Very few barrels are coming ventilated. All barrels should be ventilated this warm weather. This can be done by cutting top, bottom and sides of barrels. It can be more neatly done by using a two-inch auger. No matter how so long as it is done.

GRAPES—Ordinary, early black grapes are quiet. Some are not fully ripe and not desirable.

A very few nice, large coming sell very well.

PLUMS—The market is well supplied, mainly with red plums. They are apt to remain plentiful. Michigan is said to have a large crop. Demand tame, not equal to supply. Large German are quiet. Green Gage offered are slow.

PEARS—Demand is moderate for Clapp's Favorite. There also is an ample supply. Some Bartletts offered. They are not taken at all readily. Other pears rule quiet. Some pears have been packed in hot weather and do not hold up. Anything tender must be soon sold to prevent spoiling. Some have turned soft or received soft have had to be sold low.

While the weather is warm barrels should be ventilated.

PEACHES—Illinois peaches were late today. None on the market up to time of writing. Southwestern peaches were in fair supply. Nice, large, ripe, sound Elbertas were in good demand and firm. Many are coming small or large and spotted. They are slow. Michigan Fruit was freely offered. The quantity was not fine and holders had to urge sales, as they were afraid the peaches would not hold up.

CANTALOUPE OR GEMS—Enough are coming from different quarters so that supply is good. Size, condition and flavor make a big difference in sales and in prices realized. Overripe and common have to be sold at shaded prices to peddlers.

WATERMELONS—There were no fresh receipts reported in, but the trade appeared to be filled up and the market was dull and weak. There is still considerable accumulation on track from former arrivals and the demand is very slow.

Vegetables

BEETS—Trade quiet and market steady. There is a good supply of home grown.

CABBAGE—Demand is not large. There is a good supply of home grown and prices are easy.

CELERY—Supply exceeds requirements. Low prices are made to attract peddlers. Trade is quiet. There were early receipts of 3,000 boxes and another car was expected from Kalamazoo.

CUCUMBERS—Moderate sale. There is a good supply and market is easy.

GREEN ONIONS—Sell fairly. There is a good supply of home-grown.

GREEN PEAS—Slow sale. Quality as a rule is not fine, and buyers take hold sparingly.

LIMA BEANS—Michigan coming are very nice and sell fairly. There are enough of these coming to supply the demand. Illinois are not so good; in consequence they drag and do not clean up. They are also at a discount in price from the Michigan. Homegrown are now coming on the market.

LETTUCE—A little fancy eastern can be sold. Most of the stock coming is burnt or common. It is slow.

ONIONS—Market is easing off a little, receipts being moderate, but home-grown are supplying the trade.

PEPPERS—Best selections of southern sell at steady prices. Inferior stock is hard to move, as homegrown are plentiful.

PICKLES—Are plentifully. Most of them are slow sale. They are seldom sorted properly. Either shippers don't know how to sort them, or else don't want to go to the trouble. Mixed sizes are dull, have to be sold low and do not clean up.

RADISHES—Moderate sale and steady. Supply is ample.

STRING BEANS—Fancy, tender, young beans are scarce. The quality of the offerings is mostly common, coarse. Demand is slow, except for the very best.

SWEET CORN—There is a big supply and market is easy, although demand is good.

SQUASH—Dull and weak. There is very little demand.

TOMATOES—Market was quiet. Supply was not so large as receipts from Illinois were delayed and had not been sighted up to a late hour. Still, offerings were ample, and mostly of home-grown and Michigan. Demand is turning to the home-grown, which are getting cheap. Outside stock is slow nnless very fancy, but little of it comes that way.

TURNIPS—There is a fair trade and market is steady.

Question Box

QUESTION: *The ———, of which I am a member, has ninety-four members. We are engaged in raising corn, oats, pork, milk and wheat. I understand that you have a plan for federating local organizations for selling produce and buying farm supplies. Please let me know terms for federation, as we are not able to get any advantages the way we are situated.—B. S., Fulton Co., O.*

ANSWER: Terms for federating are sent you by mail. You will notice that by each member paying fifty cents and remitting it to the Farmers Society of Equity, a federation charter will be sent and all of your members will have the full advantage of the Equity System of marketing and advice as to where to sell and buy. Regarding the latter, your members should decide what they want and then give the local dealers the first opportunity to bid on the quantity. Should they not make satisfactory prices on large quantities, your orders can be sent where you can get such rates as the quantities purchased merit.

Q. *Some of our members will have wheat to sell in a few days, aggregating 1,000 to 1,200 bushels. Please give us instructions, as a good sale of this wheat will cause our union to grow very rapidly.—Eugene Kemberling, Secy., Selinsgrove, Pa.*

A. Send sample to Miner-Hilliard Milling Co., Wilkes-Barre, Pa., stating quantity for sale. Also, see other millers and buyers in the F. S. E. Directory sent you.

Q. *Last spring when this local union was organized, we failed to get all of the producers with us and the other association is still marketing independently, which makes it bad for all. Please let us know about the plan of federating. Also advise us regarding marketing sweet potatoes, because we will soon have a great many sweet potatoes to put on the market. Success in marketing them will do more than anything else to establish the Farmers Society of Equity all through this secton. Please send us what you can that will help us at our next meeting.—R. H. Benton, Secy., Denham Springs, La.*

A. Members of an independent association can federate with the Farmers Society of Equity to bring about unity in marketing, by the payment of 50 cents for each member of such association, that is in good standing. Complete terms and instructions have been sent. We will instruct one of the business agents in an adjoining state to give you points on marketing sweet potatoes, a man who has had experience and met with success. Also you should communicate with the various representatives of the F. S. E. that handle sweet potatoes, and get their co-operation.

Q. *Please let us know what you think the market price of wheat, oats and barley will be this season. We expect to have near 200,000 bushels of grain to market this season.—C. T. Clements, Secy., Clementsville, Idaho.*

A. See advice on marketing or holding wheat and other grains under "Our Market Review," each issue of UP-TO-DATE FARMING. We hardly care to risk a prediction just what future prices of grain will be. Will risk our reputation as a forecaster, however, on saying that all of the grains will be higher in the future. We expect wheat to sell at $1 or over a bushel before the next harvest. Also, we expect oats to sell at quite high prices, 55 cents or above on basis of Chicago market. The wheat crop is a large one, but oats, corn and hay are short, or will be short. It is hardly conceivable that wheat will remain as low as it is, with corn nearly as high. In fact, there will ultimately be a wider spread between these grains. The crop of corn will be a short one. High prices may be expected. Also, the world's crop of wheat is not above a normal one and those who hold for a dollar or more, we are sure will get it. The world's consumers will need to have all and if the farmers will not take the speculators' prices now, their price will be paid later.

Write to Secretary McAdoo, of the treasury, Washington, D. C., tell him that you have 200,000 or more bushels of grain that you want to control for gradual marketing, and tell him to arrange so that you can get some of the money that he will distribute through the central bank of deposit in your state, at a slight advance over which the bank is to pay the government. If the distribution of the money is to be for the benefit of the farmers, and the only way it can be of greatest benefit to them is to reach them direct for HOLDING their crops and not for MOVING them, then it is logical that the secretary should grant your demand.

A Buyer's Directory

Every time UP-TO-DATE FARMING comes to you it brings opportunities for advancement and comforts in its advertising columns. Before you see these advertisements we inspect them. If O. K. they are inserted in our columns.

If you have not already the habit of reading the advertisements it will pay you to make it your business to do so. Read them and see.

You can safely buy from these advertisers—we guarantee them. See guarantee on first Editorial page.

Do Your Own Shredding With a Rosenthal

Corn Husker and Shredder

Made for farmer's own use; only 6 to 8 H. P. required. We also make three larger sizes requiring 10 to 20 H.P. 18 years in the field. Shredded corn fodder is natural food. Will keep cattle in healthful condition. Write for catalog. State how many horse power you use.

ROSENTHAL CORN HUSKER CO., Box 4, Milwaukee, Wis.
We also make Rosenthal Feed Cutters and Silo Fillers

Corn HARVESTER with Binder Attachment cuts and throws in piles on harvester or winrow. Man and horse cuts and shocks equal with a corn Binder. Sold in every state. Price $20. W. H. BUXTON, of Johnstown, Ohio, writes: "The Harvester has proven all you claim for it; the Harvester saved me over $25.00 in labor last year's corn cutting. I cut over 500 shocks; will make 4 bushels corn to a shock." Testimonials and catalog free, showing pictures of harvester. Address
NEW PROCESS MFG. CO., SALINA, KANSAS

Fall Planting is Best

Our prices are the lowest, on all kinds of Apple, Peach, Pear, Cherry and other trees, and plants. Send for catalog at once, and order for early fall planting. ERNST NURSERIES, Moscow, O., Box 11.

4 BUGGY WHEELS FREIGHT PAID STEEL TIRES **$8.75**
With Rubber Tires, $18.45. Your Wheels Rerubbered, $10.30. I make wheels ¾ to 4 in. tread. Tops, $6.50, Shafts, $2.10; Repair Wheels, $5.95; Axles $2.25; Wagon Umbrella free. Buy direct. Ask for Catalog U.

Pastoral Paragraphs

A ton of soil and a son of toil
With a mortgage big to pay
No time to shirk, but a chance to work
Full eighteen hours a day.

Never drill a well in the bottom of an old dug well if you want pure water.

Hard work is not always a sure remedy for hard luck, but one thing is sure, there is no sure remedy without it.

Keep right along working the strawberry bed. The dust mulch until frost time, then the straw mulch until time to cultivate again.

A machine to do good work must be kept in good working order in all its parts. The soil is a machine, so keep it in good mechanical condition.

Have you done anything toward forming a county club or a local union in your community? You can at least mention the matter to a neighbor, and say you are willing to help.

ONE FARMER'S IDEA OF A MOTORCYCLE

SOMEHOW things come home a good deal stronger to any of us when it really happens to us. I think I appreciate this more since I became the owner of a motorcycle. I had read in a number of farm papers about how handy a motorcycle could be and while in a sort of a way I believed it, somehow it did not get down deep in like it did after I had one myself.

I got a machine for just one purpose. We live about six miles from town and I wanted my boy to attend high school, but help was pretty scarce and it was hard for him to get up early enough in the morning to help with the chores and get back early enough at night. Even then it filled his whole day full and there was no time for himself. I did not want things to be that way because I want my boy to be a farmer so I bought a motorcycle.

Before we got this machine we kept a driving horse for the boy to go back and forth with. We estimated that it cost us about $12 a month to keep that horse. We find now that it costs about $1 a month to keep the motorcycle running and the motorcycle goes further than that horse ever thought of going. Several times the machine has come in very handy in obtaining repairs for machinery that had broken down. The other day I went to town in just about the time it would take me to hitch up.

I think the place it has been of most value to us has been in keeping my boy more satisfied with farm life.

Of course, it is pretty hard to tell but somehow there seemed to come kind of a change over my boy after he got his machine. It looked as though he got enough pleasure so that his work on the farm was not the least irksome. It did him a lot of good too, this rubbing shoulders with other people as he did, kind of broadened him out and I think he is going to be a better man.

I think it would be a mighty good thing if all farmers would look into this motorcycle proposition a little for I think a good many would be mighty glad to find something that would help to keep the boy on the farm.—D. F. W., Wisconsin.

GIVE FARMERS A CHANCE

(Concluded from Page 1)

they should be able to borrow the government's loanable funds at the same rate of interest the local bank is asked to pay, and no more. Then the farmers would have a chance to control their crops, instead of being forced to place the control in the hands of others. This would cause a normal crop movement, not the diarrhoea that is the summer complaint of agriculture, but a regular, steady, healthful normal movement at stable and profitable prices.

If our public servants should see fit to do the fair thing by farmers, and make this provision, the farmers themselves would quickly avail themselves of the privilege. Farmers would organize to become a real factor in the business world, and this would give a foundation and stability to business that would make panics and hard times impossible. It is most unlikely that the aforesaid public servants will do anything of the kind, however. So, Mr. Farmer, what are you going to do about it? There is but one right thing to do—organize and compel your public servants to see that you get fair play. And the sooner you do it, the better for the whole country. And where you are organized, make your demands for some of the money to be passed around to hold the crops, instead of "to move the crops."

Mr. Dooly's Peaches And Cream.

"I see by th' payper, Hinnissy, that Misther Burleson has sint Prissydint Wilson a sivinteen pound box iv paiches that he dropped into th' postoffice."

"Who is this Misther Burleson? Till me, Mister Dooley, is he an office seeker, a pollytishun, er a gintleman?"

"He's th' postmaster ginnyral down in Washington, th' mon that counts all th' parcel post stamps. Ye know, Hinnissy, he's th' mon that raised th' limit on th' parcel post frum 'livin pounds to twinty pounds. Wan day he seen th' paiches all nice an' mellow in their crate with a red veil over their noses. What does he do but say to himself, 'Me frind, the Prissydint, would injoy thim paiches,' so he picks out a sivinteen pound box an' he sticks on thirteen sints worth iv stamps an' thin he draps it into th' postoffice an' sez to thim, 'Git bizzy, me min.'"

"Mister Dooley, are yez tellin' me th' livin' truth?"

"Hinnissy, if I had th' toime an' th' proice, I'd have affydayvits drawn oop, an' I'd sind thim to iv'ry fahrmer in th' land an' I'd say to thim, 'Th' paypul in th' cities are gittin' tired iv atin' out iv th' garbage can. They raich out their hands to ye an' first they ask ye to shake hands with thim an' thin they ask ye to put into their hands the fruits from yer orchards an' th' viggytaybles fr'm yer gardens. We want ye to know that if ye use yer brains as hard as ye do yer backs, ye'll have more contintmint in yer pocketbooks than whin ye're sellin' yer products f'r a song ar lettin' th' apples an' th' paiches toomble to th' ground an' lay there rottin' while th' pigs go rootin' around among thim with their sharp little snouts.'"

"Mister Dooley, ye're a born fillosofer. Ye shtand not only f'r cahrn beef an' cabbage, but f'r paiches an' crame. Put me down f'r sivinteen pounds iv paiches an' I'll foornish th' appytite mesilf."

Foolish to Buy Wood Shingles

What's the use of buying common **wood** shingles now that you can get the original and genuine Edwards STEEL Shingles for LESS MONEY? Don't wood shingles **catch fire,** don't they **rot,** don't they **cost a lot of time and money** to put on?

Nobody ever heard of an Edwards Steel Shingle roof **burning up** or **rotting.** And it doesn't take long to put them on. For these **steel** shingles come in great big clusters of 100 or more.

Edwards STEEL Shingles

Each Edwards Steel Shingle not only has thoroughly galvanized sides, **but each EDGE is dipped in MOLTEN ZINC.** No chance of **rust.** All joints are permanently water-tight as a result of our patented Interlocking Device, which takes care of expansion and contraction.

PRICES We sell direct from factory and pay the freight. Our cost of doing business is divided among thousands of sales. Hence our ability to underprice wood shingles. You have been intending to get our prices for some time. **Do it this time.** Send a postal now—today—and get, by return mail, Catalog 991, the Roofing Offer of the Age. Give dimensions of roof if you can, so we can quote price on the complete job. (120)

Ky. Blue GRASS. Genuine and pure. The last you bought you probably paid about $3 a bushel for it. We will supply you at $1.65 a bushel. Send orders to **O. K. SEED STORE, Indianapolis, Ind.**

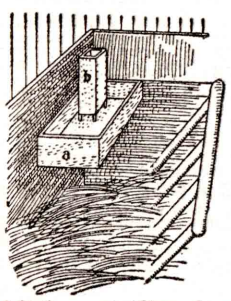
Shorty's Shortcuts

(By Himself)

WE CAN'T have things just as we want them, always. Sometimes we are forced to take things just as they are and make the best of them. Man is more or less limited in his powers to do, no matter what he thinks about it. For example, an oily-tongued gentleman with better clothes than I wore at my wedding came along one day and tried to sell me a ten-acre orange grove down south somewhere. The trees were not in bearing, in fact, were not yet planted, but would be as soon as I signed a contract (and a check on my bank) and word could be sent to the chief high Bovolopus in New York (or it may have been Chicago, or Bailey's Cross Roads) somewhere 'way off, anyhow, who would have some trees planted, and irrigated, and fertilized and sprayed, and when the oranges grew big enough to eat would have them picked, packed, shipped, sold, eaten, and send me all the money. Great scheme, it was. No trouble to me but to put money in the bank every now and then and send along the check regular. I'd soon get in the habit of it so it would seem second nature to me—I wouldn't mind it a bit, and first thing you know my checks going out would meet bigger checks coming back, and there I would be—a bloated capitalist. Ab-so-lute-lee—no doubt about it. He had the figgers to prove it—I couldn't get around them, so sign here, please, right on this line.

Well, I didn't do it, and now I've got to get rich by hard work, but so has the fellow who tried to sell the orange grove, if all others treated him as I did. But, the point is, notwithstanding all the proof in the world, you can't make a man change his mind if he doesn't want to do it, and you can't make a woman change her mind under any consideration.

Now, let's get down to brass tacks. I have a horse that is a good one. Raised him myself. Big, bony, willing, gentle, more virtues in that horse than you'd find in a city society of Women's Aids to Church Influence. But he will root the oats, corn, or other feed out of the feed box. When I go to hitch up after breakfast, or dinner, this horse has eaten half his feed and donated the other half to the chickens. So I must put in more feed, and wait until he eats it, putting back in what he passes back until it is consumed. I naturally hated to waste the time and the feed, so I fixed up a little box like the illustration. The upright box, "b," contains a full feed, and has no top or bottom and is nailed to the side of the feed box proper, "a," leaving a space of two inches between it and the bottom of the feed box. The feed, poured into the box, or chute, "b," works down as old Pete eats it away from the bottom. Saves loss of time, temper and feed. Try it once.



Yours as ever
Shorty.

A Mild Opinion

"How did you like the sermon?" asked the preacher of an old farmer.

"I never complain of a sermon," was the modest reply, "but in this case the end was most too far from the beginning, and if the trash between had been raked up and toted away it would have been better."

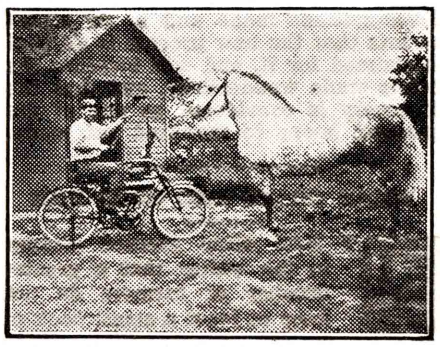
CO-OPERATIVE STOCKBREEDING

THE farmers of the United States must learn to co-operate; that is, to understand each other and act together. There is scarcely a line of action but would be more effective with such understanding and combination. As we have so often tried to show, in many things it is absolutely necessary to success, and in other things it makes important results possible. In this respect, we quote from J. H. Frandson of the Idaho Experiment Station:

It is highly desirable not only that each dairyman stick by a certain breed but that a community, so far as possible, should favor a particular breed. If nearly all the breeds are represented in a sparsely settled community it means that they are not many of any one breed and as a result whenever new blood is desired for a herd it is necessary to send away, frequently long distances, to secure what is desired.

Another distinct advantage of community breeding, especially where the herds are small, is that the farmers of a community can jointly purchase the sire and use him for their herds. The cost of purchasing and maintaining a pure-bred sire will in this way be reduced to a minimum.

The further advantage to a district or locality in sticking to one breed is that the demand for that particular breed may be supplied in carload lots, and in this way the district will gradually work up a reputation that will readily enable it to dispose of any surplus stock. In a great measure the success of our European friends is due to the fact that they have as a country been faithful to and developed that particular breed which seemed most suitable to their environment.



Two Steeds of Great Value on a Farm

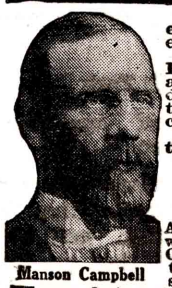
THE POTATO MOTH

THE potato tuber moth is a very damaging insect, and is spreading over the country, being especially active in California and Texas. This moth infests both fields and seed. The moth is readily detected as it leaves a web on the outside of the potato it infests. Seed potatoes should be carefully sorted, every two weeks for a month after digging, and all infested tubers destroyed. The seed should then be placed in an air-tight bin, and thoroughly fumigated with carbon bisulphate. All potato growers should examine very carefully all seed potatoes, especially those purchased from local dealers. And in infected districts the growers should co-operate to eradicate the pest completely, as it will become a pest of severe damaging power if not held in check. Potato fields should be thoroughly cleaned of tops and trash, which should be burned. Badly infested fields should not be replanted to the potato crop.

Preparing Stock for Winter and Market

All stock should go into the winter feed lot in prime condition. In a few weeks change must be made from green, succulent feed to dry grain and hay. During this fattening period especially is good care necessary. Worms gather freely while stock is on pasturage and should be promptly expelled now. All kinds of stock, horses, cattle, hogs and sheep need a conditioner food tonic, and vermifuge, and attention is called to the advertisement of the SAL-VET in this issue. SAL-VET is a recognized vermifuge and stock conditioner tending to invigorate the action of digestion and assumulation, destroying worms and making the animals healthful and thrifty.

My Famous $1.00 Offer



Manson Campbell

My special "ONE DOLLAR OFFER" has pleased so many farmers that I have decided to keep it up for another month and thus let everybody take advantage of it. Here it is:

You send me one dollar and I will ship you, ALL FREIGHT PAID BY MYSELF, this, my new 1914 Chatham Grain Grader and Cleaner. Use the machine a month. If satisfied at end of 30 days, pay me my low cash price or give me your note, without interest, payable January 1, 1914. If not satisfied, return the machine at my freight expense and I'll return your dollar.

As a matter of fact, $1.00 won't half pay me for the freight. **I only want the dollar to hold as evidence of good faith.**

Chatham Grain Grader and Cleaner

After 41 years' experience, I know every grain and noxious weed grown in America. I know the section where each one grows. I know every grain and weed that grows on **your farm.** Experience has shown that a Grain Grader and Cleaner should have the special equipment for the particular farming section to which it goes. For example, I send an **entirely different equipment of screens,** riddles and gangs to Maine from what I send to California. **There are scarcely two states in the United States to which I send the same equipment.** Thus you get the exact outfit to handle the grains and weed seed on **your farm.** If you want more or different screens, **I will send them free.** Not a penny would I ask for extra screens and riddles.

The Chatham now handles over 70 seed mixtures—wheat, oats, peas, beans, corn, barley, flax, clover, timothy, etc. Takes cockle, wild oats, tame oats and smut from seed wheat; any mixture from flax; buckhorn from clover; sorts corn for drop planter. Removes foul weed seed and all shrunken, cracked or sickly grains. Takes out all dust, dirt and chaff. It is also a bully chaffer. Handles 60 bushels grain per hour. Gas power or hand power. Easiest running mill on earth.

$1.00 Brings It—Freight Paid

Don't confuse this with ordinary "make-shift" roofings—we guarantee it 15 years and inside each roll furnish modern ideas for laying it artistically.

Certain-teed Roofing

Rolls Shingles

When ready roofing was first put on the market, the public demanded that it must prove its value by actual wear on the roof. *Certain-teed* Roofing has stood the test for years—it has made good in all climates and under the most severe conditions. When artistically laid it makes a roof you can well be proud of. You can't tell how long roofing will wear by looking at it—so for your own protection, accept no substitutes—be sure the *Certain-teed* Quality Label is on each roll.

Sold by dealers everywhere at a reasonable price.

Live Stock and Dairy

STOCK-RAISING AND FARM FERTILITY

By Capt. T. F. Peck

State Commissioner of Agriculture, Tennessee

A GREAT many farmers are under the impression that they are prospering, and their friends think they are making money, when, in fact, they are growing poorer every year. They grow good crops; they live comfortably; there is an air of prosperity about them; but when the real condition is shown it will reveal the fact that they are really growing poorer.

To illustrate: I have $10,000 which I place in the bank and as I need money I check on my capital at the bank. I can live along comfortably for a time, put up a good appearance, but after a while my capital will be exhausted.

Just so with a great majority of farmers. Their capital is invested in farm lands. They grow and market crops year after year, each crop taking some of the plant food out of their soil; the system of farming they practice takes away the plant food; the fertility of their farms; and returns nothing to the soil. The same happens to the soil that happens to the bank account when all is taken out and nothing is returned. Both will be exhausted in time.

Farmers who are doing such farming are poorer each succeeding year. Farmers should change their system of farming to one that would give them a profit and at the same time build up their soils. They can do so by giving the proper attention to the live stock industry. The sooner farmers get to appreciate live stock, the sooner we will stop a losing game and go to making a real profit on our work.

We should get fixed in our minds the fundamental principle and first law for successful agriculture—to cultivate the soil to grow crops to feed animals to feed the soil. When we do this our lands will grow richer, with intelligent handling; our crops will be better and the farmer will really be making money instead of simply living off his capital.

Conditions are all favorable for the live stock industry. While live stock is so much in demand at fancy prices we have an opportunity to make money and rebuild our land at the same time.

If we are going to raise live stock let us go at it right. Blood will tell. Let us get good blood. Get a thoroughbred with good individual points. Let the farmers in a community agree on a type and all breed the same. It will be possible for the community to establish a reputation for that type that will attract buyers, and it will mean the advantage to the producer in having the buyer come to them and ask what they will take instead of the producers having to hunt the buyer and having to ask him what he will give.

The same will hold good in any kind of live stock breeding. By all means, have community co-operation. Every time you show me a community where live stock is the principle industry, I will show you fertile farms and prosperous farmers.

Didn't Meddle

"Why, auntie, you do sing a mournful song," said the stylish boarder to the colored auntie who was washing the dishes.

"Yas, sir, I knows I sings mo'nful, but I expects by singin' and 'tendin' to my own business to git to Heaven by an' by," was the reply.

MILK THAT CANNOT SOUR

A FRENCH scientist, M. Gaulin, of Paris, has invented a process for the treatment of fresh milk that will preserve its freshness and wholesomeness in its natural state, without evaporation, condensation, or chemical treatment, keeping it absolutely pure and natural in flavor, consistency, and nutrition, indefinitely, in any climate.

The milk is first pasturized, then forced by great pressure through tiny holes less than one twenty-fifth of an inch in diameter. This breaks up, crushes and thoroughly incorporates the minute fat globules with the other elements in such a way that they cannot be separated. To illustrate, suppose a small drop of milk be likened unto an egg. The white and the yolk can easily be separated. By thoroughly beating the egg, it would be an impossibility to separate them again. So in the drop of milk, the little atomic elements that are separate, like yolk and white of an egg are by M. Gaulin's process so completely broken up and "mixed" that separation is impossible. Not even a cream separator can take the butterfat from "homogemized milk," and if it stands for months in cold water no "cream" rises to the top. This, the scientists claim, absolutely solves the problem of keeping milk natural, and medical authorities say it greatly improves the wholesomeness and digestibility of milk. Milk thus treated can not become "sour." The Canadian government has had these investigations made and in its report asserts that the new process is all that is claimed for it, and will increase the bottle trade wonderfully, and that the discovery is considered as one of the greatest boons to mankind yet made.

WHAT GOATS ARE GOOD FOR

IT HAS often seemed strange to the writer that a greater number of farmers do not keep at least a small flock of common goats. These little animals, in the course of a year, will kill out many noxious weeds that no other stock will eat. They will also kill out "buck brush" and sprouts in pastures, and their droppings will greatly enrich the land. In winter if allowed to run among the cattle in the feed lot they will obtain their living from what the cattle waste. They require no care whatever, except a little watchfulness at kidding time, as little kids, like little lambs, are apt to chill to death in cold weather. A goat will raise at least two kids in a year and very often she will raise four, as it seems natural for them to have twins.

Goat meat is considered by many to be superior to mutton and is certainly much more cheaply produced. On the farm of the writer, there is kept a flock of from fifteen to twenty-five goats the year around, and if fresh meat is wanted at any time, a kid or goat is butchered according to the amount of meat required, and there is certainly no better meat than that of a fat kid. We have had visitors at our table who pronounced it the best mutton they ever ate, not realizing of course that they were eating the flesh of a goat.—Mrs. F., Missouri.

UTILIZING WASTE STEAM IN CREAMERIES

CREAMERIES and dairy plants that use steam power should utilize the exhaust steam, and let it work instead of waste. Instead of heating wash water with live steam from the boiler, it is practical to use the exhaust steam for this purpose, and the investigations and experiments of the Bureau of Plant Industry show that in a creamery making 500,000 pounds of butter annually, a saving in fuel amounting to over $250 a year can be effected in this way.

Three Big Savings
Which Men Get In No-Rim-Cut Tires Alone

Here are three features—costly features—found in no other tire. Features that save motorists millions of dollars.

You get all these things at no added price in No-Rim-Cut Tires. That's why they outsell any other tire made.

Saving No. 1

These tires make rim-cutting impossible. They do it by a feature which we control, and which can't be successfully imitated.

With old-type tires—with clincher tires—rim-cutting ruins almost one tire in three. That is proved by careful statistics.

Saving No. 2

We add to our tire cost $1,500 per day to give the "On-Air-Cure" to No-Rim-Cut tires. We final-cure them on air bags shaped like inner tubes — under actual road conditions.

We do this to save the blow-outs caused by wrinkled fabric. No other maker does this, because it costs too much.

Saving No. 3

We use a costly patent method to prevent tread separation. Loose treads have cost motorists millions of dollars.

We have exclusive use of this vital protection, and no other maker employs it.

No Extra Price

Because of these extras, No-Rim-Cut tires used to cost one-fifth more than other standard tires. Yet they saved so much that hundreds of thousands paid the price to get them. They became the world's favorite tires.

Now our mammoth output has brought the cost down. Today you can buy them just as low as any standard tire.

Tires with these features cost no more than tires which lack them. Why not get these savings?

Our dealers are everywhere.

Poultry Pickings

Pure-bred poultry means uniformity of products.

Keep after the lice and mites until freezing weather.

Now is a good time to market a few young cockerels.

Every country community should have a poultry club.

All chickens should go to roost with a crop full of grain. Wheat is better than corn.

Cabbage, mangels, beets, all are good for winter feeding. Prepare a liberal supply.

Be ready to mark the early laying pullets. You can't afford to sell them, and you need them in your breeding pens.

Now don't forget the clover. Old biddy won't forgive you, if you do, and neither will she lay so many eggs when eggs are high.

Those who market eggs by parcel post should keep the colors separate. Uniformity is valuable. And use all the little eggs at home.

POULTRY PAYS MORE FOR SOUR MILK THAN PIGS

SOUR milk, or sweet milk either, is undoubtedly good for pigs. Not many farm pigs get sweet milk, but the farmer is sure to see that the pigs get the sour milk—all of it. He doesn't save a pint for the chicks, and the facts are that those chicks will pay him more for every pint of the milk than the pigs. This is, of course, provided he gives the chicks care the same as he does his pigs.

Sour milk will make chicks grow faster, more vigorous and prepared for greater service than any other known food. It shouldn't be fed alone, but mixed with corn meal it makes a poultry food hard to beat. I don't think it can be beaten. For laying hens it is superior to meat scrap and bone; and as for a tonic, it is worth more than all patent remedies put together.—M. C.

Corn is a fine poultry food, but at this time of year feed it green. Nothing better for the fowls at this season than corn in the wasting ear stage, cut from the cob. It helps get them in prime condition for winter—either for laying or for market.

DOLLARS AND SENSE IN THE POULTRY BUSINESS

THOSE who have very little time to give to the care of chickens will find the egg-laying breeds will pay them best, and it must be remembered they also grow large enough to eat, and the flesh is of fine flavor. If the walls of the house are kept whitewashed, the roosts painted thoroughly twice a year with a high-grade lice and mite preventative, the nests kept clean, and all old litter burned, there will be no loss on account of vermin.

A good, ordinary Leghorn pullet will lay twelve dozen eggs a year. Many do much better, but nearly all should do as well. The egg revenue per bird should come to at least $2.50.

The cockerels, if properly fed, should sell in the fall for enough profit over their cost to pay the expenses of raising both cockerels and pullets. Your laying stock thus costs you nothing.—Q. D. L.

WHAT TO DO WHEN FOWLS BEGIN MOULTING

JUST as soon as the hens begin moulting they should be divided into two classes. In one class put those you intend to keep for next year's breeding, and the others should be marketed as dressed poultry. Sell them as soon as possible after the eggs cease coming. If they were well fed during July and August they should not only have laid well, but put on some flesh, and a week's fattening should be enough to put them in prime condition for marketing.

Sell early, for money is lost by feeding through the moulting season to sell afterward. Those that are to be kept over should be given careful feeding, and the more you can hasten the moulting process the sooner they will be ready for business.

Breed your fowls for utility. Meat and eggs are where the profit lies in the farm flock. Fine feathers do not always make fine birds out on the farm.

Slang

"Is it correct to say 'put up or shut up?'"

"Certainly it is if you are referring to an umbrella."

The Joy Ride

"Do you enjoy a joy ride?"

"Yes, the first of it while you are on the auto, but when it changes to the patrol wagon, I don't."

What Did He Mean

"Miss Slasher is a charming girl when she is dresesd up."

"I can't say about that, for I never saw her anywhere but at home or an the street."

Mrs. and Miss

Mrs. Fortune complained that Peters annoyed her, and had him arrested.

"If you do not quit annoying Mrs. Fortune," said the judge, "mis-fortune is certain to be yours."

Not Averse to His Traveling

He had staid late, and was rather tedious. At last he ventured: "If I had money I'd travel." "How much would enable you to go?" she asked with a quiver of sympathy in her voice.

He Has the Advantage

"Even detectives can scarcely catch a fake palmist."

"Why?"

"His business requires them to show their hands."

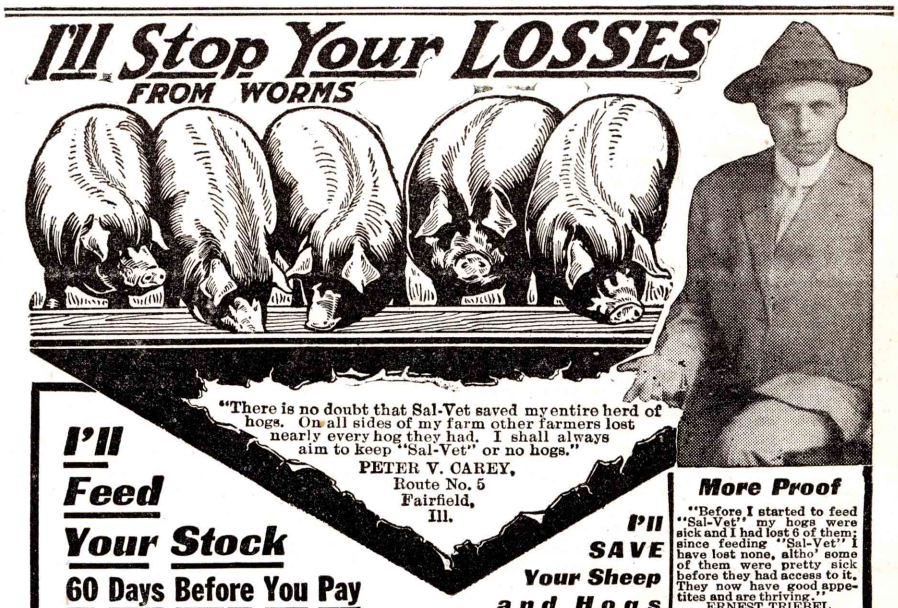
The Kicker

"That man is always kicking."

"What about?"

"He couldn't tell you himself. He kicks so much he don't know what he is kicking about, and that is the only thing he knows how to do."

I'll Stop Your LOSSES
FROM WORMS



"There is no doubt that Sal-Vet saved my entire herd of hogs. On all sides of my farm other farmers lost nearly every hog they had. I shall always aim to keep "Sal-Vet" or no hogs."
PETER V. CAREY,
Route No. 5
Fairfield,
Ill.

I'll Feed Your Stock 60 Days Before You Pay

I'll SAVE Your Sheep and Hogs

Don't let worms breed contagious diseases among your hogs this year. Don't let them kill off the young pigs and lambs and rob you of your season's profits. You can prevent it if you will just take "a stitch in time." Now is the time when worms get in their deadly work. Now they are breeding—multiplying by the millions in the stomach and intestines and if you don't get the best of them they will surely get the best of you. I'll rid all your stock of these destructive pests. I'll prove it before you pay.

More Proof

"Before I started to feed "Sal-Vet" my hogs were sick and I had lost 6 of them; since feeding "Sal-Vet" I have lost none, altho' some of them were pretty sick before they had access to it. They now have good appetites and are thriving."
ERNEST TRIEBEL,
Route No. 2
Clearwater, Minn.

The Great Worm Destroyer **SAL-VET** **The Great Live Stock Conditioner**

is a wonder working medicated salt to which your hogs, sheep and other farm animals can run freely and *doctor themselves*. It requires no dosing, starving or drenching. Costs only 1-12 of a cent a day for a sheep or hog and a trifle more for larger animals.

PRICES: 40 lbs., $2.25; 100 lbs. $5; 200 lbs. $9; 300 lbs. $13; 500 lbs. $21.12. No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk, only in Trade-Marked Sal-Vet packages. Shipments for 60 days' trial are based on 1 lb of Sal-Vet for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular size packages.

Send No Money—Just The Coupon

Just fill out the coupon at right—tell me how many head of stock you have and I'll ship you enough "Sal-Vet" to last all of them 60 days. Yo simply pay the freight charge when it arrives and when the 60 days are up report results. If it fails to do what I claim, I'll cancel the charge—you won't owe me a penny. Send the coupon now. Woman's Work

A SOCIAL CLUB FOR OUR WOMEN-FOLK

The editor of this department feels sure that a goodly number of our folks who read this department each issue would be willing to help us make it brighter, more cheery and more helpful by sending in a little letter now and then—just a friendly chat about your own toils and troubles if you have any, or your joys and pleasures, which I am sure you do have. The young folks have their Cadet page, and the men folks have their Contributors' page for accounting their prowess in doing great things in growing crops. Come, now, and let us talk amongst ourselves of this, that, and the other. Everybody is welcome.

FIRESIDE SOCIAL CHATS

By Aunt Sophia

OH, WHAT busy, busy days are these! Fruit and vegetables to can, preserves, and jams, and fruit butter, jelly and marmalade to put up for winter, with school days rapidly approaching, and winter coming all too soon, which means we soon must be making extra clothing. The housewife with a family has plenty to occupy her head and her hands from daylight until dark.

* * *

Canning can be done to great advantage by having one of those home-canning outfits, which greatly reduces the labor and hastens the work to completion. Our outfit is the greatest help to us, and we would no think of doing without one than I would consider doing without my sewing machine. But here is a hint to those who have no such outfit. Use the wash boiler. Have a little slatted wooden frame made to slip down in the bottom, and allowing the water to circulate underneath the cans. Place the fruit or vegetables in the cans, fill cans full of cold water, and place in the boiler, which should have cold water enough to reach nearly to the top of the cans. Bring to a boil, and boil until the contents of the cans are sufficiently cooked. This plan is an excellent substitute for the home canning outfits advertised, when canning for home use only.

* * *

School days! What a task to get the bunch of kidlets ready for the famous "first day." New outfits of clothes, new books, new lunch boxes, new morning duties, and fewer hands to do them. It means a new drain on mother's nerves and on daddy's pocketbook, but we manage to pull through somehow. Country schools are not at all like they were in the days when we parents were learning to bound Madagascar and find the least common denominator of a long string of meaningless figures. We find our girls learning to bind the hem of a skirt, and our boys finding the percentage of cream fat in a long string of milk bottles. At least, that is what we are being told will come to pass, and our schools are to be used for teaching little folks to do useful things, as well as to absorb knowledge about things. It sounds well, but it remains to be seen how well it works.

* * *

Oh, dear, I've used up all my time before I had fairly began to chat. I must get my little daughter's dress done for the Sunday school picnic. It isn't a fancy party dress, for I consider a neat new play frock much more appropriate for picnic frolics. I am making it by pattern No. 6109, shown in the August 1st issue. The blouse is of white pique, collar and cuffs of solid blue material, and the skirt of blue serge. It's going to be very pretty and serviceable.

"Children Teething

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

WHY SOME WOMEN AGE TOO SOON

EVER note what a difference a few years of married life will make in a man? Before the wedding day nothing was good enough for the girl. He would lay awake nights planning to please her. There were many little pleasant drives and outings, and a steady flow of pleasant words. How tenderly she would be assisted in and out of the carriage! But after a short honeymoon how quickly all this melted away. There are no sweet words, and little gifts are entirely forgotten. Quite likely she is left to climb in and out of the carriage (providing she is ever taken along) the best way she can.

There is absolutely no excuse for sweetheart days ending so abruptly or ever ending for that matter. Kind words do not cost anything and cherry smiles cost less. They mean good health, happiness, real life. On the other hand fault-finding and grouching will mean but a miserable existance.

Perhaps the wife is one of the unfortunates who never has the privilege of handling a dollar. Quite often her home is one of the most prosperous farms where there is a steady income. All the money that passes through her hands comes from small sales of eggs, milk or other farm produce to neighbors. Any man who allows this to continue makes the most serious error of his life. Nothing strengthens a woman's courage and ambition more than the knowledge that she is an equal partner and that her husband places confidence in her ability from a business standpoint. There are few wives who do not in many ways earn the lion's share of the income, and it is her rightful privilege to help handle it.

The wife's energy should be used sparingly, for if it be overworked some day it may disappear forever. It is no disgrace for any man to perform little tasks around the house, when time will permit. Often an unexpected hour's work will be like a real blessing from heaven to the tired wife.

On the farms where the above conditions are found the men are not so bad. They are usually kind-hearted and generous, ever ready to help in a substantial way any neighbor in trouble. It is simply the result of indifference that grows day by day so gradual that they are wholly unconscious of the real truth. Most any man can ponder to good advantage and ask himself if his wife is getting the best out of life that is really possible.

Mixed Cucumber Pickles — Mash and drain. Pack alternate layers of small cucumbers, green tomatoes sliced and chopped green peppers. Let stand in boiling hot brine of salt and water. Drain, rinse in cold water, and pour over them spiced vinegar. Add a little horseradish. Pack in jars.

Cabbage Pickle—Pack chopped cabbage in salted water one day. In morning drain and put in quart glass jars adding a little horseradish. Cover with scalding hot spiced vinegar, using allspices preferred. Let stand one week when pour off vinegar, boil again and fill jars.

Public Sale of Oklahoma School Lands

Notice is hereby given that the state of Oklahoma will offer for sale at public auction at the times and places herein set forth 560,290 acres of its school lands, as set forth in pamphlet advertising said land for sale.

All lands will be sold at the door of the county court house of the county wherein the land is situated:

Boise City, Cimarron county, 385,376 acres, September 22 to October 10, 1913.

Guymon, Texas county, 182,874 acres October 13 to October 29, 1913.

The terms of the sale are 5 per cent of the purchase price cash, at time of sale, and in no event shall the initial payment be less than $50. The balance of the purchase price is divided into forty equal annual payments with interest at the rate of 5 per cent per annum, payable annually. Prospective buyers will bear in mind that these lands are unimproved, and the lessee has no preference right to purchase. There positively will be no improvements of any kind to be paid for by the purchaser, and a lessee has no more advantage than a non-resident of the state. Also that 1280 acres or any subdivision thereof of these lands can be bought by one person. A pamphlet containing full and complete description of each tract of land with the appraisement thereon to be sold together with all the laws, rules and regulations can be had postage prepaid, upon application to the commissioners of the land office at Oklahoma City, Oklahoma. Address all communications to John R. Williams, secretary, 507 Mercantile Bldg., Oklahoma City, Okla.

What is Now the Fashion

Free Monthly Fashion Guide

We are unable to print all the fashion illustrations each issue that we would like to publish. However, with each pattern order mailed we will include free an advance Monthly Fashion Guide. Monthly Guide alone, without pattern, for 2c for mailing. All patterns are very latest and only 10c each, postpaid.

6238—Misses' and Small Women's Dress. Linen or serge can be used to make this dress. The skirt is cut in two pieces and is made with the empire waist line. The long or short sleeves can be used. Sizes 14, 16 and 18 years. Size 16 years requires 5 1-8 yards of 36-inch material.

6253—Ladies' Dress. This simple dress consists of a plain blouse, with ornamental front closing, wide collar and long or short sleeves, joined to a four-gored skirt, which also has an ornamental outline to the front seam, where the closing is placed. Sizes 34 to 42 inches bust measure. Medium size requires 5 yards of 36-inch material.

6247—Girl's Middy Blouse. The Middy blouse of this season is somewhat changed from the old style. It has the usual drop shoulder, an open neck with fancy collar. The sleeve is plain top and bottom. Sizes 6, 8, 10 and 12 years. Medium size requires 2 3-8 yards of 36-inch material.

Price of Patterns, 10 Cents Each

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

A Different Place

"Miss Reckless does lots of very fancy work."

"With her needle, do you mean?"

"Shucks, no! On the bars in gymnasiums."

No Use for Argument

"Waiter, how should I know that is not horse meat instead of beef?"

"You may not know, sir; all sorts of people come here to eat."

Nearly All

"Do they raise everything by irrigation in the west?"

"Yes, everything by the use of water, everything but a row, and that they raise as elsewhere, by the use of fire water."

The Merger of East and West

"But there is neither East nor West, Border, nor Breed, nor Birth,
When two strong men stand face to face, tho' they come from the ends of the earth!"
—KIPLING.

In the "Ballad of East and West," Kipling tells the story of an Indian border bandit pursued to his hiding place in the hills by an English colonel's son.

These men were of different races and represented widely different ideas of life. But, as they came face to face, each found in the other elements of character which made them friends.

In this country, before the days of the telephone, infrequent and indirect communication tended to keep the people of the various sections separated and apart.

The telephone, by making communication quick and direct, has been a great cementing force. It has broken down the barriers of distance. It has made us a homogeneous people.

The Bell System, with its 7,500,000 telephones connecting the east and the west, the north and the south, makes one great neighborhood of the whole country.

It brings us together 27,000,000 times a day, and thus develops our common interests, facilitates our commercial dealings and promotes the patriotism of the people.

A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in **"A Cart Load of Fun"** are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. **"A Cart Load of Fun"** is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.

UP-TO-DATE FARMING, Indianapolis.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

EVERY development in church and school and state, indicates that the world needs progressive people—people who know the difference between real progress and that which is not progress at all. Progress should be measured by its present and ultimate benefit to the human race. Many matters which now claim the attention and much of the approval of the world are not progressive matters, but their accomplishment will result in a setback to the human family. Organized society, including church and national government, is following the paths that were followed by people in the former ages. We look to Our Young People to stear clear of the breakers that brought to ruin former efforts. The simple principles of EQUITY, equality, fairness and like opportunities and privileges for all, are those which lead to better things, and cannot topple over into the ruts dug by selfish interests.

DEAR CADETS: Here is a boy from old S. C.,
A state in which I love to be,
I am 22 and six feet tall,
And have great fun from spring to fall.
I try to farm and do my best,
And read your letters while I rest.
We take the good old UP-TO-DATE,
And for its coming anxious wait.
We certainly think the paper grand,
Wouldn't give it up for a tract of land.
We never get lonesome in this south land,
We have cream suppers to beat the band.
Each Saturday night that passes by
We have ice cream and cake and pie.
I want all the girls and boys to write,
And now I bid you all good night.—
G. W. Easler, Converse, S. C.

DEAR CADETS: I am 18 years old, and live with my parents and three brothers and one sister on a 240-acre farm in the State of Michigan. This is a great hay, grain and timber country, and we can raise nearly all kinds of fruits and vegetables here. I can do out-door work and work in the house, too, but I like to help papa outdoors. I think it is nice to know how to do both. There is also plenty of wild game here, and fish also. I am a lover of music and flowers, but I love to go hunting and fishing and horseback riding, too. I live only 36 miles from the American Soo. Come and visit me, and we'll take a trip to Sault Ste. Marie, where the lovely Soo locks and great canals are; and we'll go in an auto. Papa takes UP-TO-DATE FARMING and it certainly is a nice paper. I love to read the Cadets. My birthday is September 2, and I would love to have a post card shower from the Cadets, and also to exchange post cards and letters with the boys and girls. —Dorothy M. Pierce, Pickford, Mich.

DEAR CADETS: I enjoy reading your letters in UP-TO-DATE FARMING very much, and I wish to add one to the list. I am 19 years old, and weigh about 172 pounds. That's enough, isn't it? But folks say I don't look it, so I don't mind. I love music, and play a piano. I worked in a milliner store last spring and fall, and like it pretty well, though I live on a farm of 112 acres. We have an auto. I would like to exchange cards with girls and boys about my age, and will answer them. My birthday is September 15.—Pearl Rouse, Caribou, Me.

DEAR CADETS: I have been reading your letters for quite awhile, and I would like to join you. My father takes UP-TO-DATE, and we all think it a fine paper. I was 16 last December, and I live on a farm with my parents, two sisters and a brother. We live half a mile from Bethany and about eight miles west of Columbus. I enjoy living in the country and reading UP-TO-DATE. I will be glad to exchange cards or letters with the Cadet boys and girls.—Rosa Richey, Columbus, Ind., Rt. 6.

DEAR CADETS: I am 16 years old and live on a 96-acre farm in Wisconsin. We have 4 horses, 19 cattle, 29 hogs and some chickens. We raise corn, alfalfa, barley, hay and tobacco. We don't have more than half a crop on account of hail storms and heavy rains. I read UP-TO-DATE and think it is a fine paper. I would like to hear from all the Cadets, and will answer all postals and letters received.—Lewis Hesgard, Oxfordville, Wis.

DEAR CADETS: I am a country girl and like country life fine. I live on a farm of 100 acres. We raise cotton, corn, oats, and almost anything else you can think of. But I am sorry to say it is very dry here this year, and crops are short. I have read this dear little paper more than a year and like it fine. I love to read letters from far away, for I don't know anything about other parts of the country for I have always lived here in Texas. I will ask every Cadet to send me a letter or card—all will be appreciated.—Ora Turner, Kibleen, Tex.

DEAR CADETS: I am 20 years of age, and have lived on a farm all my life. Would be more than pleased to correspond with some of the Cadet boys and girls near my age. I promise to answer all cards and letters I may receive.—Denver Bailey, Rocky Fork, W. Va.

DEAR CADETS: I am a farmer girl 20 years of age. My ambition is to make some farmer a good wife and nice housekeeper. I would like to exchange letters and photos with the Cadets.—Bettie Travis, Dover, Tex.

DEAR CADETS: I am a girl 18 years of age, and live on a farm of 160 acres. We have 5 horses, 6 cows, 150 sheep and 200 chickens and guineas. I enjoy getting long and interesting letters and cards from the different states. I will answer all letters and cards, and would like to exchange photos with any Cadet.—Emma De Peel, Martin's Creek, Pa.

DEAR CADETS: I am an orphan girl 15 years old, and live with my brothers on a farm. We take UP-TO-DATE FARMING and think every farmer ought to take it. It is certainly a grand thing for young people to exchange thoughts with one another all over the United States, and I will be glad to hear from any of the Cadet boys and girls, and I will answer all cards and letters I receive.—Lillie Mae Walker, York, Ala.

DEAR CADETS: Here comes a 23-year-old boy from the southwest. I live on a 35-acre farm in the Rio Grande Valley, near the Las Cruces, New Mexico. We raise here corn, wheat, oats, barley, beans, cane, and lots of alfalfa hay, which is our main crop. We have 1,200 grape vines and about 250 fruit trees. Our lands are the best irrigated lands in the southwest. The government is constructing a reservoir eighty miles from El Paso, Tex. This is known as the Rio Grande Project. I take UP-TO-DATE and I do enjoy reading the Cadet letters. I will gladly answer all letters or cards I receive from the Cadet boys and girls.—Elfego Lopez, Dona Ana, N. M.

DEAR CADETS: Can you make room for a farmer girl from Idaho who would like to become a Cadet of Equity? I am 18 years old and live on a farm of 160 acres. We have 14 horses and one cow. My father takes Up-to-Date Farming, and likes it fine. I enjoy reading the Cadet page there are so many good letters in it. I want all the girls and boys to write to me. I will answer all cards and letters I receive.—Blanche Killian, Lorenzo, Idaho.

Letters Crowded Out

We wish our young readers to know that the letters not printed are as well written and as interesting as those that are. Lack of space is the only reason for omitting them. Those wishing correspondents in their localities should write them the same as if their letters had been printed.—Ed.

President, A. Y. Satterfield, Sterling.
Secretary, O. E. Scott, Shelley.

Oklahoma

President, P. H. Thomas, Shawnee.
Secretary, J. A. Harmon, Shawnee.

Oregon

President, Wm. Schulmeric, Hillsboro.
Secretary, F. G. Buchanan, Oregon City.

J. A. Everitt, Pres.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

"Development of country life in the United States is the greatest problem facing the nation today," is the opinion expressed by Walter N. Page, U. S. ambassador to Great Britian.

—o—

"We have just passed through a period of organization of the machinery of the modern world but the country has been left out. Now we must build it up. We all know that in the coming centuries as in the past, the character and virtues of American life must come from the soil," he declared.

—o—

Ten years ago we called the attention of the country to the fact that agriculture was not making progress in twentieth century business methods as other industries were, and we urged farmers to follow the example of others and organize along practical and sound lines to protect and advance their interests through a co-operative exercise of their power to the end that the agricultural industry would be more definite and profitable and country life bettered and developed.

—o—

Then the people who were satisfied to leave farmers in their helpless condition, so the products of their labor could be made the subjects of gambling and exploitation said: "it can't be done," and "farmers are satisfied," and "farmers are doing well enough now," and "farmers are too ignorant of business and can't co-operate."

—o—

But the claims were not true. Farmers were not satisfied then, and they knew they were often being deprived of just rewards for their toils, and they were not too ignorant of business. But they had been disappointed so often in former co-operative attempts, because the objects and plans were not practical and sound, that they lost confidence in their ability to do for themselves what other classes of people had done. They were apathetic. They knew things were not right, but they did not know how to make them right. Therefore, they did not concern themselves as they should, which was interpreted to mean they were satisfied, or, at least, that they were careless and indifferent about their condition.

—o—

Farmers then, as now, knew that while others were organizing and consolidating their several activities into unity of action—co-operating—they were standing still. They knew they were at a great disadvantage whether considered as business men or laborers. They knew something was wrong when crops would perish in their fields while consumers were complaining of high prices in nearby or faraway markets; when a big crop brought them less money than a moderate one, or when a crop of corn brought them forty cents at the beginning of the marketing season, but those who held got seventy-five cents before the next crop came; or the next year the person who had sold early at the low price, held and took less at the end of the season. They could not help but see that something affected their marketing that did not affect other people's marketing, because the prices of the things they bought were the same all over, and if they would wait a while they would have to pay the same price.

—o—

But the idea had been sent broadcast by this paper that through the right kind of organization and co-operation farmers could be factors in deciding the prices their own products should bring them. The idea that controlled marketing and wise direction in marketing would compel their prices to be paid, started by this paper, was gradually being accepted and organizations to market, as distinguished from organizations to buy, as formerly, began to increase.

—o—

We believe there has been more organizing done among farmers in the ten years just passed than was ever done in the country before in the same length of time. The apathy of the farmer, and his apparent unconcern have passed away and thinking farmers and other people who think, see that farmers are thoroughly aroused and they are seeking for the way out of darkness into the full light of practical, successful co-operation in their business matters.

—o—

Remember, at first farmers did not have the co-operation of other people to organize. The other industries that had solved their business problems through sound organization and successful co-operation did not come forward to help farmers to do the same. On the contrary those people who were members of organizations, and which they could not be persuaded to give up for any consideration, uniformly opposed the proposition that the farmers of their community should organize. Organization and co-operation was good for them, but, as they would have the farmers believe, it would be bad for the latter.

—o—

But organizations of farmers have sprung up all over the country and it is now evident that there is no way to stop it. So the efforts of certain classes of people whose very existence in business depends on keeping farmers, producers only and not business men, to control the marketing of their products, have changed their tactics from open opposition to organization, to pretended co-operation.

—o—

Mr. Page says, "the country has been left out. Now we must build it up." Great and good men from the President of the United States down agree that "something must be done for the farmers," so, while we agree with Ambassador Page that the greatest problem facing the nation today is "development of country life." It is of the most vital importance that the development be along wise lines and that the people leading in the organization of agriculture and the development of country life are truly the friends of farmers and have no selfish or ulterior motives to preserve or to promote.

—o—

We mean by this that now is the time to analyze every activity under way or proposed to develop country life, to determine whether the development will be along lines and to the end that life in the country will be come the ideal life as God intended it should be and as it must be if the highest character and the grandest virtues of American life come from the soil.

—o—

No business is satisfactory where honest, well directed effort does not receive a financial reward sufficient to allow a family to live as well and enjoy as many of the beauties and pleasures of life as are enjoyed by families associated with other lines of business. Agriculture, as it measures up for the AVERAGE farmer is notoriously unsatisfactory from a profit viewpoint. **Therefore to develop the right kind of country life, the first consideration must be to make it certain for financial reward with sufficient profits.** We cannot do better than to measure all movements by this standard.

—o—

We mention some of the movements now under way as follows:

1. The county farm expert.
2. The Lever bill (now in Congress).
3. The Department of Rural Market Service of the U. S. Department of Agriculture.
4. Rural Credit Banks.

(It is our purpose to analyze all of these movements which will make it necessary to continue this article in future numbers.)

—o—

1. This movement, we believe, was the direct result of the great activity by farmers in organizing. At the bottom of the movement are the boards of trade and grain, cotton and produce exchanges in the leading cities of the country. These institutions became alarmed at the development of farmers' organizations along independent lines. They saw that it was likely to develop into a sound and permanent organization this time so the attempt to control rural organization and direct and establish it along lines that will perpetuate all the present machinery of marketing and price making, including gambling in the products of the farm.

—o—

These institutions are not known in the movement, because they have organized in "The American Council of Grain Exchanges," which, also, is not kept before the public. But the movement is usually referred to as the "Crop Improvement Association." This movement has affiliated with it, in its work, many of the agricultural college, and the state experiment station forces, and grain dealers, and many commercial clubs in the cities. The chief purpose is crop increase and crop improvement. Sometimes it goes so far as to refer to improved marketing, but we have not yet seen any reference to a practical plan to help in marketing. The medium through which it works is the county farm expert. The movement has an official paper called "The County Agent." This, be it noted, is published by the "Society of Rural and Civic organization." From its declaration of purposes we quote this:

A monthly publication for the investigation and dissemination of information regarding scientific agriculture and community development, and the uniting of all agricultural, commercial, industrial, social, educational and transportation interests to co-operate with the United States government, State Agricultural Extension Departments and all others in establishing farm bureaus and kindred organizations in every county in the United States.

—o—

We want every farmer to read the above, in small type, several times. Then ask himself: Did the commercial, industrial and transportation interests wait for the farmers to help them to establish their bureaus? Are farmers represented in their bureaus? Have farmers anything to say about how the commercial, industrial and transportation companies shall run their business? If others had enough ability to organize their own businesses without calling the farmers to help them should we conclude that farmers have not enough intelligence and business ability to organize their own bureaus and be independent in attending to their own business?

—o—

We have always contended for absolute freedom and independence by farmers in their business organization. We have always claimed that, a practical plan being furnished them, farmers had enough intelligence and enough business ability to build, operate and own their own business system for marketing and everything else.

—o—

If it is true, as we said above, that, to develope country life agriculture must first be made certain for financial rewards and sufficient profits, then can farmers expect unselfish help from the boards of trade and grain and other exchanges, whose very existence depends on uncertainty of prices and the ability to exploit the farmers' products? Certainty of financial reward means steady, definite prices for farm crops. Gamblers in farm crops and those who prosper solely because of the uncertainty of prices and the helplessness of producers to control their produce and name the prices will not do anything to kill their own business. Give steady prices for farm crops and it will be as impossible to speculate and gamble in them as it is in machines made by the International Harvester Company, or in any commodity controlled for marketing and priced by the producer thereof.

—o—

It is not reasonable to suppose that this movement is to solve the great marketing problems for farm products to bring about steady and profitable prices, the only way we can develope country life and make the country the ideal place to live. But it is reasonable to infer that these people saw the hand-writing on the wall; they saw the dissatisfaction among the farmers and they saw the organization that was being effected. Then they entered the field, not to help farmers to establish a sound organization of their own and an economical, definite marketing system, but to perpetuate themselves in doing the business of marketing while farmers continue as laborers only, to produce.

—o—

We regret to see the agricultural colleges and experiment stations so generally enlisted in this movement. We believe they have not analyzed the whole thing, therefore, we might put the same questions to them that we asked the farmers. If it has come to a pass where the farmers must look to

the boards of trade and produce exchanges for bureaus and a business system, then we may say, in the language of the old writer, "Abandon hope all ye who enter here," and the development of country life, and the making of the country the ideal place to live will be a vain hope.

—o—

As opposed to the "uniting of all agricultural, commercial, industrial and transportation interests in establishing farm bureaus and kindred organizations read this preamble of The Equity Warehouse Company, established at Portland, Ore.:

The object of the Equity Warehouse Co. is to save the members of the Farmers Society of Equity, through a market system of their own much of the waste of the old system; to secure profitable prices for all farm products, to do away, insofar as practicable, with all handlers between producer and consumer, to establish and maintain brands or grades of products and label them, and by a system of inspection to standardize the products of the farm. Also to establish canneries and cold storage houses so the surplus products ,if any, may be preserved against the time of need.

—o—

We believe there is no class of our people or any group of classes that should have any lien on the organization that is coming for American agriculture. We are opposed to the government even, singling out agriculture as the special mark of its paternalism and we disapprove of the idea that the Department of Agriculture should become the center of intelligence in reporting crops and demand and directing the marketing of crops. We do though, again strongly urge farmers to complete the marketing system of their own, that is well begun and which is proving successful, to be under their exclusive control and operation.

—o—

There are no people as well qualified to manage the affairs of farmers as the farmers themselves.

—o—

The future of American agriculture rests entirely with the farmers. They can shape it as they will **or they can let others shape it as they will.**

—o—

We believe the only way to organize agriculture for the farmers is to begin at home and organize the county units and join them all in a national clearing house.

—o—

If you agree with us, send the coupon and organize your locality now. It will be easy. The names we want so headquarters can help you. We will send a bundle of this paper so you can point out this article and have your neighbors read it.

—o—

This article will be continued.

Geneva Local Making Good

B. F. Walton, organizer for Humboldt county, Nebraska, sends good news from the local at Geneva. L. W. Myers, president of the local, shipped a car of corn at good advance over local prices.

Cecil Wilson, a member, sold a car of wheat through the Society's system and obtained a premium of $35 over the home price. M. L. Summers, another member, also shipped a car of wheat, which brought him $30 net, above the local dealers' offer.

This local was organized in June, 1913, and the secretary has sold for the members, during the month of July, six cars of wheat at from $30 to $50 extra profit a car. Let the good work go on. The farmers are entitled to all they can obtain for their products and organization is the way to get it.

More Idaho Co-Operators Incorporate

Four locals in the Marsh valley, Idaho, are incorporating under one head, under the name of Marsh Valley F. S. E. Produce Exchange. Capital stock, $10,000. Shares, $10 each. No man to own more than twenty shares and all stockholders must be members of the F. S. E. Headquarter will be at Arimo, and a $6,000 elevator will be constructed. Several hundred dollars worth of stock has been subscribed, and a board of directors chosen. The names of the contracting locals are: Arimo, Robin, Marsh Center and Hawkins Andrew Shumway is president of the incorporation, and Winslow Farr, secretary. This enterprise should be loyally supported by the membership.

Centralizing the Marketing

I attended a recent meeting of the Baldwin County Union. One subject discussed interested me very much, i. e., the extension of the territory in southern Alabama, and the "hooking up" of the sevover the idea.—D. C. McConn, Organizer for Mobile County, Ala.
eral counties in one district under one management. I gave a talk on this subject and the members seemed enthusiastic

Three Counties Will Combine

Mobile and Baldwin counties, Alabama, and Escambia county, Florida, held a joint meeting to consider doing the marketing of the three counties under one head. Mobile and Baldwin counties are already marketing together.—Foley (Alabama) Onlooker.

St. Louis in Need of Potatoes

The potato crop in Missouri suffered much on account of drouth, and the quality is said to be poor. Members and locals having eating stock of good quality will find St. Louis a satisfactory market. Write the Equity representatives, A. J. Nierman & Co., St. Louis, for latest quotations.

Crops Short—Must Buy Feed

We are very dry here—crops not half normal, and will be compelled to buy feed for our stock. If I am successful in organizing a local it will be a great help, as we can then buy our own feed direct from other members who have a surplus, benefiting both them and us. Bennett S. McElroy, Readfield, Kas.

Wants to Work Four Counties

I am sending application for the four counties of Jackson, Harrison, Hancock and Pearl River, for a starter. I expect to put in all my time. I have been a public speaker for twenty years.—W. H. Wright, Loxley, Ala.

Indianapolis Wants Cabbage

The American Brokerage Company, of Indianapolis, Ind., wants to buy from 100 to 150 carloads of good cabbage. Readers having cabbage should get in touch with them without delay.

Guaranteed Rupture Holder On 60 Days Trial

Won't Cost You a Cent if the Two Months' Test Doesn't Prove All Our Claims

You can make a thorough 60-day test of this guaranteed rupture holder without having to risk a single cent. We'll make one especially for your case and let you see for yourself how it takes all the misery out of being ruptured.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.
Box 778—Cluthe Co., 125 E. 23rd St., New York City

Get Latest Factory Prices On EDWARDS STEEL SHINGLES

Cheaper than wood, much easier to put on, 4 times as serviceable—can't **rust, rot, leak** nor **burn**—$10,000 Indemnity Bond against lightning loss—come in sheets of 100 shingles or more. Letters from wheat growers, representing the entire winter wheat section, prove that we have the most wonderful wheat ever grown. If you want to make more money from your wheat send the coupon.

Read what others have done. You can do as well. Save money at the start and make big money in the end.

55 BUSHELS PER ACRE

I sowed one acre of the new wheat according to instructions, on the 10th of October, 1912. It stood the winter well and in the spring soon led all others. The straw grew 4½ feet tall, stood up well and when threshed it yielded 55 bushels. **This yield has beat any wheat ever raised in our section of the country.** Its fame spread all around and people came a long distance to see it. **I cannot furnish seed for all who want it.**—Charlie Houser, R. R. 3, Henry, N. C.

TWICE AS MUCH AS OTHERS

I sowed two acres of the new wheat on the 10th of October last fall. It grew faster than any other variety of wheat I ever raised. Stood the winter perfectly, better than other varieties. Yield is about twice as much as other varieties of wheat that I have will yield. I consider it an extra good wheat for medium soil.—J. B. Tomlinson, Culleoka, Tenn.

EVERYBODY IS ASTONISHED

I sowed three-fourths of an acre of the new wheat. It stood the winter better than any other wheat and there is nothing to compare with it in vigorous growth in the spring. Everybody is astonished at the way this new wheat grows. It will **outyield any wheat that I ever saw in this state.**—Eugene Burford, Palestine, W. Va.

BEATS OTHERS BY HALF

I sowed three-fourths of an acre of the new wheat October 1, 1912. It beats all other varieties in hardiness to stand the winter. This wheat has proven with me to beat any other wheat by a half, and I want to sow all that I raise this fall.—Jas. T. Cregger, Chatham Hill, Va.

MORE THAN DOUBLES OTHERS

The new wheat received from you was sown on one and three-fourths acres of ground about the 12th of October. In the spring it more than doubled other varieties in vigorous growth, and in a manner, is fly-proof, as the balance of the field was sown with another variety, and the fly killed one-third of it. It did not hurt the new wheat at all. It stands up the best of any wheat I ever saw. It will yield more than double as much as other varieties. Some heads have fifty to sixty grains each. **The wheat has fulfilled every claim made for it, and more too.** Every person who has seen this new wheat wants to raise it.—Geo. L. Orndorff, Bunker Hill, W. Va.

BEST PIECE IN NEIGHBORHOOD

I sowed two acres of the new wheat on October 10, 1912. It was the best of all to stand the winter, grew four to six feet high, stands up well. It will yield at least one-half more than other varieties. It is the **best piece of wheat in this neighborhood.**—Larkin Willis, Kyles Ford, Tenn.

IT IS "MARVELOUS"

I sowed four acres of the new wheat according to instructions, on October 5, 1912. This was late to sow, but it stood the winter as well as the best. As to its growth in the spring, I know of no other word to express it better than **"Marvelous."** I estimate the yield at 25 bushels per acre.—H. H. Flint, Greensburg, Ind.

50 TO 60 BUSHELS PER ACRE

I sowed one-half acre of the new wheat. The yield is estimated at 50 to 60 bushels per acre. Compared with other varieties **it beats them all.** It is the purest wheat of all and there will be a demand for seed. I just want to say that it is the **finest wheat ever raised in this neighborhood.** My neighbors say it is the finest they ever saw.—Larry Sowash, Amboy, Ind.

HAS EXCEEDED MY EXPECTATIONS

I sowed three-fourths of an acre of the new wheat according to your instructions on October 5, 1912. This was late for our section and it did not get much of a start last fall, but was very hardy in the winter. In the spring it soon made far better growth than most any other variety. It grew three to four feet high, and **will yield far ahead** of other varieties grown under similar conditions. This wheat has attracted much attention in this section. There were 50 to 60 heads from some grains. One of our threshermen visited this part and said that he **never saw larger heads.** It has exceeded my expectations.—O. V. Burt, Rexburg, O.

ONE ACRE EQUAL TO THREE

I sowed one acre of the new wheat in October. It made a good growth in the fall and stood the winter as well as not better than the others. In the spring it soon took the lead of other wheat sown in the same field. The one acre of the new wheat will make as much grain as three acres of other varieties.—W. J. Willis and Son, Kittyton, Tenn.

AT RATE OF 63½ BUSHELS PER ACRE

I sowed only six-tenths of an acre with the new wheat, the first week in October. It made a good growth in the fall and far excelled other varieties in standing the winter. It grew five feet high, stood up extra well and the yield was at the rate of 63½ bushels per acre, which is **fully three times more than other varieties** of wheat yield through this section. The wheat is perfectly pure. There will be a demand for seed of this wheat through this section.—H. B. Austill, Booneville, Ind.

ANOTHER PROFIT

Every bushel of this new wheat that is harvested in 1914, will be in demand for seed at high prices. This is another opportunity for profit over the increased yield.

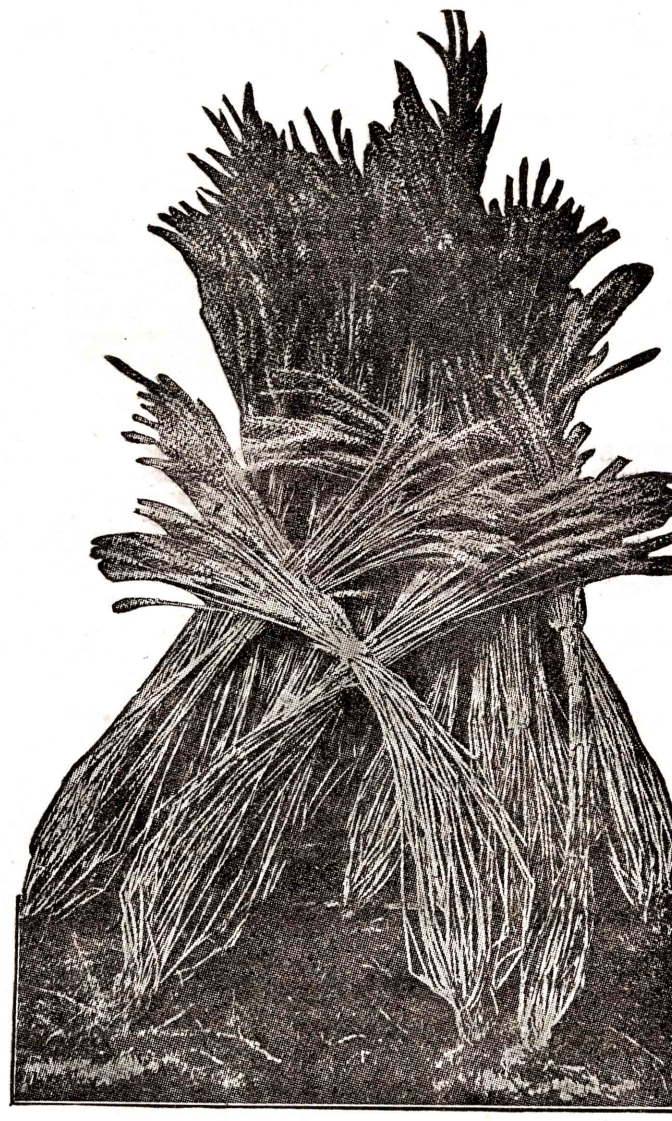
Mr. Wheat Grower—Everywhere

To sow 10 acres of wheat you will take 20 bushels of your wheat, clean and grade it down to 15 bushels, and sow 1½ bushels to the acre. Correct, isn't it?

Sell the 20 bushels at market price—$18. Keep $5.50 and send us the balance, $12.50, and we will send you a new variety to sow the entire 10 acres that will yield you much more than your own seed will.

EXAMPLE

20 bushels of your wheat at 90 cents	$18.00
Our proposition, wheat for 10 acres	12.50
YOU SAVE	$ 5.50



FIFTEEN STOOLS OF THE NEW WHEAT. EACH STOOL HAS OVER 1,000 GRAINS. THIS IS OVER 1,000 GRAINS FROM ONE GRAIN.

No, don't send us any money, but send the coupon below for our full proposition.

You're Skeptical? Well we don't blame you. But many others have done this very thing. So send the coupon and get our proposition if you are going to sow any wheat this year. The only expense to you will be a postage stamp.

If you are a wheat grower you should not wait a minute, but send the coupon before you lay this paper down. Get our whole proposition. It means money saved right now and more bushels of wheat after next harvest. Whether you intend to sow one acre of wheat or many, this ought to interest you more than anything else printed in this paper.

O. K. SEED STORE

Dept. A 7 **Indianapolis, Indiana**

Change your seed wheat, get new blood, life and vigor. Increase hardiness, productiveness and quality. Save money

BEATS EVERYTHING IN WAY OF WHEAT

I sowed one-half acre of ground to the new wheat, September 25, 1912. In the spring it outstripped every other variety of wheat growing in this section. The straw is 4½ feet high and stood up perfectly. This wheat beats anything that I ever saw in the way of wheat. I gathered some heads with 50 grains and upward. **I am highly pleased with the wheat.**—A. C. Leech, Salem, Mo.

CROP ENGAGED AT $5 A BUSHEL

The new wheat was sown on two acres of ground on September 25, 1912. It was not winter-killed in the least. No other wheat grew any better in the spring. **I estimate the yield at 50 bushels per acre,** which is much better than any other variety around here. All that I will have to sell is already **engaged at $5 per bushel.** I think it is the greatest variety of wheat ever introduced into this country. Dozens of my neighbors have seen my wheat and pronounce it wonderful.—J. H. Myers, Atchison, Kas.

MUCH BETTER YIELDER

The new wheat grew fine last fall and in the spring. As near as I can estimate the yield it was at the rate of **40 bushels per acre.**—W. W. HYLTON, Buffalo Ridge, Va.

WILL YIELD DOUBLE ANY OTHER

The yield is estimated at **40 bushels per acre** and it will **yield double** any other variety about here. I regard the new wheat as the **best I have ever sown.**—Hugh S. Espey, Rising Sun, Ind.

MORE THAN YOU CLAIMED FOR IT

The wheat is all that you claim for it and more too, as I gave it a very poor chance just to see if it was a hardy variety. The new wheat threshed 20 bushels per acre, while other varieties are threshing out 10 to 12 bushels per acre.—M. C. Franklin, Jefferson City, Tenn.

YIELD TWICE AS MUCH AS OTHERS

I sowed one-half acre of the new wheat. It stands 5 feet, 6 inches in height, with heads bent downward and just full of wheat grains. **It has about twice as many grains to the head as other varieties.** It will yield from 30 to 35 bushels to the acre, which is about twice as much as other varieties this year.—C. S. Manning, Elizabethtown, Pa.

FOUR TIMES AS GOOD AS MY OLD KINDS

I sowed seven-eights of an acre of the new wheat and the yield is 30 bushels from this plat. Stools of thirty to forty stalks were common. This new wheat is four times as good as my old kinds.—H. G. Ayre, Bradley County, Tenn.

I WILL NOT SOW ANY OTHER KIND

The new wheat was more hardy than our native wheat, and in the spring started off and was away ahead of any other wheat around here. The yield was at the rate of 30 bushels per acre, which is one-third more per acre than any other wheat. It is a great stooler. I counted 42 heads from one grain. I will not sow any other kind this year. **I am well pleased with** it and have highly recommended it.—Oscar Harvey, Arkport, N. Y.

WILL PRODUCE DOUBLE AS MUCH

I sowed the new wheat obtained from you on seven-eighth of an acre, on October 3, 1912. It started out with an extra growth in the fall and stood the winter forty per cent. better than other varieties. It **excelled all others in growth in the spring.** Average heighth 4½ feet. It stood up extra well, and will produce double as much as other varieties in this section. I sowed the wheat on thin land and the test is very pleasing to me.—Sumner Flippin, Lafayette, Ind.

Will you spend a stamp to save money and increase your next wheat crop?

Spend a stamp, send the coupon and get full particulars. Write to any of the people whose letters we print if you want to but they will sow all of their wheat or sell the surplus to their neighbors. It will be years before much of this wheat will reach the mills because it will be in demand for seed as no variety ever was before. We will be glad to hear from every wheat grower so we can send full particulars and place our proposition before them. Mailing this coupon places you under no obligation but, if you grow winter wheat investigate now

FOR BETTER WHEAT MAIL THIS

O. K. Seed Store, Dept. A, Indianapolis, Ind. please send me without any obligation on my part to buy, your proposition on seed wheat as advertised.

DANGER! Beware of Worms in Your Stock

Note this Appalling Yearly Loss!

How Much of this Gigantic National Waste Comes Out of Your Pocket?

Worms in farm animals are about as common as weeds by the roadside. You don't see them so plainly. You may not even know they are there, but official records show that nine out of every ten animals have them. They come from the eggs and larvae that are dropped in the pastures, and picked up by the animals in grazing and drinking.

Government Report
Approximately
$25,000,000.00
Stock Losses
-Yearly-
Directly or Indirectly
Due to
Worms

SalTone Will Surely Save All Your Animals

You can't prevent the worms from getting into your animals, but you **can keep them from staying there**—absolutely. **SalTone** is a stock tonic, wormicide and conditioner that is absolutely guaranteed to drive out all stomach and intestinal worms, and keep them out as long as the animals can reach it. Now, honestly, can you afford to pour expensive feed into wormy animals, and have the worms get fat, while your animals half starve, make no growth, sicken and maybe die? If you have money to throw away, throw it to the birds, but don't feed it to worms. Don't think you can't afford **SalTone.** You can't afford NOT to use it. One penny's worth will keep a hog or sheep in fine shape for 12 days, or a horse or steer for four days. **SalTone** gives them appetite, makes them gain flesh on less feed, tones them up and keeps them in condition to resist the attacks of cholera and other diseases that cause the farmers millions of dollars of loss every year.

The Stock Conditioner and Tonic

SALTONE TRADE MARK

The Great Wormicide for Stock

VISIT OUR STATE FAIR EXHIBITS—There will be SalTone exhibits, and a showing of prize winning Hampshire Hogs, from the SalTone Stock Farm, at the Indiana, Illinois and other State Fairs this fall. Let's get acquainted. Come around and make yourself at home. Bring your folks along, too. We're going to hold "open house" all week. Don't fail to come.

Try It 60 Days at Our Risk

Send the Coupon—NO MONEY!

We want to send you on approval 100 pounds of SalTone (or more) and give you 60 days to test it out. Give it as directed and at the end of that time tell us your experience. If it does not do as we claim, it will cost you nothing but the nominal freight charge. If it does, it will make you ten, perhaps a hundred times its cost. Don't take chances but TRY SalTone, because you risk nothing. You have everything to gain and nothing to lose. We leave it to you to say whether it does all we claim, and there will be no kick from us if it fails. Sign and mail the coupon TODAY.

The John E. Robbins Co., Greensburg, Ind.

READ the Experiences of these Farmers Who Accepted Our Offer

I received your SalTone and have given it a fair trial, and find that it does all that is claimed for it. I do not expect to be without SalTone again.
W. M. McMillan, Albany, Mo.

I want to say that SalTone is all you claim for it. I have not had a sick animal since I commenced to use it. SalTone sure removes the worms and keeps stock in a healthy condition. I recommend it to all.
Oscar Robards, Robards, Ky.

SalTone is surely great. I saved a bunch of 30 hogs that certainly would have caused me loss without it. I would not do without SalTone as long as I had a hog on my farm.
Louis Kautz, Higginsport, Iowa.

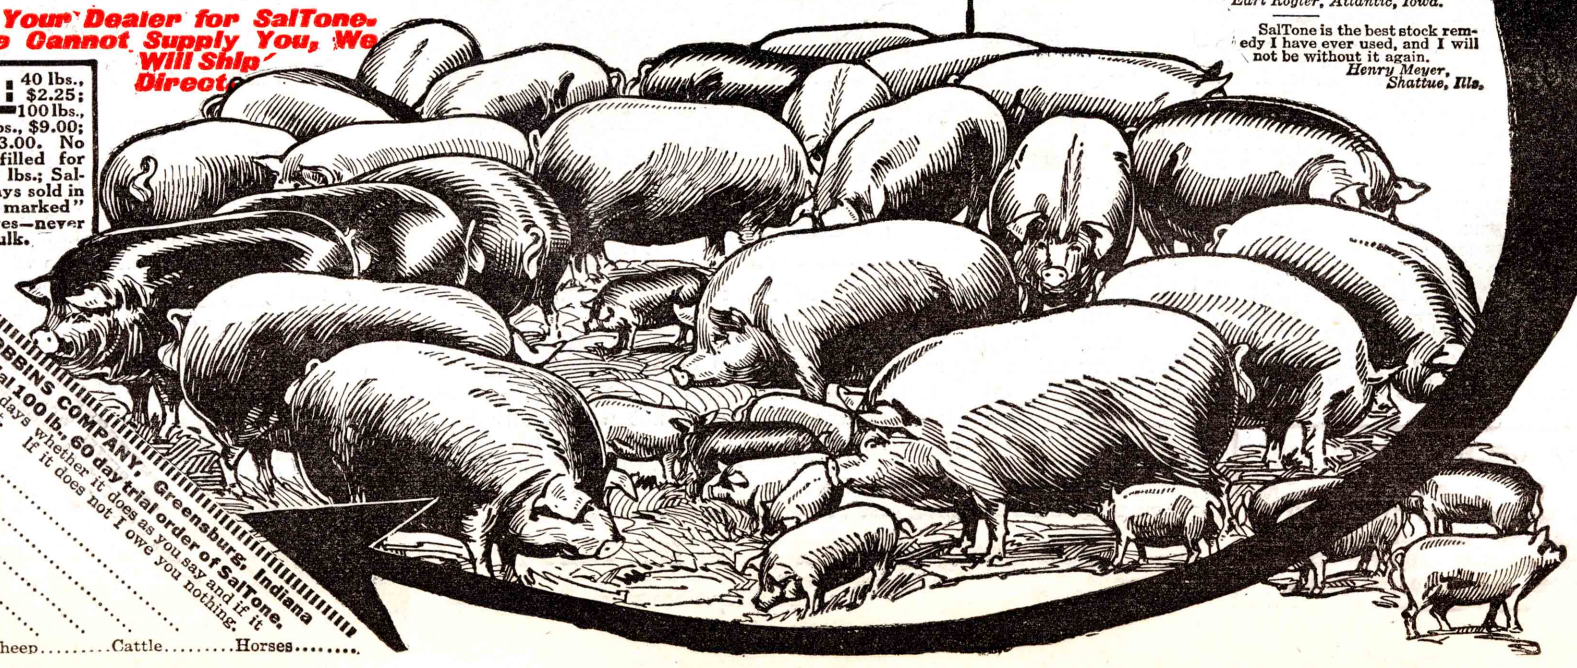
I feel quite an interest in SalTone because before buying it I tried a similar remedy that proved not half as good. SalTone is "A1", and it has made my animals look many times better than they ever did before. I will never be without SalTone again, and will recommend it to all my neighbors.
Albert Miller, Batavia, N. Y.

Enclosed is my third order for SalTone. I have a car of 240 pound April barrows ready to ship. My hogs have never wintered better. I have fed SalTone long enough to know it is well worth the money, and I will recommend it to my neighbors.
Earl Rogler, Atlantic, Iowa.

SalTone is the best stock remedy I have ever used, and I will not be without it again.
Henry Meyer, Shattue, Ills.

Ask Your Dealer for SalTone. If He Cannot Supply You, We Will Ship Direct.

PRICES: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00. No mail orders filled for less than 40 lbs.; SalTone always sold in "trade-marked" packages—never in bulk.



THE JOHN E. ROBBINS COMPANY, Greensburg, Indiana

Ship me your **special 100 lb., 60 day trial order of SalTone.** I will tell you in 60 days whether it does as you say and if it does will pay for it. If it does not I owe you nothing.

What Dairymen Should Do

Broadening of Plan of Organization the Thing Necessary.

(NOTE: The following is part of an address by Mr. Everitt, President of the Farmers Society of Equity, at Huntley, Ill., on August 23, 1913. The Huntley association is one unit of the Chicago and Elgin dairy district, which embraces parts of northern Illinois, southern Wisconsin and northwestern Indiana.)

* * * I have in my hand a clipping from your official directory. From this clipping I learn of the extent of your organization and of some of the things you have accomplished. But what I particularly note are these statements: "Our organization has not finished its career. It has just made a good start. The possibilities before it are immense. The price of milk is still unjustly low and it is the duty of this organization to effect a just price. Let no one shirk responsibility."

With this statement for my text I will try to point out what should be done by the dairymen of this district to arrive at complete success through organization and co-operation, providing you can avoid the pitfalls that are in the way of every co-operative effort.

Higher Prices Wanted

You have a splendid organization in this community and it is a part of a splendid organization in this district. It is asserted that you are getting higher prices now than almost any other large district in the country, but your object, as stated is to still further advance the price. The object is a worthy one. You are entitled to higher prices. Every condition surrounding the production of milk suggests it. Even the prices paid by the consumers suggest it. But you should not contend for higher prices because the consumer has been forced to pay more than three times the price you receive, but on the merits of your own case. It is not exactly a fair divide of the consumers' dollar that you should seek, but rather a fair wage for your labor, a fair interest on your investment and a fair profit to put in the bank after expenses have been met. This should be your contention regardless of the price the consumer pays.

The Problem

So the problem before you is, how can we get all that we are entitled to for our milk?

The natural answer is, by maintaining your organization and strengthening it and demanding more and sticking together to get the price.

Very good, but I said there are pitfalls along the way that every co-operator travels, therefore, it is of vital importance that the way be charted so that you may know where the dangers are and so they may be avoided. My purpose will be to point some of them out to you.

Competition Nation-Wide

Milk in various manufactured forms is an article of nation-wide commerce and consumption. Only part of the milk produced in this section is consumed in its original state in Chicago and the surrounding country. As milk cannot be shipped an unlimited distance, you can have a practical monopoly for raw milk in this district, and, as far as this home market is concerned, you could compel the handlers to pay all that you feel you should have, providing no more milk was produced than is consumed in this market. But the fact is, you produce a surplus over what the Chicago district consumes. Much of the milk that is produced in this district is manufactured into butter, oleomargarine, cheese, etc., or condensed. These manufactured products find markets all over the country. As a consequence milk produced here comes in competition with milk produced in hundreds of other dairy districts over the country, and in this fact lies one of your greatest dangers.

Buyers Contend for Lowest Price in Any District

It is plain to see that if you set your price higher than the price in other producing sections where butter, cheese, oleomargarine and condensed milk are manufactured, the manufacturers who operate in this district will be at a disadvantage as compared with manufacturers who operate in districts where the raw material is cheaper, when it comes to the nation's markets. Since this is true, you may expect the manufacturers here to fight every attempt you make to maintain a price higher than the LOWEST price that prevails in any other producing and manufacturing district. Please understand this. While the handlers may be indifferent as to the price paid for milk consumed in Chicago, and the surrounding territory, because that is a unit in which they can control the selling price and which other producing districts cannot supply, yet they will always try to force the price down to equal the cheapest producing district in the country, so that the manufactured products made here may be on an equal footing with other manufacturers when it comes to selling in other markets. I do not mean that there should be one price for the milk that is consumed in this district and another price for what is manufactured. Such an arrangement would not be practical, but all of the milk would take the lowest price that may be forced, because of the competition the manufacturers meet.

A Federation the Remedy

From this reasoning it appears that if your organization, which has already compelled higher prices to be paid in this district than in almost any other large district in the country, can force the price still higher, you may produce a condition where the manufacturers cannot pay your prices for raw milk. If that condition arises and if the factories would shut down, there would be such a surplus of milk over what Chicago and the surrounding territory can consume, that you would be entirely powerless to maintain a fair price. So this is a condition that you must guard against. It is clear that the price you can make and maintain for your milk in this district is a price that will not be very much above the price of milk in other producing districts. Therefore, it becomes necessary to have a federation of dairymen. I mean that the dairymen in other producing districts like St. Louis, Kansas City, Minneapolis, Indianapolis, Baltimore, New York, Boston, etc., must co-operate and all set the same prices, relatively, and stand for them, and maintain them when secured.

The Country Ready for Federation

From my knowledge of conditions in the dairying districts over the country, such a movement, if started, will meet with a hearty response and it should not take long to bring about a federation almost or quite, nation-wide. Also from my knowledge of the state of mind of the handlers of milk, and some of them are on the ground here today, they will approve of such a movement and perhaps some of them will help it along. The buyer of milk—and it is the same with buyers of other farm products—is not opposed to paying fair, profitable prices to the producer, if he knows that his competitors cannot buy for less. But what he demands, and what all handlers, except the speculators, want are stable, steady prices at all times and the same price to every buyer. In view of your avowed purpose to demand higher prices in this locality, it is of the most vital importance that the movement to bring about such a federation should be started without delay. With all, or a great many, of the heavy-producing districts brought into a federation for uniformity of business, unity in price-making, and uniform rules for grading and marketing, you will be in a position to demand and get all that you are entitled to, because you will know that you are backed up by your brother dairymen all over the country. Under such conditions you will not need to be afraid of the buyer coming to you with the dire threat to take HIS price or he will close his factory or remove it to another locality, because there will be no other place where he can get raw material at a lower price.

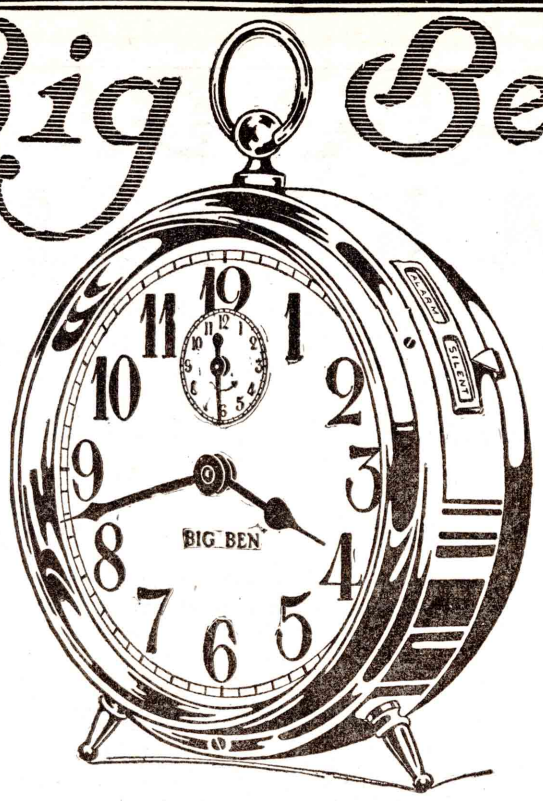
The Danger of Over Production

There is also another danger that confronts you. It is the danger of over-production. Going back to my text, I quote this as your official declaration: "The price of milk is still unjustly low, and it is the duty of this organization to effect a just price."

If milk would be the only crop produced for market it could stand alone and the price could be raised until its production was as profitable as any one desired. But other crops are also produced to sell in this district as well as all over the country. So if we admit that through your milk producers' organization you can force the price of milk up and maintain very profitable prices for a season or two, and should the other products of the farm not be so favored with an organization and co-operative selling, and should they sell at less profitable prices than milk, it would follow as truly as day follows night, that the other crops will be neglected and milk producing will be overdone. So I say to you that you can have no assurance of permanent success of your organization to market milk at profitable prices until the scope of your organization is broadened and it includes other crops, and until you work just as hard and just as wisely to make the other crops equally profitable. One of the banes of American agriculture has been the continual changing from one crop to another, from an unprofitable crop to one that is temporarily profitable, only to see it over-produced, the prices forced down, when the pendulum swings back to the other crop again, only to have the same experience repeated.

A Comprehensive Organization

I recognized these fundamentals in agrigultural co-operation some years ago and gave to the farmers a plan of co-operation through a comprehensive organization for all of the crops, for all of the farmers, and for the whole country. The organization is the Farmers Society of Equity. Your organization here can become, through a provision for federation that we have, a local union, or local unit, of the Farmers Society of Equity and your future efforts and activities would all work to the completion of a national organization, that fully meets the contingencies as already referred to in this address, and which unquestionably confront you, and which you must meet in the near future. The Farmers' Society of Equity will be glad to welcome the milk producers and the producers of other crops. You will find the principles of the Farmers Society of Equity just and sound, its plans of marketing practical and comprehensive enough to meet every requirement of the great agricultural industry of the country and its business system to take care of marketing, already in successful operation.



Presenting TWO ways to get up early

He'll get you up *on the installment plan*, a little at a time, by ringing every other half minute for ten minutes, so you'll wake up *gradually*. Or he'll do the whole job all at once, with one long, straight, five-minute ring.

You can set him to do it as you choose, and *shut him off short* in the middle of his call either way.

That makes him *two good clocks in one*, to suit everybody's taste in early rising.

He plays no pranks. He won't go off before it's time and rob you of your full measure of sleep. He won't go off behind time and rob you of your work time. It's Big Ben's business to run on time, to ring on time and to stay on time.

Big Ben attends to his own business and helps you attend to yours by getting you and the farm hands out early.

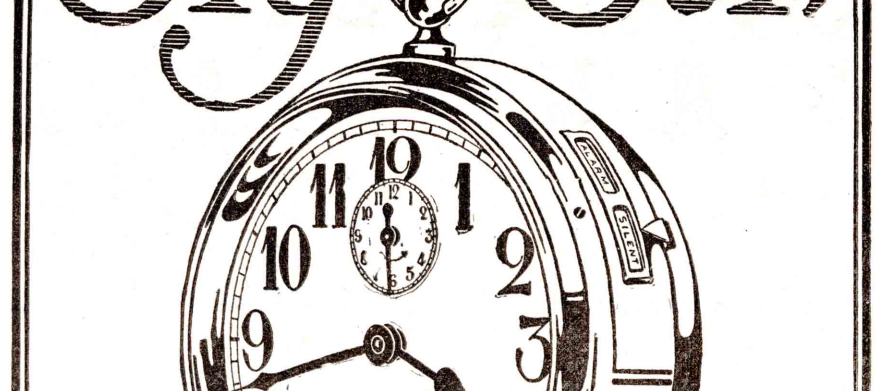
Then he sticks around the house and keeps time all day for the women folks so they can have your meals on time.

There never was a clock that fitted in better with the farm work.

He's triple-nickel plated and so handsome you'll want to keep him in the parlor instead of a bedroom. Stands seven inches tall from the top of his head to the tips of his toes; has big, easy-winding keys, large hands, and big figures that you can read at a distance on dark mornings, and is built of good implement steel so he'll last for years. He's doing this kind of work in 3,000,000 American homes today.

Twenty thousand jewelers sell him—one in your neighborhood, probably. If yours doesn't, just send a money order for $2.50 addressed to *Wesiclox, La Salle, Illinois*, and he'll come to the front door, if the parcel post does, charges prepaid.

I'll Stop Your LOSSES
FROM WORMS



"There is no doubt that Sal-Vet saved my entire herd of hogs. On all sides of my farm other farmers lost nearly every hog they had. I shall always aim to keep "Sal-Vet" or no hogs."
PETER V. CAREY,
Route No. 5
Fairfield,
Ill.

I'll Feed Your Stock 60 Days Before You Pay

I'll SAVE Your Sheep and Hogs

Don't let worms breed contagious diseases among your hogs this year. Don't let them kill off the young pigs and lambs and rob you of your season's profits. You can prevent it if you will just take "a stitch in time." Now is the time when worms get in their deadly work. Now they are breeding—multiplying by the millions in the stomach and intestines and if you don't get the best of them they will surely get the best of you. I'll rid all your stock of these destructive pests. I'll prove it before you pay.

More Proof

"Before I started to feed "Sal-Vet" my hogs were sick and I had lost6 of them; since feeding "Sal-Vet" I have lost none, altho' some of them were pretty sick before they had access to it. They now have good appetites and are thriving."
ERNEST TRIEBEL,
Route No. 2
Clearwater, Minn.

PRICES: 40 lbs., $2.25; 100 lbs. $5; 200 lbs. $9; 300 lbs. $13; 500 lbs. $21.12. No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk, only in Trade-Marked Sal-Vet packages. Shipments for 60 days' trial are based on 1 lb of Sal-Vet for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular size packages.

The Great Worm Destroyer — SAL-VET — The Great Live Stock Conditioner

is a wonder working medicated salt to which your hogs, sheep and other farm animals can run freely and *doctor themselves*. It requires no dosing, starving or drenching. Costs only 1-12 of a cent a day for a sheep or hog and a trifle more for larger animals.

Send No Money—Just The Coupon

Just fill out the coupon at right—tell me how many head of stock you have and I'll ship you enough "Sal-Vet" to last all of them 60 days. Yo simply pay the freight charge when it arrives and when the 60 days are up report results. If it fails to do what I claim, I'll cancel the charge—you won't owe me a penny. Send the coupon now. In changing your address, always give old as well as new address.

INDIANAPOLIS, INDIANA, September 15, 1913

OUR ADVERTISERS—GUARANTEE

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this UP-TO-DATE FARMING stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in UP-TO-DATE FARMING" when writing to the advertiser. Medical advertisements are not accepted.

With the Up-to-Date Farmers

Off to the farm college.

We're all human, but we don't all always act like it.

Faith, hope and charity are good for the farm when applied with elbow grease.

Some folks see only the good in their own possessions and only the bad in others?

Sam Saxon says it depends pretty much on what is inside a man's head as to what goes into his pocket.

Florida has twenty-five demonstration agents, one state agent, and one assistant state agent. Those "crackers" should soon become crackerjacks.

Jack Frost is on his way, bringing his fly swatter with him. Then we can lay ours on the shelf until Jack goes back to the Northland next spring.

Spot Cash is the best way to pay for things, but Spot Cash isn't always around when we want it. Then Spot Cash's cousin, Good Credit, comes in handy.

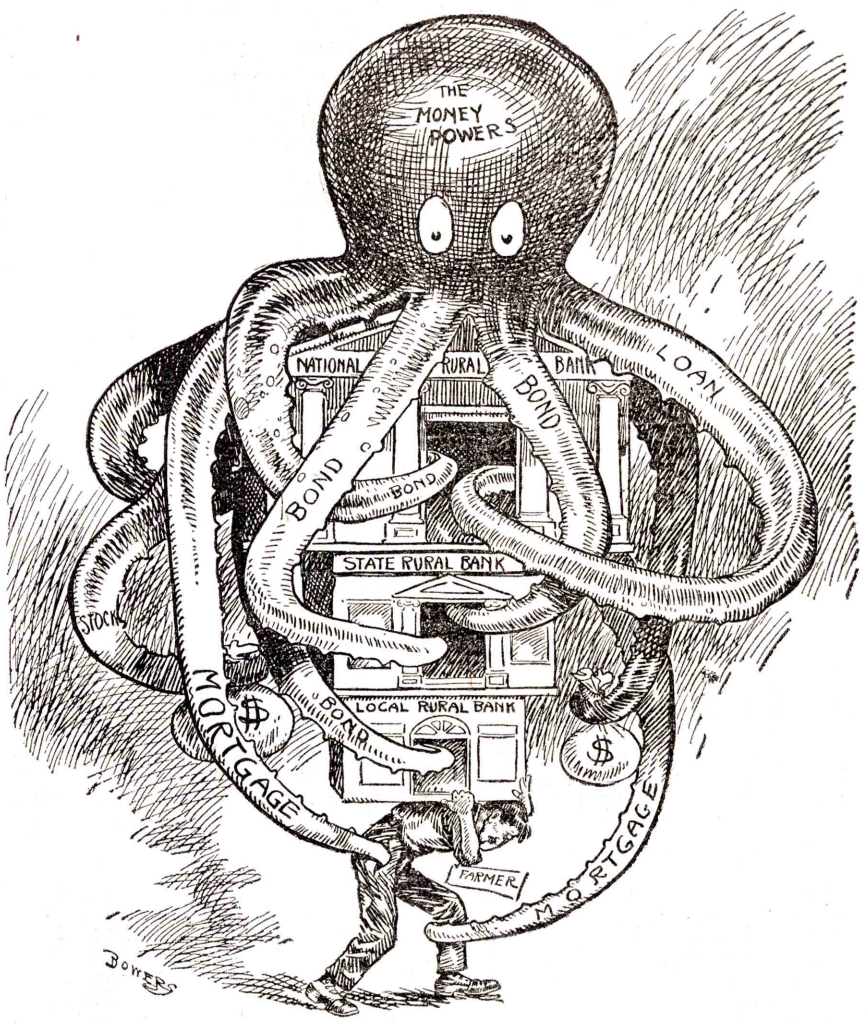
What if the farm women would organize a housekeepers' union and go on a strike for water works, fireless cookers, washing machines and things like that? Could you blame them?

Farming isn't usually very profitable if the farmer and his son cannot make enough during the summer to send the boy to school during the winter.

Iowa farmers are to have a state official architect to show them how to build the buildings needed on their particular farms to get the best results for the least money.

We venture the opinion that the prize pumpkin was an accident rather than the result of breeding and feeding. Nevertheless, let the man have the credit.

Overchecking a bank account is bad business. No honest farmer will do it. But many of them are over-drawing their soil account. Putting back in is quite as important as taking out. Be honest with the farm.



"EVERY NOTE, BOND AND MORTGAGE IS A SUCKER THAT FASTENS ITS TENTACLES ON THE LANDS AND HOMES OF THE PEOPLE."—See "The Farmers' Burden."

Lessons in Co-Operation

Lesson No. 2

The first principle in successful co-operation is to bring together two or more who have one or more interests in common. These people must then agree on a certain method of procedure, and act as one. Each must give something if each is enabled to take something. Co-operation without giving is as impossible as buying without paying. The man who buys a dollar book must give up the dollar in order to obtain the book. Co-operation does not mean that co-operators can eat their cake and have it as well. It does mean that those who buy and those who sell must both pay and deliver, as well as to accept and receive. It also means that they obtain more for their money, and more for their goods, when acting together than when acting alone. A partnership is one form of co-operation. A stock company is another form. Two men loading hay is another form. Any work or business whatsoever where two or more can obtain better results by working together than by each working alone is co-operation.

Community co-operation means that the inhabitants of that community join forces, giving up some individual privilege for a greater individual reward—a reward that can only be obtained in just that manner. In marketing, successful co-operation demands that independent marketing be given up for collective marketing, at less cost for better prices. Every community can obtain such rewards. Are YOU enjoying them?

The Farmer's Burden

THE farmers of the United States are in position to be prosperous as never before. There is a demand for all they can produce, and production with an occasional exception as from unusual drouth and heat in localities as this year and last, or possible floods, is successful and abundant.

But important matters confront the farmers entirely outside of the fields, matters that unless guarded against and overcome, will neutralize their very best efforts and rob them of the prosperity that is theirs by the natural conditions that pertain to their calling.

In the first place, those who do not care to work on the farms covet the profits that belong to farm labor, and have combined to establish a system of buying and selling that enables these few to compel the farmers to take the lowest possible prices for what they produce, and then compels the users to pay the highest prices need and hunger can force them to do. The enormous profits between these two extremes are absorbed by the few that have combined to extort them, and it is no wonder these speculating dealers become millionaires, and that the average farmer finds it a struggle to live, and that the buying consumers often go hungry in spite of abundant production.

To bring this all about, not only the marketing is controlled, but the distribution also. Often products are going to waste in producing communities, while only a few miles away consuming communities may be in actual need of that very stuff. And instances are not uncommon where commodities have been shipped to distant market centers there to be held for a time and then returned for consumption to the very shipping stations from which they went to the distant centers. Why do not the rulers of the country, the guardians of human detiny, take cognizance of these things? This is one matter that confronts the farmers today.

But it is not all. The combined control the uncombined. Many years ago manufacturers and others whose business it was to convert various raw materials into articles of usefulness and demand, were annoyed by the fact that persons of like business in other countries, were willing to accept smaller profits as their remuneration, or could produce the articles at less cost. At all events, foreign manufacturers competed with those of this country and compelled the sale of the commodities at lower prices. These seekers of higher prices, therefore, combined and, under various pretexts, secured the adoption of the tariff duties to prevent the competition, at least to the amount of the tariff imposed.

The people demanded a reduction of those monopolistic features of the tar-

(Continued on Page Eight)

A Three Cornered Quarrel

IN THESE days when organization and co-operation among farmers is being more talked about than any other single topic, it is interesting to watch the movements of the organizations and of those opposed to them. Just now the California Fruit Growers' Exchange is being put to it to defend its methods. As all our readers should know, the United States Department of Agriculture, through its Bureau of Rural Organization and Markets is investigating all the agricultural organizations and associations, co-operative and otherwise, trying to determine, if possible, the strength and weaknesses of the various plans. The department sent a man to California last year to learn all about the methods of the California Fruit Growers' Exchanges. As a result of his report, it has been rumored that the government will recommend this organization and its methods as the ideal plan for a producers' marketing organization, which rumor has roused the ire of the independent shippers of California, who are making a vigorous protest against such action. The independents assert that if the government thinks the California Fruit Growers' Exchange is an ideal institution, getting better prices, giving better service, and performing its work in a manner profitable and satisfactory to its members, why, it is a greatly mistaken government. The independents claim that the "investigator" did not investigate, but instead of going out amongst the growers, circulated around the offices of the exchange, and took the word of the officials for what was being done, and made his report to the department from the data they gave. According to the independents, the exchange handles not more than half the crop; that many members must wait three, four, or five months for returns; that over half the crop is shipped via the "tramp car route," without being sold, and when shipped, no one knows where it will land or how much it will bring; that it often cuts prices and ruins markets to crush the independents, who declare that notwithstanding such opposition they (the independents) obtain as good and even better prices than those obtained by the exchange; that the exchange is a real trust, operating under high-handed trust methods, and under unduly heavy expense, which in their opinion makes it anything but a "model" for a producers marketing organization, and they have gathered statistics and information and submitted the case to Secretary Houston. They formerly made several attempts to start action against the exchange as a violater of the anti-trust laws, but such efforts have been ineffectual so far. This is the independent's side of the quarrel.

The exchange officials stoutly defend their organization and their methods. The following statement from Manager Powell outlines the work of the Exchange from its own standpoint:

The function of the California Fruit Growers' Exchange is to furnish marketing facilities for the district exchanges at a pro rata share of the cost. It places bonded agents in the principal market cities of the United States and Canada, and exercises supervision over them. The exchange business is on a cash basis, and makes prompt accounting of returns to its members. Under the exchange system, every shipper reserves the right to regulate and control his own shipments, develop his own brands, to use his own judgment as to when, where and in what amount his fruit shall be shipped, and the price he is willing to receive.

This reservation is evidently made to protect the exchange from anti-trust prosecution. We imagine very few, if any members take advantage of it, and attempt to control their shipments. For any considerable number of them to do so would be merely a return to individual marketing.

Mr. Powell continues:

The bonded agent in the market acts directly under orders of the shipper, to determine the price (outside the auction market) at which the fruit shall be sold. The exchange acts as a medium through which orders pass from the agent to the shipper, but never attempts to determine the price at which the fruit shall be sold. There is no attempt to regulate shipments, eliminate competition, divide territory or to influence price. It does not consign fruit—it is shipped on order.

The exchange will, of course, defend its existence and operations on the basis of the claims made by its manager. If the claims made by the independents be true, however, no defense can save it. Unless a marketing organization gives satisfactory service to the producers it cannot live.

We have a bone to pick with both sides of the controversy. We do not believe the independents are working for the good of the growers, because, while they criticise the exchange, they offer the growers no other remedy for the losses that must be suffered by producers so long as they market independently. There can be no question but that through some form of a co-operative organization lies the salvation of the growers' profits. Until the marketing is systematized, controlled, and efficiently and economically managed, the growers will continually suffer needless losses. The exchange has attempted to remove the losses, but failed in fundamentals. It professedly fails to attempt to do what must be done, i. e., regulate shipments, replace competition with co-operation, and make sales.

Just so long as there is no such regulation; so long as the exchange and the independents are bitterly opposing each other, fighting for markets and supremacy, just that long will conditions remain such that the best results cannot be obtained. Markets will be glutted, prices cut, expense will accumulate, and the entire trade be in turmoil.

We would not criticise if we were not able to show a better way. The Equity System we teach and are putting in operation will bring order out of chaos, profit instead of loss, harmony in place of war, and replace competition with co-operation. Let all the growers, members of the exchange and the independents, unite upon the Equity plan. Then standard grades and brands will be adopted for the entire production. The growers themselves will meet in convention and determine minimum prices for each grade and brand. The quantity, the quality, and the price will be published to the world. One sales agency, appointed by the officers, or elected by the officers, or elected by the growers, will have charge of all sales for the entire production, including Florida. Buyers may compete, if they like, by offering more than the minimum price, but growers will not compete with each other by offering their product for less, for be it remembered that these prices will not be established by edict, but by considering the total supply, the total demand, and the average cost of production—a fair and honest price for honest goods. The demand, knowing where it can find the supply, and being unable to find it elsewhere, will go to it. No auctions, no "tramp" cars, no glutted markets, no heavy overhead expense, just straight, clean, direct business. With this plan once in operation there will be no shipping on consignments, no waiting for returns, but orders will be given even before the fruit is harvested, and the money will be ready when the products are graded, inspected, and labeled, ready for the car.

Crop Reports by Telegraph

THE national Department of Agriculture is to make a new departure in the matter of crop reports. The different states are to be given by telegraph reports of the crops and their condition within the respective states. The new system is first to be tried in experimental way, and Illinois, Missouri, Minnesota, Iowa, Kansas and Texas have been selected as the states to try the experiment in. The government crop news for each of these states will be telegraphed from Washington to a central point in the state. There the information will be reproduced and mailed to all the newspapers in the state. This information, it is said, may be valuable for use by even the local weekly papers the same week that it is issued by the government.

As we have often said of the reports sent by mail from Washington, we cannot see how even these telegraphic reports can be of much value to the farmers. Granting them correct and reliable, a feature decidedly questionable as the past has clearly demonstrated, they come too late in the season for the farmers to be benefited by them. If they are to avail for good at all it must be in enabling the farmers to correct deficiencies by increasing production or to prevent prospective surplusses by reducing production. We don't care by what means the reports are sent, they can't reach the farmers in time for them to make those corrections. The crops can have no condition to report until they are planted and are in process of growth. Even the acreage cannot be reported until the planting is done, and then it is usually too late to plant more or have less.

The only benefit that can come from these reports is to give pointers on the fixing of prices. The department at Washington understands that, for it admits that "these data are to be supplied for the reason that the condition of crops within a state has more effect on prices within a state than the conditions of the country at large."

Here intervenes the unfortunate fact we have so often referred, to that farmers do not fix the prices on their own stuff. Boards of trade and other buyers in city and country, by co-operative action or the acceptance of action taken by a few that have no connection with farms or farming, make the prices from week to week, or even from day to day, and the farmers must accept those prices no matter what reports they get from Washington or when they get them. Even the telegraphic reports, therefore, fall back into the same grooves worn so deep by the reports heretofore sent by mail, their benefits are for the price-making and buying classes and not for the farmers. It seems that the government cannot, or will not, understand this situation. The only way the farmers can overcome these fatal conditions is to get in position to determine the price at which they will sell their stuff, and have a marketing system that will enable them to hold the products until they get the price. Then the reports will be of benefit to them. Such times can come quickly if farmers will it so.

The Farmers' Chamber of Commerce

EVERY progressive city of any size owes much to its "Chamber of Commerce," and there are few cities of over 3,000 population that have not an organization of that sort. It is the business of such organizations to look after the common welfare of their respective cities from the commercial, or business standpoint.

The entire business of the farms is done in the towns or cities of the country. In these towns and cities the business world has its places of business, and its business men to take care of its interests. Organizations of many kinds have their representatives there. The local grain dealer, and stock buyer are there to represent the great organized interests of their class. The local bankers represents the banking interests, also organized.

But no one is there who represents the farmer and his interests. In the small villages and towns the farmer is supposed to represent himself, but as his welfare is so closely associated with great influences and operations in which he takes no part, and has no influence, he cannot effectively act for himself, or gain any advantages. In the larger towns, market centers, and terminal cities he cannot appear for himself, and therefore has no representative in the places where his greatest business interests lie.

There should be a chamber of agriculture in every city and town, maintained by the organized farmers, and equipped with men and business machinery to take care of the affairs of common interest amongst the farmers. They are as essential to the advancement and progress and prosperity on the farm as boards of trade and chambers of commerce are necessary to the business welfare of the town. What representation do farmers have upon the boards of trade? None whatever; yet, practically all the "trading" done is in products that originally came from the farm.

It is folly for farmers to say they cannot afford to maintain such establishments. They not only indirectly maintain the boards of trade and chambers of commerce already extant, but they directly furnish the members with the means of making individual fortunes. Under the Equity system of organization and operation, the farmers' boards of trade would not only be self-supporting, but would be the means of increasing the profits of every farmer.

The Farmers Should Have It

"The booklet, 'The Crop-Rich Money-Poor Farmer' is to my thinking the best thing in print on the subject of organization, co-operation, and marketing. If every farmer in America would spend part of his evenings for the next six months reading and re-reading this booklet, a social and economic revolution would be on, such as the world has never seen." —Albert E. Jack, Secretary, Milk Producers' Association, Chicago, Ill.

(A copy of the booklet will be mailed free on request to any person interested. Address President, Farmers Society of Equity, Indianapolis, Ind.)

The Simplest Question of All

PEOPLE who live in the cities have to pay too much for provisions, the common necessaries of life. They have to buy them, though, no matter what the price, at least to the extent of their needs or ability. This is the most serious part of it. Many human beings reach the end of their ability, and suffer for lack of proper food, in spite of the fact that there is an abundant supply, and these same deprived people would be able to supply themselves at reasonable prices.

This is a problem not only up to the ruling classes, but to those who advise and assist the rulers. To us the question seems a very simple one. There is an exceedingly bad system of distribution. Concentrated or central marketing has often taken stuff away from the need rather than to it. But this is by no means the most serious part of the problem. The spirit of extravagance has grown up in the higher circles of living. The vast accumulations of money and reckless expenditure has invited high prices, and to keep up with this method of living has compelled dealers to make large profits. This, and not the first cost of the stuff, has caused the high prices consumers are required to pay, and is the parent of the evils, the wrongs, the burdens under which the public, both consuming and producing, are groaning today. The producers suffer as much or more than the consumers, for the spirit of greed or necessity for excessive profits reacts upon the producers or first sellers, and forces the prices paid them to the very lowest point that will induce production either with profits or without.

This statement is a simple one, and it seems to us is easily understood. And it unquestionably points out its own remedy. There must be a different marketing system. The producer and consumer must get closer together. The farmer and his customers must learn to know each other. Distribution must take the stuff to those who need it and when they need it instead of piling it up all at once in distant centers where a few get control of it and pile on profits to meet the requirements of this extravagant period.

We submit to all thinking people, isn't that plainly the condition today? And isn't the remedy just as easily understood? But it takes organization, concentration and co-operative effort to apply it. Organization of farmers and organizations of consumers, and confederations of all such bodies with a united determination to accomplish this one purpose. And it can be done quickly. Think what it means not only to farming, but to the human family.

John Sherman on the Money Question

INFORMATION and opinions on the money question are now eagerly sought. Twenty years ago then Senator John Sherman was an authority on that subject. At times he was considered an extremist, but his views were always respectfully considered. As monetary reform is one of the leading issues of today, it cannot be out of place to consult the authorities of other days whether we approve of them or not. The safe counselor studies all sides of every question. Mr. Sherman was considered a "hard money man," but he was in favor of redeemable paper, and was distinctly opposed to the Cleveland policy of converting the greenbacks and other treasury notes into interest bearing bonds. He believed a deficiency of revenue, the expenditure of more mony than the revenue produced, was responsible for most of our financial ills; that if expenditures were held within the revenue it would be easy to maintain the required reserves and perpetuate a stable financial condition.

In an article published in the Forum for April, 1896, Mr. Sherman gave at length his opinion on this subject, and closed with the following paragraph, emphasizing his views on the money question:

A careful study of the systems of banking, currency, and coinage adopted by the principal nations of Europe, convinces me that our system—when cured of a few defects developed by time—founded upon the bimetallic coinage of gold and silver maintained at par with each other; with free national banks established in every city and town of importance in the United States, issuing their notes secured beyond doubt by United States bonds or some equivalent security, and redeemable on demand in United States notes; and the issue of an amount of United States notes and Treasury notes equal to the amount now outstanding (with provision for a ratable increase with the increase of population) always redeemable in coin and supported by an ample reserve of coin in the treasury, not to be invaded by deficiencies of revenue, and separated by the sub-treasury system from all connection with the receipts and expenditures of the government—such a system would make our money current in commercial circles in every land and clime, better than the best that now exists in Europe, better than that of Great Britian, which now holds the purse strings of the world.

In the same article Senator Sherman expressed a thought on the tariff, particularly as it affects farm products. The question was before Congress then as now, and as now the purpose was to reduce or abolish the tariff on farm produce. In fact that had been largely accomplished, and Mr. Sherman argued, with the figures to sustain him, that to diminish the tariff on farm crops not only increases the imports of such crops into this country, but it diminishes the exports. This disturbs the balance of trade between this and other countries, and as our financial standing with other nations depends upon the balance of of trade being in our favor, the above condition would put the balance of trade against us and thus draw on our gold reserve. However people may view this matter, it is unmistakable that removing the tariff from farm products certainly increases importations, thus adding to a supply already abundant, and reducing the price of such products in this country, and that cannot be other than a direct loss to American farmers.

A Departure in Marketing

TEXAS farmers, the papers tell us, have departed in a measure from the ordinary method of marketing. Arrangements have been made with the Wells, Fargo & Company Express to act as their sales agent. The company is to secure from city customers continuous orders for products to be supplied at stated intervals. These orders the farmers are to fill and the company is to deliver the goods and collect the bills. The prices are to be those fixed by the farmers plus the actual cost of delivery and collection. It is said the plan is working quite well, but there are contingencies upon which its success must depend. In the first place, the orders must be certainly and promptly filled, and in every case the goods must be fully up to the standard. A single failure in either of these particulars would lose a customer. Even these first simple conditions cannot be met without perfect organization of the farmers so as to secure definite and harmonious action; the goods in proper quantities and quality must be promptly delivered.

At the other end of the deal there must also be certainty of action, which is difficult to secure without perfect organization there also. The failure of a single customer to accept and pay for the ordered goods breaks the chain and involves loss as well as disappointment and dissatisfaction among the farmers. There is no way to get goods the farmers may fail to deliver to the company, and there is no way to store goods that may be refused by a customer.

Another weakness of this plan is, that it cannot apply to the main crops, crops that cannot be transported and delivered by express. These are the crops on which farmers suffer most from the present marketing system. As a relief measure, therefore, the Texas plan can be no more than palliative; but it demonstrates that there are different ways of selling, that farmers may get in touch with their customers, that the supply may go directly to the demand, and that some of the toll gates that now rob the farmers practically of all profits may be cut out. But it will take a nation-wide movement to do that effectively, and a movement that will apply to all crops, north, south, east and west. It must take care of the big crops as well as the small ones, and the non-perishable as well as the perishable. This involves a complete knowledge of supply and demand, including where each is and the cheapest and surest means of getting the two together. This can be secured only by a national organization with ramifications covering the entire country, and information both general and local. This requires a system no more complicated than the government weather bureau, or crop reporting board, and being a business proposition when properly systematized it would be absolutely reliable. It would also involve storage so that surplusses could be held by the producers' organization to meet future demands. This would make glutted markets impossible, and it would obviate all danger of a lack of supply at any time during the year.

Such a system we have many times described and shown its practicability and efficiency, and it is the only means that will bring to the farmers the relief they so greatly need. It is the only way to break up the present system that so mercilessly plunders both producers and consumers. But it requires organization, with efficient representatives properly located to attend to every detail. And it is not an experiment. Though as yet lacking the nationality, it is being effectively employed in localities and districts. What a boon it will be to both farmers and consumers when it is made national and to apply to all crops.

A Farm Credit Amendment

THE administration currency bill, now in Congress, was indefinite as regards warehouse receipts, based on agricultural products, being acceptable as a basis for obtaining loans. An amendment was added to the bill, by the House caucus that leaves no doubt on this score. This amendment puts paper based on agricultural products on exactly the same basis as other commercial paper, for banking purposes. It also extends the time on notes admitted to discount to sixty days instead of forty-five days as originally proposed.

This amendment settles one of the greatest controversies in the bill. True, it is nothing more than the banking rules permit now, but it was claimed by some that the bill as originally drawn would exempt stored agricultural products from being a basis for credit on which advances of cash could be made through the banks. It is well known that warehouse receipts for stored agricultural products figure largely in the marketing of such products. For instance, a man or a company of men having several thousand dollars set themselves up to handle grain, cotton, potatoes, eggs, poultry, or any other crop. They buy at current rates, place in storage and receive a warehouse receipt which they take to a bank and borrow thereon well up to the amount they have invested. This borrowed money is then used to buy more of the produce which is stored and the borrowing is done on another receipt. In this way $10,000 of original capital will be made to get $50,000 to $100,000 worth of produce to store for higher prices that come between harvest times.

Some say that the amendment to the bill will give farmers what they need, viz., a way to obtain money on their produce while holding it for gradual marketing, and not be forced to dump it as soon as produced. But they can do this now. The one great trouble with farmers, and the only one, is that one farmer usually has not enough produce to justify storing and getting cash advances when he needs it and they too often neglect to get together and put all this business in one man's hands, as in the case of the present buyers and storers. It is a matter of a simple local organization as we explain in nearly every issue of this paper, or a federation of local organizations in a county or district. It is just as practical for the producers of the stuff to store it and get cash on the spot advances on it, as it is for the people who have been making storing their only business. And just think what it means! Last fall new corn sold around forty cents a bushel. Now seventy-five cents is eagerly paid to the people who stored it a few months. Wheat is selling at country points around eighty cents now. It may, and probably will sell up to $1.25 before the next crop comes. If any part of the 1912 corn crop is worth seventy-five cents a bushel, then it was all worth more than forty or fifty cents. We may say that if the TEMPORARY SURPLUS HAD BEEN STORED BY THE GROWERS THEMSELVES, and sixty-five cents a bushel asked for it, an average increase of about twenty cents, the price would have been paid. Figure what wealth this would have meant to the country. Figure what it would have meant to each farmer on his crop.

Remember now and in the future that warehouse receipts, based on agricultural products, are recognized as high-grade commercial paper and easily affords the way to get cash advances on crops, while still controling them for gradual marketing. This solves the problem of the financially poor farmer, the chief argument against community organization.

It's high time each community has its organization and each county its county federation, for marketing or storing in community or county or district units.

Aid for Seed Growers

THE North Dakota legislature passed a law instructing the state seed commissioner to publish a list of those farmers who claim to grow improved or pedigreed seed of any kind for sale, and to mail such list to any farmer in the state who requests it. Farmers having such seed are instructed to send samples with description of the kind, origin and quantity to the Pure Seed Laboratory, Agricultural College, N. D., where it will be examined, classified and listed.

Along the same line of effort is the American Farmers' Pure Seed Association recently organized. This movement was started by farmers in the vicinity of Worland, Wyoming, with Prof. B. C. Buffum, of great fame as a plant breeder, as permanent secretary. The object is to protect by official stamp and seal the purity of the seed disposed of by its members; to enable the seed-growing farmer to market his seeds to a world market, and to distribute official and reliable information to its members.

Poultry-Keeping Under Difficulties

(First Prize)

When a girl I helped mamma with her chickens and have always loved poultry. When married I was anxious to have a flock of my own. It was three years before we were situated where I could have my hopes realized. We fixed up a little cottage in a field where I could have all the room wanted. I knew nothing about thoroughbreds, but I was very enthusiastic, and that autumn bought whatever I could get from neighbors who could be induced to sell a few. I succeeded in purchasing from one to three from each neighbor until I was the proud possessor of nineteen hens and two roosters, of all sizes and colors. Some were long-legged, some duck-legged, and they were anything but a pretty lot. I gave them plenty of corn and expected to get several dollars' worth of eggs by Christmas. To my great disappointment I found the first egg Christmas eve. From that time on, however, those biddies certainly did their duty. In a very little while every hen was laying. I next made up my mind to raise early broilers, but having started in to lay eggs the hens refused to stop and laid right on until March before one would set. Then they started setting in earnest, and by the middle of May I had taken off every hen with a nice brood of chickens. I had no up-to-date poultry plant. My poultry conveniences consisted of plenty of pens made from half-rotten fence rails, covered with old boards. I raised nearly all of the chickens that were hatched, in spite of the crude equipment, much to the surprise of an uncle who was from the north where poultry had better accomodations. I cut up rabbits and other meats we did not use for them, and beat up all the bones and china I could get hold of. Corn and corn meal was the only grain I fed, but I supplied plenty of pure water. I raised over two hundred chickens, and received from twenty-five to fifty cents for what I sold, and we ate not a few ourselves. I kept fifty of the choicest ones for breeders.

Since then I have become interested in thoroughbreds, and have raised larger flocks of much handsomer fowls, but never a bunch that was as inexpensively raised. The corn fed was the only expense, and the destruction of insects more than made that good.—M. L. H., Shady Grove, Fla.

The Best Berry Invented is a Profit-Payer

(Second Prize)

That Englishman who said the strawberry was the best berry God ever made was everlastingly right. Not only best in shortcake, with sugar and cream, or straight from the stem, but in the market-place as well. There's always a demand, and the better the berry the better the price. A high, sandy loam is the best for them.

It was several years ago we decided to try raising them. We began on a small tract fifteen feet wide by eighty feet long. We limed and manured, plowed and harrowed until the land was in fine condition. We marked off eight rows lengthwise of the patch, took young plants with strong roots, dipped the roots in water and planted with the roots full length in the soil, pressing the dirt firmly. All grew but four. We kept the patch well weeded, going through it every two weeks. We also kept all blossoms cut off the first year. The next summer the blossoms fairly made the patch white. We sold 500 quarts at ten cents a quart, preserved fifty quarts, and ate all a family of five could eat, which you can estimate, Mr. Editor, by multiplying all you think you could eat by five.

While strawberries yield quite a profit, there is not a great deal of work connected with a small farm patch. I think they are the leader for big pay for small space and labor. If weeds are kept out, the patch will bear for several years.—E. E. M., Pennsylvania.

Our Country Contributors

Semi-Monthly Prize Letter Competition: Subject: My Most Profitable Crop

First Prize $3.00 Second Prize $2.00 Third Prize $1.00

NOTICE TO SUBSCRIBERS

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

Expert Hog Raising

(Third Prize)

Mr. Editor, allow me to say I think you have one of the best of farm papers for us to express our ideas. Now let me tell your readers how I care for hogs, which pays me the greatest profit. It costs me from $18 to $25 to feed a sow one year, so my ultimate profit must come from the number of pigs in each litter, and the ability of those pigs to grow rapidly.

About two weeks before farrowing time I begin to feed bran and a spoonful of linseed meal, and feed less of the other feeds. At farrowing time, or from two to four days previous I feed bran only, and never had a sow that did not farrow with ease, though I often have them rolling fat. Bran, moreover, is a food for year around feeding, keeping the system of the animals toned up. Directly after farrowing a few handfuls of bran in clear water is fed, gradually increasing the feed after the second day by the addition of other foods, and bring up to full feed by the fifth day.

When the little pigs are born they should have but little milk at first, or diarrhoea may result. A good preventative is a little alum water or baking soda in the mother's feed. Wean the pigs at from seven to ten weeks of age, taking them off one or two at a time, the strongest ones first. In this way you have an even lot of pigs and no injury comes to the sow. Milk is the natural food for hogs. Give all you can. And keep thrifty, purebred stock.—E. C. S., Arkansas.

Hens that Pay as They Go

It seems to me that what pays most for the least money and labor expended would be the crop most profitable. Counting the outlay, we have made the most money from our flock of Brown Leghorn hens. We have an incubator. Buying eggs, running the incubator, oil, etc., made our 168 baby chicks cost us $11. We then estimated the cost of raising to the "fry" stage at fourteen cents each, when we sold enough fries and roosters to make the six dozen we kept cost us $24, or $4 a dozen. At the age of six months they began laying, and in seven months we sold $108 worth of eggs, besides using $29 worth, at a feed cost of about $45. So they have made us a net cash profit of $72, or one dollar each, and we have the hens left. We credit our success to this: Hens half-fed and carelessly cared for are an expense; but if well cared for, and kept on full feed from early hatching time, the little Brown Leghorn rustlers will make good on the egg proposition.—A. R. B., South Dakota.

Controls His Marketing and Gets His Price

Hogs grown on and sold from my farm have built more fence, paid more debts, and put more money in my pockets than any other product I raise. I have been farming for myself for five years. I range my hogs, feed but once daily (in the morning has been found by experiment to be the best time). When finishing for market I feed twice daily. I alternate my feeds, giving corn at one feed, and a good rich slop at the next. I seldom lose a hog, as I do not wait for disease to appear before taking preventative measures, keeping them thrifty and free from worms and lice. Where I make my greatest profit is in selling. If a good price is offered I sell outright. If prices are low I kill and cure the meat. The price is sure to come up, and I have no trouble disposing of all at a good price. Selling is where the profit comes in. If we arrange to hold our products, the price is sure to come.—J. J. J., Tenn.

The Corn Acre

The most profitable crop I think I ever produced was a crop of fifty-six bushels of corn grown on an acre of very ordinary soil last year. The dry weather reduced the yield at least one-third, or I would have practically doubled my net profits. I broke the land in April, seven inches with the plow and three inches with a subsoiler. Then disced and dragged it into seed bed shape, and planted single grains sixteen inches apart in rows four feet wide, drilling in the bottom of a furrow made by a bull-tongue shovel. After planting I top-dressed with seven loads of stable manure, and harrowed well. Cultivated with a double-shovel, very deep the first time. At the second cultivation I applied 200 pounds of commercial fertilizer. I cultivated between the rows during the dry weather, and this treatment produced my most profitable crop.—M. R. Hayes, Tenn.

A Tennessee Boy and His Corn

Not hearing from Tennessee, I will give my experience in my corn patch. Last year, as a member of the boys' corn club, I decided to try to beat my record for the year before, in the greatest yield at the least expense. I broke my land nine inches deep in the winter. When time came, I rebroke with a disc harrow, and planted flat. During the spring and summer I gave but four cultivations, each one with a cultivating harrow.

In the fall I gathered twenty-two bushels of peas, which sold at $1.50 a bushel, and sixty-four and three-fourths bushels of corn which sold at $1.10 a bushel, making my total sales $103.22. This, by using scientific methods, but no fertilizer of any kind, was the best farming I ever done. Under the old method this same land produced from 35 to 45 bushels an acre.—G., Tennessee.

Corn Acres are Popular and Profitable

I have always declared my intentions of becoming a profitable farmer. My father plants a large area to corn and cotton. On the side, I took one square acre, plowed it early and deep, fertilized with 600 pounds of good fertilizer, harrowed thoroughly, planted and cultivated according to the rules of the best scientific growers, and gathered 105 bushels, which I sold for $1 a bushel, and netted over cost of production, $76 on the acre. It takes education to succeed at farming. One must first know what to do and how to do it. My success is an example for the neighborhood, and will be profitable to more than myself.—G. W. S., Arkansas.

What I Did With Red Clover

I had a field of clover that had been seeded with oats the spring previous. It was cut on June 15, making a hay return of two tons an acre, which was sold for $4 a ton, hay being very low in price here. However, the hay income was $8 an acre. I let the second crop go to seed, cutting in September, and late in the fall had it hulled and secured a yield of four bushels an acre, for which I received $9.10 a bushel. The hulling cost me $1 a bushel. My clover crop, hay and seed, yielded $40.40 an acre. Clover is a good money maker, as well as a fertilizer for the farm—Kenneth Smith, Minnesola.

Ducks That Made Money

In the spring of 1912 I decided to raise ducks, and bought one and a half settings of eggs, placing them under a hen. Fourteen eggs hatched, and I was successful in raising ten to maturity. I fed bread, cornmeal and milk from the start, until August, when they picked their living. The feed cost me but $1. I sold five ducks for $4.50 and kept the others for this year. I now have fifty ducks readily salable at from $1 to $1.50 each. I consider ducks very profitable. —M. G. Flansburg, N. Y. (Note.—This contributor neglected to send his postoffice address. Will he please send it so we can remit the award.—Editor.)

Barnyard Gardening

Having a small back yard full of sand burrs, I concluded last year to try to replace them with vegetables. I spaded the soil and planted tomato seed. I had room for twelve plants. The soil was sandy, and our house being newly built, the earth was full of trash, lime, mortar, etc., and I had small hopes. But by July the tomatoes began ripening and they gave me all the fruit my own and two neighbor families could use until frost. I canned three bushels of ripe ones and at frost had plenty of green ones for pickles.—Mrs. Ed. Rainbow, Battle Creek, Mich.

Dollar Peaches Pay Well

The most profitable crop on this farm is peaches. From eight acres we picked 635 bushels, and sold 540 bushels at $1 a bushel. We had besides all we could use for canning, preserving, pickling, etc.—P. E. Bergman, Kas.

Editor's Comment

Many a farmer's wife is longing for the time to come when she can have a first-class poultry house with all the equipment, fixtures and conveniences advertised in the poultry catalogs and papers. They are all very nice, indeed, and make work with poultry a greater pleasure, and adds to the chances for success. But fine fixtures alone will not make for success. Neither are fine birds a guarantee of greater profits. After all is said and done, it is the management that tells. The Florida lady has proven that good management with poor equipment can win success. The insect diet, so abundant in the far south, contributed no little to the thrift and productivity of the fowls. Insects, we are told, grow all the year 'round in Florida.

Every farm ought to have a good strawberry patch. If used only for the home, strawberries are profitable. All can have them if they try. Just a few simple rules to follow, and Jack Frost and Ned Neglect are the only people who can rob you or this delectable food, unless, perchance, there are bad boys with appetites stronger than morals. But, estimating the yield of E. E. M.'s patch by the rules laid down in his letter, we don't believe a patch of that size could do it. Our storage capacity for strawberries and cream is practically unlimited.

It is a pig's business to make a hog of himself. E. C. S. has a really fine system for giving his pigs a thorough business education and making them business successes. Now, if he could adopt the marketing plan of J. J. J., of Tennessee, he would have an unbeatable combination.—The Country Contributor Editor.

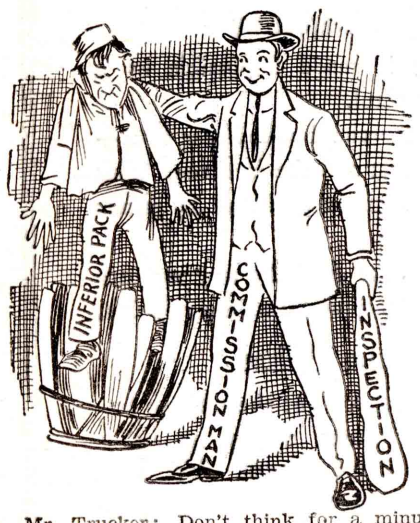
Our Market Review

Semi-Monthly Review of Crops, Market and Trade

THIS summer has shown the great importance of the farmer and his products to the business of the country. When the farmer is IN the market, business of all kinds is on the boom, but when the farmer is OUT of the market, business of all kinds is stagnant. So we find in the drought stricken sections where the crops were destroyed, business of all kinds is dragging and some people in all lines and professions are leaving for other parts. From the others sections, however, come reports of great commercial activities. Thus the northwest, where the rains were the most abundant comes the most favorable trade reports.

Spring wheat, which is now being threshed, while much short of last year, is large enough to make the 1913 wheat crop a record one. The size of the crop is reflected in the large visible supply, over 50,000,000 bushels, which is too large for the comfort of those farmers who are still holding wheat. Encouragement can be taken, though, from the fact that this visible supply is a third less than it was on the same date a year ago, that the visible increased only 573,000 bushels in the last two weeks compared with an increase of 2,205,000 bushels in the same period the year before and an advance in cash price of 5 cents at Chicago to 7 cents at Kansas City. Spring wheat did not share in the advance, but remained practically the same as two weeks before. This is because the buyers and storers know many farmers will sell as soon as they can, regardless of the price. A year before the price was $1.05 at Chicago. There is a falling off in the marketing of winter wheat which is the chief factor in the rising price.

The corn crop is being estimated around 2,500,000,000 bushels. We predict the final figures will be less. The smallest crop in recent years was 1901, with 1,522,090,000 bushels. Kansas, Oklahoma, northern Texas and southern Nebraska are almost bare of corn. Iowa and Missouri have



Mr. Trucker: Don't think for a minute that you can adulterate your goods, or put in inferior quality without being detected. The inferior pack will come to view, and it will look several times as bad to the commission man as it did to you when it went it.

light crops and there are many spots and considerable areas in other states where the crop will be very light to a total failure. The visible is very low (see table). The price is practically unchanged from two weeks before, and 2 cents higher than a year before.

The oat crop estimates have been raised as the season advanced and the northern crops became known. The yield is now placed beyond the billion mark. The visible supply reflects even a larger yield, because it is larger than a year before, when the crop was 400,000,000 larger. The price is about the same as two weeks before and is too low, considering the short crops of corn and hay.

Further deterioration has occurred in the cotton crop in Texas and Oklahoma, while the outlook east of the Mississippi river is generally very good. The price has advanced further as our report shows. The crop is being estimated about two million bales short of last year's, or about twelve and a half million bales.

The potato crop will be far short of last year, but large enough to supply the demand nicely and will be a very profitable crop to the growers if conservatively marketed. Live stock marketing has been unprecedented in the west forced by the failure of feed crops. Notwithstanding this prices have been well maintained. There is no near prospect for low prices for live stock. Broom corn is likely to have a high price inning, because of the short Kansas and Oklahoma crop.

ADVICE—Hold wheat, or if short of feed grain, feed it. Market corn gradually. Hold oats. Market potatoes conservatively. Each grower should hold part of his crop. Market hay gradually, but be sure to get what is it worth. Hold new beans. Cabbage is a short crop. Market gradually, but know the market value before selling to any person.

The following tells the balance of the market story.

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on August 30, 1913, with comparisons, are shown in the following table (The sign — before figures means decrease, X means increase.)

	Aug. 30, '13 Bushels	Change from 2 wks. before Bushels	Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
WHEAT	50,526,000	X 573,000	X 2,105,000	X 25,267,000	—3,076,000
CORN	3,770,000	—1,330,000	— 335,000	X 1,012,000	—4,539,000
OATS	29,294,000	X5,674,000	X 2,761,000	X 13,366,000	X 4,065,000
BARLEY	2,302,000	X 602,000	X 974,000	X 942,000	X 822,000

The visible supply of wheat in Canada on the same date was 4,730,000 bushels. This is 594,000 bushels less than two weeks before and 2,815,000 bushels less than a year before. The visible supply of oats was 6,062,000 bushels on the same date, which is 270,000 bushels less than two weeks before and is 3,504,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on September 6, two weeks before and a year before as follows:

	Sept. 6	2 Wks before	AYr. before
WHEAT, No. 2 RED			
Chicago	.93 @93¾	88 @88¾	1.05
St. Louis	..93 @95	90 @92½	1.03
Kan. City	.91 @92	84½@85½	1.00
Cincinnati	95½ 96½	90½@91½	1.05
New York	96 @97½	94 @95½	1.04
CORN, No. 2 WHITE			
Chicago	....77¾@78½	77½@78	81
St. Louis	... 78	78½@79	80½
Kan. City	..77 @77½	77½@78½	75
Cincinnati	..79½@80	80 @81	85
New York	... 83¾		61
OATS, No. 2 WHITE			
Chicago	....44¾@45	43½@44	34
St. Louis	... 44	43½@44	35
Kan. City	..43 @43½	42½@43	34½
Cincinnati	..45 @45½	44 @44½	36
New York	..		39

Minneapolis—Spring wheat, No. 1 hard, 90¾c; ..o. 1 Northern, 88¾@89⅞c. Two weeks before, 90c and 88@89½c respectively.

Future Grain Prices

Chicago grain futures closed on September 6, 1913, and two weeks before, as follows:

WHEAT—September, 88⅜c; December, 91⅝c; May, 96¾c. Two weeks before, 87⅛c, 90½c and 95⅝c respectively.

CORN—September, 76⅛c; December, 72⅝c; May, 74⅛c. Two weeks before, 75¼c, 69¼c and 70⅛c respectively.

OATS—September, 42⅝c; December, 45½c; May, 48?c. Two weeks before, 42¾c, 45c and 48c respectively.

COTTON, New York, September 6—Cash middling uplands, 12.75c; middling gulf, 13c. This is 25c a cwt. higher than two weeks before and is 90c a cwt. higher than a year before.

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers Society of Equity, Indianapolis, Ind.

Chicago Produce Market

Chicago, September 6, 1913.

POTATOES—Arrivals by cars with comparisons follow:

	This week	Last week	Last year
Monday	x	40	x
Tuesday	100	76	80
Wednesday	80	25	40
Thursday	90	45	50
Friday	35	25	45
Saturday	20	40	30
Total	325	251	245

xLabor Day.

Market was quiet but firm at recently advanced prices. Demand was moderate as usual on Saturday, but receipts were reported at only 20 cars and no difficulty was found in obtaining full prices.

Sales reported were: Per bushel—Minnesota Ohios—2 cars at 60c, 2 cars at 63c, 2 cars at 65c. Jersey Green Mountains—2 cars at 95c.

Per bushel, Jersey Green Mountains 93@95c
Minnesota Ohios, outside sacked..60@65c

The price is 5 to 10 cents a bushel higher than two weeks before. A year before the price was 40@45c for Minnesota Ohios. In the same period last year prices declined 7 to 10 cents a bushel.

SWEET POTATOES—Have been easy and on the decline lately owing to unseasonable weather and a good supply. Today being Saturday, holders were particularly anxious to clean up.

Barrels, Virginia ..... $2.40@2.50
Jerseys ..... 3.50@3.75
Hampers, Jerseys ..... 1.00@....

The price is $1.25 a barrel and $1.00 a hamper lower than two weeks before. A year before the same kinds named were $3.75 to $4 for Virginia Jerseys and $1.25 for Jersey hampers.

St. Louis reports sweet potatoes lower under large offerings. Alabama yellow, hampers at 90 cents. Tennessee red and white at $1. for hampers.

HAY, September 4—Receipts, 1,393 tons. Demand continues good and offerings increasing. Market steady.

Choice Timothy Hay ..... $18.50@19.00
No. 1 Timothy ..... 17.50@18.00
No. 2 Timothy ..... 15.00@16.00

The price is 50c a ton higher than two weeks before for choice. A year before the price was $22@23.

STRAW—Rye straw quotable at $7.50@8. Oat straw at 6.50@7. Wheat straw, $6@6.50.

Rye and oat straw are 50 cents a ton higher. Wheat straw is unchanged to 25c a ton higher than two weeks before.

BROOM CORN—There is a strong feeling on the part of holders. Demand remains rather quiet.

Per ton, Illinois corn ..... $110.00@140.00
Oklahoma ..... 110.00@120.00

The price is unchanged from two weeks before.

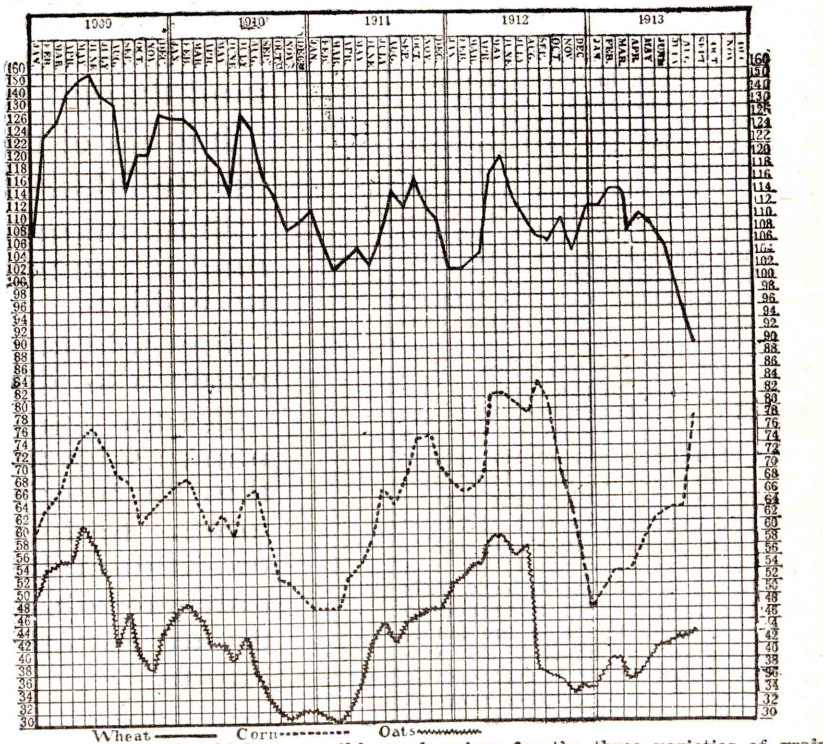
BEANS—There has been little to the market. As of late pea beans were moderate sale, a small business in Red Kidney existed and the other kinds were neglected so as to be about nominal. So far as old beans go they were in only moderate supply, in the hands of dealers, and steadily held. The new crop has had favorable weather to bring it forward. There have been no price changes quoted.

Pea Beans—
Hand-picked, choice ..... $1.90@1.95
Common ..... 1.25@1.65

Mediums nominally about same as Pea Beans.

Red Kidneys, choice ..... $1.65@1.75
Common to fair ..... 1.25@1.50
White Kidney nominal ..... 3.00@....
Brown Swedish, long ..... 1.00@....
Round ..... 1.25@.....

The prices are practically the same as two weeks before.



This chart shows the highest monthly cash prices for the three varieties of grain, at Chicago, for the period, 1909 to August, 1913, inclusive. The lowest figures in August, 1913, were wheat, 86c; Corn, 69¼c, and oats, 39c.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	x....	11,631	x....
Tuesday	10,995	11,324	7,352
Wednesday	.. 9,945	10,115	14,458
Thursday	..10,098	9,580	8,167
Friday	 7,319	8,158	6,924
Saturday	 8,162	7,129	7,605
Total	46,519	57,937	44,206

xLabor Day.

Receipts, April 1, 1913, to Sept. 6, 1913, 2,502,005 cases.

Receipts, April 1, 1912, to Sept. 7, 1912, 2,458,803 cases.

Receipts, April 1, 1911, to Sept. 9, 1911, 2,098,504 cases.

Receipts, April 1, 1910, to Sept. 10, 1910, 2,429,414 cases.

A firm feeling exists and quotations without special change.

Miscellaneous lots, cases returned, 14@19½c, depending on quality.

Firsts quotably 23c. To bring quoted price eggs must run mostly to new-laid eggs, with not over 30 eggs loss to the case.

Checks—In good supply and only merchantable stock selling. Some of the checks coming are mouldy and musty and sell anywhere from $2@3 a case for merchantable lots.

Dirties—In good supply and in only moderate request. Quotable at 10@13c, depending on quality.

Refrigerator eggs in good demand. April Firsts salable at 22c.

The price is just a shade higher than two weeks before.

FRUIT

APPLES—The market for apples continues to rule steady for all nice fruit. Arrivals have not been so large lately but what all could be sold. Fine eating apples especially have found good sale.

The weather has been unseasonably warm and more or less apples coming in barrels not ventilated have arrived more or less heated and imperfect.

All grades of stock salable; it is merely a matter of price and this is governed by quality and condition or fruit. Some bulk apples are now coming and said to be meeting with good sale.

PEARS—The market is not in good condition. The supply exceeds the demand. Many of the pears are common and not suitable for the good trade. Many are now coming soft or turn soft if held a short time.

Arrivals are expected to fall off. A good part of the Michigan Bartletts are said to have been marketed.

PEACHES—Were easier. The demand was tame and supply good. A good many Michigans are small. Kansas stock also small and not well put up. Peddlers are getting a good many and they hurt the trade of the retailer.

Bushel baskets from Ohio have no covers on them and that is unfavorable. They cannot be handled like covered baskets. Shippers cannot use them. They are apt to become bruised.

GRAPES—Quotations vary quite a little. It is due mainly to quality. Some black grapes coming are already loose on the stems and not desirable. Demand is so that really nice black grapes in baskets are salable and steady. The common are slow and easy. Black grapes coming in cases of 12 and 6 baskets are very dull. Buyers do not care for them in cases. Delawares are slow and sell only in a limited way. Red Wyomings have no regular demand. They are only a chance sale.

PLUMS—Are slow. Demand light. All are easy. They are now coming ripe, and soon become soft. They must be let go when a reasonable offer is received.

Sometimes a small sale can be made at a fair price. Receivers cannot hold out for anything of this kind. There are too many Plums. They must be sold in lots or they would remain and spoil.

CANTALOUPES OR GEMS—Early demand was fairly good for nice melons. Common stock, especially if soft, has to be let go at low prices to the first buyer that comes along. Arrivals from the west and southwest it is said are about to become smaller and next week a better market is looked for.

WATERMELONS—Receipts were reported at 17 cars. The market was firm for fancy, large melons, but dull for undersized, ordinary stock. Few peddlers are now operating and melons must be good enough for a better class of trade to sell well.

VEGETABLES

BEETS—Few farmers came in today and the supply was small. The market was firm.

CABBAGE—Supply only moderate. Demand fair and market firm.

CARROTS—Supply small today and market firm. Demand moderate.

CELERY—The market will not clean up today. There is a good supply, 3,200 boxes in today. Some shows heat and will have to be sold at a discount.

CAULIFLOWER—Market well supplied. Demand is for fancy goods. Rusty eastern stock slow sale at a discount.

CUCUMBERS—Market is liberally supplied. Demand only fair and market easy.

EGG PLANT—Home-grown in good supply and fair sale when desirable in size and quality.

GREEN ONIONS—Trade quiet. Supply is small and market steady.

LIMA BEANS—There were fair receipts and a fair demand. Market was without material change. Fancy beans sold fairly. Some showing rust, off color or very small were dull.

ONIONS—Market is quiet and weak. Lower prices are quoted. Demand is tame, and there is a generous supply.

PEPPERS—Home-grown are plentiful. They meet with a fair demand at easy prices.

PICKLES—Holders were anxious to clean up. The market was weak.

RADISHES—Not much demand today. Supply ample and market easy.

STRING BEANS—More home-grown were offered. The demand was limited and prices averaged lower.

SPINACH—Moderate sale. There is a moderate supply of home-grown.

SWEET CORN—Selling fairly. There is a good supply and market is steady.

The Farmers' Burden

(Continued from Page 3)

iff, and changed the national administration to secure such reduction. Meanwhile moderate protective duties had been placed upon certain farm products ostensibly to protect American farmers from the competition in our markets of the cheaper production of other countries. It is strangely denied now that these duties ever benefited our farmers or that they were ever intended to benefit them! The latter congressional declaration may be true, but not the former. Those import duties were a benefit to American farmers, whether the lawmakers intended them to be or not. Whenever "the prices are out of line for export," as we so often read in the market reports; the tariff is working for the farmer. The tariff duty often held the farm prices of the protected commodities the full duty above what they would have been had the foreign commodities been poured free into our home markets. That is what is now proposed shall be done. Practically all protection is taken from farm products in the bill now before Congress. In this respect it differs from the Canadian reciprocity measure which overwhelmed the Republican party and denied Mr. Taft every state in the Union but Vermont and Utah—it differs from that measure only in the fact that it reduces the tariff on other commodities also. But it persists in taking all protection from farm products. The excuse given by some is that these duties were never any benefit to the farmers, which is false on its face. On the other hand, one distinguished Senator recently declared that "textile raw materials (just as they come from the farms) have been put on the free list to enable us to make greater reductions in the tariffs on finished products than we otherwise could have done."

In other words, to reduce the tariff on manufactured goods reduces the profits of the manufacturers, and to compensate them for that reduction farm products, raw materials, are put on the free list, so that manufacturers and millers may retain their profits and thus throw the reduction, the loss, on the unorganized farmers who may complain but, it is thought, cannot do anything. Seriously, can't the farmers do anything? This proposition confronts them.

One other. There are powers that control the money of the country. By means of stocks, bonds, etc., they get control of the property to the amount of billions, and of the money as well. This money goes back into circulation at the will of the money power, and the methods of that power soon gather it back to them again. Every note, bond and mortgage is a sucker to aid in drawing it back. This power has long wanted a chance to thus fasten its tentacles in the lands, the farms and the homes of the people. The money power is resourceful. It has devised the seductive plan of rural credits. The word is sent out that the farmers need money, and an easy method, it is claimed, is being devised for them to borrow it at attractive rates of interest. All the security required is land mortgages or rural bonds, not on single tracts or homes, but in combinations of them.

Do farmers need more money than usual? If they could get equitable and steady prices for their stuff would they not be well and continuously supplied? Farmers are intelligent, but many times they do not think or reason from cause to effect. It is not that farmers need to borrow money more than usual, or that the monied people wish to aid them. It is simply that the money lenders have a surplus on hand that they wish to create an eager demand for, and provide for absolutely safe security, and accomplish their long desired purpose to get liens on and obtain final control of the homes of the people.

Yes, we say of a truth, at this time important matters confront the farmers. In thus pointing them out we incur the enmity of these subtle powers. BUT OUR DUTY IS PLAIN. WE SEEK THE TRUTH, AND IT IS OUR PURPOSE TO FEARLESSLY TELL IT. WILL OUR FRIENDS STAND BY US? WILL THE FARMERS SUSTAIN US? WILL THEY GET IN POSITION TO DO THE GREATEST WORK OF THEIR LIVES, AND WIN THE ETERNAL GRATITUDE OF THE HUMAN RACE? THOSE ULTERIOR PURPOSES MUST BE HELD IN CHECK, AND THE FARMERS ALONE CAN DO IT. WE HAVE POINTED THE WAY.

Wants to "Jine" the Union

I feel, and know you are doing a grand work, and I firmly believe that your paper, which I have read for years, puts out the strongest and best plea for the farmers than any and all other papers combined. To the tillers of the soil its work is worth many times its price, and will be worth even more to those who will read it with understanding. Yours for closer co-operation.—S. J. Smith, Deming, N. M.

Want to "Jine" the Union

I have a sample copy of Up-to-Date Farming, which is the best paper I ever read. I am going to subscribe. We farmers here want to know how we can form a union through which we can have something to say about prices. I am sending you some names, and can send a hundred more. I have been asked to send to you for full particulars about the Farmers Society of Equity.—Ben Vance, Sadieville, Ky.

Fall Planting is Best

Our prices are the lowest, on all kinds of Apple, Peach, Pear, Cherry and other trees, and plants. Send for catalog at once, and order for early fall planting. ERNST NURSERIES, Moscow, O., Box 11.

Cash FOR OLD Bags

Turn your old bags into money. We buy them in any quantity, sound or torn, at a liberal price and pay the freight. Write for particulars and state number you have. Reference: Citizen's Bank.
Iroquois Bag Co., 441 Howard St., Buffalo, N. Y.

YOUR FALL SUIT FREE

Made to Your Measure

$30 to $40 would not buy a better one, but you get it for nothing. Not a cent to pay. Simply wear it, tell your friends where you got it and make

$10 to $15 a Day

taking their orders. It is dead easy. You never saw a nobbier suit or a more stunning pattern, cut in strictly advance style (3 months ahead of the times). Your choice of 60 patterns to choose from. Drop us a postal card for heavy pattern book, inside information about styles, self-measuring, blanks, etc., etc. Don't wait. Everything free—we pay expressage. Get ahead of the other fellows—write this very minute. A postal will do it.

To Save Blow-Outs

On No-Rim-Cut Tires We Spend $1,500 Daily No Other Tire Maker Does That

This "On-Air Cure,"—done to save blow-outs—costs us $1,500 daily. And no other maker employs it.

It is one of the three features—used in No-Rim-Cut tires alone—which have saved tire users millions of dollars.

It is one of the three reasons why No-Rim-Cut tires far outsell any other.

All these tires are final-vulcanized on air bags, shaped like inner tubes. They are cured under road conditions.

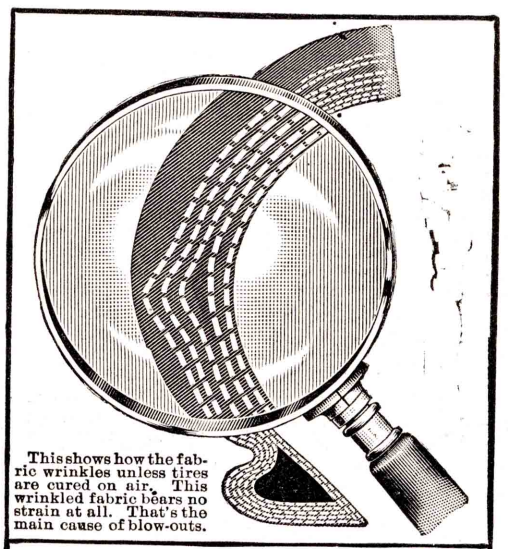
Cured in this way—on elastic air—the fabric doesn't wrinkle. Every inch shares the strain.

All other tires are vulcanized on iron cores alone. The fabric often wrinkles. See the picture. This wrinkled fabric shares no strain, and that leads to countless blow-outs.

Loose Treads

Tread separation near the breaker strip is another costly ruin.

We use for this strip—at the base of the tread—a patent fabric which is woven with hundreds of quarter-inch holes. The tread rubber is forced down through these holes, forming countless rubber rivets. Then the whole tire is vulcanized en masse. In no other tire is this thing done to prevent tread separation.



This shows how the fabric wrinkles unless tires are cured on air. This wrinkled fabric bears no strain at all. That's the main cause of blow-outs.

GOODYEAR AKRON, OHIO

No-Rim-Cut Tires

With or Without Non-Skid Treads

No Rim-Cutting

Then rim-cutting is made impossible by a method which we control.

With clincher tires—the hooked-base tires—rim-cutting ruins almost one tire in three. This is proved by careful statistics gathered by public accountants.

We save all that ruin. And the way we control is the only satisfactory way known to do this.

No Extra Price

In No-Rim-Cut tires you get these three features which no other maker uses. You save blow-outs, save loose treads; and you end rim-cutting completely.

Yet these tires now, because of mammoth output, cost you no extra price. No standard tire made without these features costs less than No-Rim-Cut tires.

That is why No-Rim-Cut tires hold the leadership of Tiredom. No other tire in all the world has nearly so many users.

And you will be one of this army of users when you once make a mileage comparison.

Our dealers are everywhere.

Advertising Profits for You

The business transaction that profits the seller only is wrong. The buyer must also benefit from the purchase. Modern business is built up this way.

Therefore, when you are interested in an advertisement you must know that a purchase will benefit you.

Read the advertisements in UP-TO-DATE FARMING. Our advertisers are guaranteed.

Foolish to Buy Wood Shingles

What's the use of buying common **wood** shingles now that you can get the original and genuine Edwards STEEL Shingles for LESS MONEY? Don't wood shingles **catch fire**, don't they **rot**, don't they **cost a lot of time and money** to put on?

Nobody ever heard of an Edwards Steel Shingle roof **burning up** or **rotting.** And it doesn't take long to put them on. For these **steel** shingles **come in great big clusters of 100 or more.**

Edwards STEEL Shingles

Each Edwards Steel Shingle not only has thoroughly galvanized sides, **but each EDGE is dipped in MOLTEN ZINC.** No chance of **rust.** All joints are permanently water-tight as a result of our patented Interlocking Device, which takes care of expansion and contraction.

PRICES We sell direct from factory and pay the freight. Our cost of doing business is divided among thousands of sales. Hence our ability to underprice wood shingles. You have been intending to get our prices for some time. **Do it this time.** Send a postal now—today—and get, by return mail, Catalog 991, the Roofing Offer of the Age. Give dimensions of roof if you can, so we can quote price on the complete job. (120)

Pastoral Paragraphs

Sam Saxon says that a one-legged man ought to succeed at raising hops.

The farmer without a silo can not compete with the one that has one and uses it right.

No farmer has time to waste pulling blade fodder. Cut what you want in the regular way.

Is bearded wheat better than bald wheat? Well, is a bearded man better than a bald one? It all depends, you know.

Now is the time to prepare for selection of seed corn. Do it in the field, where you can pick the type of the stalk as well as the ear.

Wayne County, Ohio, produces a superior quality of eating potatoes that always commands a few cents more per bushel in eastern markets than any others.

Need a smoke-house? Build it of concrete. It will serve for both smoking and storage. Farmers who produce fine meats should not be without them on their own tables.

Plans for potato storage houses and instructions regarding storage is made into a bulletin by the Department of Agriculture at Washington, D. C. The number of this bulletin is 549, and can be had on request made to the department.

A Nebraska farmer who succeeds with alfalfa inoculates the soil at seeding time by running dry dirt taken from the roadside where sweet clover grows through a feed grinder, putting it in a grain drill, and sowing soil and seed at the same time. Fifteen bushels of dirt and six pounds of seed per acre is used.

The Canadian Experiment Station at Ontario finds it no difficulty to produce winter wheat at the rate of from thirty-six to sixty bushels an acre. The average yields of fourteen varieties for a period of eighteen years is forty-four and one-half bushels an acre. The largest yields are produced from first crosses, on clover sod.

OLD-FASHIONED BUCKWHEAT FLOUR

IN THE hill section of Sussex county, N. J., some fifty miles from New York, are a few of the old-time grist-mills with Buhr stones that are sharpened by clipping with a steel hammer, which are devoted exclusively to the grinding of buckwheat in the old-fashioned way, which the Dutchman who settled New Jersey and the Englishman who settled New England believed was the most delectable breakfast food on earth. The Dutchman served it with country sausage. The Englishman served it with maple syrup. Otherwise the two were alike.

The bulk of the product of these mills goes to Newark. A little, a very little, indeed, finds its way to New York. Requests for supplies are generally refused because the total product is usually purchased long before the crop is harvested. Men who lived in the east thirty years or more ago, and there are many of them in the west, will recognize the description. They will know what the old-time buckwheat flour is. Not many are fortunate enough to secure this old-fashioned flour now.

MONTANA WAREHOUSE LAW

THE new warehouse law of Montana, applicable to grain, makes it clear that warehousing grain in that state will be a different proposition from what it used to be in the central states before the "public utilities" lawmakers got busy. In Montana when grain is delivered for storage —and everyone who has grain may require the warehouse or elevator, doing a storage business, to accept the grain of the house contains space for it—the elevator becomes responsible for it. The operator must keep it insured for the owners' benefit; is responsible for loss by heating if that takes place through any neglect on his part; must give notice that grain is going out or is out of condition, but he is not thereby relieved of responsibility to preserve as he may be able the condition of the grain in question. All charges are fixed and practices regulated by the law, and all documents used must be those prescribed by those charged with the execution of the law. In other words, the public elevator is a storage house; the private elevator is one for the conduct of private business only. The grain business would be greatly benefited in all markets, if this distinction were rigidly and literally enforced everywhere.

WANTED--AN EXTERMINATOR FOR THISTLES

Editor, UP-TO-DATE FARMING:

I would appreciate it if some of your correspondents could give me a sure-kill cure for Canadian thistles. I've tried both carbolic acid and salt without satisfactory results.—Wm. M. Enfield, Pa.

Wll some of our readers send in an account of their experience with a successful remedy.—Editor.

Here's a problem for you: One dollar for the best solution. With wheat at seventy-five cents a bushel, corn at the same price, shorts at $1.50 a cwt., will it pay to sell the wheat and buy shorts and corn to feed a bunch of pigs? Or, should the farmer grind and feed the wheat? Best answers will be published in October 15th issue.

Mr. Dooley and the Sleeping Sickness

"Hinnissy, what do ye think is th' greatest thing in th' wurrld —Niagry Falls, th' Grand Canyon iv th' Collyrahdo, er th' Dimmicratic Congress?" asked Mr. Dooley as he spat accurately in the tobacco box filled with sawdust.

"Nayther wan. Th' gratest thing in th' wurrld is slape. If a mon slapes long enuf he feels loiks a top, and if he kapes on slapin' four an' twinty hours out iv iv'ry day, he saves three shquare meals, besides th' wear an' tear on his jaw bones. That's a big item, Mister Dooley, in these days whin th' cost iv livin' is goin' oop so high that it looks loike a balloon ascinsion with th' common paypul holdin' on to th' trapeze bar by th' skin iv their teeth."

"Hinnissy, in me judgmint, yer argumint fer slape won't hould water. Slape is loike a mill-shtone er a high shtandin' collar around th' nick iv this coonthry. Over in Afriky they've got th' slapin' sickness an' they're lettin' th' Frinch an' th' Inglish an' avin th' Dootch come in there an' grab th' lands roight frum under their noses, an' yit they slape on."

"Th' Amerricun paypul are jist loike thim haythins. They've bin fast aslape mintally while they've bin wearin' their knoockle bones sore a-diggin' an' a-plantin' an' a-hoein' an' a-rakin' an' a-cultivatin' an' a-harvistin' an' a hooskin' an' thin whin they're beginnin' to see th' fruits iv their labors, what happins? Th' torkey buzzards that have bin a-sittin' on th' fince talkin' pollyticks swoop down on th' cahrn cribs an' th' grannaries an' fill their stummicks until they're stoofed to th' bustin' p'int.

"Th' only way to rimidy condishuns, Hinnisy, is to put a little salt on th' tails iv these torkey buzzards, lock thim in th' shmoke house an' drap th' key down with th' old oaken buckit. Talk about yer slapin' sickness in Afriky! Why, Hinnissy, we've bin a slapin' whin we've bin wurrkin' loike ingines with th' shweat shtandin' loike steam on our brows an' the biiler threatenin' to blow oop iv'ry minute frum high prissure."

Don't confuse this with ordinary "make-shift" roofings. We guarantee it 15 years and inside each roll furnish modern ideas for laying it artistically and permanently.

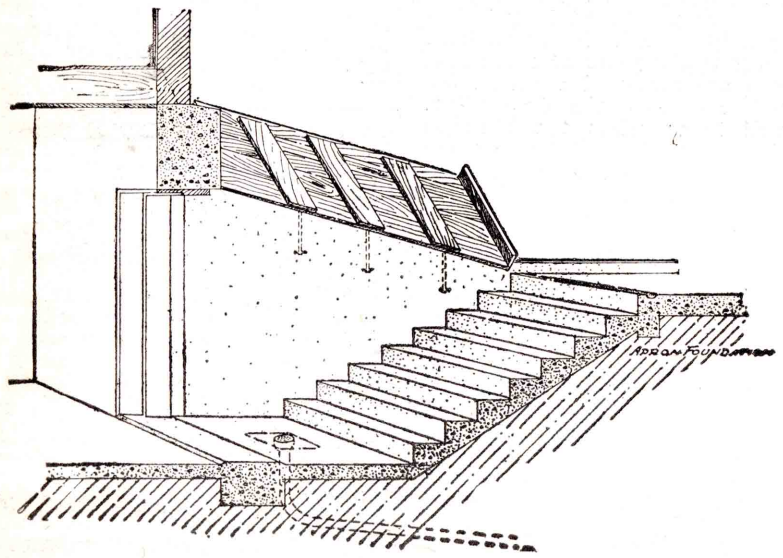
Outside Cellarway of Concrete

A GOOD dry cellar is a valuable adjunct to the farm home. Many cellars, otherwise excellent are practically ruined because of their dampness. A damp cellar not only fails to keep well the food supplies stored therein, but is a constant menace to the health of the family, and has caused not only a great amount of illness, but many an untimely death. One cause of dampness in the cellar is often a poorly built outside cellarway. The best way to build such a cellarway is illustrated herewith.

The methods of building hatchways for either new or old cellars are very similar. With an allowance for a three-foot landing at the bottom of the stairs, excavate the opening to the width of the steps desired plus one foot. This extra width is for a six-



inch thickness of concrete wall on each side. The steps themselves have a rise of six and a tread of nine inches. Beneath the steps proper is a four-inch thickness of concrete. Therefore, provide for this thickness in sloping the ground upward from the landing to the top of the stairs. Extend the trenches for the side and end walls one foot below the concrete steps. As forms choose two 1 by 12-inch boards and notch them as though they were to be used as "horses" to support wooden steps of the same dimensions as those of concrete. Place the notched edges down with the ends fixed at the top and bottom of the stairs. To mold the rise of the concrete steps, use 1 by 6-inch boards 3 feet 10 inches long, which are secured to the forms by means of nails and wooden cleats.

With the forms firmly fixed in position, fill the mold for the bottom step, and the space back of it, with concrete proportioned 1 bag of Portland cement to 2 cubic yards of sand to 4 cubic feet of crushed rock. If bank gravel is used, mix the concrete 1 part cement to 4 parts gravel. Bring the concrete in each step to the top of the riser and finish the surface with merely a wooden float. Continue the work upward until all the steps are finished. At the top of the stairs tie the apron foundation to the side walls by means of old iron rods imbedded in the concrete and extending around the corners. This will prevent possible heaving and cracking by frost.

The side forms of the six-inch walls are then erected and are thoroughly cross-braced against each other. For these forms use 1-inch siding on 2 by 4-inch studding spaced two feet apart. The walls can be carried to any height desired so as to give the cellar doors sufficient slope for shedding rainwater. Above ground line, outside forms must be provided. Fill the walls with concrete, mushy wet. Before the concrete sets, bolts are placed (heads down and washered) in the top side of the side walls for holding the wooden sills to which the cellar doors are hinged. After two to four days the forms can be removed. Connect up the drain in the landing and lay the landing floor.

The eight cellar steps of the hatchway shown in the plan have a tread of nine inches, a rise of six inches and a length of four feet six inches. The landing at the foot of the steps is three by four feet and has a four-inch concrete floor. This same thickness of concrete lies under the steps proper. The side walls were built as described above. For this improvement there were required the following quantities of materials:

Bill of Materials

Crushed Rock, 2 cubic yards
Sand, 1 1-4 cubic yards.
Portland Cement, 12 bags.

For improving old cellar hatchways it is frequently necessary to fill with earth and gravel so as to provide the earthen slope for the concrete steps. Such fillings must be thoroughly tamped into place and should be water-soaked to settle before the steps are built.

Concrete steps, unlike other kinds, become stronger with age. They are perfectly safe under the heaviest of loads. Moreover, besides being watertight, they keep out rats, mice and other obnoxious vermin.

Analogy

"Mother, is the parasol a female umbrella?"

"Why, my dear child, what put such a thought as that in your head?"

"I was wondering if the first parasol was made from an umbrella rib!"

Not Likely to Object

"Billie, what do you reckon your papa will say when I tell him I want to marry your sister Betty?"

"I don't know, but you needn't worry, for he has never objected when anybody wanted to marry any of my other sisters."

Too Slow

"I was at the moving picture show, and it has your farm and your new hired man at work."

"Oh! you must be mistaken about that. A moving picture couldn't work as slow as he does!"

Only a Precaution

"Mr. Beasley, I would like to use your phone a minute."

"Certainly; but what is the matter with yours?"

"Nothing, but I want to tell my wife a man is coming home with me for dinner, and sometimes a person sitting in the office can hear what she says."

With butter at the present high price every ounce of cream counts

Cream is more than ever a valuable commodity these days, and it is doubly important that not a drop be wasted or lost.

If you are still using the "gravity" setting method you are losing a pound of butter-fat in the skim-milk for every four or five pounds you get.

The advantages of the DE LAVAL over inferior cream separators at all times are greatest at the season when milk is often cool and cows are old in lactation.

A DE LAVAL Will Save its Cost by Spring

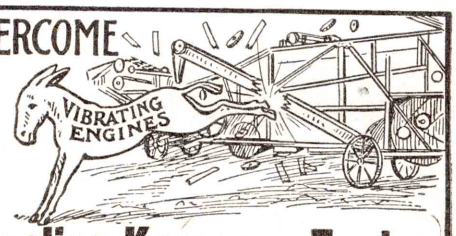
Then why put off any longer the purchase of this great money saving machine. Put it in now and let it save its own cost during the Fall and Winter and by next Spring you will be just so much ahead.

Even if you have only a few cows in milk you can buy a DE LAVAL now and save its cost by Spring, and you can buy a DE LAVAL machine for cash or on such liberal terms that it will actually pay for itself.

THE DE LAVAL SEPARATOR CO.
NEW YORK CHICAGO SAN FRANCISCO SEATTLE

300 KICKS A MINUTE OVERCOME

If you buy a vibrating gas engine it will kick your valuable machinery into the scrap pile. Every explosion delivers a kick and every kick wears and tears the engine and the machine it runs.



The United States Gasoline-Kerosene Engine
IS **NOT** A VIBRATING ENGINE

It delivers a Steady Stream of Power, free from shock. Instead of KNOCKING your machine, it PULLS, as continuously, firmly and steadily as a steam engine. The shocks from the explosions are completely absorbed and overcome. **This means more power from your fuel.** Thousands of United States Engine Owners testify: "My engine uses from 1/3 to 1/2 less fuel than my neighbor's in doing the same amount of work."

INVESVIGATE:—Don't buy until you know about "The World's Best Farm Engine." Just say, "Send me your free catalog illustrating how violent Gas Engine Vibration has been overcome in the United States Engine. Also tell me how I may have a United States Engine delivered for **30 days' trial.**"

Don't Buy an Engine

until you have investigated the Temple Gas—Gasoline—Distillate Kerosene—Alcohol Engines. Sizes: 1¾-2-3-4-5-6-7-8-9-10-12-15-18-20-25-30-40-40-H. P. One Cylinder, Double Cylinder and Four Cylinder Engines made to secure highest efficiency and lowest operating cost. All Temple Engines are Slow Speed, Heavy Duty Engines; They occupy less than one-third of the space of the Horizontal Engine; they weigh from one-third to one-half less than the weight of the Horizontal Engine and notwithstanding less bulk and less weight, they are built stronger in proportion to strains. Explosions are located low down on a flat base, which overcomes violent vibrations. These advantages greatly increase their range of use.

Temple Engines cost nothing, as they pay for themselves in fuel saving and in securing from the machines operated their highest efficiency. They save from ¼ to ½ the fuel of the average engine.

Temple Engines Have Won Five 1st Premiums for Low Operating Cost, Stability and Steady Power.

THEREFORE—Don't buy an engine before investigating the Temple. This is the Company's 61st year as manufacturers. It is one of the Pioneer Engine Makers of the Country, which means reliability and durability of its product.

Live Stock and Dairy

Sows selected from large litters are always best for breeding if properly cared for.

Sam Saxon says that men are more or less like four-legged animals—sheepish, mulish, hoggish, or bull-headed, as the case may be.

Some authorities assert there is no such thing as a dual-purpose cow. Well, anyhow, if there is such a thing it is the milking strain of the Shorthorn. What else should we call them?

The Indiana Experiment Station produced beef at a cost of $7.70 per 100 pounds gain by feeding 500-pound calves a ration of corn, cottonseed meal, clover hay and silage, figuring the feed stuffs at market prices.

The North Dakota Experiment Station raised a Shorthorn bull calf to twelve months of age at a cost of $68.20 for feed, and the calf was then worth $150. Yet some folks think the station professors can't make farming pay.

Don't feed a good balanced ration to lice on cattle, horses or hogs. The lice will thrive, but the stock will not, and there's no market for lice.

It takes four and one-half pounds of corn and a healthy pig to make an increase of one pound of pork. In other words, a bushel of corn makes twelve pounds of pork.

The Illinois Experiment Station fed corn, cottonseed meal and silage to 500-pound calves, paying 47 cents a bushel for corn, $30 a ton for cottonseed meal, and $3.68 a ton for silage. The average daily ration for each calf was 9.8 pounds shelled corn, 1.94 pounds cottonseed meal, and 14.9 pounds silage. The cost per 100 pounds of gain was $7.20.

HORNLESS HEREFORDS—A NEW BREED

B. O. Gammon, Secretary American Polled Hereford Association

OF LATE years there has been originated and firmly established a naturally hornless strain of pure-bred Herefords called the Double Standard Polled Herefords. This new strain is already proving immensely popular.

In twelve years the breed has grown from one small herd to over 800 herds with new ones being established on an average of one a day. Already they have proved adaptable to the conditions of thirty-two states and nowhere have they failed to make good. They are simply pure-bred Herefords without horns. They are recorded the same as the horned Herefords.

Polled Herefords can be easily introduced into any Hereford herd. Well bred polled bulls will dehorn from 75 to 100 per cent of the calves from registered horned Hereford cows, and by retaining the polled heifers for future breeding your whole herd is made naturally hornless in three or four years. The demand for Polled Hereford breeding stock is so strong that good prices are always realized for surplus stock and it can be sold while young, which lessens the cost to the producer.

More and more men each season are deciding to breed only naturally hornless cattle. Every other breeder and feeder is just as disgusted with horns as you are. If your herd is naturally polled and competing herds are horned you will sell your surplus stock first and for more money than your competitor.

Polled Herefords are an improvement and in cattle as in all other things, the improved models are in strongest demand, sell for the highest price and give the producer the biggest profit.

Polled Herefords are well advertised, and this keeps the demand ahead of the supply all the time. The American Polled Hereford Breeders' Association is a great national organization that is spending hundreds of dollars every year to keep the advantages and merits of the breed before the public.

A BUSINESS SOW

JOHN CAMPBELL, of Indiana, has a Yorkshire sow with a wonderful record as a pig producer. She has produced five litters of pigs, with a total number of seventy-three pigs farrowed. Her first litter contained fourteen pigs; eleven were raised. The second litter contained fifteen pigs, raising twelve. The third, sixteen pigs, raising fifteen. The fourth, fifteen, raising thirteen, and eleven pigs were raised from the fifth litter of thirteen. This sow possesses sixteen milk-producing teats, and weighs about 800 pounds. At eight weeks of age her pigs weigh about forty-seven pounds apiece. Can any of our readers beat this?

A MARVELOUS HEIFER CALF

The Holstein heifer calf shown herewith was born on the 9th of last July. It showed at birth a most wonderful development of the udder, and its owners, Festler & Budd, of Northfield, Minn., began milking the baby calf,

which in a short time was giving a pint of milk at a milking, twice daily. The milk has been tested at two different times, showing a percentage of butter fat in excess of 3.5. The calf is a perfect beauty, large for her age, and perfectly developed. She is being exhibited and milked at the fairs. Her name is Northfield Holstein Queen.

Shorty's Shortcuts

(By Himself)

HANK WILLIAMS came back the other day, and has made arrangements to rent Fred Hogan's farm for three years. Fred is going to retire from his farm, and go to town to live. Great thing for a town—these retired farmers. They're usually "ferninst" all town improvements. Used dirt roads and paths for forty year, and don't see no use in paving the streets and building sidewalks. I don't much imagine the town folks are overjoyed to get Fred, though he is a good enough fellow. They ought to meet him at the city limits with a "Back-to-the-Farm" committee. Hank Williams has been hunting a paradise for the last twenty years. First, he thought it was up in the piney woods of Michigan, and he went up there. After three or four northern winters, he came to the conclusion that northern Michigan and paradise were two different and separate places, and he still imagined he wanted paradise, so he turned his back on Michigan, and went to Florida. Thought paradise was where oranges grew. But he was mistaken again, for he worked harder and made less than he had ever done before. Then a real estate man told him Texas was the spot, the right spot, and the only spot for a poor, honest, hardworking, intelligent man, and Hank sold out in Florida, and bought out in Texas, where he dried out three years in succession, and then skipped out while the skipping was possible. Paradise might be in Texas, but that real estate agent surely did give Hank the wrong location. Where next? Canada. Maybe it wouldn't be exactly Paradise, but it couldn't be as bad as Texas, so off to Canada, to raise wheat and potatoes. And now Hank is back home again, and says Fred Hogan's farm looks more like Paradise to him than all the other places he's seen. It took him twenty years to find out that what he was looking for was right under his nose.

A real estate agent's booklets and a railroad ticket very seldom leads a man into a better thing than he leaves behind him. There are exceptions, of course. I've seen 'em myself. Nevertheless, it is a pretty safe rule to go by, that he who fails to see the opportunities right around him will have the same eyes wherever he goes. It is new eyes he needs, not a new location. The shortest cut I know to where success is located is to make the most of what you have right now.

Yours as ever

Shorty.

Higher Education

Idle Son—Say, pa, what is the higher education?

Pa—It is the education that makes a young man know that he must work if he gets an honest living.

They Were on the Way

Bride to be—I will be so glad to share your sorrows.

Husband to be—But I have no sorrows.

Bride to be—But you will have after we are married.

Alfalfa Clover

The Wonder Crop of the World

A field of alfalfa will improve your soil, increase your supply of hay and increase the value of your land.

It is easy to grow if you know how to prepare your land and when to sow.

We will give you full directions FREE with each order of seed purchased of us.

Prime seed, testing 99 per cent. pure, $9 a bushel.

Choice seed, testing 99 40-100 per cent. pure, $10 a bushel.

Poultry Pickings

A Connecticut lady owns twenty hens. After she had fed them twenty dollars worth of feed, she counted up her egg sales and found she had sold thirty-two dollars worth. Besides, she had all the eggs wanted for table use.

Good care makes good birds and good birds make good profits.

Sam Saxon says the hen with the loudest cackle seldom lays the largest egg.

A fresh-air poultry house—any convenient tree.

Only one fowl in every ten, taking the country over, is a pure-bred. other nine are mongrels.

A cheap incubator is just about as good as a cheap pair of shoes, or a cheap suit of clothes.

Good poultry houses and yards, good incubators and brooders, good stock and good feed should enable any farmer's wife to support him comfortably.

Success in poultry is a question of breeding and feeding.

There is not one farmer in a hundred that is living up to his poultry opportunities.

POULTRY-RAISING FOR MONEY-MAKING

T. E. Quisenberry, Director, Missouri Experiment Station

THE per cent of commercial egg and poultry farms which are paying today is much larger than at any previous time in the history of the industry in the country. This improved state of affairs has been brought about largely through the good work which has been done by the agricultural colleges and experiment stations of the United States and Canada. The nature and requirements of the feeds which we must give the poultry vary so greatly with the different ages and purposes for which they are being fed that we cannot hope to achieve the highest degree of success unless we have a thorough understanding of the subject of feeds and feeding. Wheat is not only the grain which is the nearest to a complete feed for poultry, from the standpoint of the balanced ration, but its size, color, shape and freedom from outer covering make it very attractive to poultry, and they are very fond of it. For growing stock or laying hens it is much more valuable than corn because it contains less oil and more protein. Owing to the fact that wheat always sells for a higher price on the market than corn, a great many farmers feel that they cannot afford to feed it to their hens. In this they are mistaken. They would make more money by marketing their corn and feeding their wheat to hens. Corn and oats rank next to wheat as grain foods. Of meat food, I consider sour milk and buttermilk the most valuable. I would not start a poultry farm without sufficient cows to supply milk for the poultry. Sour milk and buttermilk are splendid for poultry of all ages and conditions, and should be given whenever possible. The nutritive ratios of both are very narrow. They are therefore very valuable in balancing the ratios which the various grains render too wide. The various mill products form an important division of our poultry feeds because they enable us to balance our rations, and furnish part of the ration in concentrated form. An interesting experiment on allowing fowls to select the foods they like best was conducted at the station. The result showed their preferences to be as follows: Of grains, wheat, corn, millet. Of meat foods, buttermilk (by a large majority). Of mill products, rolled oats, ground oats, corn meal shorts. Of grits, oyster shells (by a large majority). The experiment covered eight and a half months and the fowls in the test were five S. C. White Leghorns and five Buff Orpingtons. They consumed 559 pounds of feed, 759 pounds of water, and laid 1,144 eggs.

Ky. Blue GRASS. Genuine and pure. The last you bought you probably paid about $3 a bushel for it. We will supply you at $1.65 a bushel. Send orders to O. K. SEED STORE, Indianapolis, Ind.

Poultry Paper 44-124 page periodical, up to date; tells all you want to know about care and management of poultry for pleasure or profit; four months for 10 cents. Poultry Advocate, Dept. 97, Syracuse, N. Y.

Woman's Work

A PROGRESSIVE SOCIAL CLUB FOR OUR WOMEN-FOLK

The editor of this department feels sure that a goodly number of our folks who read this department each issue would be willing to help us make it brighter, more cheery and more helpful by sending in a little letter now and then—just a friendly chat about your own toils and troubles if you have any, or your joys and pleasures, which I am sure you do have. The young folks have their Cadet page, and the men folks have their Contributors' page for accounting their prowess in doing great things in growing crops. Come, now, and let us talk amongst ourselves of this, that, and the other. Everybody is welcome.

FIRESIDE SOCIAL CHATS

By Aunt Sophia

THE other day a neighbor of mine who is the mother of a bright boy sixteen years of age, came over to talk over a matter that lay next to her heart. What should she and the father do with the boy? Harold is a good boy, rather impulsive, warm hearted, generous, altogether lovable. But he is impressionable as well, and yields to influences. He does not, and would not do anything very wrong, he would scorn the thought. Nevertheless, his is a nature that can be led, step at a time, imperceptibly at first, but surely along the road that leads to no good end. His mother is a woman of unusual intelligence, with a fund of wholesome common sense, and is able to see her son as he really is, to recognize his shortcomings as well as his virtues. What a thing it is for a boy to have a mother like that!

Harold likes his home, the farm, and is much interested in farm work. He is the only child, and heir to the farm, which is a good one. Just now he is seriously debating whether or not to take a course in the state agricultural college, and the thought is one of great concern to my friend. If he stays at home, she can keep him with her during the few years that practically shapes the destiny of a boy. With the money it would require to put the lad through college, they could supply him with books, papers, stock, and other things to enable him to become a very efficient farmer. The farm is one that will make a good income, and the future from a financial standpoint seems safe enough. On the other hand, the boy might develop a love for agriculture in its broadest sense, by having the encouragement and inspiration of a college career. Agriculture will need leaders, and Harold has many qualities which fit him for leadership, and which could best be developed by the environment of a great agricultural college, with its broadening views and influence. But—and here's the rub—the mother fears that there is a chance that the fast element, the lively young men, also likable, impulsive, and fun-loving, who are not seriously inclined; and who are found in every college, may exert an influence over Harold that will not be good for him; that will tend to draw him away from her and the life she hopes to see him lead.

Now, then, sisters, I have put the case before you (with her permission), to see what you would say about it. What did you do, if you had a similar experience in the past, and what was the result? Let us hear from you.

* * *

My better half is what the neighbors call a "progressive farmer." He keeps right up with the times. Any new idea that comes along is studied, and if he thinks he can make it pay he tries it. As a consequence, our little farm is quite well equipped with labor and time savers. I insist that a progressive farm, and a conservative kitchen are incompatible; that a black dog isn't black unless it is ALL black, and that an up-to-date farm isn't up-to-date unless it has an up-to-date kitchen. I am just as progressive as he is, and I want my part of the farm life to keep pace with the rest of it, and of the world. We bought a new gasoline engine to cut and grind feed, run a lot of machinery out at the barn, and then we bought another, a smaller one, to run machinery near the house. But what I started to tell was that not a single farm home should be without a self-heating gasoline iron for ironing. I have had one all summer, and would not think of giving it up. Sisters, join the Progressive Club and keep up-to-date.

FASHION FOR EARLY FALL

THIS fall the fashions seem to be more attractive than ever before. Everything is soft in line and graceful, considerable drapery being one of the novel features. This is found not only in skirts, but in coats and waists as well. The waists are made at least two sizes too large for the wearer, if we are to judge by appearances, and hang in what would have been called a "sloppy" manner not so very long ago.

The very low shoulder produces the effect of a drooping figure, while the sleeves are almost without exception plain at the shoulder, many of them being set into the low shoulder with a very wide armhole. Lower down, at the wrist there is generally a little fullness and this is gathered into a cuff of greater or less depth as desired.

Nearly all sleeves, both of odd waists and costume waists are full length. They follow the shape of the arm, but they are not tight. Those that end at the elbow are really loose and sometimes almost baggy at the cuff that is generally a wide band of lace or other trimming.

The high waist remains with us and it is certainly becoming to the figure as it is now seen. The uncorseted effect is still favored, but this does not mean the utter absence of the corset, for below the waist one is still tightly laced in. Above the waist the corset is very short, but there is always a brassiere of some substantial material to hold the figure in place. The result is very soft and attractive and the loose blouse helps a great deal.

The skirts themselves vary as widely as anyone could desire and there is no trouble at all in finding some style for every peculiarity. The plainer tailor models have all the severity of past seasons, but these are not by any means as popular as are the semi-tailored styles.

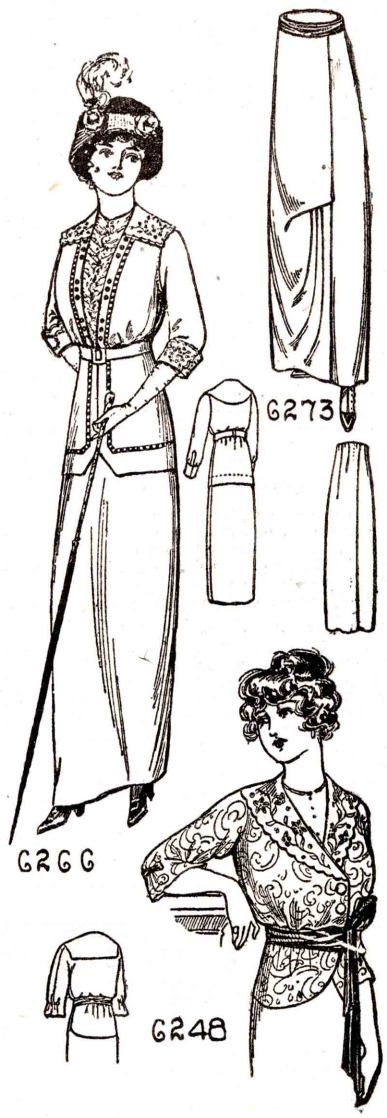
What is Now the Fashion

An excellent idea of the tailormade costume up to date can be derived from the figure shown in No. 6266 and the little jackets that are now so popular are well pictured in No. 6248, which would combine very well with the skirt shown in No. 6273.



Free Monthly Fashion Guide

We are unable to print all the fashion illustrations each issue that we would like to publish. However, with each pattern order mailed we will include free an advance Monthly Fashion Guide. Monthly Guide alone, without pattern, for 2c for mailing. All patterns are very latest and only 10c each, postpaid.

6248—Ladies' Shirtwaist. This shirtwaist can be used to complete a dress or it can be worn with separate skirts. The long or short sleeves can be used. The pattern 6248 is cut in sizes 34 to 42 inches bust measure. Medium size requires 2 5-8 yards of 36-inch material.

6266—Ladies' Dress. Linen or serge can be used to make this dress. The closing is made at the front and the long or short sleeves can be used. The two gored skirt is made with a front and back yoke. The pattern 6266 is cut in sizes 34 to 52 inches bust measure. Medium size requires 4 1-2 yards of 44-inch material with 2 yards of edging and 3 1-2 yards of braid.

6273—Ladies' Skirt. A two-piece design, made with high or regulation waistline. There is a graceful drapery at the lower edge of the front seam, where the closing is also placed. In the back there are just a few gathers at the top of the skirt. Pattern 6273 is cut in sizes 22 to 30 inches waist measure. Medium size requires 2 7-8 yards of 44-inch material.

Price of Patterns, 10 Cents Each

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

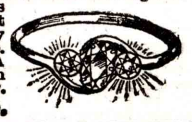
A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in "A Cart Load of Fun" are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. "A Cart Load of Fun" is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.
COONER & FORTUNE, Indianapolis, Ind. **For 10 Cts**

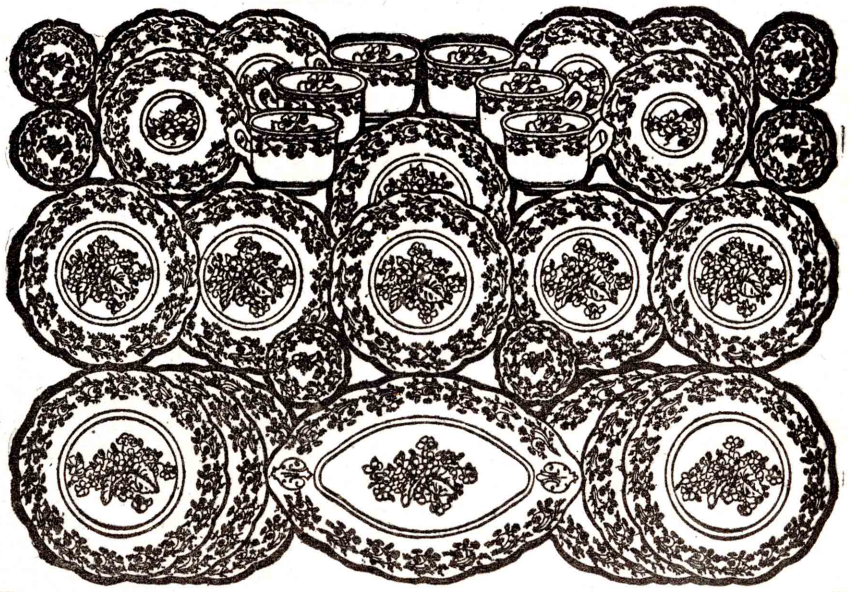
LOCKET AND CHAIN FREE

This beautiful **Ladies' Neck Chain and Locket** is gold plated, burnished in finish with a long cable link Chain having a patent spring catch. Locket is set with twelve highest quality brilliants in the popular Star and Crescent design. Is over 1¼ inches in diameter and can be engraved on back. Secret compartments for two pictures. We are going to give away thousands of these Lockets, and we want you to have one.



SEND NO MONEY A postal will bring our free offer. A beautiful, sparkling, brilliant gem Ring to those who are prompt, so write at once. Don't delay.
LOCKET & CHAIN CO. 114 Friend Bldg., Kansas City, Mo.

74 ARTICLES FREE



I HAVE SELECTED the prettiest set of dishes I could find to give to my friends. The above picture does not show all the dishes, but gives a faint idea of the beautiful rich Rose design and the size of each piece. As soon as you send in the coupon below I will mail you a large picture of the entire set with each piece in all the pretty colors of red, white, green and gold, showing just exactly how the set will look when you take it out of the box in your own home.

In the center of each plate or dish there is a beautiful cluster of bright roses, surrounded by green foliage, all in perfectly natural colors. Around the edge of each piece there is a very heavy and artistic design in gold. The combination of gold, green, white and red, makes the most popular design yet produced in tableware. Fashionable, stylish, artistic and serviceable. The ware itself is pure white and dainty enough to delight the most fastidious housekeeper. When you get these dishes on your table you will have something to be proud of indeed. And we don't want you to pay us a cent of your money for them. What we ask you to do is so easy you will never miss the spare time it will take, and the pleasure these beautiful dishes give will be with you for years.

In addition to the lovely 33-piece American Beauty Dinner set I will also give 41 extra gifts. These 41 extra gifts are also free. I pack them in the crate with your dishes. Counting the 33-piece dinner set and the 41 other articles make 74 articles you will get by giving me a little of your spare time.

Fill out the coupon below and I will send you prepaid a big sample needle case, containing 115 Sharp's best needles, darners and bodkins, all fitted in a handy and convenient needle case. The darners are for cotton, wool, lace, gloves, carpet, etc. When you have received them show the needlecases to your friends and also show them the sample copy of the Journal of Agriculture and Star Farmer, which I will send you, and ask them for 25c each in connection with a special offer I will authorize you to make. When you have collected only $4.00 for us in this way the lovely dinner set will be yours. Put your name on the coupon and send it at once. It costs you nothing to sign the coupon—I take all the risk.

SEND NO MONEY
Journal of Agriculture and Star Farmer, St. Louis, Mo.:
Please send me free and postpaid the Big Needlecase of 115 best grade needles, together with large illustration in colors of the 33-piece dinner set and tell me about the 41 extra gifts. If I take orders for sixteen needlecases in connection with your special offer you are to ship me the complete dinner set, and 41 extra articles—total 74 articles.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

THOUGH UP-TO-DATE FARMING visits its readers promptly every two weeks, important events are transpiring so rapidly that issues seriously involving the human family transpire within these short periods. This rapid transpiring of events keeps our editors busy, for we are determined this paper shall be different from other papers in that it will speak fearlessly on all subjects and work in the interest of its readers. Our young writers scarcely know how much they help us! and they can help us much more. We are approaching now the business and the busy season for the press. We not only want to keep the paper full of good things, but we want the greatest possible number of people to read them. Here is where our young friends can help us most. Every new subscriber is another link in the chain which even now encircles the globe—the addition of other pupils to our great school. Get us all the subscribers it is possible to obtain. We'll be liberal.

DEAR CADETS: I am 17 years old, and have lived on a farm all my life, and like it very well, but I believe I would like city life the best. UP-TO-DATE has been coming to our home for about six years. I read it all, but I most appreciate the Cadet letters. I am a great lover of flowers and animals. I am a member of the Grit Golden Rule Club, which I think it very nice, and I wish all the Cadets were members. I want all to write me and send me their photos; will get mine in return. Write me about your home and I will write you about mine and about all my friends and amusements. I live 7 miles from Georgetown, and get my mail every day at noon. —Emma Beatrice Rogers, Georgetown, S. C.

DEAR CADETS: Napa Valley is situated 20 miles from the Pacific ocean. It is surrounded on the east and west by high mountains. In the northern part of the valley is a beautiful mountain higher than the surrounding ones, and it is supposed to be an extinct volcano. The hills around are heavily wooded with oak, pine and redwoods. Toward the southern part the hills gradually get lower and are covered with low bushes. At the extreme southern part of the valley is an asylum that is covered with green ivy the year around. Further up the valley is a Veteran's home where the inmates are provided by the county with both food and clothes. The building is surrounded with fragrant flowers, and the people give concerts to amuse and honor them for sacrificing so much for their country. Now, I have given a brief description of one of the noted valleys of California, and I would like a Cadet from Arkansas or Kentucky to send a description of their part of the country. I will be glad to hear from the boys and girls near my age, which is 16 years. I will answer all.—Celia H. Servis, St. Helena, Cal.

DEAR CADETS: I live in a small village and I love to read your letters. I am 19 years old, and in the second year of high school. I have a piano and love to play. My father owns a farm, and when I am not in school I help him all I can. We have taken UP-TO-DATE for about a year, and I highly recommend it to all. I would be glad to hear from all the Cadets. —Elza Cunningham, Dudley, O.

DEAR CADETS: I am 13 years old, and have lived on a farm all my life. I don't think I would like city life much. We have been taking UP-TO-DATE about two years, and like it better than any other farm paper. I would like to hear from some of the Cadet boys and girls, and will answer all cards or letters I receive.—Effie Powers, Rocky, Okla.

DEAR CADETS: I am a Georgia girl, and will be 18 in November. I have been reading UP-TO-DATE for two years, and I think it is a fine paper. I always enjoy the Cadet page. I am not a farmer girl, but I think I would enjoy country life much better than city life. The farmers here raise corn, cotton, oats, rye and cane. All the crops are fine in our state.—Allie Peters, Iron City, Ga.

DEAR CADETS: I am 16 years of age, and live on an 80-acre farm in southwestern Colorado. Our farm is in a large farming district, 12 miles from the city of Durango. My parents have taken UP-TO DATE FARMING for over a year, and I think it is a very good paper. I will gladly answer all letters and cards received from the Cadet boys and girls.—Ray H. Michael, Hesperus, Colo.

DEAR CADETS: I live on a 160-acre farm three miles from town. I have been a reader of UP-TO-DATE for only a short time, but I certainly think it a fine paper. If more farmers would read it they would be more prosperous. I have lived on a farm all my life, but I expect to move to town in the spring. I would like very much to have a card or letter from every state in the union, and will answer all I receive.—Agnes M. Peterson, Dwight, Ill.

DEAR CADETS: I am a farmer boy 17 years old, and have a crop of my own. I raise corn, peas, watermelons and vegetables. I like to farm for my mother and has been for 20 years. I assist him in the office, but I don't like it very much. I would rather live out in the country on a large farm. Father has a small farm, but it really don't seem like a farm at all. There is nothing I enjoy more than to visit a home out on a farm where I can enjoy the fresh air and see things one never dreams of in a town or city. I am a great lover of music, and think it the greatest accomplishment one can attain. I have studied music and play right well. I did not study last year because of sickness, but I am studying now and will continue the study in school with my other studies. I will be 18 years old September 19, but I am small, weigh 80 pounds, and am not larger than an ordinary 12-year-old child, except in height. I wear a one and one-half shoe. Would like to have a letter and card shower, and will positively answer all I receive. Would like to hear from boys and girls in every state in the Union.—Dodie Crosby, Ruffin, S. C.

DEAR CADETS: I am a Virginia girl, 19 years old, and live on afarm. I like to work on the farm. In fact, I like outdoor work better than housework. I enjoy reading the Cadet letters and UP-TO-DATE. I hope to hear from many of the Cadets, and will gladly answer all letters and cards I receive.—Belle Lawson, Herald, Va.

DEAR CADETS: I am a goat raiser, and live on a farm of 160 acres. We have 300 goats, and they do fine on our ranch. We also have a fine garden and corn fields. My sister takes UP-TO-DATE FARMING, and I think it a fine paper. I like to read the Cadet letters as well as the other parts of the paper. I would like to hear from Cadets, especially those in California. I am 19 years old.—Henry Mahnke, Kelseyville, Cal.

Free Pony

Who Wants Me—Quick?

Boys and Girls! Do you want this beautiful Shetland Pony all for your own? Then send me your name and address today—quick. Some one is going to get him—you can have him—*but hurry!*

My Name is *"Major"*

Well Broken Gentle Kind

42 Inches High

I Am Now 42-in. High and 3 yrs. Old. I am a Pet, Too.

My color is black. I am considered a very handsome pony. I am well trained. You can either ride me or drive me and I am just as kind and gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy. I do not scare because I know better—have been taught better. I want a kind little boy or girl as my owner. I'll go anywhere to find them. I am just waiting to come to someone. I'll make some boy or girl happy, because that's what I was made for. That's what I was intended for and it's what I like to do. If you want me, and I know you do, just send me your name and address on the coupon below (or a postal,) and I'll do my best to come to you in a hurry—I must go somewhere, so be quick. Send your name this very day.

Wagon and Harness, Too, Come With Me

This is one of the most beautiful ponies, that I have ever given to any boy or girl in all my life, and I have given away more than 25 Shetland Ponies. This one, **"Major"** is a beauty. He will make the heart of any boy or girl leap with joy. I wish you could see him. I just hate to let him go, but go he must, free of all cost to some boy or girl friend of mine who is willing to do me a small favor.

I am going to send a beautiful carriage along with him, and harness too, and I expect a saddle also. Might as well. I want to please and that's the way to do it. I want the boy or girl who gets this elegant Shetland Pony and outfit to be just the happiest person in all the world. I want them to remember me as long as they live, and they will, too. I have dozens of little boy and girl friends to whom I have given ponies and presents, all over the United States and I get letters from them every now and then. They send me pictures of the ponies I gave them, and tell me how pleased they are and that I always do as I say—Now my friend, if you want **"Major"**, just send me your name and do it quick. **I have a gift for you.** A postal card or the coupon in the corner, will do. Hurry! I'll send you the present, pony pictures and letters from boys and girls to prove what I say, so hurry!

Uncle Billy, Pony Man, 142 W. Ohio St., Chicago

I Want This Pony

Uncle Billy, 142 W. Ohio St., Chicago, Ill.

I want **"Major"** and I want you to send me the pony pictures, your free gift, and tell me how to get this pony. Below is my full name and address. Send quick.

Practical Organization and Co-operation

THE FARMERS SOCIETY OF EQUITY

A national organization of, by and for farmers for all the benefits to be derived through the means of organized co-operation. Incorporated under the laws of Indiana. No Capital stock. Membership fee, $2.00; Dues, $1.50 annually. Unity of marketing through county and district clearing houses, ultimately to federate in one national clearing house, the plan.

National Union Officers

Pres., J. A. Everitt, Indianapolis; V.-Pres., W. H. Mitchell, Hutchinson, Kas.; Sec., M. K. Sleight, Indianapolis; National Organizer, H. F. Cutting, Portland, Ore., or Indianapolis. Directors, Robert Stevenson, Lebanon, Ind.; Jacob Bretz, Bretzville, Ind.; S. W. Morris, Rochester, Minn.; Fred N. Parkinson, Rexburg, Idaho; W. S. Shure, Summerdale, Ala.; J. A. Harmon, Shawnee, Okla.; C. Hayes Taylor, Indianapolis, Ind.

State Union Directory

Locals reporting dues and fees of new members in states having an organized state union will make reports to their state union secretaries.

Idaho

President, A. Y. Satterfield, Sterling.
Secretary, O. E. Scott, Shelley.

Oklahoma

President, P. H. Thomas, Shawnee.
Secretary, J. A. Harmon, Shawnee.

Oregon

President, Wm. Schulmeric, Hillsboro.
Secretary, F. G. Buchanan, Oregon City.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

In the preceding issue of this paper we said:

* * * We mean by this that now is the time to analyze every movement under way or proposed, to develop country life, to determine whether the development will be along lines and to the end that life in the country will become the ideal life as God intended it should be, and as it must be if the highest character and grandest virtues of American life are to continue to come from the soil.

—o—

The movement considered in that issue was the County Farm Expert movement. We showed that the forces back of this movement are the boards of trade and produce and cotton exchanges federated in what is called the "Council of Grain Exchanges." As is well known, the institutions mentioned are maintained for gambling and speculating in the products of the farm—the necessaries of life—and our conclusions were that it is not reasonable to expect the people representing these institutions to solve farmers' marketing problems in the interest of farmers themselves, but that it is reasonable to infer that they entered the field to perpetuate themselves in doing farmers' business at the marketing end, and have farmers continue as laborers only, to produce the stuff.

—o—

Before leaving this subject, we will quote further from the August number of "The County Agent," which is the official paper of the County Farm Expert movement. Referring to an illustration in that number was this:

Here are shown ten county agents, with automobiles, who work shoulder to shoulder in ten of seventeen counties of the West Central Minnesota Development Association, all of which counties were organized by the assistance of the Crop Improvement Committee, Council of Grain Exchanges, in co-operation with the Government and the State College of Agriculture.

—o—

We make the above quotation to further confirm our claim as to the people back of the movement for greater crops, which movement does not include any plan for improving the marketing system. Another purpose we have is to again show the position of the government and state agricultural colleges, as alleged by "The County Agent."

—o—

We may stand perplexed at the situation. How can two such supposedly incongruous classes of people co-operate for a common cause? The undeniable interest of the one class is to keep the marketing of farm crops and the prices thereof as uncertain and indefinite as possible, so as to permit gambling and speculating therein, and the exploitation thereof. The interests of the other class ought to be to bring about such a system in marketing the products of the farms that there would be such a certainty in prices and in the markets that there would be no more opportunity to speculate in the products of the farm than there is in a season's output of wagons or plows or other goods made by a financially strong manufacturing concern. So the question arises, what does the co-operation of these two classes of people mean? As long as the farmers were content to follow in the lead of their teachers who taught them to produce two blades of grass, two bushels of grain, two bales of cotton, or two tons of hay, where one blade, one bushel, one bale or one ton was produced before, the people who enjoyed a monopoly of handling the crops, were content to keep hands off. But since this paper and the Farmers Society of Equity have shown the farmers that they can have a business system of their own, controlled and owned and operated by themselves, and since many farmers have been demanding of their leaders in no uncertain language, that they must have instructions and plans for marketing, instead of only the eternal din in their ears to "grow more stuff," the aforesaid marketing monopolists are taking a leading part in organizing the farmers.

—o—

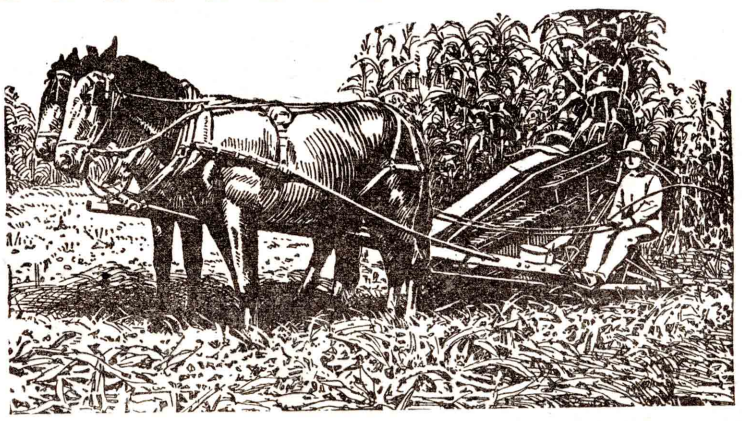
We charge without fear of successful contradiction that this effort is made for the purpose of keeping the farmers' minds off of the true issue—that of profitable marketing. Backed by the Council of Grain Exchanges, a movement is abroad in the country in the interest of greater production exclusively such as the country never knew before. If the farmers themselves in any county are indifferent or opposed to crop improvement, without improved marketing, these people, who have their selfish interests to promote, furnish the money and thus force the county expert on the people. What farmer who has joined in this movement knew that the Chicago, Minneapolis, New York, New Orleans and other gambling boards of trade and exchanges are back of and at the bottom of the "West Central Minnesota Development Association?" And the same question we might ask of the farmers in any other district where the county expert movement has started. We venture the assertion that not a single farmer in the seventeen counties comprised in the Minnesota district referred to in the quotation at the beginning of this article, will know that the very institutions he detests, and which are the cause of most of the ills that afflict his business, furnished the money to canvass the districts to get the expert established, until he reads this paper.

—o—

And what about the connection and co-operation of the Agricultural Colleges, with the Council of Grain Exchanges? The Agricultural Colleges were established for the benefit of the farmers. "The County Agent" says, "This work of establishing county experts is done by the Crop Improvement Committee, Council of Grain Exchanges, in co-operation with the Government and the State Colleges of Agriculture. It would appear from this that the agricultural colleges are drifting away from the farmers and have become adjuncts of and co-operators with the very institutions that farmers most desire to be rid of. As far as this affiliation of the colleges and the Council of Grain Exchanges has been affected, the colleges have joined with the farmers' enemies. Besides the claim that the Council of Grain Exchanges has secured the co-operation of the government and the fact that many of the agricultural colleges are co-operating with it, it insidiously seeks to secure the co-operation of other classes of people; in fact, to pervade all of the country institutions. Thus the country handlers of farm produce become willing workers with it, because they think they see a menace to their business in the rise of a farmers' power in the field economic. The banker enlists because he believes the movement to increase production will make an extra demand for money and he would rather have the farmer a borrower than independent financially, as would be the rule, if the farmer could sell his crops for what they should bring. And these are not all. The press is subsidized or enlisted in the movement through specious arguments and a "Press Committee" is always a part of the propaganda of the Council of Grain Exchanges. Even the schools are enlisted in the movement through activities in seed-testing and crop contests by the boys and girls.

—o—

We print these things to start the farmers to thinking. They may well ask, "whither are we drifting." In considering this matter it is well to keep in mind the saying that the stream cannot be purer than its source. Likewise the motive of the Council of Grain Exchanges cannot be different from the interests of its constituent boards and exchanges, and the inter-



Let the Horses Do the Work

IN all the operations necessary to the raising of corn, from the preparation of the seed bed in the spring to the planting and cultivating, you use power-drawn machines. Why stop a reasonable method and go back fifty years or more at harvest time? Why take the horses off the work just when the hardest job is to be done? This year buy a corn binder and let the horses do all of the work incident to the corn crop.

There is not alone the saving in work to be considered; there are other important savings resulting from the purchase and use of an I H C corn binder. Properly used it saves the one-third of your corn crop which the old method wasted. Each corn binder saves the wages of four or five extra men or saves about four-fifths of the time spent in harvesting the corn by hand. No matter how you look at it, you will make money by investing in an

I H C Corn Binder

Corn is hard to cut, but the practical design and strong construction of I H C corn binders make them last and do good work for years in all kinds of corn, either short or tall, standing, down or tangled. When cut at the right time and cured in the shock the whole corn crop, ears, stalks and leaves are ready to be turned to profit by being run through an

I H C Husker and Shredder

Deering, McCormick or Plano

In years when the hay crop is short and prices high, a plentiful supply of nutritious stover enables you to bale your hay and sell it in the best market without detriment to your stock. Shredded fodder is eagerly eaten by the stock and is especially good winter feed, because of the large amount of heat-producing materials it contains. It is better to use corn stover in the barn than to waste it in the field; especially, since it comes to you as clear profit and at practically no expense.

I H C local dealers will assist you in deciding on the right machines for you to buy and they will give you cheerful and willing service, both before you buy and afterward, as long as your machine lasts. Get catalogues and full particulars from them or, write the

International Harvester Company of America
(Incorporated)
Chicago U S A

ests of the members of such boards and exchanges.

—o—

So the question is, is it for the best interest of the people who gather together the products of the farm at the lowest prices than can be forced and store them for speculation and exploitation, that the farmers shall be organized to the extent and on a plan that will keep the supply of farm crops in their (the farmers') own possession until the real demand, gradually expressed, needs them, and then be sent by the farmers' own marketing system directly to that demand, with the intervention of only a small fraction of the present middlemen and entirely and absolutely free from any speculation, gambling or exploitation?

—o—

Farmers should answer this question for themselves and then they will have the answer to the question, "whither are we drifting?" by the Council of Grain Exchanges route.

—o—

There can be only one answer. The attempt is being made to side-track the sincere efforts of farmers' real friends and a vast army of farmers who are honestly and earnestly seeking their industrial freedom from the bondage of other classes. It is clear that such freedom can only come through an organization promoted by the farmers themselves, composed of farmers and for the chief purpose of the control of crops by the producers thereof, and equipped with a business system that will send the crops direct to the demand.

—o—

We have frequently said that we are not against the crop improvement movement per se. We are in favor of greater and better production, but we want every effort to increase the crops coupled with an equal effort to improve the marketing so the producer will get as much money for the large crops as would be paid for smaller crops.

—o—

Without improved marketing, every material increase in production, regardless of how it is brought about, reduces the money value to the whole number of producers and is a curse to farmers rather than a benefit, but always is a distinct benefit to handlers, by cheapening the price of the crop and making more of it to handle.

—o—

We have many times given illustrations in this paper, based on government reports of crops, showing that the great crops sold for less money than the small crops. In a recent issue of the Saturday Evening Post, it editorially confirms what we have pointed out to our readers months ago in the following:

Last year's corn crop exceeded three billion bushels, but as the price fell, producers got no more for it than for the preceding crop of two and a half billion bushels.

—o—

Continuing the Post brings up an interesting piece of history in the following:

Time out of mind farmers have faced this paradox of getting more money by producing little than by producing much. In 1679 and 1680 Virginia tobacco crops were superabundant and prices fell to a point where a year's yield would hardly clothe the family. In 1681 and 1682 the assembly was urged to stop tobacco planting. When the last attempt failed, mobs of planters desctroyed crops right and left. Hundreds of plantations were laid waste. Colonial militia suppressed the mob, three ringleaders were hanged and a law was passed making plant cutting high treason and punishable with death and confiscation.

—o—

Continuing, the Post says:

In the ensuing 230 years we have not improved much, except in the minor details of riot and hanging, upon those crude attempts to trim the balance between producer and consumer. Last year's average corn yield to the acre was under thirty bushels. It might easily have been forty. If it had been the price would have fallen below the cost of production.

—o—

The Post vividly presents what the farmers may expect and what unquestionably will be the result if the advocates of greater crops, without improvement in our marketing system, succeed in their attempt. We want though to say that even in the matter of "minor details of riot and hanging," using the words of the Post, we have really not improved on the farmers of over two centuries ago, because as recently as 1907 the tobacco planters, in an important district in Kentucky, attempted to and practically did cut out a whole crop of tobacco to reduce the supply, so that tobacco already produced and on hands might be sold at profitable prices. In that campaign to cut out the crop, numerous cases of riot, barn-burning and even murder occurred.

—o—

And so it has been, that in recent years, since farmers realized that it was the large crops that gave them the least money, there has been more effort made by organized farmers to reduce the production than to increase it. Indeed, even without an extensive organization to increase production, any good season easily produces a crop that sells at unfairly low prices. In bad seasons we doubt whether even the greatest effort on the part of the Crop Improvement Association can materially increase the crop.

—o—

But we can see how the farmers, in those counties that have been organized for greater and better production, are in a splendid position to broaden the scope of their co-operation and make it include marketing, too. Naturally there will be opposition to such a broadening of the scope of the organization, but as the movement is said to be for the welfare of the farmer and as one of the chief interests, in fact the vital interest of his business is marketing, he must brush aside all opposition and demand through the county expert, advice and help also in marketing to get what the crops should bring him. To this end we have added to our coupon this time a bank to report the County Agent and his name and address. On receipt of such coupons we will communicate with the agent and show him how he can help the farmers in his county to market and thus the movement to develop country life will be balanced, and the benefits many times multiplied.

—o—

In these matters we can only show the dangers and sound warnings and point the way to a cure for existing or threatened ills, but the farmers themselves must apply the remedy. So where the farmers have associated themselves as a body to improve the production, they are in a very favorable position to broaden the purposes of the association to include marketing. From the evidences that we have given, and there is additional evidence that can be found in the Year Book of the Department of Agriculture, they can see that only by taking such an additional step, can they justify their efforts to produce more?

—o—

We earnestly believe that it will be the greatest mistake farmers ever made if they now wait on the government or any outside institutions, or any class of our people to organize them to solve their business problems.

—o—

If farmers permit an organization to be built throughout the country, according to plans and specifications furnished by the Council of Grain Exchanges (the federated boards of trade and cotton and produce exchanges) it will continue all the uncertainties of marketing as at present so that speculation and gambling will be perpetuated. These are things that the farmers want to get rid of.

—o—

The first step to take is to start the work by organizing local unions, these to be federated into county unions and the county unions to be federated into district unions for immediate marketing purposes and all to be eventually federated into one central head or clearing house for the entire country. All of this is made clear in the literature of the Farmers' Society of Equity.

—o—

Where the crop improvement association has been established it can take the lead. For a fact the people who associate themselves together to increase the production ought to easily be convinced of the absolute necessity of including in their activities practical marketing to secure what their crops are worth. Neighborhood pull and co-operation is where we must start. County pull and co-operation multiplies the strength of each individual farmer in each county many times, but by the system that we teach, and which system is in operation in various sections of the country already, the power of the individual farmer may be increased by the combined power of all the farmers in a big district, comprising several counties, because all have joined together to uphold each other in their demands for profitable prices and equity in all the business relations of life.

—o—

The coupon follows. Let some person send it in from each community, whether the county expert is there or not.

—o—

If additional copies of this paper are wanted by any of our subscribers, they will be sent on request. We would like to have a copy placed in the hands of every County Expert Agent.

—o—

This article will be continued.

Equity Field Work

OCTOBER 1 DUES PAYING DATE

Local unions and members-at-large are notified that the next dues paying date is October 1. This does not mean that dues for each member are payable quarterly, as the annual dues of $1.50 are payable in one payment. It does mean that such local unions or such members-at-large as started in the three months that October 1 is the nearest quarterly date. All must pay at this time. The dues paying date is written on each charter. The secretary will look at the charter, if in doubt, and if "October first dues paying date" is written thereon, he will collect the dues from each member and send it in. Members-at-large will send direct. Please be prompt in paying dues as they are the sinews of war in this great work which is being accomplished faster now than ever before. That thing has a double value that is done promptly.

REPORT THOUGH YOUR SECRETARY

We constantly receive reports of crops to sell from members of local unions, and the Society's representatives are bothered the same way, as they inform us. If a member of a local union REPORT YOUR CROPS TO THE SECRETARY. He is your business agent and it is his duty to assemble all produce of a kind and sell it as a community unit. That is what you organized for and if you cannot break away from individual marketing your organization will be valueless.

Cache County, Utah, Holds F. S. E. Convention

A county convention of the Farmers Society of Equity was held in the Commercial Club rooms at Logan, Cache county, Utah, on August 12. The convention was attended by several of the leading Equity officials from Idaho, and the program following was carried out. These northwestern farmers have taken fast hold of the correct plan for effective business organization—the county unit for both buying and selling.

Program

1. FRUIT—How we can handle same both in planting and marketing. N. R. Broby, Wellsville.
2. DAIRYING—How we can develop same as a County Unit. F. I. Peart, Millville.
3. POTATOES—How we can grow and handle same to our advantage as a County Unit. General discussion.
4. POULTRY—How same can be handled as a County Unit. General Discussion.
5. GRAIN MARKETING—Advantages in growing and marketing unitedly. Wm. A. Shuldberg, President Franklin County Union.
6. FARM MACHINERY AND IMPLEMENTS—O. E. Scott, State Secretary Idaho Union.
7. COAL AND SACKS—The purchase and distribution of same. John Everton, Secretary-Manager Franklin County, Idaho.
8. THE EFFICIENCY OF THE COUNTY UNIT—A. Y. Satterfield, President Idaho State Union.

A State Union's Success

The Idaho State Union has purchased for its members more grain sacks than the total quantity of sacks handled by any two firms dealing in sacks in the state. The saving thus effected was from two to five cents a sack, or from $1,000 to $2,500 a carload. The state union is rapidly perfecting its plans to handle all the crops produced by the membership this year, and has been shipping hay for some time.—A. Y. Satterfield, President.

Approves F. S. E. Plan Unreservedly

Your society receives my unreserved approbation and commendation. God bless your grand work and give success to the Farmers Society of Equity.—W. F. Parker, Missouri.

Rural Organization Service

It is the chief desire of Up-to-Date to see the farmers prosperous and happy, and it is our chief object and endeavor to help them become so. Every community can be more prosperous, and have more of the things that go to make for greater enjoyment of life. The best way to attain this end is through a local organization for educational, social and business purposes. Every community can, and should have such a club. We shall be glad to aid in the work. If any reader who lives in a community where no such club now exists, but desires to see one established will write the editor, he will take the matter in hand. Literature will be supplied showing how to form and conduct a club, and blank forms and full instructions will be sent, free of charge. Questions will be answered. All the information advice and assistance in our power will be given cheerfully. To organize and conduct a country club is not a difficult task. It can be done anywhere, everywhere, by following the simple rules of successful co-operation that have been tested and tried through long years of experience and found sufficient. No matter where you are, or what the condition of your community, or what crops you raise, you can have a successful local organization that will add wonderfully to your country life, its progress and prosperity. All our editors have had long experience, in many different localities in just such work. On our staff is a corps of experts in this line of work. We will all help. We want to help. Let us hear from you.

Law Should Stop Sale of Leg-Strap and Spring Trusses

Wrong to Buy Anything for Rupture Without Getting 60 Days' Trial

Depending on leg-strap or spring trusses—like shown below—is little less than slow suicide. They are almost sure to shorten your life. It's next to impossible to make them hold without hurting—they are simply a curse to wear.

Away With Leg-Strap and Spring Trusses

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why druggists should no more be allowed to fit trusses, than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write today—find out how you can prove every word we say by making a 60-day test without risking a penny.

Box 773—Cluthe Co., 125 E. 23rd St., New York City

Old Folks What 15c will do

You have wished for a paper that is printed in type that you can read without straining your eyes; a paper that gives all the news of the world, and that tells the truth and only the truth.

The Pathfinder is just the paper you have been longing for, and the little matter of 15c in stamps will bring it to you every Saturday for 13 weeks on trial **The Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation, now in its 20th year of increasing success. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time and money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, **The Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at least. Send only 15c to show that you might like such a paper as this and we will send **The Pathfinder** on probation 13 weeks. The 15c does not repay us, but we are glad to invest in New Friends. **THE PATHFINDER**, Box 7, Washington, D. C.

Two Money-Making Rules for Every Farmer—

Keep Out the Weeds and Worms

You can't make money raising weedy corn—or wormy stock. It's impossible. Worms cause even **bigger** loss than weeds, because most farmers don't fight what they don't **see.** But one thing's sure, and that is—

Every Farm Animal Needs SalTone

Government reports say nine out of every ten animals are wormy—that the annual worm loss is more than $25,000,000.00. It's nine chances out of ten **YOUR** animals are wormy.

What It Is

SalTone is the oldest medicated salt on the market. John E. Robbins, the famous stockman, has been making it for over thirty years. You feed it like common salt.

Send the Coupon and Try 100 lbs. of SALTONE The Wormicide and Conditioner for All Farm Animals.

SALTONE Will Stop Your Worm Losses

What It Does

SalTone has made International prize-winners for Mr. Robbins—you've heard of the famous **SalTone** herds. Don't pour expensive feed into worms. **SalTone** will drive them out—will make your stock fat and fine. One penny's worth lasts a hog 12 days. Read our offer:

Read These Letters

I have not had a sick animal since I commenced to use SalTone. **Oscar Robards, Robards, Ky.**

SalTone saved me from losing a bunch of 30 hogs. **Louis Krautz, Higginsport, Ohio.**

SalTone made my stock do many times better than ever before. **Albert Miller, Batavia, N. Y.**

My hogs wintered better than ever before. **Earl Rogler, Atlanta, Iowa.**

Try SalTone 60 Days—See for Yourself

THE JOHN E. ROBBINS COMPANY, Greensburg, Indiana
Ship me your special 100 lbs. 60 day trial order of SalTone. I will tell you in 60 days whether it does as you say and if it does will pay for it. If it does not I owe you nothing.
UFD9-15-13
Name.....
P.O.....Ship Sta.....
County.....R.F.D.....
State.....

Send the Coupon—No Money

We'll send 100 pounds of **SalTone** on 60 days' trial. Give it as directed and at the end of that time tell us your experience. If it does not do as we claim, it will cost you nothing but the freight charge. If it does, it will make you ten. perhaps a hundred times its cost. Send no money—just sign and mail the coupon TODAY.

The John E. Robbins Company
Greensburg, Ind.

Prices:
40 lbs., $2.25;
100 lbs., $5.00;
200 lbs., $9.00;
300 lbs., $13.00.
No mail orders filled for less than 40 pounds; SalTone is sold in "trade-marked" packages. Never in bulk.

New York Farmers Ready

I am greatly pleased with the F. S. E. literature sent me. The book "The Third Power," is a masterpiece. The Farmers Society of Equity is what farmers have long needed, and it remained for Mr. Everitt to show how to quickly accomplish a great work. I have talked with prominent farmers and to a man they are in favor of the Farmers Society of Equity movement. I am ready to begin work at once, and can give all my time to it, as the cause is worthy of a man's best effort. It will be no trouble to organize a local here.—J. C. Kull, Lockport, N. Y.

co-operative marketing plans for some time, and to have many associations each under separate management does not insure intelligent distribution, but works in the dark. The whole marketing of all products must be done either through one central marketing management for all crops or one for each product. There is much of importance to farmers besides the marketing feature that can only be accomplished under one organization."

Combined, We Can Do it Now

I have read and studied the circular, "The National Marketing System," and I am sure that some day, in the near future, too, we shall have a system as you outline. Oh, how plain it is, if we could only grasp it with an honest motive. Knowing that it takes money to defray the expenses of your work, I take pleasure in contributing my mite. Enclosed find my check.—I. S. Henjum, Secretary, National Association of Farmers Co-Operative Elevator Managers, Hartford, S. D.

Given to Ladies

35 Embroidery Designs WITHOUT COST

Here are 35 Beautiful Embroidery Designs that I have secured exclusively for the ladies of my large up-to-date family. In the assortment are 6 Embroidery Borders, 4 Butterflies, 5 Emblems, 2 Alphaoets, 2 Initial Wreaths and innumerable other beautiful and attractive designs.

Apples Wanted

Our local is in the market for flour and apples, desiring to secure supplies from the F. S. E. Give description and price.—A. O. Alexander, Secretary, Arnold, Neb.

Make Money gathering all kinds of roots, barks, herbs, leaves, etc., used in medicines. Write for circular. GRUND COMPANY, N. PHILADELPHIA, PA.

Let me give you this family of 3 dollies and 3 issues of Up-to-Date Farming for only 10 cts

THIS family consists of Anna-Belle, over two feet tall; her brother Jimmie, a husky fellow and sister Susie, each eight inches tall. If you get them you can name them to please yourself. Anna-Belle is a big, plump baby, very like a real live youngster, and can wear baby's clothes. Her hair is golden instead of black, as in the picture, bright eyes and rosy lips. Her legs and arms bend and she will sit or stand, as you want her to. Every little girl will love to have a dolly like this to dress and undress, and play with. Brother and sister dolls are just too cute for anything.

MY REALLY GREAT OFFER TO UP-TO-DATE READERS

I WANT to give this doll family and three issues of our paper to a little girl in each family that receives this paper, or to some one who will give it to a little girl friend. I make this offer to introduce Up-to-Date Farming, in new homes. The only condition that I make is that 10 cents (12 cents if in stamps) be sent to help pay the expense and to guard against more than one person in a family sending; also that you will show what I send you to your father and mother and five of your neighbors.

When You Do This, According to My Plan, I Will Send You, Entirely Free, the Newest Talking Doll, "Princess," a Sensation from Germany.

YOU better not miss this. Others will offer dolls, but I don't allow any one to beat me in liberality. Think of this and you should send your name before you lay this paper aside. Try to be the first one in your neighborhood to possess this family of dolls and then, following in a few days you can be the happy possessor of the beautiful talking doll "Princess," made in Germany. Fill out the coupon, mail and you will get them by return mail.

Miss Gertrude Allerton, Dept. 98, Indianapolis, Ind.

COUPON

Miss Gertrude Allerton, Dept. 98, Indianapolis, Ind.

Please send me the doll family as offered in September 15th UP-TO-DATE FARMING. I will show everything you send me, to my father and mother and five of my neighbors, according to your plan. I enclose 10 cents (12 cents if stamps). No other member of my family will send.

Name .....P. O. .....State....

1913 ALFALFA Seed—Grown in best alfalfa section of Central Kansas. Price $12.50 per 100 lbs. Sacks 25c each. You pay freight. Sack containing 150 lbs. enough for 7½ acres. The best money producing crop in the west. Cattle, horses, hogs and poultry keep fat on it. Restores worn out land to original fertility. One planting good for many years if properly cultivated. Produces 6 to 10 tons hay yearly besides seed crop. Can ship any quantity. Send draft or money order for $19 and we will ship 150 lb. sack promptly. Refer you to First National Bank, Junction City, as to our standing. The B. Rockwell Mdse & Grain Co., Junction City, Kan.

SEEDS WANTED—We buy clover, timothy and all seeds from farmers direct. Highest prices paid. O. K. Seed Store, Indianapolis, Ind.

RICE—New crop. 100 pounds beautiful, clean, white table rice, in double sacks, freight prepaid to your station, $4.65. 200 pounds, $8.30. Safe arrival of rice guaranteed. Cabaniss, Rice Farmer, Box 26, Katy, Tex.

MULES FOR SALE—Eight young mules, good strong ones, from one to five years of age. Prices and full description on request. J. W. Lathrop, Valeda, Kas.

GINSENG, Golden Seal roots and seed for planting. Write for prices. W. N. Long, Florence, Ky.

Your Wheat Crop!

Only 7½c an acre additional expense

for seed will increase your yield 5, 10, 15 or 20 bushels per acre. Reports from Growers make this clear. :: :: ::

Double your wheat crop!

Yes, sir, it can be done on many farms, and on others the yield can be increased 5, 10 or more bushels per acre if the **INDIANA RED WAVE** is sown.

There is not a particle of doubt about you raising such crops as reported by our customers if you sow **INDIANA RED WAVE WHEAT** this year. If you did not raise such crops it is to your interest, more than ours, to order this seed at once. Notice the low price we make for round quantities.

This wheat was produced by crossing Early Red Clawson and a hardy Russian variety. It is a new wheat and has all the vigor of youth. This is noticeable in all stages of its growth. It is extremely hardy to withstand winter. The straw grows from three to five feet, depending on the condition of the soil, and is strong. The head, which is the true test of variety of wheat, is large, both as to length and breadth; is closely set with meshes which are well filled with medium size, amber grains. The illustration on this page shows four heads exact size. The meshes on these heads except at the butts and tips had four grains each. You can count the meshes and estimate the grains. These heads were not the largest we could select, but were rather selected to show the style and type. The head is beardless.

The **INDIANA RED WAVEWHEAT** is without a peer for standing hard winters and drougths, or repairing damage if any is done, because of its great vigor, and for big yields. Those farmers who have been depending on the old standard sorts, which have lost much of their original vigor can afford to discard them now and sow their main crop of **INDIANA RED WAVE.** We make a special low price for such.

HEADS OF INDIANA RED WAVE WHEAT FROM A PHOTOGRAPH, EXACT SIZE. THESE ARE NOT EXTRA SELECT HEADS.

RED WAVE WHEAT AT INDIANA EXPERIMENT STATION 49.4 BUSHELS

Newspaper Bulletin No. 191, dated July 26, 1913, from the Indiana Experiment Station reported on thirty-six varieties of wheat tested at the experiment farm this year. The greatest yield per acre reported was RED WAVE, 49.4 BUSHELS. The average of all tests was 35.8 bushels. Ten plats of Michigan Amber were sown as "check" plots and the average of the ten was 33.4 bushels. We will send the full report to all requests.

PRICE OF RED WAVE WHEAT

By freight or express; ¼ bushel, 75c; ½ bushel, $1.25; 1 bushel, $2.25; 2½ bushels (1 bag for two acres) $5; 5 bushels (2 bags for 4 acres), $9; 10 bushels (4 bags for 8 acres), $17.50; 25 bushels (10 bags for 20 acres), $37.50. Larger quantities at $1.50 a bushel. No extra charge for bags.

By mail, postpaid: 1 lb., 30c; 4 lbs., $1; 10 lbs., $2.

We have put the price low in round lots to induce sowing liberally. For instance, 10 bags full, to sow 25 acres, will cost $37.50. If you would sow your wheat you would take about 40 bushels worth on the market 90 cents a bushel, $36.00, and clean and grade it down to get your seed. The difference in cost then is only $1.50, for 25 acres, or 7½ cents an acre.

Terms *Cash with order preferred, but will send payable on delivery and subject to examination, if good references are sent.*

KENTUCKY—Far Ahead of Any Other

My old variety of wheat is Fultz. This fall I sowed some of your Indiana Red Wave also. Heads on the Fultz are 3 inches long, with two grains to the mesh, the Red Wave heads are 4 to 5 inches long with three big grains to the mesh. It has got all other kinds of wheat beat. It is the best that I ever saw. I never grew such a good wheat before. It is far ahead of any other in my neighborhood in every way.—W. H. Bryant, Boyd Co., Ky.

ILLINOIS—60 Bushels an Acre

I will let you know how the Indiana Red Wave wheat has done for me, as we threshed yesterday. First I will say that it turned out wonderful. We got 60 bushels an acre, and old farmers say it is the first time they ever saw anything like it. Everybody around here wants the seed of this wheat.—Mrs. Anna Raurer, Tazewell Co., Ill.

MISSOURI—60 Bushels an Acre

I let my Indiana Red Wave wheat get too ripe before I cut it. As a result a good deal of it was wasted. Notwithstanding this, when I threshed I had 60 bushels an acre and a little over. It is the wheat for this state. I am going to sow 100 acres of it this fall.—A. J. S., Holt Co., Mo.

NORTH CAROLINA—100 Bus. from One Bag of Seed

I bought one bag of Indiana Red Wave seed wheat (2½ bus.) and have just threshed 100 bushels of fine wheat from it. It is better than any other wheat I have seen.—J. E. G., Rowan Co., N. Car.

MICHIGAN—The Best Yield on Record—42 Bushels

The Indiana Red Wave wheat made a yield of 42 bushels to the acre when threshed. This is the best yield of record for this county.—Guy A. T., Monroe Co., Mich.

VIRGINIA—Will Yield a Third More

Indiana Red Wave was of stronger growth than any other wheat I ever raised. Some heads 5 inches with 5 grains in a mesh. It will make a third more than that by the side of it. Everyone that sees it says it is the best headed wheat they ever saw and all speak for seed.—V. H. P., Floyd Co., Va.

ILLINOIS—50½ to 55 Bushels an Acre

I sowed 10 acres of Indiana Red Wave and threshed 1,009 bushels, one-half of the field averages 50½ bushels, and the other half, which I fertilized, averaged 55 bushels an acre. The wheat is the finest I ever raised and tests 62 pounds. Just before cutting many people in the neighborhood called to see it and they all pronounced it the finest they ever saw.—J. H. C., Morgan Co., Ill.

Farmers and millers want a variety of wheat that not only "makes good" sometimes, or under very favorable conditions, but a variety that excels other varieties all the time and under all conditions. Such a variety is Red Wave.

Our seed wheat catalog, with complete description and more reports, will be sent to all customers from this advertisement, or will send the catalog in advance if requested.

A Community Report on Red Wave Wheat

One of our first customers for Indiana Red Wave wheat—R. L. Clark—introduced the variety all through his community and this year he sends us this letter and the following reports from his neighbors. This community is not noted for strong ground and heavy yields.

Mr. Clark's Letter

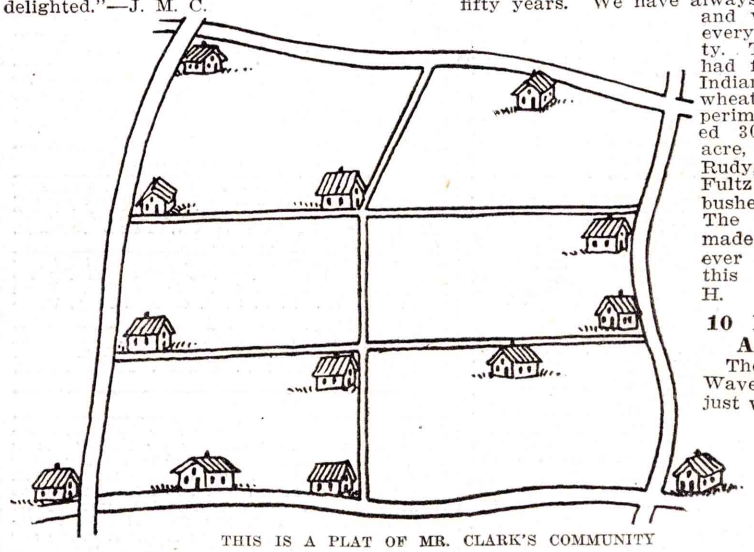
O. K. SEED STORE
Indianapolis, Ind.

Gentlemen: Enclosed I send you some letters that my neighbors handed me about their crops of Indiana Red Wave wheat. These men all live in my community. I can stand on my windmill tower and look into fields of Red Wave wheat aggregating three hundred acres that produced thirty bushels and up an acre. The Red Wave has easily outyielded other kinds an average of eight bushels an acre throughout this whole community.—R. L. Clark, — County, Ind.

These are His Neighbors' Letters

12 Bushels an Acre More

I sowed fifty acres of Indiana Red Wave wheat in the corn last fall and have just threshed it and it made thirty-three bushels an acre, fine wheat. My other wheat yielded twenty-one bushels an acre under same conditions, but with a higher grade of fertilizer. It is useless for me to say "I am delighted."—J. M. C.



THIS IS A PLAT OF MR. CLARK'S COMMUNITY

One-Third Better

I am pleased better than ever with my Red Wave wheat. It is fully one-third better than my neighbors' wheat, which is Rudy, Poole, and Fultz. It weighed heavier than any wheat threshed in our neighborhood.—W. H. F.

Yields More than Any Other in 30 Years

I have been farming for over thirty years and in that time have grown most of the varieties of wheat. For three years now I have grown Indiana Red Wave wheat only. My experience over this time proves to me that this wheat starts stronger, stands the winter better, stands up better and yields more than any wheat I have ever grown.—M. C. N.

Will Sow Only Red Wave

This year I had two kinds of wheat—Indiana Red Wave and Dunlap. They were grown under the same conditions. The Red Wave yielded thirty-five bushels an acre and the Dunlap twenty-eight bushels an acre. My next crop will all be of Red Wave.—H. C. L.

5 Bushels More Per Acre

I have raised Indiana Red Wave wheat two years. This year I had some Poole raised under the same conditions. The Indiana Red Wave beat it in yield five bushels an acre.—E. F. L.

Much Better than Old Varieties

This is my first year with Red Wave wheat. I have not threshed yet, but it is so much better than any of the old varieties that I am well pleased indeed.—G. L. D.

Red Wave 25 Bushels, Poole 10 Bushels

My land is rolling and thin. I have never grown a good crop of wheat on it until this year, when I had Indiana Red Wave. My Red Wave produced twenty-six bushels an acre of fine grain. I paid a good price for some choice Poole seed last year which only yielded ten bushels an acre. Joint worm, fly and black rust did not injure the Red Wave like they did Rudy and Poole.—R. P.

Far Better

My Red Wave is far better than any old variety that was ever grown on the same field. It succeeded on the wet spots where others failed.—E. T.

Best Yield Ever on Farm

I am farming twelve hundred acres of land which my father also farmed for fifty years. We have always raised wheat and we have tried every known variety. This year we had forty acres of Indiana Red Wave wheat in as an experiment. It threshed 30 bushels an acre, while our Rudy, Poole and Fultz made only 20 bushels an acre. The Red Wave made the best yield ever produced on this farm.—L. D. H.

10 Bushels An Acre More

The Indiana Red Wave did for me just what it did for everybody who had it—it made 10 bushels an acre more than Rudy. —C. V.

Has Made Good

This is our second year for Red Wave and we find it far better than Rudy. This wheat has made good for us in every particular.—R. T.

Twice as Much as Rudy

This was my first year with Indiana Red Wave wheat, and it has done for me just what it has done for my neighbors—it produces the bushels. Part of my crop is "Improved" Rudy. I have not threshed yet but the Rudy will do well to yield half as much as Red Wave. I estimate the latter at thirty bushels to the acre.—A. R. M.

A Great Boon To Community

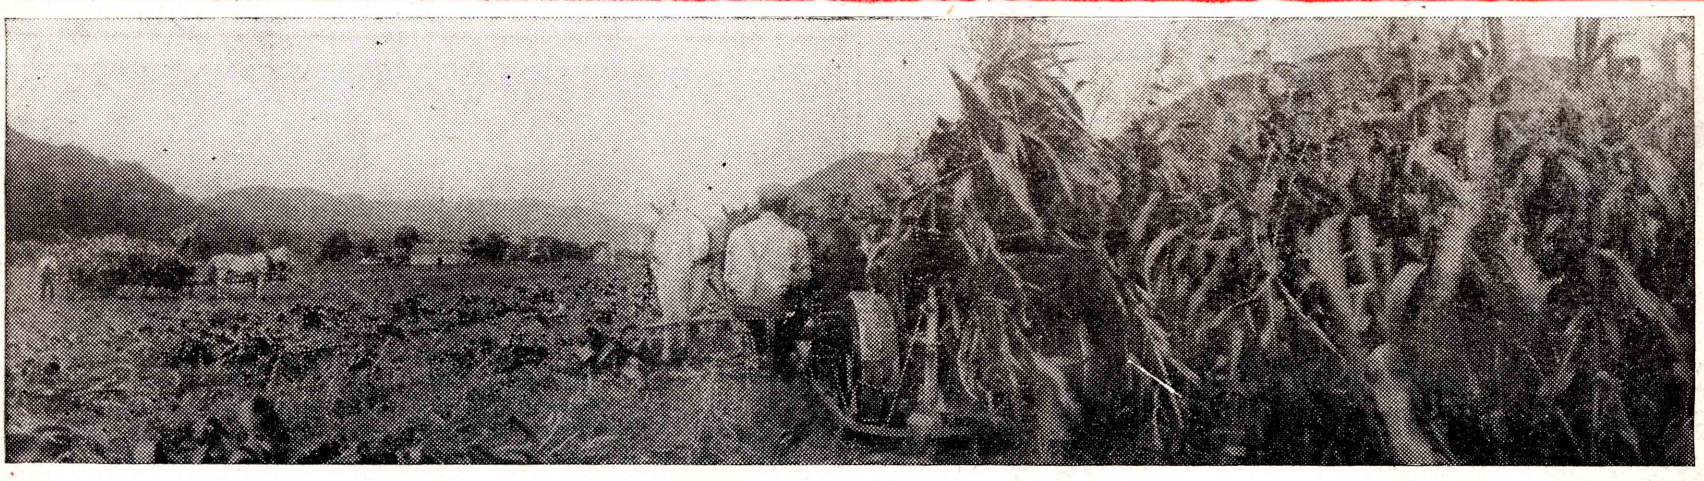
I have grown the Indiana Red Wave wheat for three years and I will say that I believe it to be the best paying variety ever sown in this section. I consider its introduction a great boon to this community.—M. J. T.

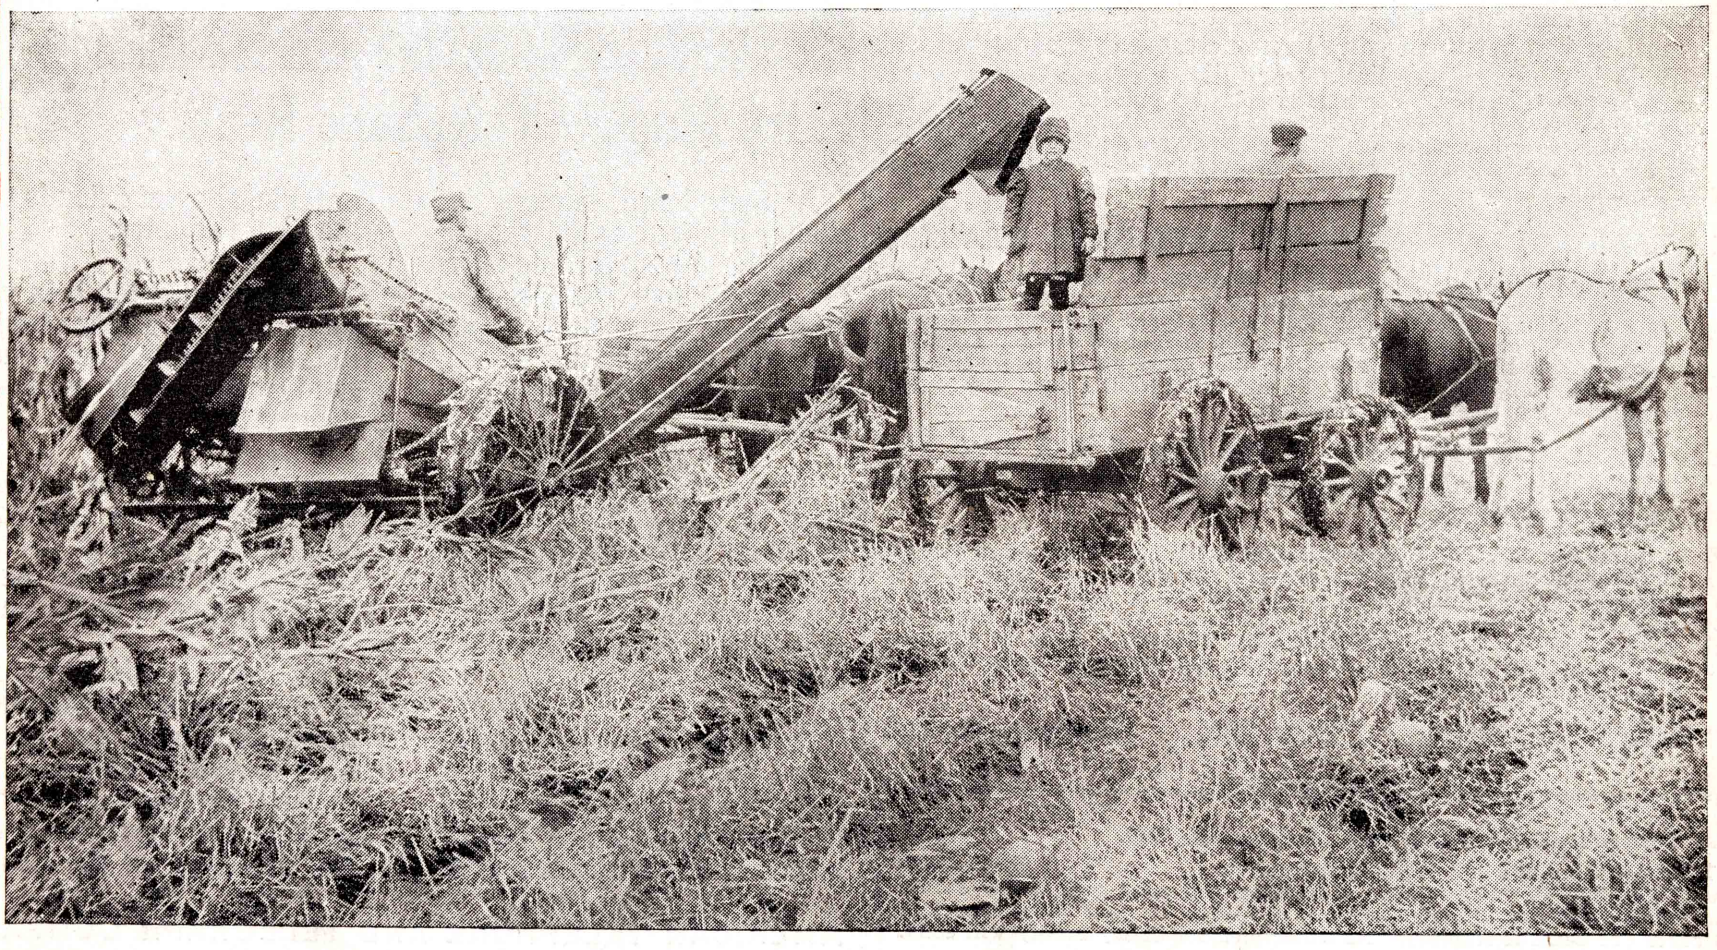
O. K. Seed Store, Indianapolis, Ind.

UP-TO-DATE FARMING

16th Year | October First, 1913 | Number 19

Making the Most of the Corn Crop—Page 7





The government's estimate of the corn crop is 774,000,000 bushels less than 1912. It is the smallest crop, if this estimate stands, since 1903. We believe future estimates will show a reduction. The crop should be marketed conservatively.

Let me give you this family of 3 dollies and 3 issues of Up-to-Date Farming for only 10 cts

THIS family consists of Anna-Belle, over two feet tall; her brother Jimmie, a husky fellow and sister Susie, each eight inches tall. If you get them you can name them to please yourself. Anna-Belle is a big, plump baby, very like a real live youngster, and can wear baby's clothes. Her hair is golden instead of black, as in the picture, bright eyes and rosy lips. Her legs and arms bend and she will sit or stand, as you want her to. Every little girl will love to have a dolly like this to dress and undress, and play with. Brother and sister dolls are just too cute for anything.

MY REALLY GREAT OFFER TO UP-TO-DATE READERS

I WANT to give this doll family and three issues of our paper to a little girl in each family that receives this paper, or to some one who will give it to a little girl friend. I make this offer to introduce Up-to-Date Farming in new homes. The only condition that I make is that 10 cents (12 cents if in stamps) be sent to help pay the expense and to guard against more than one person in a family sending; also that you will show what I send you to your father and mother and five of your neighbors.

When You Do This, According to My Plan, I Will Send You, Entirely Free, the Newest Talking Doll, "Princess," a Sensation from Germany.

YOU better not miss this. Others will offer dolls, but I don't allow any one to beat me in liberality. Think of this and you should send your name before you lay this paper aside. Try to be the first one in your neighborhood to possess this family of dolls and then, following in a few days you can be the happy possessor of the beautiful talking doll "Princess," made in Germany. Fill out the coupon, if you did not do so from our preceding issue, mail and you will get them by return mail.

Miss Gertrude Allerton, Dept. 98A, Indianapolis, Ind.

COUPON

Miss Gertrude Allerton, Dept. 98a, Indianapolis, Ind.

Please send me the doll family as offered in UP-TO-DATE FARMING. I will show everything you send me, to my father and mother and five of my neighbors, according to your plan. I enclose 10 cents (12 cents if stamps). No other member of my family will send.

Rural Organization Service

Farm papers and agricultural leaders are talking a great deal about the value and necessity of organization. All agree and declare every rural community should have a local union for educational, social, and business purposes. Up-to-Date Farming can and will help the farmers of any community to form such an organization. We have had years of experience in the work. Wherever there is a farmer who feels that a local organization would be beneficial in any way, right there we want to help him form one. We invite him to write to us, so we can help. We are at the service of the farmer. We are ready to act, as well as to talk. Let's talk it over.

STATEMENT OF OWNERSHIP, MANAGEMENT, ETC.

of UP-TO-DATE FARMING, published semi-monthly at Indianapolis, Ind., required by the Act of Congress of August 24, 1912.

Name of Postoffice Address

Editor, J. A. Everitt .....Indianapolis
Managing Editor, J. A. Everitt, Indianapolis
Bus. Mgr., S. F. Everitt, ...Indianapolis
Publisher, Equity Pub. Co. ..Indianapolis

Owners: (*If a corporation, give names and addresses of stockholders holding one per cent. or more of total amount of stock.*)

J. A. Everitt, S. F. Everitt, both of Indianapolis, Ind. There are also thirty-three other stockholders, each owning less than one per cent. of the capital stock.

Known bondholders, mortgagees, and other security holders, holding one per cent. or more of total amount of bonds, mortgagees, or other securities:

The Equity Publishing Company has no bonds or mortgages.

S. F. Everitt, Business Manager.

Sworn to and subscribed before me this 22d day of September, 1913.

Notary Public.

(My commission expires January 5, 1914.)

Farming is a *Great Success* on Minnesota Land

and wide-awake farmers from all over the country are buying as much of Aitkin County farm land as they can, because, on investigation, they have found the soil to be fertile and strong, the climate to be particularly well suited for quick, hardy growths, and the location—handy to the big markets of Duluth and the Twin Cities—to be just right for quick, profitable sales.

This land is sold remarkably cheap on very easy and simple terms :: :: ::

Write to us so that we may give you valuable information.

Fairy Magic—Telephone Reality

A tent large enough to shelter his vast army, yet so small that he could fold it in his hand, was the gift demanded by a certain sultan of India of his son, the prince who married the fairy Pari-Banou.

It was not difficult for the fairy to produce the tent. When it was stretched out, the sultan's army conveniently encamped under it and, as the army grew, the tent extended of its own accord.

A reality more wonderful than Prince Ahmed's magic tent is the Bell Telephone. It occupies but a few square inches of space on your desk or table, and yet extends over the entire country.

When you grasp it in your hand, it is as easily possible to talk a hundred or a thousand miles away as to the nearest town or city.

In the Bell System, 7,500,000 telephones are connected and work together to take care of the telephone needs of the people of this country.

As these needs grow, and as the number of telephone users increases, the system must inevitably expand. For the Bell System must always provide a service adequate to the demands of the people.

SUBSCRIPTION PRICE

One year, 50 cents; three years, $1, if paid in advance. If not paid in advance, 60 cents a year.
Trial Subscription, three months, 10 cents, in clubs of five or more.
Canadian Subscription, double rate.

UP-TO-DATE FARMING

Published the 1st and 15th of each month by the Equity Publishing Co., Inc.

Entered at the Indianapolis, Indiana, Postoffice as second class matter, under the Act of Congress of March 3, 1878

EXPIRATIONS AND RENEWALS

Oct. 13 If this date, or an older one is in your address on this paper or the wrapper, your subscription has expired. We hope you will send your renewal at once.

In sending in renewals, or new subscriptions, subscribers and subscription agents should always state "new" or "renewal." Old subscribers should always send the address label clipped from the paper with renewal, if possible.

In changing your address, always give old as well as new address.

INDIANAPOLIS, INDIANA, October 1, 1913

OUR ADVERTISERS—GUARANTEE

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this UP-TO-DATE FARMING stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in UP-TO-DATE FARMING" when writing to the advertiser. Medical advertisements are not accepted.

With the Up-to-Date Farmers

Farming is too broad an occupation to have a side line.

Never mix up with an affair that will not mix with religion.

Sam Saxon says that "horny hands" are the kind that stands for hard knocks.

Hope for the best, and plan for it, but keep your affairs in shape to withstand the worst.

The surest way to lose a long race is to run as hard as you can at the outset. Go slow at first.

The supply of good tenants is not near equal to the demand. Possibly the same is true of good landlords.

Farmers' co-operative elevators handle over half the grain in North Dakota. There are four hundred of them.

If "elastic" currency is the kind that flies back where it came from as soon as we loosen up on it, we don't want it, that's all.

Sam Saxon says he's always noticed that when church members go to prayer-meeting to pray for rain mighty few take their umbrellas along.

Those who take steps to sell right are on the right track. They will arrive at prosperity's gates far ahead of those who do not, and get front seats in Prosperity row.

Parcel Post Utopia—the city housewife orders vegetables from the farmer by telephone: The post office department makes the delivery, collects for it, and puts the money in the Postal Savings bank to the farmer's credit. Great! But who is doing it?

Did you go to the fair with the whole family and enjoy yourselves immensely? If not, you lost something you need. Your faculties for enjoyment were given you for use. If you don't use them you are less a man, and less a success than you are capable of being. Recreation is a necessary part of life, the same as eating, sleeping and working.

Many a high school girl who can find the diameter, circumference, area and cubic contents of a pie, couldn't make the pie to save her life; and many a boy who studies Steele's Science of Physics until he knows all about air pressure and water pressure still can't fix the valve of a balky pump. Education is of little value unless we can make use of it in everyday affairs.

Organized Marketing (to farmer:—My friend, I can help you out of this, if you will let me.

Farmer—No, stranger, I have all the help I need. The Grain Exchanges are coming to my assistance.

Grain Exchange—This farmer will come out all right when he puts more stuff on his wagon for us to handle.

Lessons in Co-Operation

Lesson No. 3

There have been, and are now, many kinds of co-operative organizations of farmers. Many of them have been organized by impractical enthusiasts. Some have been managed by incompetent officials. Some have attempted to do things no such organization should undertake. Nearly all have either attempted too much, or attempted nothing worth while. One cause of such varying effort is lack of understanding as to what true co-operation is and can accomplish. The high-minded idealists who organized them did not fully comprehend what a farmers' organization should be and do. They usually founded them on momentary enthusiasm and altruism. They neglected to put a business system into the enterprise to make it bring in results that would pay each member and be of benefit to the whole neighborhood. They aimed too high to be useful, and were controlled by would-be reformers who wanted to reform everybody but themselves; to wage war on all neighbors who did not see fit to affiliate; and to tear down the business of others. Such have had a short, turbulent existence. Like a prairie fire in a strong wind, they swept the territory they covered, but when the fires of enthusiasm died, only a blackened waste remained.

Enthusiasm is a splendid, and uplifting force in any movement. It is necessary, for without its stimulating influence no goal worth while would ever be reached. But enthusiasm must have something real behind and underneath it. There must be a substantial basis for it to work with. It must do real things worth doing, or it will die.

The first thing to determine, when planning a community or local organization is—what can we do with it in our business life that will make it pay, and how can it be done? A practical question, deserving a practical answer.

Next Topic—What a Local Organization should attempt.

THE UNANSWERED QUESTION

THE information is going the rounds that farmers are to to be more prosperous in this year of 1913 than ever in the history of the country, notwithstanding that the total products of our farms is less by one-fifth than they were last year. A 22 per cent. smaller crop, and a 6 per cent. larger income. Though the size of the crop is less—the number of pounds, bushels, tons, etc., are fewer, the amount of money received is to be larger—the number of dollars more. Instead of selling five, we sell four; and for the four we get $1.06, whereas last year we received but $1.00 for the five.

Once more another proof is added to many before it, that the largest crops bring less money than smaller crops. Once again we call attention to the fact that there is something radically wrong about it. The large crop should bring at least as much as the smaller one. And until it does, will some one please tell us why the larger crop is the most to be desired and worked for, from the farmer's side of the question? When larger total crops send prices down so low that such crops bring a less total than smaller ones, and at the same time the larger crop is purchased and used, is there any reason why the millions invested in means to better farmers' condition should be used exclusively to produce, yet more, and induce a still smaller income? We put the question frankly. We want it answered.

There are great influences at work to increase production. Increased production will, some day in the near future, become a great necessity. In the day at hand, a greater necessity is to market what is now produced in a way to bring to the farmer the real value of the large crops he can and does produce.

When the farmer is mired in the bog of low price, will a heavier load enable him to get out? Does not the cartoon on this page tell a true story? This question which we have time and time again thrust before the advocates of greater production alone as a panacea for agricultural ills has been evided, avoided, criticised and sneered at, but it has never been answered fairly and openly. Come now, what is the answer? When larger crops bring less money, how is the farmer helped by producing the larger crop?

In the past five years the Burley Tobacco Growers Society has compelled the tobacco buyers to pay them fifty million dollars more for their leaf than they would have received had they remained unorganized. In the next five years they will save them fifty millions more.—A Kentuckian. That's good. Splendid. After all that night-riding business, too. Keeping everlasting at it brings success to any worthy cause.

We are For and Against

UP-TO-DATE FARMING is against what is wrong and it is for what is right. Our entire editorial force is in vigilant observation of the entire field of human action, and with impartial and mature minds our writers study every action as to its effects on the general public. They then discuss those effects with absolute impartiality, fearlessly approving those things that will result in good to the people, and as fearlessly opposing what they conclude will have a bad effect and result in evil. This is what makes UP-TO-DATE FARMING different from all other papers, and that is why it is so eagerly sought by the reading and thinking public.

We may find more things to oppose than to favor. It is entirely natural that we should. In a country where and at a time when so many interests are so closely allied, and where the selfish so often get in the lead and seek to divert the good things to evil purposes, it is natural that the impartial observer will find more to condemn than to approve. Often in the very best of things evil finds a lodgment, and it is as important to expose and dislodge these evils as it is to drive the depredating mouse from the bureau or kitchen cupboard. For instance, the United States Department of Agriculture is a good thing. It was established for a good purpose, and it has done the public much valuable service. But often methods and even purposes are found in it that are evil in their effects, and that work injury to those for whom the Department was established. These we protest against in the interest of the people. The good is taken for granted, and we don't have to argue for that, but when something specially good is proposed we are just as emphatic in our support of it.

It is so with the agricultural colleges. They are institutions agricultural America could not do without. They are among the most prominent landmarks of advancing civilization, and like suns they shed light over the American farms. But weeds grow in the best fields, and ill-advised purposes creep into these colleges. We unhesitatingly oppose such growths, make plain the evil effects of them, and urge their elimination, even at the risk of being charged with opposition to the schools. Also, when we see that these cherished institutions lack something that is entirely within their province, and that would enable them to accomplish their great purposes twice over, we advocate the taking up of that additional work and thus round out the great usefulness of those important institutions.

The President of the United States is the revered head of the national government, and Congress is the assembled representation of the people's rule. But the President is human and may do wrong, and the Congress may propose and enact measures that are not for the public good. UP-TO-DATE FARMING does not hesitate to point out the errors of the chief executive and to oppose unwise measures in Congress, and show their evil effects. Defending the rights of the people enables the people to be heard, and in no other way can we have a "government of the people, by the people, and for the people."

And it is thus of many other things. Our editors are vigilant as well as untiring. They realize their responsibility to the WHOLE people, and they work to discharge that responsibility without personal fear or special favor. This may make it appear sometimes that we oppose more than we approve. But not at all. Things that are wrong must have their evils shown up; they must be argued against, and if possible defeated or overcome. It often takes vigilance and persistence to do that, and it is that which gives them prominence in our columns. We could not do our duty otherwise. We sincerely wish there were more papers that do the same.

But aside from these various questions of public right or wrong, UP-TO-DATE FARMING stands by itself in the advocacy of great reforms that mean more to the farmers and the public welfare than were ever before given prominence in public discussion. We say stands by itself, and so it did until it made things so plain and showed the evils so undeniably and proved the accomplishment of the reforms so essential, that advocates have sprung up all over the country, so that the accomplishment is certain in the not distant future.

No, UP-TO-DATE FARMING is not merely a paper of protest. It is for as well as against; for the Right and against the Wrong. It is a fearless advocate of the best interests of the people, and the champion of the greatest of all reforms. In this as in other things it is educational, and that is why not only farmers but thinkers everywhere are so eager to get it. It is no wonder that our subscription list is so rapidly growing, and that renewals are coming in by hundreds from all over the country. This is gratifying, and it encourages us to do more and more for the general welfare.

Express Companies and Marketing

THERE is to be a revolution in marketing. Of course many experiments will precede the complete accomplishment but a different system, a system that will benefit both sellers and buyers, is coming, and it is now not very far away. The persistent teaching of UP-TO-DATE FARMING during the past ten years or more has borne fruit, and that fruit is rapidly approaching maturity. In a previous issue we mentioned the part the express companies are proposing to play in this matter. From an article that recently appeared in Leslie's Magazine, and that refers specially to the Wells Fargo Express Company we quote the following:

> It (the express company) will bring what the farmer grows to the market where the buyers wait. And this both in a small way and on a large scale. It does not propose to search the country over and bring in the commodities and supply the demands in a retail way, but it will find out who the buyers are, whether individuals, commission merchants, or societies for economy in living, and it will show them where their wants can be supplied. It will prevent the producer from sending his products to points where there is no market, as he now does blindly, losing when he sells and losing on the needless cost of freight. It is because one market is glutted and another not supplied that most of the trouble arises. For, although a contrary impression prevails, the production of foodstuffs of all kinds has kept abreast of the growth of population with the sole exception of beef cattle.

But, continuues the article in Leslie's, the farmer himself is one of the problems to contend with. He must be educated in up-to-date shipment and in sending what he pretends to send to market. "Too often, having something to market, he goes to the store for odds and ends of barrels and boxes and fills them with apples, helter-skelter, putting an inferior quality in the bottom of the container." This works to his own injury, and each marketer should have a personal brand, as a farm name, to identify his shipments and thus get the benefit of his judgment and honesty. The express companies propose to teach these better methods and better shipments. It is declared that this work will lead to the marketing of products worth two billions annually that now go to waste, either by rotting on the ground or by being neglected after they are dumped at their destination by the shipper.

Our main reason for quoting from the article in question is, that it shows a clear understanding of the situation. "It will bring what the farmer grows to the market where the buyers wait," instead of dumping it in the central markets that become glutted, destroy prices and fail to supply the outside most eager demands. Very truly indeed, "it is because one market is glutted and another not supplied that most of the trouble arises."

These are really the conditions that exist, and because of them thirty millions of people, the great farming class of the country, are a prey to a comparatively few buyers and pretended distributors who drive to the waste pile what what they cannot handle most profitably. And almost all the rest of the country's population are a prey to the very same class at the buying end of the transaction where the most exacting prices to create exorbitant profits are charged.

We are glad for these conditions to be known and understood by all classes, for when understood they will be remedied. The express companies may not find a remedy. Isolated farm organizations may not be able to do it. Societies for direct buying in the cities and labor centers may not. But these combined—the farm organizations and other societies confederated and working together, will accomplish the great purpose, and save humanity from the classes against the masses.

We naturally appeal most directly to the farmers. That thirty million people who toil as few others do, but who never know from year to year, or from day to day, what the products of their labor will bring them, is a fact which belies modern civilization, and it is one which cannot exist when it is understood as it is now so clearly being understood in all walks of life. We congratulate the whole people on the rapid approach of this great consumation.

And it is not at all out of place here to call attention specially to the Equity System. The Farmers Society of Equity, introducing the Equity System everywhere, is rapidly spreading over the country. A letter just received from Oregon says:

> We are beginning to find that we must organize or go to the wall, and that it is up to the farmer to do the work himself. Farmers here have been skinned to a frazzle, and when we talk of organization we get the frigid look of those who profit most by our lack of unity. We have one of the finest valleys and productive, but no market, rank discrimination and robbery have almost put us out of business.

Those farmers propose to apply the Equity System, and to show the difference we quote from a letter just received in the same mail from another section where the System is in operation:

> "Everything considered, we are more than pleased, and there is only one reason for our success, and that is the management of the selling end of the proposition. We have established a line of customers who will look to us each year for their supplies, and we expect to hold the lead in the marketing of crops. The more I see of Equity the better I like it."

Short Selling a Menace to the Country

BY "SHORT SELLING" is meant the selling in a speculating market of stocks and commodities the seller does not own, or that possibly do not exist. Such sales are usually made under pretext of future delivery, though neither buyer nor seller expects such delivery to be made. In case of stocks, book entries are all that is necessary or expected. In a recent address in the Senate Senator Cummins declared that such selling on the New York Stock Exchange, the Chicago and other city boards of trade, and on cotton, produce and stock exchanges generally, is one of the greatest vices of the day, and is a "menace that threatens the industrial and financial strength of the country."

As an example of how stocks and securities are thus traded in, the Senator mentioned one railroad whose stock is listed at $168,430,000. The record showed that during the year 129,000,000 shares of that stock, face value $100 each, had been bought and sold though very little of the stock had changed hands. The stock of the St. Paul road was listed at $116,348,000, but the trades in that stock during the year amounted to $149,277,000, the most of them being sales the real owners of the stock knew very little about. The Reading road's capital stock amounted to $42,480,000, but the trades in that stock totaled $1,114,000,000. Senator Cummins declared that these exchanges are not places for the transfer of actual commodities, but they are places where experienced and reckless and unscrupulous men balance their wits against each other in purely gambling operations, and that the old Louisiana lottery was a "pink tea compared with this orgie of vice."

On the same occasion Senator Clark declared the New York Cotton Exchange and the New Orleans Exchange were no more than gambling institutions, engaged in a wholly selfish and illegal business, and yet they controlled the price of cotton for the whole world, and thus the remuneration or income of the cotton growers depended upon them.

It is the same way with the pretended buying for future delivery of all farm products. Commodities that do not exist and never did exist are pretended to be sold on the market in competition with the actual products of the farms, and thus affect the price of the real things. In fact, these transactions largely determine the prices farmers must accept for the products of their season's toil. There is neither right nor justice in it. It is no part of civilized or legitimate business, and, as Senator Cummins says, it is a menace to the welfare of the country. **And these are the people, strange to say, who have delegated to themselves the job of leading the farmers out of the wilderness, with the sanction and co-operation of government officials and agricultural colleges.**

About the only remedy we know is for the farmers to take the matter into their own hands and establish a system of marketing independent of these gambling schemes, entirely beyond the reach of the exchanges, and that will pass the stuff as directly as possible from the producers to the consumers, and thus meet the demand with the supply. It looks like every unprejudiced citizen, no matter what has calling, would be eager to aid in the establishment of such a system.

Too Much Talk—Not Enough Doing

NEARLY everybody except farmers themselves are talking, writing, figuring and planning to help the farmer out of his difficulties. Railroads, bankers, boards of trade, mail-order houses, implement manufacturers, publishers (ourselves included), and the various branches of state and national agricultural departments—those who have nothing else to do, and those who have, are all trying to lead the layman out of the labyrinth. And, after the various matters have been discussed fore and aft, the final word is that "farmers must get together, and they must do it themselves."

With the first part of the conclusion we agree. With the last, we think some modifications are, to say the least, desirable. There can be no question but that farmers should be more thoroughly informed in the science of agriculture, or that the business of marketing the crops he produces should be reformed. But the government, nor the agricultural press did not put the duty of educating the farmer in the science of production upon the farmer himself. They instituted schools, colleges, experiment stations and bureaus galore to show the farmer the best methods of farming. But, when it comes to better methods of marketing, realizing that such reforms demand organization of farmers, they declare the farmers must learn how to organize, how to develop a marketing system, and to operate it without help. In other words, they come out in the field to show the farmer how to do things, where he is at home, and where he is best acquainted with conditions; then, asserting that farmers must organize, and build up a new system of co-operative marketing, a field new and strange to farmers, and where they are in greatest need of assistance, these wise men tell the farmers they must "go it alone." This is clearly dodging the issue and shirking responsibility and we have no part in it. Farmers will organize, and stay organized, when they are encouraged to do so, and are aided in putting their organization on a practical basis, making it safe. They are in greater need of education and encouragement in matters of co-operative enterprises than they are in matters of raising corn and feeding pigs.

There are several organizations now making an endeavor to supply this need. Though they have the same general purpose, they are working along different lines. This tends to complicate matters, confuse and mystify the farmers, and places a handicap on all such efforts. It is time right now for all who are in any manner engaged in promoting "better business methods for farmers" to crystalize their efforts. It is high time the advocates, teachers and preachers of organization and co-operation do a little organizing and co-operating amongst themselves, take off their regalia and go to work at the job ahead of them in a sensible, practical way. It is time to shut off the hot air, get right down to "brass tacks" and work together, or at least with understanding, mutual confidence and harmony, to build up a successful local organization in every community. There is plenty to do, plenty of places to be filled, plenty of virgin territory to cover. There is no reason why there should be any jealousies, or opposition. There are many, many reasons why there should not be. The logical, practical sensible, and necessary thing to do, gentlemen, is to get things on a working basis. They have too long remained on a talking basis.

Real Progressiveness

THE Milk News sees in the present agitation for better methods two classes of progressionists. One class may be called the Increased Production party, and the other the Increased Price party. One sees no gain for farmers except in bigger crops, the other seeks the gain exclusively in better prices for what is produced.

There is no doubt, says the writer in the journal we are quoting, that if one or two or even a few people in every community learn the secret of increased production and apply it they will profit by the knowledge. But true agricultural progress is not to help a farmer here and there while the masses struggle on without remuneration. Suppose we all get wise and increase our production. We have more than once seen a year when corn sold at sixty cents a bushel, followed by a year when just as good an article would not bring over thirty cents a bushel. It was when a year of scarcity was followed by a year of plenty. If all farmers grew a hundred bushels of corn an acre (or forty bushels—Ed.), for two or three years all demands would be over-supplied, all markets would be glutted, and corn would scarcely sell at all. To tell the American farmers the way to prosperity is through increased production is exactly the same as to tell the coal operators the way to double their profits is for them to mine double the amount of coal, for the carriage makers of the country to double the output of carriages. But none but the farmers are urged to do a thing so foolish. It is well to learn, says the writer of the article we are condensing, but it will avail farmers little or nothing to learn how to produce more unless we also learn how to sell at a profit what we produce. The great labor forces have organized to increase their earnings. It was not enough to learn from science how to make steel; it was necessary to learn how to market it after it was made and thus hold the production within the demand. Increased production will not help unless the demand is keen enough to take care of the increase.

It seems, therefore, clear that the first thing to do in dairying as well as in general farming, is to secure what the product is worth and then set ourselves resolutely to producing more when more is needed. Farmers, and dairy people particularly, need increased price, and the world will soon need increased production. When we get the equitable price the increased production will soon follow. This is the reasonable view, the logical view, and the view that can alone lead to permanent good results and the rural uplift so many people pretend to be working for.

The Railroads and the Farmers

THE car shortage is with us again, as usual. And, as usual, complaints and "kicks" pour into the railroad offices and the Interstate Commerce Commission. The railroad officers hand out the usual time-worn and threadbare excuses. But this time they bring along a spick-and-span new excuse for delay in furnishing cars. It is an appeal for higher freight rates. It declares that the present freight rates do not yield sufficient income to enable the railroads to meet their constantly increasing expenses. Wages of railroad employes are being increased. Laws have compelled safety appliances, devices, and methods that are costly to the roads. Materials are growing steadily higher in price. New lines are to be constructed, and old lines double tracked. On top of all this, state legislatures have reduced rates, forbidden advances, and as a consequence, the roads declare they are not making money enough to enable them to keep up with the demands of the traffic, and at the same time provide for future needs.

The railroads have for years been among the foremost advocates of better farming and a greater production. They have put vast sums of money into experiment and demonstration farms, good roads excursions, better farming trains, and other propaganda tending to increase the ability of the farmer to produce more. And then, when the farmers do produce a large crop, the roads say they find themselves unable to supply enough cars to carry the crop to market. They have given liberally to promote better farming, and now they audaciously ask the farmers to give it all back, and more besides, in higher freight rates in order that they may do better railroading. It would seem that the railroads have problems of their own that need solution, and that before they attempt to show farmers how to produce great crops they should be able to show ability to transport them promptly, efficiently and economically. It might have been better had the roads given their time and money to better railroading rather than to better farming.

A Bad Crop Year

THIS is essentially a bad crop year, and supplies should be husbanded to the greatest possible extent. The Department of Agriculture issued September 9 a statement showing the prospects of the various crops for the entire United States on September 1, 1913, compared with the same date of 1912. It will be seen that the prospect of every crop mentioned is below that of 1912:

Crop	Sept. 1, 1913	Sept. 1, 1912
Corn	65.1	82.1
Spring Wheat	75.3	90.8
Oats	74.0	92.3
Barley	73.4	88.9
Buckwheat	75.4	91.6
White Potatoes	69.9	87.2
Tobacco	74.5	81.1
Flax	74.9	86.3
Rice	88.0	88.8
Apples	47.7	67.9

The condition of winter wheat is not given because that crop was already harvested; but the yield per acre was better than last year—16.5 bushels against 15.1 bushels. The fact that crops are shorter does not necessarily mean that they will sell for less money. The reverse is likely to come true.

Smile Awhile

Hurried Up

"Your new cook didn't stay long, did she?"

"No, she mistook the gasoline for the kerosene and went straight up!"

He Knew It

"No man can serve two masters," said the preacher kindly to several convicts in the penitentiary.

"I learned that before I came here," said one of the convicts, "I tried two masters and was sent up for bigamy."

Saw Things Plainer

"I don't see you keeping company with that young eye doctor so much as you used to."

"No, he cured my eyes and I see things plainer than I did."

Auto-Government

"What is an autocracy?"

"I guess it is where automobiles rule."

They Argued

"Do you belong to a debating society, Mr. Green?"

"Yes, one that is always in session. I have a wife!"

Some Doubt About It

First Drummer—I tell you I've had a big run of business this trip. How much do you guess I sold?

Second Drummer—Oh, maybe about half.

First Drummer—I don't understand. Half of what?

Second Drummer—Half of what you say you sold.

Mathematical

Teacher—A mother has four potatoes to divide equally among five children. How will she do it?

Pupil—Mash the potatoes.

It Will Help

Jimmy—Why are the farmers of our district buying an organ for our school?

Billy—So they can organ-ize, I guess. I heard them a talkin' about it.

Wanted a Job

Town Loafer—They tell me you want to hire a hand, Mr. Farmer. What'll you pay?

Farmer—I'll pay every cent you are worth.

T. L.—I just won't work for that.

Not Serious

"May struck Gene the very first glance."

"It must have been only a glancing blow."

Applying Natural Philosophy

Teacher—Why are the days longer in summer than in winter?

First Pupil—Because heat expands and cold contracts.

Second Pupil—Because the sun has to go slow when it's hot, and has to go fast to keep warm when it's cold.

Third Pupil—Because the farmers need more hours for work in summer than in winter.

Fourth Pupil—Because when the days are short the nights are long, and its so nice to have long nights in cold weather.

Mr. Dooley and Harry K. Thaw

"Good mahrnin', Hinnissy!"

"Good mahrnin'! Mister Dooley! Ye're not lookin' quite yer ould silf, avin if I must say it mesilf. Are ye worrit, Mister Dooley?"

"I am that, Hinnissy. I've lost so mootch flish worryin' about th' fate iv Harry K. Thaw that me laigs is thin as bane poles an' me shpinal colyum is roobin' oop aginst me wish-bone. Last night I drimt iv th' sillybrated Ammerycun beauty prizziner sittin' on th' back seat iv a sixty-mule power masheen moonchin' at a toadstool sandwitch an' prayin' to Hivvin that it would toorn out to be a habeas corpus mushroom.

"Th' iscape, capchoor, recapchoor, an' dooble capchoor iv this movin' pickchoor perfarmer makes me think iv something, Hinnissy."

"Makes you think? How shtrange!"

"Shtrange but true. Harry K. Thaw on his wiggly way to th' bar iv joostice makes me think iv an apple on its way to th' apple pie frum th' orchard. Th' cahrse is as crooked as a dog's hind leg in flea toime. He wint loike chain lightnin' whin all th' links is loose. Loike th' apple that's tossed around frum fahrmer to freight handler, to wholesaler, to th' mon that roons th' cahrner grocery, to th' woman that wears th' hole in her stockin' an' th' crimp in her pocketbook, so Harry K. Thaw has bin tossed around frum sheriffs to constabulls to immygrashun offishuls an' thin landed in th' clootches iv th' high-priced lawyers."

"Yis, Mister Dooley, an' it's th' same with th' apple. It's thrown about so mootch that it's rotten, an' thim that ain't rotten th' pigs eats an' makes into gold-brick breakfast bacon instead of into apple pie."

Our Market Review

Semi-Monthly Review of Crops, Market and Trade

LAST year there was harvested the greatest total crops the country ever produced. This year, because of droughts the yield falls far below, but we will probably be able to worry through, as we did after 1912, when the chief crops measured practically the same. The following table which gives the final government estimates of the 1911 and 1912 crops, and the September estimate for 1913 will show:

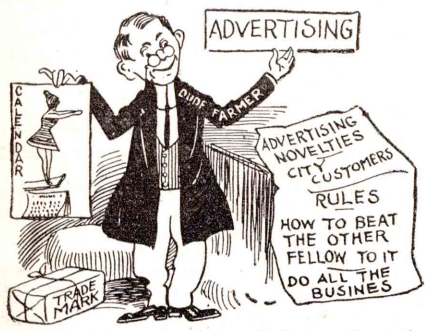
Crops	1913	1912	1911
Winter wheat	511,000,000	400,000,000	399,000,000
Spring wheat	243,000,000	330,000,000	330,000,000
Total wheat	754,000,000	730,000,000	729,000,000
Corn	2,351,000,000	3,125,000,000	2,531,000,000
Oats	1,066,000,000	1,418,000,000	922,000,000
Rye	35,000,000	36,000,000	33,000,000
Barley	168,000,000	224,000,000	160,000,000
Potatoes	325,000,000	421,000,000	292,000,000
Tobacco (lbs.)	861,000,000	963,000,000	905,000,000
Flax	20,000,000	28,000,000	19,000,000
Rice	27,000,000	25,000,000	23,000,000
Hay (tons)	63,000,000	73,000,000	47,444,000

For closer comparison we find the crops measured by bushels aggregate the following: 1913, 4,746,000,000 bushels; 1912, 6,007,000,000 bushels, and 1911, 4,710,000,000 bushels. Note how close the crops of 1911 and 1913 compare while the 1912 crop was about a billion and a quarter bushels larger than either. With tobacco, the estimate yield is materially less than in 1911, but hay is comfortably larger. The estimates of this year's crops, are advance estimates and they may be changed materially, in fact we expect the figures on corn to be reduced considerable. The world's wheat crop is estimated by Dornbusch as 101,792,000 bushels larger than last year, which is only about 2 1-2 per cent. of the total crop and rather a negligible quantity.

Sufficient rains have at last fallen in drought afflicted sections and we can say that crop prospects, as far as there are any crops growing, are improved. The **greatest benefit at this late day is to revive pastures and prepare the ground for fall seeding. Early frosts** have further reduced short crops in many sections. Our reports are that a full acreage of wheat will be sown notwithstanding the low prices.

The wheat visible increased only about one-fourth as much as in the same period last year, but corn increased three times as much and oats we regret to report, increased over five million bushels and is now the highest it has been for a good many years—34,563,000. If the visible were less, say one-third of this, the price would be 50 cents or higher.

	Sept. 13, '13. Bushels	Change from 2 wks. before Bushels	Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
WHEAT	52,320,000	X 1,794,000	X 7,252,000	X 19,809,000	—5,371,000
CORN	6,701,000	X 2,931,000	— 85,000	X 4,028,000	—1,924,000
OATS	34,563,000	X 5,269,000	X 3,183,000	X 25,451,000	X 7,790,000
BARLEY	3,904,000	X1,602,000	X 629,000	X 1,915,000	X 589,000



Some farmers' idea of increasing the demand for farm produce.

Wheat prices declined at Chicago about one cent but in other markets they advanced about a cent since our former report. No improvement is likely until the first run of spring wheat is transferred by the dumpers to the speculators. Corn is slightly lower than two weeks before. It is well to know that the price of wheat at country points in Kansas and Oklahoma is 70 to 75 cents a bushel of 60 pounds, while corn, which must be imported largely to feed, is priced at 76 1-2 to 77 1-4 cents in Kansas City, for 56 pounds. Add freight and it will be about 85 to 90 cents. Why not feed the wheat? If Kansas and Oklahoma farmers will feed their wheat to hogs and cattle it will bring them over a dollar and, we believe, would soon raise the price in all markets to a dollar. Oats prices are about unchanged.

Potatoes are giving the heaviest yield in Maine and good crops all through the northern tier of states which is the heavy producing belt. But the middle belt states which ordinarily produce many million bushels to supply home demands are quite bare and must depend on the north. The conditions appear to be excellent for netting good profits from potatoes this year, if marketing is done gradually.

ADVICE—Hold wheat for higher price, or feed it. Kansas had a 90,000,000 *bushel crop of wheat. Under normal conditions we would have about* 90,000,000 *to* 100,000,000 *bushels to export. About the Kansas crop. Kansas, Oklahoma, Northern Texas, and large parts of Nebraska, Missouri, Arkansas, also smaller parts of Illinois, Indiana, Iowa and Kentucky have a total or nearly a total corn failure. Wheat is relatively cheaper than corn to feed. Pass the word around to feed part of the wheat rather than buy corn. The* 90,000,000 *bushel surplus should melt like a snow bank under an August sun and what wheat is left will sell at* $1.00 *or more. Don't be afraid of imported wheat even under free trade. Europe needs all the surplus of other countries and if the stream is stopped from the United States the price will go up by leaps. Why the wheat crop this year is only* 729,000,000 *bushels the corn crop is* 774,000,000 *bushels less than last year and the oats crop is nearly* 400,000,000 *bushels short of last year. We could feed all of the wheat and not make up for the shortage in other grain. Cast aside sentiment and feed wheat while it is relatively cheaper than corn, keeping in mind that every bushel fed will make a better market for a bushel that is left. Market surplus old corn. Hold oats for higher price. Market potatoes gradually. Watch the markets to not get caught in the gluts that may come temporarily. The F. S. E. can help you. Hold new beans, the price will be higher. Cabbage is quoted at* $25 *to* $30 *a ton now but too free marketing, which is dumping, can break the price. Let them go off gradually. Choice apples will bring profitable prices if sent to the right demand. Try to connect with the small cities, towns and rural communities. "The Market Place" department can be used to advantage. See is on this page.*

The following tells the balance of the market story: If these figures and comparisons are read carefully each issue they will give any farmer a grasp of crop and market conditions that cannot be gotten in any other way.

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on September 13, 1913, with comparisons, are shown in the following table. (The sign — before figures means decrease, X means increase.)

The visible supply of wheat in Canada on the same date was 7,930,000 bushels. This is 3,200,000 bushels more than two weeks before and 1,063,000 bushels more than a year before. The visible supply of oats was 5,703,000 bushels on the same date, which is 359,000 bushels less than two weeks before and is 4,085,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on September 22, two weeks before and a year before as follows:

WHEAT, No. 2 RED	Sept. 22	before	before
Chicago	.92 @93	93 @93¾	1.05
St. Louis	.94 @95	93 @95	1.04
Kan. City	92 @93	91 @92	1.00
Cincinnati	96½ @97	95½ @96	1.05
New York	96 @97½	96 @97½	1.04

Minneapolis—Spring wheat, No. 1 hard, 85¾c; No. 1 northern, 83¼ @85¼c. Two weeks before, 90⅜c and 88@89⅞ respectively. A year before, 90c and 87@90c, respectively.

CORN, No. 2 WHITE			
Chicago	.75½ @75¾	77¾@78	74½
St. Louis	.75½ @76	78	76½
Kan. City	.76½ @77¼	77 @77½	70
Cincinnati	.77 @77½	79½@80	80
New York	82½	83¾	59½

OATS, No. 2 WHITE			
Chicago	.43½ @43¾	44¾@45	37
St. Louis	44	44	36
Kan. City	43½	43 @43½	35
Cincinnati	.46 @46½	45 @45½	37
New York	.48 @48½		40

Future Grain Prices

Chicago grain futures closed on September 22, 1913, and two weeks before, as follows:

WHEAT—September, 87⅛c; December, 88⅞c; May, 93¼c. Two weeks before, 88⅜c, 91⅝c and 96⅜c, respectively.

CORN—September, 74¾c; December, 72⅜c; May, 73⅝c. Two weeks before, 76⅛c, 72⅝c and 74⅛c, respectively.

OATS—September, 41¼c; December, 43¾c; May, 46⅝c. Two weeks before, 42⅝c, 45½c and 48c respectively.

COTTON—New York, September 22—Cash cotton closed as follows:

Middling upland, 13.55c; middling gulf, 13.80. This is 80 cents a hundredweight higher than two weeks before. A year before the price was 11.85c and 12.10c respectively.

Chicago Produce Market

Chicago, September 23, 1913.

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with ormer years. For advice about other markets address the

To Bring Seller and Buyer Together

This department is exclusively for producers and handlers of farm produce, grain, live stock, cotton, vegetables, fruit, hay, poultry, eggs, etc. :: ::

There is no charge for this service but a condition is that before using it the accompanying coupon be sent for full instructions, blanks, etc., so all business may be conducted systematically. You will appreciate the advantage of this after you get the instructions.

This is the first appearance of this department. When corresponding always say "I saw it in 'The Market Place.'"

POTATOES—One car medium size and smooth. Ready now.—Fred Newmiller, R. R. 4, Clyde. N. Y.

APPLES—Wanted. 100 to 500 bushels now and a car load of winter apples later.—J. E. Evans, Sisterville, W. Va.

CORN—This community wants a few cars.—W. D. Reddock, Personville, Tex.

FENCE POSTS, MOLASSES, CHRISTMAS TREES—For sale by Sulphur Local Union, James F. Powell, Pres., Sulphur Springs, Ind.

HAY, CRAB-APPLES—Eleven tons of baled hay and a few barrels of crab-apples.—H. Lengemann, Imlay, Mich.

POTATOES, APPLES—We have lots of potatoes to sell and want to buy apples.—J. U. Flemming, Organizer, Ellendale, N. D.

POTATOES—Wanted to buy in car loads.—A. E. Weber, Sec., Geneva, Neb.

DRIED FRUIT—Prunes, raspberries and canned fruit and vegetables, also winter apples and potatoes to sell.—Equity Warehouse Co., Portland, Ore.

SWEET POTATOES—Car loads to sell.—C. B. Lozier, County Secretary, Robertsdale, Ala.

SWEET POTATOES—A car load of Nancy Hall variety.—T. Edwin Martin, Oklona, Miss.

CORN, OATS, BARLEY, POTATOES—We want to correspond with locals that have these to sell.—Henry Vauck, Sec., Shickley, Neb.

BARLEY—Seven car loads to sell.—F. R. Peart, Sec., Logan, Utah.

WHEAT, OATS, APPLES, POTATOES—For sale. W. S. Kerstetter, Sec., Sunbury, Pa.

WHEAT—300,000 bushels for sale.—F. C. Saxowsky, Sec., Hebron, N. D.

WHEAT, POTATOES, APPLES—Large quantities for sale.—O. E. Scott, State Secretary, Pocatello, Idaho.

POTATOES—Parker's Prairie Local Union has car loads to sell.—L. H. Brockman, Sec., Parker's Prairie, Minn.

WHEAT, POTATOES—Carlots, to sell.—C. H. Dent, Sec., Dent, Minn.

WHERE TO SELL

Following are some of the representatives of the Farmers Society of Equity. These people want to buy direct from the producers. Report what you have to sell, but you should first send the coupon for instructions, blanks, etc.

KEY—In the following directory aletter or combination of letters is used to indicate the crops handled, as B means beans; Bu, butter; Bc, broomcorn; D, dairy products; Df, dried fruit; E, eggs; F, fruit; Gr. grain; H, hay; LS, live stock; P, potatoes; Py, poultry; R, rice; S, straw; Veg, vegetables; W, wheat.

Chief crops raised to sell .. ..

Making the Most of the Corn Crop

MAKING a good corn crop is a very important feature of nearly every farm. To be able to make the most of the corn crop, after it is grown is equally important.

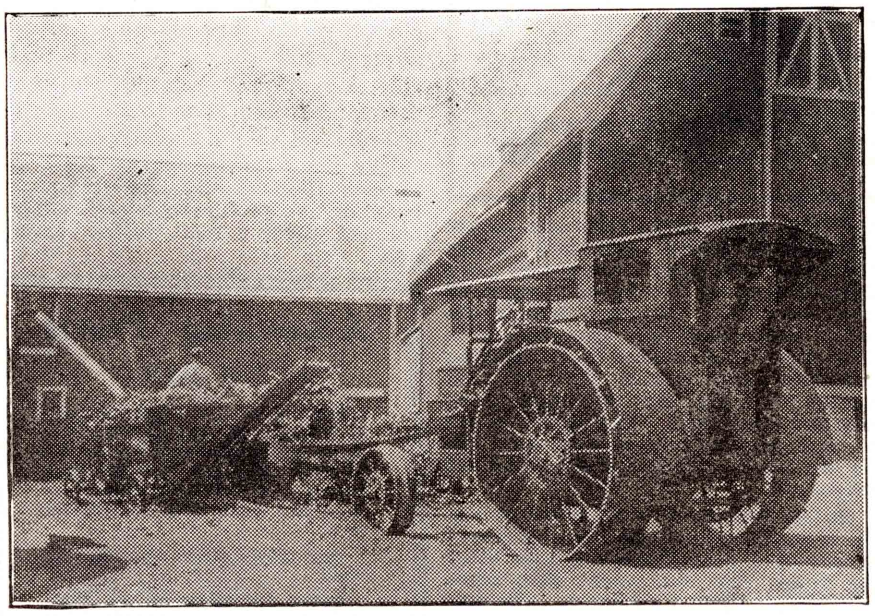
Corn long ago dethroned cotton as King of Crops. Corn in the ear, corn in silage, corn in the shock, corn in the crib, wherever corn is found it is the leader among feeds. And corn grows everywhere excepting only those climates where Jack Frost will not give it a fair show.

After the crop is grown to maturity the problem of harvesting is met. Shall it be cut, or husked in the field? If the latter, fully forty-five per cent. of its feeding value is left in the field. True, cattle, horses and sheep may save some of it later, but most of it is wasted. Cutting and shocking is much better. Cost a little more, no doubt, and takes more time and labor, but it is worth it. Not every farmer can carry sufficient stock to utilize the roughage. But, if feed is the problem, saving corn fodder will help to solve it. Silage is the best way to feed the corn crop to obtain its full value. Not every farmer has a silo, and those who have them cannot save all their corn crop by this excellent method.

When a man cannot do all that is ideal, and best for him to do, he must make compromises. The best compromises for the average farmer is to cut and shock part of his corn crop, fill his silos, and husk the balance standing in the field.

The silage first demands attention. When the corn is glazed, get out the corn harvester, make ready the silo, put the machinery in shape, and fill the silo. Put it through with a rush. A good cutter will tax the capacity of two men to place it on the table. Tramp it well. After the silo has been filled, and as it settles, tramp it around the edges occasionally. This prevents decay from extending down the outside. But remember that a newly filled silo heats, and in heating creates a dangerous gas. Let a lighted lantern down in it before you go yourself. If the lantern goes out, you stay out. Take no chances.

Farmers Should Save The Full Feeding Value of this, the most Important Crop.



Put the Fodder in the Barn and the Corn in the Crib

Even though corn is selling at $1 a bushel, the cattle feeder, beef or dairy, can make it pay best in silage. Eight acres of fifty-bushels-to-the-acre corn will yield 150 tons of silage, and fill a 16x36 silo. Silage will not only go farther in feeding than the same area of corn fed dry, with the fodder shredded, but it will bring out the cattle in better shape in the spring. The average cost of a silo is $330. The average cost of growing, harvesting, and putting ensilage in the silo is $1.85 a ton. Its feeding value, on the average, is $6.50. An acre of good corn will produce fifteen tons of silage. Figure the rest yourself.

After the silage comes the cutting and shocking. Corn must be riper for this than for silage. Ripe corn allows larger shocks which reduces loss by exposure. The leaves, husks and tassels are about all that will be eaten. Even farmers who have silos can well afford to also have some shock fodder. It pays. Harvesting with a machine greatly facilitates the work of both harvesting and handling. Shredded fodder feeds easily, and the refuse makes excellent bedding. And I have always noticed that where stalk fodder was scattered and fed, that portion of the field showed increased fertility for years afterward.

After shocking time is past get in readiness for husking. Put the cribs in order. See that the floors and roof are tight. There should be plenty of storage room in every farm to hold the crop of that farm so long as the farmer may desire. Farm storage of grain is destined soon to play a most important part in the matter of price, and price is what portrays the percentage of profit. On large farms corn is put in the crib by farm elevators, saving time and the strength of the farmer. It is no easy task to shovel a forty-bushel load of corn high into the crib at the close of a long day's work. Those who may think it easy can learn the truth by trying.

The corn crop is most profitably marketed on hoof. It is not possible that the crop can ever be entirely marketed in this manner, however. Corn has many other valuable uses besides feeding and fattening animals. There will always be a market for the grain, and, as it has been found that corn can be bred for special qualities, the grain farmer has much to learn to provide the market with the quality it most desires and will pay most for. This brings us to the problem of corn breeding. Seed selection is a most essential feature of making the most of the corn crop. Now is the time to start in the work of seed selection. Every corn grower should secure and study the bulletins on this subject put out by the experiment stations of his own and other states. Corn breeding should be part of the regular work of every corn belt farmer who would make the most of his corn crop.

Our Market Review

(Concluded from Page 6)

Farmers Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars with comparisons follow:

	This week	Last week	Last year
Monday	130	60	100
Tuesday	120	65	75
Total, 2 days	250	125	175

Receipts again made a generous total, but the demand was broad and prices remained without material change. Supply again consisted chiefly of Wisconsin round white stock in sacks, which met with ready sale at the prices.

Sales reported were: Per bushel—Wisconsin white, in bulk—3 cars at 78c; 3 cars sacked white at 80c, 3 cars Burbanks at 80c; 4 cars white at 82c;. Minnesota Ohios—1 car at 83c.

Per bushel, Minnesota Ohios, bulk 80@83c
Wisconsin, round white, bulk or sacked ..... 78@82c
Wisconsin, Burbanks ..... 80@...

The price is about 20 cents a bushel higher than two weeks before, and about 38 cents a bushel higher than a year before.

SWEET POTATOES—Have got to a level of prices where they sell fairly well. The market is kept supplied to a point where buyers have no difficulty in getting what they may require.

Barrels, Virginia ..... $2.00@2.10
Jerseys ..... 2.75@3.00
Hampers, Jerseys ..... 1.00@....
Illinois, small ..... .75 .90
Alabama, common, dirty ..... .50@....

The price of Virginia and Jerseys are from 20 to 30 cents a berrel lower than two weeks before.

STRAW—Rye straw quotable at $7@7.50. Oat straw at $6@6.50. Wheat straw, $6@6.50.

Rye and oat straw are 50 cents a ton lower than two weeks ago. Wheat straw is unchanged.

HAY—Receipts, 874 tons. Demand continues good and market firm. Offerings small.

Choice Timothy Hay ..... 18.00@18.50
No. 1 Timothy ..... 16.50@17.50
No. 2 Timothy ..... 15.00@16.00

The price of hay is 50 cents a ton lower than two weeks before. A year before the price was $18 to $19 a ton for choice timothy.

BROOM CORN—Quotably firm. There was a strong feeling. The volume of business doing remains tame.

Per ton, Illinois Corn ..... $110.00@140.00
Oklahoma ..... 110.00@120.00

The price of broom corn is unchanged from two weeks before. A year before Illinois was quoted $60 to $110 a ton. Oklahoma $60 to $110 a ton.

BEANS—There was nothing new to mention. The market rules quiet. No consignment lots appear on sale. Stocks of old beans in hands of dealers are small. Demand moderate for pea beans and restricted for other kinds.

Pea Beans—
Hand-picked, choice ..... $2.00@2.10
Common ..... 1.50@1.75

Mediums nominally about same as pea beans.

Red Kidneys, choice ..... $2.25@2.30
Common to fair ..... 1.50@1.75
White Kidney nominal ..... 3.00@....
Brown Swedish, long ..... 1.25@1.50
Round ..... 1.60@1.75

The price of pea beans is 10 cents a bushel higher than two weeks before. Red Kidneys are about 60 cents a bushel higher. Brown Swedish 25 cents a bushel higher. Other kinds unchanged from two weeks before. A year before the price of choice hand picked was $2.95 to $3.00.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week Cases	Last week Cases	Last year Cases
Monday	6,674	8,613	4,506
Tuesday	7,358	9,005	7,993
Total	14,032	17,618	12,499

The market is quotably firm at the current quotations.

Ordinary Firsts quotable at 20½@22c.

Firsts quotably 25@25½c. To bring quoted prices Eggs must run mostly to new laid eggs, with not over 24 eggs loss to the case.

Refrigerator eggs in good demand. April Firsts salable at 23@23½c and Extras at 24@24½c.

The price of eggs is a shade higher than two weeks before and about 3 cents a dozen higher than a year before.

GREEN FRUITS

Chicago, September 23, 1913.

APPLES—There is a good, healthy market. Arrivals of fall apples are very moderate. They are not expected to come at all freely. The crop has proved to be light. Demand is good. All grades are salable, but as is natural, prices vary with the quality. Not many winter apples coming yet. Such as do come go to coolers, as it is too early for these. Prices lately have shown a moderate upward tendency.

GRAPES—Black grapes in baskets sell fairly. The better the quality the more readily they sell. There is a difference in prices.

The few Niagaras and Delawares coming in are disposed of.

PEARS—There is a firm market. Arrivals and offerings are very moderate. All nice clean fruit, almost any kind, good sale. It is early yet for Keiffers. They are apt to come green.

PEACHES—The market was ruling quiet. Demand for large packages is not so good as it has been. It looks as if the preserving demand has become pretty well supplied. The large trade seems to be over. Buyers seem to be calling more for the small packages, fifth bushel baskets. Market well supplied. Peaches vary a good deal in size and color. Small and light colored stock slow and easy. A good many are of this kind.

CANTALOUPE OR GEMS—Are dull, slow and easy. Season late and it has become too cool. There is still a good supply of Colorados. Holders express a desire to clean up and stay out. The few Michigan baskets coming drag.

WATERMELONS—There were no fresh receipts. Some in yesterday still remain. There is very little demand. Market is nominal at $50 to $100 a car, with very little doing.

VEGETABLES

Chicago, September, 23 1913.

BEETS—Supply of stock with nice tops is decreasing. Nice goods sell freely. Trimmed beets are plentiful.

CABBAGE—Market firmer. Demand is more active and supply only fair.

CARROTS—Market is firm. Supply is not large and the demand has been stimulated by cool weather.

CAULIFLOWER—Fair supply in today. Fancy nice size and clean had good sale. No. 2 stock had to be liberally discounted.

CELERY—Sold well today. Receipts were 3,400 boxes and prices held steady.

CUCUMBERS—Demand is good for nice, green uniform size goods. Culls, thick, discolored stock not wanted.

EGG PLANT—Fair sale and steady. Supply of home-grown is decreasing.

GREEN ONIONS—Fair sale at steady prices. Supply is not large, but ample.

LIMA BEANS—Only a moderate supply in today. The shelled beans met with fair sale at steady prices. Beans in pods are not selling.

LETTUCE—There were fair receipts of Eastern and the quality was more desirable. Demand fairly active and market steady for nice stock.

ONIONS—Good sale and steady. Buyers want large onions and are willing to pay any premium for nice goods. Market is firm.

PEPPERS—Market is liberally supplied with home-grown. Demand is fair and market easy.

PARSNIPS—Fair sale and steady. Supply is ample.

PUMPKINS—Supply of large, yellow pumpkins is fair, not large. Demand is moderate.

PICKLES—Supply is not large and market holds steady, although rather quiet.

RADISHES—Fair sale and steady. Home grown are in ample supply.

SWEET CORN—Fair trade at steady prices. Supply equals requirements.

STRING BEANS—Nice beans sold at higher prices. Supply has become small, especially of Wax. Demand is good.

SPINACH—In good supply and easy. Demand quiet.

SQUASH—Moderate sale. There is a good supply.

TURNIPS—Trimmed are plentiful and easy. Nice, write with green tops scarce and firm.

TOMATOES—Are selling fairly at steady prices. Frosts have been experienced in the vicinity, and it is possible the supply of home grown will be shut off.

What Others Say and What We Think of It

The organization of shipping clubs among farmers of North Louisiana is going on at a rapid pace and a number of these associations have come into being for the purpose of making it easier for the live stock raisers and truckers to handle their market products.—Journal of Agriculture. It ought also to help them obtain better prices. If it doesn't there's a screw loose in the machinery.

What farmers in this country want is not benevolence, either from the government or from individuals, but only a chance to help themselves as European farmers have done.—The Nebraska Farmer. The farmers have all the "chance" they need. No one is keeping them from doing even more than European farmers can ever hope to do. What our farmers need is to wake up and take advantage of their "chances."

The farmer who wants to hold his products will find it much better to be ahead than behind. Rather than to devise some system that wil enable farmers to hold their crops when behind we should give our attention to putting farmers on such a footing that they will be far enough ahead to hold their crops, if they so desire, without the aid of a paternalistic government.—Nebraska Farmer. All right—trot out the system. An anxious world is waiting.

In the United States in 1880 there were 49,000,000 hogs and 50,000,000 humans. Twenty years later there were 76,000,000 humans, but only 67,000,000 hogs.—Producer and Consumer. Don't forget, now, that part of those humans are also "hogs."

Our Country Contributors

Semi-Monthly Prize Letter Competition:
Subject: My Most Profitable Crop

First Prize $3.00 Second Prize $2.00 Third Prize $1.00

NOTICE TO SUBSCRIBERS

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

A Girl Raises Rats for the Market

(First Prize)

Miss Abbie E. Lathrop, near Granby, Mass., is not only one of the very few of her sex not afraid of rodents, but actually derives pleasure from the raising of them for a livelihood, having proved them to be her most profitable crop. On her little farm, which she has paid for wholly with money earned in her unique enterprise, she raises hundreds of the little animals each year, for which she finds a ready market. In addition to being a skilled handler of rodents, Miss Lathrop is a serious business woman, and has successfully raised rats and mice for market for several years.

Starting in a very humble way, first with only dancing mice, Miss Lathrop became the sole support of her mother, and soon annexed a ten-acre farm, which now is given up to breeding rats, mice, and guinea pigs. Many of these she sells to animal dealers in large cities, who resell them for pets, but mostly to scientific laboratories, where they are used for purposes of demonstration and experimentation by scientists and professors of medicine and anatomy.

Miss Lathrop's careful business methods have made it possible for her to make a very good living in an extraordinary occupation for a woman. Miss Lathrop is fond of showing her unique place to visitors, who come from far to see the "rat queen" and her remarkable industry. She is the envy of many of her neighbors, who make less in ten years on their stony farms than she makes in one year by raising rats.

Miss Lathrop's venture is the result of seeing a pair of "dancing mice" in a bird store. They attracted her attention so much by their curious behavior that she bought them for pets. Dancing mice, like ordinary rodents, increase very rapidly in number, and at first Miss Lathrop gave the progeny of her pair of pets away, but soon found that she could sell them at a good price. So she began disposing of her surplus stock in nearby towns; her field of trade widening gradually until she received letters of inquiry from Boston and New York.

Bird dealers, animal dealers and others seemed to want dancing mice.

This gave Miss Lathrop an idea. She was seriously handicapped striving to earn a living owing to ill health, and she had her invalid mother to support. She and her mother talked it over for a long time and finally Miss Lathrop decided to make a business of mice. No one was more surprised than she at the result.

From the very first after she had announced herself as a breeder of fancy mice, orders began to pour in. It was not long before the little creatures were actually supporting herself and the invalid mother. For a long time the demand was greater than she could supply.

She added white mice and white rats and fancy colored mice to her list, and later English and Peruvian guinea pigs, but no matter what new variety she introduced people seemed to want them as soon as they heard of them. It was some time, however, before she could understand why the dealers in New York and Boston kept sending her such large orders for mice and asking why she did not raise more rats and guina pigs. She finally learned that medical leboratories were using the little animals for experimental purposes.

Orders continued to grow larger until Miss Lathrop found it necessary to employ a housekeeper to look after the house that she might give business her undivided attention She employs several laborers in farm work, to plant, care for and harvest the crops, practically all of which she feeds to the rats, mice and guinea pigs. —John Latham, Ohio.

Big Money in Bantam Fowls

(Second Prize)

Believing the readers of Up-to-Date Farming might be interested I will tell what my most profitable crop was.

I began by purchasing a pair of Black African bantam chickens, of the rose-comb variety. For these I paid $6, a sum which some of you may consider high, but as they were full-blooded stock, having won prizes in large poultry shows, I was therefore able to guarantee each bird raised and command prices accordingly.

From the pair I hatched thirty-four chicks the following year. I did this by not allowing the hen to set and keeping her producing eggs, which I hatched under a light-weight common hen.

Bantams are much harder to raise than larger breeds of fowls, but I was successful in raising twenty-six of the thirty-four.

Bantam chicks, as may be imagined, are very delicate little creatures and prove easy victims to any dampness, from which they must be closely guarded by keeping them in dry, clean quarters. After the third week you can be reasonably sure of seeing them all in full feather.

Of the twenty-six raised, eleven were cockerels. I selected a pullet for each of the eleven cockerels I had, making eleven pairs, which I advertised in one of the city newspapers for sale. In a short time I had sold the eleven pairs at $4 and $5 a pair, according to age.

They were purchased chiefly by city folks as pets for their children, and in most cases were purchased for no other purpose.

In figuring up I found I had realized $51 from those sold, besides having four pullets left to add to my pair for the next year's breeding season. Deducting the price paid for my original pair, and $2 or $3 for feed, you will see I cleared something over $40 on the pair in one year.—Mrs. John Hodell, Ohio.

Plant Trees

(Third Prize)

About twelve years ago I bought a tract of railroad land. It had once been covered with the finest native oak timber, but the people for miles had come to this timber to get posts, railroad ties and mine props. At the time I got possession there was not a tree large enough to make a mine prop. The land was covered with second growth oak, which in twelve years has grown into fine timber; props and railroad ties, and saw logs, which are ready cash on the stump or at the track.

Props are worth $60 a thousand; ties $30 to $50 a hundred; cord wood $3.50 to $4 a cord on track.

At these prices a man can take his teams into the timber in the fall and winter when work on the farm is not pressing and clear up several hundred dollars besides keeping farm hands busy the year round.

Growing timber will pay as well or better than growing other crops. I believe mine is making a growth of at least $2 an acre a year. About all that is necessary is to keep fire out and nature will do the rest.

Not long ago a man told me life was too short to think about growing timber. I cited him to a man that a few years ago owned forty acres of fine timber land. In his eagerness to get it cleared he piled heaps of good timber and burned it to get it out of the way. Last spring I saw that man hauling stumps out of his neighbor's field for fuel.

There are hundreds of others just like him. Not a stick of timber growing on their farms.

Life is not too short to do anything that needs to be done. Because we have plenty of timber is no excuse for wasting it, there will be people here after we are gone.—F. S., Ill.

Going in for Strawberries

I must tell you about my strawberry patch. I ordered 1,000 Klondike strawberry plants, expecting to have enough strawberries the next year, to eat and to can. I have only been on a farm four years, having lived in a city all my life. Everything I tried was in the nature of an experiment. I suppose about two-thirds of the plants lived.

The first berries that came we used for the table. We have a great deal of company in summer, besides five in our own family, and served strawberries three times a day. You can imagine the quantity picked for home use. In a short time the vines bore more than we could eat. My wife canned fifty-two quarts, and seldom a day passed without giving away from one to three gallons to our neighbors, and friends from the city. All this

Fire, Water and Lightning Resistant. Practically Indestructible.

Special Offer

A fortunate purchase enabled us to secure a limited amount of brand new, high grade corrugated iron and galvanized steel roofing, some of which we are offering, while it lasts, for as low as $1.25 a square of 100 sq. ft., f. o. b. cars, Chicago. This is only one example of how much we can save you on all your roofing purchases. Never before in the history of the roofing business has such a remarkable money-saving roofing offer been made. It doesn't make a bit of difference what kind or make of roofing you have in mind to buy—corrugated, iron, galvanized steel or ready roofing, rubber surfaced, pebble, marble, flint or gravel coated—we can supply your every need with just the kind you want. Write today for—

$1.25 Per 100 Sq. Ft. Buys Best STEEL ROOFING

FREIGHT-PREPAID PRICES

and let us **prove** that we can save you **big** money on every kind of Roofing, Siding and Ceiling. We can furnish you the material necessary for re-roofing your house, barn, granary, church, residence, garage or poultry house. We can also furnish you the siding, conductor pipe, eaves trough, and everything needed. METAL ROOFINGS ARE BEST and cheapest in the long run, easiest to lay, longest life, non-absorbent; fire and lightning proof; cooler in summer, warmer in winter; do not taint rain water; with ordinary care will last a lifetime.

New, Heavy, Galvanized Roofing 2¾c per Sq. Ft.

Just another example of how hard we've smashed roofing prices this season. Never before and probably never again will you be able to buy such roofing at this price.

We Save You Money

Now is the time to send in your order for this roofing—don't delay it a single day. Even if you do not intend to use it for several months to come, send your order in now with a reasonable deposit which will protect you in your purchase, and the material will be shipped when you are ready to use it. Metal Roofings are best and cheapest in the long run, easiest to lay, longest life, non-absorbent; fire and lightning proof, cooler in summer, warmer in winter; won't taint water; with ordinary care lasts a lifetime.

Chicago House Wrecking Co.

Prominently known everywhere to the public for 20 years as the great "Price Wreckers" and now owned by the Harris Bros. Co., have decided that their best interests require that the name of the principal owners of the company be more prominently brought to the public's notice. There is no change in our business, except that the four Harris Bros. will, in the future, advertise and sell their goods, under the name of the Harris Bros. Company, instead of the Chicago House Wrecking Co.

Just drop us a postal. We will absolutely prove to you that, quality for quality, we are underselling all competition by a wide margin. You run no risk in sending us your order. Our binding guarantee, backed by this $10,000,000 Company fully protects you. Write for free samples today.

HARRIS BROS. CO., 35th & Iron Sts., Dept. BN-135 Chicago

time strawberries were selling from $2.50 to $3 a crate. Having canned all that we wanted, and finding them still coming we decided to take them to our nearest market and sell them; they were then getting cheap and plentiful, averaging $1.25 a crate, but before the season was over we cleared $18 after paying for crates, help in picking, etc.

We certainly consider our small strawberry patch our most profitable crop, and if we had gone into it for the money, which we shall do next year, and sell while the market is high, and can when it is low, our profits will increase considerably. We estimate that if we had sold all berries that came from the patch, we would have cleared at least $50 and our patch was about as large as a good sized garden. We intend to plant several thousand plants in the spring.—A. A. W., Tenn.

Dairying Pays in the West

My most profitable crop is milk. I have 15 cows which bring me a good profit because I take good care of them and feed them right.

I raise carrots, beets, turnips and hay, which I find the best feed for milk cows. In August I averaged forty pounds of milk a cow, making 4,200 pounds of milk a day. The milk tested 5.4 per cent., making 22.68 pounds of butter a day. I get thirty cents a pound for the butter, bringing $6.80 a day. So for the month of August I made from fifteen cows $210.92.

I separate the milk. By doing so I get sweet skim milk for my pigs and calves.

If a dairy is run by a good system it can not help but pay, as I have found out. It takes system to make any undertaking pay. Use system, and right marketing and your work, whatever it is, will pay.—R. C. Chase, Oregon.

Garden Tomatoes

My most profitable crop is tomatoes. I set out a plot 99x51 feet and sold $50 worth of tomatoes.

I plowed the ground as deep as I could, made a good seed bed, and set my plants (which I had in a cold frame) on the 10th of May, cultivated every week until they were too large to cultivate. The first tomatoes were sold July 3rd. I got 8c a pound for some and afterward I received one dollar a crate, and some I was forced to sell at fifty cents a crate. Have some to pick yet. My late field tomatoes are now coming in and look fine.—T. B. P., Ind.

Another Profitable Tomato Crop

I plow my ground in early spring, harrow it and pack thoroughly one acre of land for tomatoes.

I take a single plow and lay off rows four by three feet. I let the plants get three or four leaves on them; then take a dibble, make a hole and pour some water with the plant.

When the plants begin to grow I hoe close around the plant, plow both ways and it is no trouble to grow tomatoes. I have made $100 on one acre of tomatoes with less work than I could on any other crop and have let my neighbors have what they wanted, besides we had all we wanted for our own use.—T. P., Missouri.

Comment by the Editor

There is a crop of rats and mice to a greater or less degree on every farm, but not many people make any money out of them. I believe the balance is usually the other way. The courageous Massachusetts maiden, however, finds rat farming profitable. There are lots of ways to make money, by doing things differently from the ordinary. And a change in variety often turns loss to profit. Ordinary rodents are worse than useless, but here is a young lady who raises extraordinary ones at a profit. Women and mice don't mix very well, as a rule. J. L. didn't say, but the Editor will wager a rat trap that Miss Lathrop wears bloomers when working with her crop. Otherwise how could she?

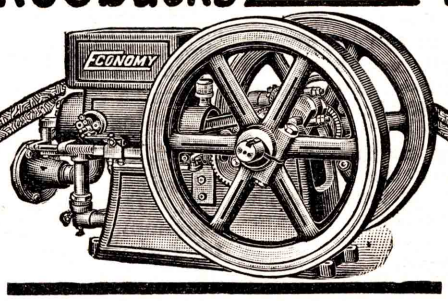
The Ohio lady gives us another instance of finding it profitable to break away from the ordinary. People are willing to pay high prices for unusual things, it seems. While banty hens are more trouble to raise, they eat less, and bring more money.

We heartily approve the sentiment expressed by F. S. Tree planting is a privilege, and a duty as well. The man who thinks of the future as well as the present is nearly always a better man, and a better citizen, than one who does not. We owned a Colorado tree claim once, and planted some trees. We hope they are living yet, serving some one at least some shade and a shelter from blizzards. Let us all take care of the trees we have, and plant more to replace them.

Hogs Harvesting Wheat

A FARMER in Whitman county, thirty bushels per acre. wheat that was good for Washington, had a field of Wheat was not high in price at his market town. He was advised to turn a bunch of young hogs in the wheat field and let them do the harvesting. He doubted the value of this advice but was prevailed upon to try it out in a small way. He divided a fifteen-acre field equally. Cut and threshed half of it, and sold the grain. The other half he fenced and turned in the hogs. He kept a careful accounting of expenses, and when a final reckoning was made he found that the 225 bushels threshed and sold netted him a total of $110.25, or forty-nine cents a bushel, after deducting the cost of harvesting, threshing, hauling, etc. On the other half, harvested by the hogs, he netted $290.25, or $1.29 a bushel on 225 bushels of wheat, after deducting the first weight of the hogs, and the costs of marketing. It pays to know the feeding value of grain at market prices for live stock. A business farmer will be always ready to take advantage of the relationship between prices and products.

Sears-Roebuck's ECONOMY Engines



Reliability

The *Economy* Gasoline Engine is so *accurately made*, of such *splendid materials* and is so *carefully tested* that when it is put to work on the farm it is *bound* to run smoothly and steadily *day after day, year after year, with less care and less attention than any other engine on the market.* You get *extreme dependability* when you buy the high grade Economy, because it's *built into* the Economy.

Our low prices are the result of modern methods of manufacture, enormous output and direct from factory selling. Our guarantee and reputation make you *sure* of satisfaction.

BUY A BOHON "BLUE GRASS" STORM BUGGY And Save $25 to $50

MY Full Wrought Straight Grain Second Growth Hickory Storm Buggy has ALL the good points found in any Storm Buggy ever made, and NONE of the bad ones. It is not too heavy, weighing but little more than the regular top buggy. Seat is wide and roomy and set back to give plenty of leg room. I will positively GUARANTEE that the doors, windows or other parts will not rattle. Has drop side windows, which open the same as street car windows. They are fitted in metal slides, with steel springs to hold them firmly in place. The double flange construction of the slide ways keeps out all wind and rain. Front and rear windows are hinged at the top, allowing them to be opened up against the roof, where they are firmly held in place by special spring fasteners. I could say much more about the body, the gear, the axles, the wheels, etc. But "seeing is believing" and I just want to ship it to you on

30 Days' Trial & 2-Yr. Guarantee

Give it a good hard trial on your own roads—I don't care how bad they may be—and if you are not satisfied with it in all respects ship it back and I will pay the freight both ways. If you keep it you are further protected by my binding two-year guarantee against defects of material or workmanship.

Big Catalog Free

Write for my big catalog which gives detailed description of my storm buggy as well as a full line of other vehicles, harness, etc. I will be glad to send it postpaid. Write for it today — a postal will do.

True Co-operation a Friend to Business

A WELL written article in the Farm Implement News calls attention to the danger of going to extremes not so much in the practice, perhaps, as in the teaching of co-operation. All concede that the farmer is a very important factor in the prosperity of the country, and unless the farmer prospers no one else can prosper to any very great extent. But there must be other classes as well as farmers, else the farmers would have no customers, and could, therefore, have no incomes.

The reason the earlier farm organizations seemed to make their principal fight on the business interests is explained by a broad-minded advocate of true co-operation to have come of the fact that when farmers, smarting under wrongs they could not entirely understand, decided that they must organize so as to meet organization with organization, they very naturally looked no further than to the business men they knew for the source of their trouble. They thought it was the prices they had to pay for what they bought and not the prices they received for what they sold that oppressed them. In other words, they had been taught all their lives that the prices of farm products were made at the fountain-head of trade in accordance with some mysterious law, and, therefore, they must be right, and if there was an unfairness in prices it must be in the prices they were required to pay. This arrayed the farmers against the local business men, and the business men against the farmers.

But this is not the teaching of UP-TO-DATE FARMING. This paper holds that the prices of farm products are the ones that are arbitrarily and unfairly made; that while supply and demand have a limit and their relationship varies, the speculative making of prices, as published in the market reports, has little to do with that, the law of supply and demand being practically ignored, so that speculators may buy cheap and sell high. Hence it is not the purpose of this paper at least, to antagonise the business interests of the country, but to wrest farm products from the hurtful hands of speculation and gambling, and give those commodities greater permanency in price and a more equitable adjustment of supply and demand. The resulting price may at times be higher and it may be lower, but it will always be remunerative to the producers because the profits revert to them instead of flowing into the coffers of speculation; and yet the stuff will go to the users at lower prices than under the present system. This theory of farm organization, therefore, is most friendly to the legitimate business interests, and those interests should be friendly to it, and they are so wherever the relationship is understood. Success along these lines takes nothing from business, but it makes farmers better off financially, increases their aspirations, refines their tastes, multiplies their wants, and makes them more abundant purchasers.

In many localities the business and professional men understand this, and are helping to lead. In such localities co-operation takes eminently the proper form—that of pure mutuality of interests, which leads to "equity in all the business relations of life." All we ask of the businessmen is to meet us half way, and assist in solving the problem so necessary to the success of farming as well as to the success of business, and the general and permanent prosperity of the country and the world.

Pastoral Paragraphs

It is a mighty poor farm that has no specialty.

What dynamite will do to stumps, rocks, and hard pan is sufficient. Try it.

If you have fall plowing to do follow the plow until the ground freezes. You can't plow frozen soil, but you can husk corn any time.

While the United States produces three-fourths of the corn grown in the world, it raises less than one-fifth of the wheat.

It is not a good plan to seed alfalfa with wheat. It will not hurt the wheat, but tends to lessen the chances for success with the alfalfa.

The farmers of the north and central west are acquiring the science of business, which accounts for the rapid increase of successful farmers' elevators.

A successful Long Island farmer sows alfalfa in rows one foot apart and cultivates it while growing. The yield is from three to five tons an acre on a sandy soil.

If some genius could put a seat on a hoe it might become popular with farmers. As Sam Saxon says, it is hard work nowadays to sell a farmer a farm tool that hasn't a seat on it.

Right now is a good time to set apart a day or two for fixing up all the buildings, fences, machinery, and such things that need fixing. Keeping everything in good shape is the trademark of the successful farmer.

"One acre of alfalfa," says a practical Iowa farmer who has studied the crop on his own farm for several years, "will bring up the fertility of three acres—the one in alfalfa and two others. Feed the hay and sow the manure.

I've seen farmers get up early in the morning, feed, curry and harness the horses, clean the stable floor and throw the manure out of the barn window, to leach and to burn. Then, after breakfast, drive to the station and buy commercial fertilizer!

The soy bean has some advantages over cowpeas. It stands extremes of wet and dry better. There is less loss of leaves in handling as hay. The seed cracks less in threshing, and is richer in protein and fat. It is a better nitrogen gatherer. Cowpeas, however, make a better growth on poor soil.

I wonder if all the farmers who have hay forks and carriers, manure spreaders, patent gates, calf feeders and other labor-saving devices also bought mop wringers, bread mixers, dish washers, washing machines, vacuum sweepers and such like for the house? Lop-sided progressiveness isn't fair.

FALL WORK WITH THE STRAWBERRY BED

THOSE who have strawberry beds (and every farm should have them) ought now to prepare them for the winter They are done growing, ready for winter rest.

In sections where snow falls early and remains on the ground all winter no protection is needed. It is freezing and thawing, again and again, that injures the strawberry plant. They should be covered so the light freezes will not effect them, and, when once frozen, the light thaws will not affect them either. Straw, hay, forest leaves and similar material makes an excellent covering.

PRIMARY PRINCIPLES OF SUCCESS WITH WHEAT

WHY do wheat growing farmers neglect seed selection? Some do not think it worth while. They have not studied the question, nor investigated the results of the practise. Some neglect it without other cause than carelessness and habit. They find it hard to adopt a new practice and get out of the rut. Some haven't had the means or the time. They merely thought they haven't The man who really desires to better his crops, and has determination back of the desire can find a way to do things necessary. The is no question about that. It is merely a matter of decision. Possibly the average farmer does not have a strain of wheat worthy of development by seed selection in the field. In that case, he should buy a bushel or two of thorough-bred seed from some reliable seedsman or breeder. He can do this by selling some of his own. But at least every farmer can thoroughly clean and grade his seed before sowing it, with a good fanning and grading mill. If there is no such mill in the community that is available, let him interest two or three neighbors and purchase one in co-partnership. It will pay for itself twice over in a single year.

Merely running grain through a mill to blow out the chaff and trash helps some, but what is needed is grading. All the light, shriveled, broken grains should be removed, and only large, plump ones sown. There are machines that will do this grading perfectly, and they are not expensive. And when it comes to marketing, clean the grain, and sell by sample. Demand a higher price, and show wheat worth the premium, and you will succeed. The inferior wheat can be fed at home, and for poultry and hog feed is worth at least one dollar a bushel. Left with the other wheat it brings down the price of the entire crop from five to ten cents a bushel. Do first-class farming, friends. Put out a first-rate product and you will meet with first-rate success.

THE LINE FENCE

ALL lines between farms should be thoroughly established, then a permanent fence erected. This line fence is best made of woven wire and steel posts set in concrete. Barbed wire is second choice.

For line fences, or permanent cross fences, steel posts are much better than wood or concrete posts. The life of steel posts is very much longer than wood posts, and when set in concrete they will maintain their alignment indefinitely.

The cost of steel posts is not high. The line post will not exceed in cost a good wood post. Corner and gate posts, being heavier and longer than line posts, cost a few cents more than the latter. Even these cost about the same as heavy wood posts used as corner and gate posts.

A good way for setting steel posts is to fill in the bottom of the post hole, and around the post, with six inches of concrete. On top of this cake of concrete fill in with dirt, tamping it well. Around the post at the ground line fill in with six inches of concrete. This method provides an anchor at top of ground and bottom of hole for the post.

One style of post on the market requires no staples to fasten the wire. The fence is secured to the post by means of tongue-like punchings on the post. These tongues being bent around the wire secures it firmly to the post. These posts are round and tapering, and are galvanized to prevent rusting.

Another style of post is made of angle iron, with holes on side to receive staples. As the staples are driven home the ends cross, thus clinching them and holding the fence securely.

SHORTY SHORTCUTS
By Himself

POTATO growing isn't the same as it once was. Styles in farming change along with the fashions. It used to be that in the spring, after the frost was out enough to plow, we broke up a piece of new ground, with a plow, just a common, ordinary plow, and every third furrow I dropped seed potatoes behind the plow. I was behind the plow when I started the round, but usually finished with the plow right behind me. We planted ordinary potatoes, too. Went down cellar, and raked up what potatoes we hadn't been able to eat, mostly little ones, and planted them. And in the fall, if the weather was willing and the Lord permitted, we dug a good crop from that patch. If we didn't, why, we laid it to the weather and the Lord. No old time farmer would ever assume any responsibility for a failure, unless he neglected to obey the mandate of the moon.

Nowadays we plant potatoes under different practises. We give the seed a sun bath, an air bath, a medicine bath. We buy eye-water for its eyes, and face powder for its skin. We turn our potato cellar into a sanatorium. We select our seed in the field in the fall, and put them in a box, and fumigate with the dope the potato doctors give us. Nothing is too good for our seed potatoes. I don't think I ever found anything quite good enough. If I was a vegetable, I had as soon be a potato as anything else. I couldn't be "skinned" any more than I am now.

Just the same, I've found that the shortcut to success in growing potatoes is in following the fashion. So I send to my agricultural college for the fashion plate, and make my plans accordingly. We don't have new ground as we did in the old days. Even the moon goes back on us once in a while. The weather is as changeable as ever, and we don't know just what the Lord has in mind, so we try to take all possible precautions. These precautions begin when the potatoes are dug. I select my seed from the best yielding vines. To make sure no disease lurks around, I put the seed in a box, airtight, and set a small dish of bisulphide of carbon on top of the potatoes, then shut the lid for twenty-four hours. One week lated I do the same trick over again. In the spring—oh, wait until spring and I'll tell you then.

Yours as ever
Shorty.

NATIONAL CONVENTIONS FOR GOOD ROADS

FARMERS, business men, governors, manufacturers, civil engineers, and all others who are or should be interested in good roads have been invited to attend the Good Roads Convention and Exposition to be held in St. Louis for one week beginning November 10. This great movement is being promoted by the United States Good Roads Association.

Farmers' organizations are invited to send delegates. All governors have appointed one delegate from each county in their state. The boards of agriculture of all states have been requested to attend and take part in the affair. President J. A. Everitt, of the Farmers Society of Equity, will be there on Farmers' Day, Thursday, November 13. The convention promises to be one of unusual interest.

The six days of the convention are announced as follows: Monday, Governors' Day; Tuesday, Mayors' Day; Wednesday, Legislative Day; Thursday, Farmers' Day; Friday, Engineers' Day, and Saturday, Manufacturers' Day.

The Southwestern Passenger Association and the Western Passenger Association have reported a two-cent rate.

One of the chief objects of this convention is to center upon a bill for Federal aid toward building good roads throughout the country. Farmers all over the country should take part in promoting such a bill, and every farmer who is interested in the matter and possibly can do so should attend the convention in person.

A RATHER EXPENSIVE WORM

THE common white grub does damage to the extent of $7,000,000 to corn, timothy, and potatoes in the states of Iowa, Illinois and Wisconsin, saying nothing of the losses they cause elsewhere. Not only does this insect work injury to these crops, but also to strawberries, nursery stock, lawn and pasture grasses. The total damage is placed by an expert who has been investigating the subject for many years, at about $24,000,000.

These grubs are not the same as those found in manure or rotten logs. It is the product and parent of the May beetles, that deposit their eggs in fields of grass or small grain. The beetles themselves do little or no injury. The expert declares that this beetle will be very abundant in 1914, and unless precautionary measures are taken, 1915 will see great quantities of the grubs appear. Deep plowing this fall is one way to check the pest. Also all infested fields should be deeply plowed next fall. The best time for this is from October 1 to 15. Pasturing a field with hogs and turkeys is also an excellent eradicator, and top-dressing grass and grain fields with a liberal application of commercial fertilizer will help also.

WHAT EVERY FARMER SHOULD KNOW ABOUT HORSE COLIC

MANY stockmen think colic is just simply "colic," and the only difference is in the severity of the attack. This is incorrect. There are several forms of colic, having different causes, and affecting different parts of the animal's intestinal anatomy. The severity of a case of colic depends largely on the variety, and usually requires an experienced man to make a differentiation.

The common cause of colic is the sudden change from old to new hay. This is so relished by the animal that the stomach becomes overloaded, causing a fermentation and resulting in a distention of the stomach of intestines, or both, by gas. This type of colic is one of the most dangerous and rapidly fatal forms of the diseases known. The construction of the stomach and intestines is such that once distended it is impossible for the accumulated gas to escape unless it is aided either by the introduction of a stomach tube or trocar.

Keep in mind that horses are apt to overload on new hay and give only a small amount at a time until the animals become accustomed to the change. Give every horse that receives dry feed a bran mash, either wet or dry, containing a handful of linseed meal and a little salt, at least twice weekly. Neglect often results in the loss of a valuable horse.

In harness the "colicky" horse gives way in the hind quarters, stops, becomes restless, paws the ground and stamps, shakes himself and endeavors to lie down. Later on, he often totters, groans, kicks with the hind legs at the abdomen, looks round at his hind quarters, whisks his tail, stands over at the knees, arches his back, stretches the head and neck, and places the hind feet under the body. As a rule, the animal lies down very carefully and slowly, or makes attempts to lie down, but sometimes may throw himself recklessly on the ground. He may lie still or roll and kick violently. He may sweat profusely and bloat and die within four or five hours from the outset.

During the onset of an attack give one quart of raw linseed oil, to which has been added one ounce of spirits of turpentine and two drams of fluid extract of nux vomica. Feed should be entirely withheld for at least twenty-four hours, but allow plenty of water. If bloat is excessive it should be promptly relieved with a trocar by an experienced hand.

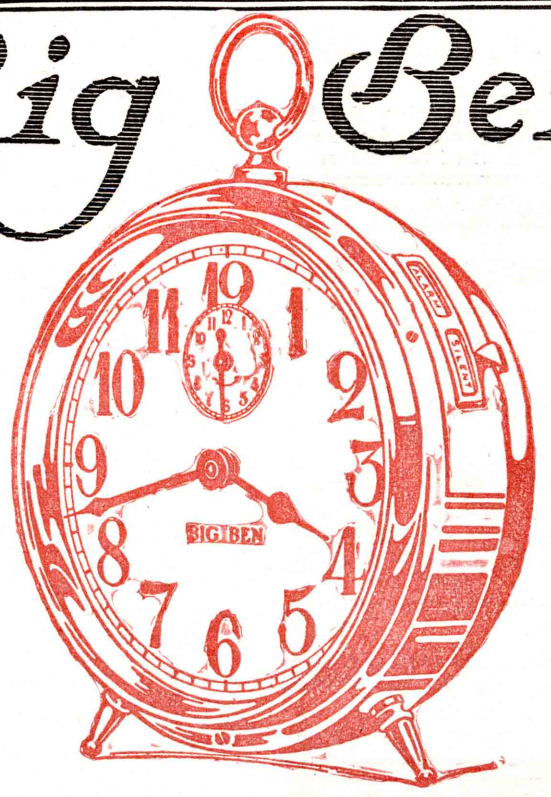
Big Ben



Presenting TWO ways to get up early

He'll get you up *on the installment plan*, a little at a time, by ringing every other half-minute for ten minutes, so you'll wake up *gradually*. Or he'll do the whole job all at once, with one long, straight, five-minute ring.

You can set him to do it as you choose, and *shut him off short* in the middle of his call either way.

That makes him *two good clocks in one*, to suit everybody's taste in early rising.

He plays no pranks. He won't go off before it's time and rob you of your full measure of sleep. He won't go off behind time and rob you of your work time. It's Big Ben's business to run on time, to ring on time and to stay on time.

Big Ben attends to his own business and helps you attend to yours by getting you and the farm hands out early. Then he sticks around the house and keeps time all day for the women folks so they can have your meals on time.

There never was a clock that fitted in better with the farm work.

He's triple-nickel plated and so handsome you'll want to keep him in the parlor instead of a bedroom. Stands seven inches tall from the top of his head to the tips of his toes; has big, easy-winding keys, large hands, and big figures that you can read at a distance on dark mornings, and is built of good implement steel so he'll last for years. He's doing this kind of work in 3,000,000 American homes today.

Twenty thousand jewelers sell him—one in your neighborhood, probably. If yours doesn't, just send a money order for $2.50 addressed to *Westclox, La Salle, Illinois*, and he'll come to the front door, if the parcel post does, charges prepaid.

Live Stock and Dairy

To grow money, grow live stock.

Oil meal and bran in a mash is a fine constitutional for hogs.

The cow that is left to shift for herself will soon become shiftless.

Don't trust a mule handy with his heels. This means all of them.

Go now and put into practice what you learned at the state and county fairs.

It is a good habit to water the work horses after they have eaten their hay at night.

One-third oats and two-thirds corn ground into meal is about right for feeding pigs.

Keep the colt growing and in good fettle if you want it to become a valuable horse.

Being ready is a big part of success. Are you ready for winter? Stock well provided for?

For common colic, give the horse one ounce of laudanum and one ounce turpentine is a pint of raw linseed oil.

There is no money in a cold wind striking the milk cows. Keep them away from it.

A nice, warm sunshiny place for the pigs will make money for the pigs' owner this winter.

The care of the horse is half his worth as a worker. The better the care the better the work.

A farm paper, a home paper, a business paper, an educator and an inspiration—all this and more is what we are trying to make UP-TO-DATE FARMING.

The cow is a living exponent of reciprocity. You give her hay and she gives you milk. The better you treat her, the better she does for you.

Though stock does not drink as much in cool weather, they need what they do drink just as much. Water the stock frequently and regularly.

It is said to cost a farmer $85 to keep a horse one year. This doesn't mean the horse consumes $85 worth of feed at market price, but that feed, labor in caring for the horse at wage prices an hour, the cost of shelter, horseshoeing, etc., depreciation, etc., amounts to $85.

BEDDING FOR LIVE STOCK

WHENEVER I see a good herd of cattle, horses, or hogs, a fine flock of sheep or a large, sprightly flock of poultry I know just what sort of a caretaker is behind them, says Wm. Galloway. So much is written about feeding and breeding that bedding is overlooked, when it is just as important as feeding.

If a horse must rest in a wet, filthy stall he will go into the morning's work feeling sore and tired, skin and hair dirty and not feel good all day. If he is a colt such treatment retards his perfect development.

Look in at the barn of the successful dairyman. You'll find well-bedded stalls for the cows that are due to freshen, plenty of dry, deep litter or straw under the cows in the stanchions and the young things contented and frisky in pens bedded with two feet of straw. The stable of the race horse owner is bedded deep always! Why? Because he knows it keeps the animal fresh, his muscles free and pliable and his skin loose.

Brood sows cannot do their best in coming through the winter without a dry bed of straw. She does not need a heavy bedding at farrowing time, but her pen must be dry and clean. Growing pigs will make better gains on their feeds when well bedded at night.

SUCCESSFUL PREVENTION OF ABORTION IN DAIRY COWS

ALL dairymen know how great a scourge abortion has become to the dairy business. The great waste, due to loss of calves, shrinkage and failures to breed, amounts to millions. A treatment has been devised at the Vermont Experiment Station by Professor F. A. Rich, veterinarian, who has made an extensive study of this disease covering a period of fifteen years. This treatment has been wonderfully successful. It has time after time stopped abortion in herds that were badly stricken with the infectious disease of the worst type. Where half or more of the pregnant cows in the herd had aborted, and the others found infected with the disease, the treatment has cured the affected animals without exception, and all give birth to normal calves at the proper time. One excellent feature of the treatment is that it is absolutely harmless, and may be given in any sized dose for any length of time with no results except to increase the thrift of the animals, and to prevent disease.

The treatment consists of giving from one-third to one-half ounce of methylene blue (medicinal grade), in the feed, or in capsules, night and morning for one week. Then, after an interval of four weeks, give another week's treatment, continuing in this alteration during the period of gestation. The material can be obtained of druggists. The price should not be more than $2.50 a pound. A week's treatment for one cow will cost approximately seventy cents.

NEVER MIND THE TARIFF—BUY SHEEP

I WISH I might say something that would encourage farmers to get into sheep a little more generally," says a New York farmer. "I am led to do this by the good prices we have received for our lambs the past season. They went readily, on the average, when about six months of age, for $6 apiece, lacking a few cents. When you think how comparatively little work is connected with growing lambs it seems to me this is pretty good. Of course, if we had been situated so that we could have butchered those lambs ourselves and marketed them, we could have realized more for them. Then, too, this is not all the return we got from the ewes referred to. We have the wool. Every ewe should shear at least five or six pounds of wool, and this would bring in the market now about twenty cents a pound, or something like $1.25 more.

"It is calculated that eight sheep can be kept on the same feed which would be required for one cow. Supposing that we have eight sheep, and each has one lamb, selling at the rate I have stated, $6, and the little bunch would bring us nearly $50. We think it a pretty good cow that could put that amount in our pockets in a year for the same amount of work. We know what it means to have a dairy to attend to. Twice a day the cows must be milked, and it is a good deal more care to feed, groom and clean the stables after cattle than it is to care for sheep. Anyhow, I believe that every farmer might find it a source of profit to keep some sheep. It does not need a great deal of experience to look after a small flock."

FINE BUTTER-MAKING A PROFITABLE ART

THERE is more than one kind of good butter. Well-made country butter is good. It has fine color and flavor, and when delivered direct to the consumer it is thoroughly satisfactory. But many country butter makers who took great pride in their product, and who had no trouble in getting a premium of several cents over the local market price have been astonished, incensed, and disgusted to find, on shipping some of their product to the city, to find it was not so favorably received, and brought several cents less than the price quoted in city markets for first-class butter.

The reason is plain enough to the dealer who sells the butter to city patrons. Country butter, as ordinarily made, does not "carry" well. It loses its texture, and some of its flavor in shipping and handling. It isn't made with the right "body" for the treatment it gets in shipment. To satisfy the high-class city trade butter must be made according to well defined rules, which produces a very superior product, and one that will fully satisfy everybody. Even those who have a fondness for the old-fashioned "country butter" will recognize its superior qualities.

In our next issue we will give an outline of the methods of butter-making on the farm that will produce an article equal to the best, and superior to most of the butter to be found in the markets of the cities or towns—a product that should command at least two cents more than the ordinary "first-class" butter brings.

DE LAVAL
CREAM
SEPARATORS

Make Fall and Winter Dairying More Profitable

THERE are special advantages in using a good cream separator during the fall and winter months.

The milk from cows long in lactation is hardest to cream—and likewise hardest to separate with an inferior separator.

Moreover, cream and butter prices are highest, so that the waste of gravity setting or a poor separator counts for most.

Then there's the sweet, warm skim-milk for stock feeding, alone worth the cost of a separator in cold weather.

There is surely no reason to delay the purchase of a separator or to continue the use of an inferior one. A De Laval machine will save its cost by spring, and may be bought on such liberal terms if desired as to actually pay for itself meanwhile.

See your local De Laval agent.

Poultry Pickings

Clean up the flock and get rid of all but the business birds.

Wholesome food and exercise is the best tonic for any bird.

A business poultry flock should consist of about 200 hens.

Don't forget a box of fine, dry dust for winter use in the hen house.

Plump chickens catch the eye and the dollar of the ultimate consumer.

The utility fowl is the most profitable for the average poultry keeper.

Begin now to prepare stock for Thanksgiving and Christmas markets.

Have a nice bunch well fattened for the Jewish holidays that begin this month.

Ask a busy old hen about business and she'll tell you it is picking up all the time.

The average egg production the country over is put at eighty eggs per hen. Is your flock up to the average?

Marketing poultry is of as much importance as preparing it for market. Form a poultry shipping club, and learn the business.

Keep some bran in a feed box where fowls can help themselves. And put a lump of copperas in the drinking water now and then.

The farm flock that produces an average of 150 eggs per hen annually is not an impossibility. There would be plenty of profit in it, too.

Now is the time to get the pullets in readiness for winter laying. They will lay if you feed them right and make them exercise. They can't help it, if you have the laying kind.

HENS THAT LAY EGGS

EGG laying contests are always very interesting to all poultry keepers. We are all interested in the best laying varieties, and the contests help us form decisions.

The Connecticut Agricultural college has been conducting a competitive egg-laying test. The results at the end of the first six months have been recorded.

In this contest are one hundred pens, representing nearly every well-known breed and variety. The leading pen was of Single-comb White Leghorns, belonging to Tom Barron, of Catforth, England. This pen laid 588 eggs, or an average of 117 eggs per bird.

Second for the first six months was a pen of White Leghorns belonging to Edward Cam, Houghton, England, with a credit of 521 eggs.

The best American pen was a pen of Single-Comb Buff Leghorns entered by George H. Schmitz, Chicago, Ill., which laid 502 eggs for the first six months and stands third in the contest.

The best individual record in the contest was made by a pullet belonging to Mr. Barron. This bird laid 135 eggs in the first six months. The second best individual is a White Wyandotte belonging to Edward Cam which laid 129 eggs.

The best record made by any American hen was 124 eggs, which was made by a White Leghorn pullet belonging to Braeside Poultry Farm, Stroudsburg, Pennsylvania. A Barred Plymouth Rock belonging to Woodside Poultry Farm, West Philadelphia, laid 88 eggs in 91 days, laying 61 consecutive days.

Up to date two hens have laid two eggs in one day.

THE EGGS THAT ARE BAD AND WHY

NEARLY 10 per cent. of all the eggs received in New York are bad, either broken, "spotted," or rotten. This waste is due to bad methods of handling and marketing, and the producers are as much to blame as anybody. This loss means low prices to producers and high prices to consumers. It is also unnecessary. The people of Denmark have established a business-like system of selling their eggs, and their profits are much greater than before, and the eggs are better. A few people in any community can establish the Danish system of gathering, inspecting, labeling and marketing. As soon as the buying public learned of it, poultry would pay well in that community. A local union is the ideal place to start the movement.

BLACK LEGHORNS VS. WHITE WYANDOTTES

I HAVE lived on a farm nearly all my life, and know what farm life is. Our hens do best for us. We usually keep a large flock and for many years have raised the Black Leghorns which cannot be excelled in laying eggs. We make more money from them than from our cows, and with less work. A neighbor has White Wyandottes, which do well for her. I gave them a trial. They are better market and eating fowls than my Leghorns, but cannot equal them laying. Raising chickens is like all other work—success means proper care, and that means work.—Mrs. Geo. Watson,

SPROUTED OATS FOR WINTER FEEDING

THE natural green food for fowls will soon be a thing of the past. They need it as much as they did six months ago, even more. We hope all our progressive poultry keepers saved plenty of green clover, as we urged them to do. This will help along. So will cabbage, beets (nothing can be much better than beets), potatoes, turnips and other vegetables.

Those who have neglected to provide any of the above green foods must depend on sprouted oats or leave the green stuff out of the ration, which would be dire misfortune, both during the winter and early summer months.

The better the fowls are cared for, in winter, the better business they will do in the spring.

It is a very important thing to take the fowls through the winter in thrifty, vigorous condition so they may be in prime condition for early summer work.

Nothing is more necessary to the proper wintering of fowls than green foods of some kind in their diet. Sprouted oats are as good as anything available for the average farm flock, and is not expensive or troublesome.

Moreover, sprouted oats should be included in the winter diet of every flock, no matter what else they may have.

In order to make the best feed, oats should grow quickly. In order to get a quick growth three things are necessary: First, warmth; second, plenty of moisture; third, sunlight.

Manufacturers of poultry supplies carry a line of oat sprouters that do the work perfectly. Any farmer can make a satisfactory arrangement with a few boards, hammer and nails.

It is better not to wait until after the green feed is entirely gone before we begin to supply it, as fowls should never be without it.

Attention to such details is the secret of success with poultry.

Advance Styles FREE Suits 3 Months Ahead of the Times

Woman's Work and Welfare

Helpful Hints for Homefolks

A PROGRESSIVE SOCIAL CLUB FOR OUR WOMEN-FOLK

The editor of this department feels sure that a goodly number of our folks who read this department each issue would be willing to help us make it brighter, more cheery and more helpful by sending in a little letter now and then—just a friendly chat about your own toils and troubles if you have any, or your joys and pleasures, which I am sure you do have. The young folks have their Cadet page, and the men folks have their Contributors' page for accounting their prowess in doing great things in growing crops. Come, now, and let us talk amongst ourselves of this, that, and the other. Everybody is welcome.

FIRESIDE SOCIAL CHATS

By Aunt Sophia

I THINK we are going to have a surprise in store for us. I did not think the idea of a Progressive Social Club in this paper would bring such an immediate and hearty response. I am more than glad to welcome Sister Taylor, as its first voluntary member. Her letter is most interesting. It is "progressive," too, and I am heartily glad she rapped those horrid food faddists over the head. It was good use for the first exercise of our "club." May it be wielded as vigorously, and frequently in the same good cause.

* * *

Talking about social clubs, did you ever live in a stagnant, "dead" neighborhood, where all the old people were so busy making money they had no time to "waste" on the entertainment of the young people? About all they ever did along this line was to refuse to let the boys have Saturday afternoons to play ball, and then scolded them for playing on Sunday, and objected to their going fishing on the same day. I have; and it is no wonder boys and girls look longingly toward the lights and joys of city and town. Now, I think we should start an earnest effort, through our new "Progressive Social Club" to remedy this wholly wrong and undesirable condition. We can help each other through this paper, by suggestions and encouragement. We may be able to bring new light and life into many a community. It is worth trying, is it not?

* * *

At last the farm woman is to be officially recognized as a very important factor in agriculture. Mr. Secretary Houston, of the United States Department of Agriculture, has sent 50,000 letters to 50,000 farmers' wives, inviting those receiving them to give their ideas about what the farm women need most, and how the department can help them make better homes, and take part in making farm life more desirable for both children and grown-ups. These letters were sent to the wives of the crop correspondents, of whom there are 50,000 scattered throughout the United States.

* * *

Now, what are we to think of this act on the part of the Secretary of Agriculture? What can we do, more than we are doing, I wonder, to build better homes, and make farm life better for everybody around us? What do we need in the way of assistance which the great Department of Agriculture can give us? I have always thought of this branch of the government as being wholly for the menfolks, and have never given a thought to this new side of the matter. The department is trying to teach our husbands better ways to run the farm to make the most money. Will it now try telling us the best way to keep house, and raise children? What will the farm women tell the secretary? We will see after a while, for he has asked that all the replies be sent in by November 15. In the meantime, why not discuss this matter in this department. Will those who have something to say on the subject please stand right up and say it?

* * *

How many of us have had our vacation for this year? What is a real vacation for a farmer's wife? Isn't it a rest from regular duties? Not an enforced idleness—Oh, dear, no; but a change. New scenes, new thoughts, new associations, new life. That is it—new life. Vacation is for recreation, "re-creation" puts it best.

* * *

I have just been reading of May Irwin, the world's "leading lady" on the comic stage. Positively the sunniest, cheeriest, funniest, merriest woman that ever lived. She works at her task of making folks laugh until they can't realize there is or ever was such a thing as worry or trouble. It is her life work. But she takes a vacation every year. She takes up farm life for her recreation.

She is a cook and housekeeper of note. Yes, she can cook and bake and brew, can Miss Irwin, and sweep, dust, clean and all the rest of it. Housekeeping is her pet diversion; she glories in it. Instead of touring Europe in the summer, Miss Irwin hastens to her model farm at Irwin Island, New York, and begins an arduous season in the kitchen, with her pots and pans, when she isn't out of doors feeding the chickens, horses or pigs. Truly May Irwin has made "back to nature" a living motto, and the bloom in her cheeks, the light in her eyes and her wholesome youthfulness are not the least of the charms and rewards of her career.

Thirty-five years and upwards on the stage, in the most arduous roles, and —she is still May Irwin. She keeps her youth, her vim, her vivaciousness, by recreation. And we farm women should be able to do the same. But how? That is the question. Have any of our readers a hint or a suggestion?

* * *

Wonder of wonders! Perhaps I had better have said, horrors or horrors! We are told by an eminent physician, no less than Dr. Kellog, of world-wide fame, the founder of the great sanitarium at Battle Creek, that there may be no more babies born after the year 2013. Now, what do you think of that? The birth rate is rapidly decreasing. And if it keeps on at the present rate of decrease, the stork must go out of business entirely by the year mentioned. Why is it so? Because, says the doctor, women are going into other business. They are working in shops, in factories, in offices, in politics, and in society, which is the most exacting and the most useless of all businesses, and babies interfere! Well, I do not believe the dire phophecy of Dr. Kellogg will ever be fulfilled. I don't even think the doctor himself believes it. But I do think that woman-kind owes a duty to the race. The very fact that they exist is the reason why they should not fail in their duty to posterity. A woman can never repay her mother for giving her existence, and the care bestowed upon her—not in a lifetime of service and devotion. The only way to pay this debt is to pay it to the race, of which the mother was a part. Is this not so? And if it is so, let us bring up our girls trained for wifehood and motherhood—not for business. At least, these are the sentiments of your AUNT SOPHIA

FUNNY IDEAS ABOUT EATING

By Mrs. C. H. Taylor

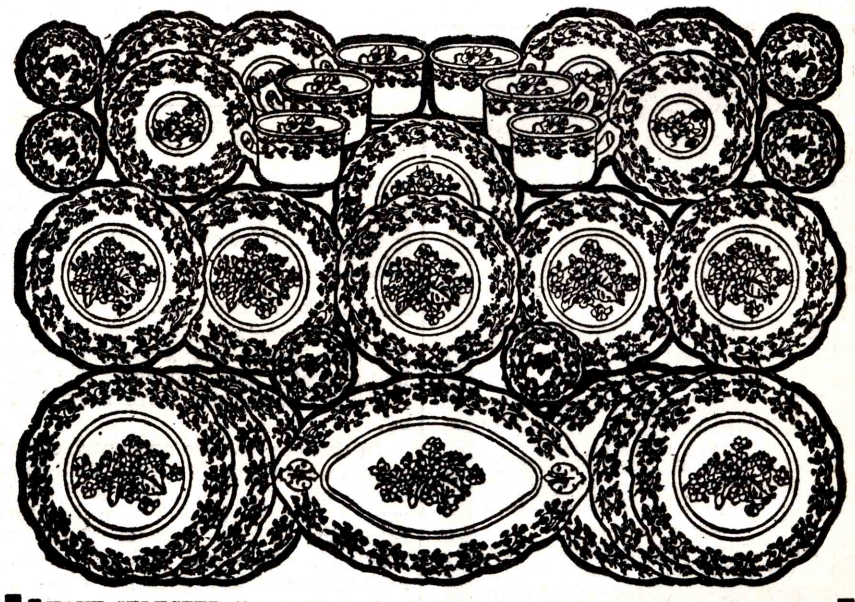
Dear Aunt Sophia: My husband is one of the editors on the staff of UP-TO-DATE FARMING, and I want to be the first to voice my warm approval of the idea you have given. A "Progressive Social Club" sounds interesting. To me it sounds better than the "Progressive Euchre Clubs" that infest social life in our cities, and even in our smaller country towns that are so eager to "ape" the society life of the Gothamites.

I am a native of the southland, born on the sunny side of the Blue Mountains in Virginia. And southern women take a great pride in cookery. Possibly our northern sisters take equally as much, but are more modest about it. I am sure I don't know where the southern woman won fame as an expert in delectable dishes to appease the appetite of man, but it seems that we have it, so of course, we try strenuously to live up to it, and make the most of it. It is quite true, I am sure, that the average woman of the south does give a great deal of thought to what she feeds her family, though she often pays more attention to the palate than to other equally necessary factors in the food question.

There is a professor of science in Washington who has made a life-long study of foods for folks. Prof. Langworthy is his name, and he has for years been connected with the United States Department of Agriculture. He has written many very interesting bulletins on food of all kinds. Associated with him is his daughter, Miss Langworthy, who is an expert cook, and she has written several bulletins also. We lived in Washington (a wonderful city), for a few years, and as my husband is something of a food crank (I suppose he became "inoculated" with his balanced ration notions in his farm work) he became very much interested in the experiments of the Langworthys, and I confess I came to be so myself. I feel that, as Elbert Hubbard says, "a man's first duty is to be a good animal." We enjoy perfect health above all things, and the science of feeding humanity for the best physical and mental development is of greater importance than feeding hens for eggs, pigs for pork, cows for milk and butter, and soils for crops. If properly selected foods give better results with all these, why should not good results be obtained by properly selecting and preparing "balanced rations" for our own bodies?

But new ideas are strange things. They always develop the strangest notions imaginable in the minds of some people. Out of this wholly sensible good food idea has grown more fads and faddists than anything else. Just now the country is full of "food doctors" with their abominable health diets. And I am just glad to see that the Department of Agriculture is going to expose them as they really are. It would not matter so much, but all over this country are people who are ill because of improperly selected or cooked foods; and these are the unwitting victims of many of these food doctors, some honest but ignorant, others wilful perpetrators of fraud. A circular recently sent out by the De-

DISHES FREE TO ALL



I HAVE SELECTED the prettiest set of dishes I could find to give to my friends. The above picture does not show all the dishes, but gives a faint idea of the beautiful rich Rose design and the size of each piece. As soon as you send in the coupon below I will mail you a large picture of the entire set with each piece in all the pretty colors of red, white, green and gold, showing just exactly how the set will look when you take it out of the box in your own home.

In the center of each plate or dish there is a beautiful cluster of bright roses, surrounded by green foliage, all in perfectly natural colors. Around the edge of each piece there is a very heavy and artistic design in gold. The combination of gold, green, white and red, makes the most popular design yet produced in tableware. Fashionable, stylish, artistic and serviceable. The ware itself is pure white and dainty enough to delight the most fastidious housekeeper. When you get these dishes on your table you will have something to be proud of indeed. And we don't want you to pay us a cent of your money for them. What we ask you to do is so easy you will never miss the spare time it will take, and the pleasure these beautiful dishes give will be with you for years.

In addition to the lovely 33-piece American Beauty Dinner set I will also give 41 extra gifts. These 41 extra gifts are also free. I pack them in the crate with your dishes. Counting the 33-piece dinner set and the 41 other articles make 74 articles you will get by giving me a little of your spare time.

Fill out the coupon below and I will send you prepaid a big sample needle case, containing 115 Sharp's best needles, darners and bodkins, all fitted in a handy and convenient needle case. The darners are for cotton, wool, lace, gloves, carpet, etc. When you have received them show the needlecases to your friends and also show them the sample copy of the Journal of Agriculture and Star Farmer, which I will send you, and ask them for 25c each in connection with a special offer I will authorize you to make. When you have collected only $4.00 for us in this way the lovely dinner set will be yours. Put your name on the coupon and send it at once. It costs you nothing to sign the coupon—I take all the risk.

SEND NO MONEY

Journal of Agriculture and Star Farmer,
St. Louis, Mo.:

Please send me free and postpaid the Big Needlecase of 115 best grade needles, together with large illustration in colors of the 33-piece dinner set and tell me about the 41 extra gifts. If I take orders for sixteen needlecases in connection with your special offer you are to ship me the complete dinner set, and 41 extra articles—total 74 articles.

Name .....

Address .....

partment of Agriculture, after investigating many of these folks, is both interesting and amusing. Let me quote from it:

Many of the so-called diet systems lay great emphasis on raw foods. Now, there is no objection to anyone's eating raw food if he likes it, or finds after experiment that it agrees with him, provided it is of good quality, free from contamination, and wholesome. The truth of the matter is, however, that man's chances of health are best when he eats with moderation a diet made up of clean, wholesome, ordinary foods, well prepared in the usual ways. As an example of their methods of reasoning, someone tried to raise rabbits wholly on cooked foods. (The rabbits did not thrive on such rations, nor could it be expected that they would.) From this the "expert" draws the conclusion that because rabbits could not live wholly on cooked food, human beings should confine themselves wholly to raw food, a conclusion wholly unwarranted. Raw food is natural to rabbits, and this is perhaps a fortunate provision of nature, because the average rabbit would probably have a good deal of trouble lighting a fire or a gas stove to cook food.

This may not be very interesting to all your readers, Aunt Sophia, but seems to me it ought to be. And especially to all who are raising children. No one needs a wholesome, nourishing diet so much as the growing child. To neglect the needs of their bodies is as sinful as to neglect the needs of their minds. Schooltime is now with us. We try to provide a good teacher, and good books, but don't we neglect the lunches? There are all the elements for mind building in the books they study. Are there all the elements of body building in the lunch they carry? And do we KNOW, or do we merely THINK we are doing the best that can be done with what we have? These matters may not interest many, but they are surely important to all.

Have I over-stayed my welcome? If so, I shall not offend again; but so many of our farm papers and magazines are conducting "Health-hint Departments," some edited by authorities, others by faddists, that I wanted to have my say out on the matter that is attracting so much attenion. I would warn all my sisters, both north and south, not to neglect this matter of proper food for their loved ones, and not to fall prey to the notions of the faddists. Even our old friend, T. B. Terry, well known all over the country as a "farm doctor," has blossomed out as a "food doctor," and conducts such a department in a farm paper. We have the warmest admiration for Mr. Terry, but he is not always right, and we think not always real sensible. For instance, Mr. Terry warns against meat as a producer of rheumatism, bed-fast at times. For years a strict vegetarian, and during this time was a great sufferer from rheumatism, bed fast at times. For nearly ten years he has been eating a moderate amount of wholesome fresh meat daily. His last rheumatic attack came just a few weeks before he began the meat diet. He has never had an attack since, and his system is now wholly free from rheumatism. Another instance: Mr. Terry eats whole wheat. So do we; but Mr. Terry grinds it, and bakes it, and grinds the baked bread and bakes again. So unnecessary. We merely look over the whole wheat grain, cook it several hours in a fireless cooker, serve it cold or hot with cream and sugar. It is lots less trouble than Mr. Terry's manipulations, and much better flavored food. In fact, it is delicious.

So to those who are seeking health and vigor via the "Teeth and Tongue Route," I would say, let common sense rule, and let faddists alone.

Those who have tried to follow the instructions of food faddists will sympathize with that incomparable poet philosopher, Walt Mason, who says:

The kind of things I like to eat are those on which Doc puts a ban; I'm suffering for juicy meat, but I must eat a tub of bran. I wonder why the things we hate are always good for our disease? I eat about a hundredweight of shavings when I'm wild for cheese. I cast a hungry, wishful eye upon the cherries, freshly canned, upon doughnuts and the pie, but Doc, he shakes a warning hand. "If you," he says, "do not behave and eat this sawdust johnnie-cake, you'll soon go shopping for a grave and monument, and no mistake." The Doc, he seems to snoop around, discerning things that I despise, and then he says that I am bound to do those things, confound his eyes. And so I'm eating bolted meal, washed down with water from the pump; and if you ask me how I feel, my answer's sure to make you jump.

TO MEET THE ADVANCING SEASON

AS THE cold days become more numerous our thoughts turn to the dresses that are to be worn during the real cold days of winter. The late fall brings us the needed styles and among these we find the coat blouse. This has taken the world by storm and it is reproduced in all kinds of materials. A good example of it is seen in the costume illustrated in figure 6299. The coat is really a waist. Some of them are more closed than others, but this is the only difference.

The coat blouse has produced another novelty in the vest. This, too, is subject to many variations. The mannish waistcoat is perhaps the most popular and we find it made of brocaded silk and velvet, of plain silk and of all kinds of fine tissue overlaid on silk or satin. Buttons lend additional attractiveness to it and the wildest kind of color schemes are indulged in.

The separate coat is also a very important garment. This may be of the rough and ready type or of the more dressy kinds. Of these last the illustration in No. 6263 is an excellent example. All lines are loose, the closing generally very low down and well overlapping. Long collars, square collars, round collars and no collars at all are worn, just as the taste of the wearer may dictate.

So much fur is used as a trimming for dresses that many of the coats are also trimmed in this way and thus do away with the need of separate fur neck pieces. There is also a fur cloth which is much liked, and what is known as "peau de souris" and which really does look like mouse skin is very much worn.

The idea at present seems to be to keep the entire costume in one color. With the exception of the vest we find very little contrast. Coat and skirt may be of differing materials, but they are almost without exception of the same tone.

GOOD THINGS TO EAT

The following recipes came from New Zealand, over half way around the globe.

Jellied Oatmeal.—Place three cupfuls of water and one of milk in the upper part of the double boiler, add a pinch of salt, and when boiling stir in two cupfuls of oatmeal; cover closely and cook for two hours over hot water; then add, just previous to serving, one large cupful of stiffly whipped cream, serving in small standard china dishes sprinkled thickly with chopped nut meats and accompanied by sugar and thick cream.

Cottage Pudding.—Cream one cupful of butter with a quarter of a cupful of sugar till light; add yolks of three eggs beaten until thick, then add one cupful of milk, sift in two cupfuls of flour, four teaspoonfuls of baking powder, and a pinch of salt; beat well and fold in the stiffly beaten whites of the eggs. Pour into a well buttered pudding dish. Bake fifty minutes. Serve with sweet sauce.

Milk Biscuits.—Sift one quart of flour into a basin, then add two teaspoonfuls of baking powder, and half a teaspoonful of salt. Rub into them two heaped tablespoonfuls of butter till fine, then add as much milk as will make the ingredients into a soft dough. Handle as little as possible. Roll out into a sheet one inch thick, cut into rounds, and bake in a buttered and floured pan, in a hot oven.

Cheese Sandwiches.—Three tablespoonfuls of Roquefort cheese, one tablespoonful of butter, quarter teaspoonful of salt, dash of red pepper, one teaspoonful of olive oil. Mix all into a smooth paste with the flat point of a knife, and spread on toasted slices of bread. The green portion of Roquefort cheese is preferred for these sandwiches.

Five-Minutes' Pudding.—Ingredients: 2 ounces flour; 2 ounces sugar, 1 egg, 1 tablespoonful milk, 2 teaspoonfuls baking powder, 2 tablespoonfuls jam. Method: Beat the sugar and egg together, add the flour and baking powder and milk. Spread the mixture on a well-greased paper. Bake quickly for five minutes, spread with hot jam and roll up. Dust freely with caster sugar.

What is Now the Fashion

6299, LADIES' DRESS.—A dress waist a full vest, a small collar and a peplum is here joined with a two-piece skirt to form a costume. Plain and figured crepe, plain and figured linen, messaline both plain and figured and gingham of the same style will be effective developed by this design. Pattern 6299 is cut in sizes 34 to 42 inches bust measure. Medium size requires 4 5-8 yards of 36-inch material.

6263, LADIES' THREE-QUARTER LENGTH COAT.—This is the favorite length for the new fall coats. This model is altogether plain, with low cross-over closing edged with a shawl collar of contrasting fabric. Pattern 6263 is cut in sizes 34 to 42 inches bust measure. Medium size requires 4 1-8 yards of 44-inch material.

6249, LADIES' THREE-GORE SKIRT.—The skirt is one of the newest styles, showing the late idea of a little fullness at the waistline and this may be gathered or tucked. Pattern 6249 is cut in sizes 22 to 30 inches waist measure. Medium size requires 3 1-4 yards of 44-inch material. Tailor mixtures, silk, satin, linen, ratine and the like are appropriate for this style skirt.

Price of Patterns, 10 Cents Each

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

"Children Teething

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

HOW TO SELECT AND ALTER WAIST PATTERNS

By Charlotte E. Carpenter, Colorado Agricultural College

WHEN buying a waist pattern take an easy measure around the bust and select a pattern corresponding to this measure.

Before placing the pattern on the cloth, it should be tested at the following points to see how it compares with one's own figure; length of back, length of front, length of under-arm, neck, arms-eye, and waist.

If the pattern is too long waisted lay a crosswise plait below the bust-line, or if the figure is slight and the arms-eye large a second but smaller plait may be laid above the bust, taking some of the extra length from the arms-eye.

Should one desire to increase the length of the waist, cut the pattern below the bust and slip down the desired amount.

For a very large bust, cut across at the side front seam and spread the pattern to make a "V" shaped opening on the side and side front. If the figure is very slight it may be desirable to take a cross dart at this point.

For round shoulders cut across back and make a "V" shaped opening at center of back.

If the length of the waist is right and the arm-eye seems large, a cross dart may be taken at arms-eye in both front and back.

For square shoulders raise the front of shoulders at neck and trim out the neck in front. Always be careful not to trim out too much at the neck.

For slanting shoulders raise the shoulder near the arms-eye and trim out under the arm.

A Flourishing Local

We are reporting seven new members this week and on Wednesday will put in a new local at Fisher's Ferry. Our local is putting in a car of lime this week, and we have placed our order for twenty-two tons of dairy feed. Our local is in a flourishing condition, and successful in both buying and selling.—W. S. Kerstetler, Secy., Sunbury, Pa.

THE CLIMAX OF ALL DOLL AND TOY OFFERS

NEVER in the *31 years* that this business has been in existence has there ever been made so stupendous an offer as this one. Here is an opportunity to make your little daughter happy, to afford her more innocent pleasure and enjoyment than any other combination of presents you can select.

NOTHING TO SELL

My offer is different from any others. You are not required to work hard and sell things. My object in offering these beautiful premiums is my determination to have my literature read in every home in the United States.

The Doll Imported, over 20 inches high — full jointed, dressed complete — eyes open and shut—jointed arms and legs.

Go-Cart One of the most pretentious go-carts ever given away—collapsible—can be opened and shut at will.

Dining-Room Set Cutest set you ever saw. Regular dining-room table and four upright chairs—beauties. Substantially made and already set up.

22-Piece Tea Set A real imported set, designed to imitate silver. Beautifully embossed.

Kitchen Utensils 14 pieces—pots, pans, skillets, etc. Made of a good grade of tin to fit stove. A really practical little set that will last a long time.

Stove Just like a real one, with chimney and fireplace, doors, etc. Highly enameled in many colors. Made of good hard metal and all set up and ready to use.

Bisque Baby Made of bisque with jointed arms and legs and long soft hair. A little beauty.

WHEN I SAY FREE, I MEAN FREE

Bank Testimonial

To Whom It May Concern:
H. A. Sloan of Spencer, Ind., is a man well known to us whose reputation for honesty and integrity has never been questioned. We are positive that any offer that he may make will be carried out to the letter.

EXCHANGE BANK OF SPENCER, INDIANA.
(Signed) John H. Smith, Cashier.

This Is My Plan

Send me your name and address—a postal will do—and I'll send you a set of beautiful gold embossed pictures (no two alike) with which you are to advertise my business by distributing them free with a whole year's pleasant and instructive reading.

Think of the Fun

Think of the fun your little girl can have undressing dolly and making the bed. She closes her eyes when she lies down just like a human being. In the extra large go-cart there is room for sister dolly too. Then, think of the fun setting the dainty dishes on the dining room table and the four chairs all around—and the little stove, with its pots, pans, skillets, etc., all add to the fun—and

Not a Cent Required

You enter into no obligation. I take all the risk. I send the pictures to you promptly and I pay all the charges. Simply your name and address. Please do not send any money.

ONE PREMIUM AT ONCE JUST FOR SENDING YOUR NAME AND ADDRESS

I don't want you to lay down this advertisement and put off writing and then forget about it. So just to induce you to waste no time and to write today, I will send one premium at once with the pictures as soon as I receive your name and address. This is free, absolutely, and in addition to the premiums described above.

READ WHAT THE BANK SAYS

Thousands of these sets will be given away, so take advantage of my offer and my liberal extra premium today. Do it now while you think of it.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

AS AUTUMN approaches thoughts of the winter naturally come into the mind. Both work and amusements change, but the responsibilities of life are still upon us all. Over a vast portion of this country unusual heat and drouth have prevailed to such an extent as to greatly reduce farm production. Many a farmer has done many a day of hard work that will bring but little reward, and foodstuff and feed will be scarce in many localities. This is of interest to everybody, and we wish farmers were in a position to protect themselves to the fullest possible extent. And the schools almost everywhere are in operation now. Our young people are availing themselves of the means of acquiring knowledge. Mental growth is even more important than physical growth. We wish our young friends every success in every effort for good, and trust they may qualify themselves to bring the whole country, which they must soon control, into better and greater things. Read the following good letters

---

Just think of the following from two Kentucky girls:

DEAR CADETS:
I am a Kentucky girl;
My hair is brown with many a curl;
My eyes are of a violet hue,
And my face is very freckled, too.
I live in the country and go to school
In the fall when the weather is nice and cool.
I am a reader of UP-TO-DATE FARMING,
And think the paper decidedly charming.
I am a lover of music and flowers,
And practice the organ hours and hours.
Yet in learning I seem very slow,
The reason why I do not know.
But for all that I never fret,
I'm waiting to hear from each Cadet.
Now, girls and boys, don't be afraid
To write to a lonely little maid,
For each will sure be answered straight.
Hurrah! hurrah! for UP-TO-DATE!
Katie Gallemore, Mayfield, Ky.

DEAR CADETS:
My name is Grace,
And I live on a place
Up in the hills
Where there are no chills.
My face is blue, my eyes are white;
I tell you now I'm an awful sight.
My hair is brown, my mouth is big,
And I'm as fat as a China pig.
I try to be jolly as I can be,
And think I'm as sweet as sugar, see?
I like to ride and skate and run,
And holler loud, and have lots of fun.
I am 15 this very year,
And from the Cadets I want to hear.
I like peach pie and apples, too,
And now I'll leave it all to you.
Grace Gallemore, Mayfield, Ky.

DEAR CADETS: I am a Filipino girl, 16 years old, and was born on a farm of 2,012 acres, the principal product of which is brown sugar. I have read very much the UP-TO-DATE FARMING, and think it dandy. We are five sisters and I am the oldest. My second sister, Benita, plays the violin; Honey, the third, sings quite well, but is yet studying the violin. Conchita, the fourth, studies violin. Faith and myself play the piano. I play pieces composed by France, Lizt, Beethoven, Mendelssohn, Mozart, Hyden, Chopin, Wagner, Rubenstein, and others. I first appeared in public when I had my nine years. Once in a while we used to visit the city on our steamer Gil Lopez, a 24-hour voyage just for a few days. We love the farm life for its quietness, and one can study better how to be a good housewife. Do you think we are happy? Wish you are with us. I'm anxious to hear from the Cadets, and will try to answer all letters and cards I receive.—Marcela Lopez, Hda Fard-on Fabrica, Neg Oce, Philippine Islands.

DEAR CADETS: I am a girl of 14 and live in Squirrel, Idaho, in the large Snake River valley, which is surrounded by beautiful mountains. Among them is the Teton Peak, which is very high and rugged. The chief product here is grain. In summer there are large fields of oats, wheat and barley, and there are prairies of wild flowers and sage brush. The snow is from three to four feet deep in winter, and we amuse ourselves by coasting down the hills when the snow is hard. I can have plenty of sleigh rides, for the first snow falls in December and it does not leave until April. I hope some of the Cadet boys and girls will write, for I take great pleasure in reading letters from other countries and other states. I think some of you would like to hear from the west, and I will surely answer all who write me.—Frieda Bolland, Squirrel, Idaho.

DEAR CADETS: I am a country girl of 15, and I like the country fine. I would not exchange it for the city. Our chief crops are wheat, oats and corn, and they are far below our average this year. I would like to exchange cards with the Cadets, and will gladly answer every one I receive.—Mildred Land, Epworth, Ill.

DEAR CADETS: I am a Pennsylvania girl of 15 years. I do not live in the country, but I did when I was small. I am very fond of reading and of outdoor sports, and I always spend my school vacation on my grandmother's farm. I would like to exchange cards and letters with the Cadets, especially those from other states. Those who send their photos will receive mine in return.—Pearl H. Hesher, Northampton, Pa.

DEAR CADETS: Here comes a Missouri farmer boy, 19 years old, and I would like to join the Cadets, and exchange cards and letters with all of you. I will answer all I receive.—Chauncey Velten, Gilliam, Mo.

DEAR CADETS: I would like very much to join the Cadets. I live on a farm of about 50 acres. We raise lots of corn, oats and vegetables. My father takes UP-TO-DATE FARMING, and I like it very much. I always read the letters from the Cadets. I would like to get letters and cards from all the Cadet boys and girls.—Hulda M. Beardsley, Sandy Hook, Conn.

DEAR CADETS: I am 16 years old, and live on a 320-acre farm, 12 miles from town. I have taken UP-TO-DATE FARMING for two years, and think it is a fine paper. I would like to exchange letters and cards with the Cadet boys and girls, and will answer all I receive.—Frances G. Lea, Doland, S. D.

DEAR CADETS: I am a farmer girl, 15 years old. I enjoy farm life better than the city. Our main crops are corn and tobacco. I would like to exchange cards and letters with the Cadets, and the first that writes will get my picture. Will answer all.—Lola Adcock, Oxford, N. C.

DEAR CADETS: I am a farmer girl, 15 years old, and live on a small farm about one mile from Safford. Our principal crops are wheat, alfalfa and barley. It is very hot here sometimes. My father likes UP-TO-DATE FARMING very much, and I enjoy reading the Cadet page. I would like to exchange letters, photos or postals with any of the Cadets.—Flora Swanger, Safford, Arizona.

DEAR CADETS: I am a farmer's daughter, age 18. We take UP-TO-DATE FARMING and think it a fine paper. We live on a farm of 220 acres. I enjoy reading the letters, and would be glad to hear from the Cadet boys and girls; will answer all who write.—Stella Matz, Carmi, Ill.

DEAR CADETS: I am a reader of UP-TO-DATE, and I enjoy the letters very much. I am 18 years of age, and will finish high school this winter. I live on a farm and would like to hear from some of the Cadet girls and boys who live on farms.—Ada Gamblin, Holden, Mo.

DEAR CADETS: I am a reader of UP-TO-DATE, am 17 years of age, and live on a farm, and keep house for my father. I shall go to school at the county seat of Johnson county this winter. I am a distant relative of Daniel Boone. I would like very much to hear from the other Cadets.—Lola Boone, Holden, Mo.

DEAR CADETS: I am a Georgia boy, 19 years old, and live on a farm of 119 acres. We raise corn, cotton, cane and sweet potatoes. Our crops are looking fine. Would like to exchange letters with any of the Cadets.—W. I. Highsmith, Lulaton, Ga.

DEAR CADETS: Will you let a California girl, 15 years old, into your pleasant circle? My father takes UP-TO-DATE and I enjoy reading it very much. I live on a farm not far from San Francisco in the sunny San Joaquin valley. I am very fond of reading and have learned to play the piano a little. I expect to go to high school this winter. I would be glad to hear from all the Cadets, and will try to answer all.—Estella Niel, Turlock, Cal.

DEAR CADETS: I am 19 years of age, and have blue eyes and white hair, and the boys and girls all call me Blondy. I am a member of the Arkansas National Guard, and am a soldier boy. But my trade is photography and kodak finishing. If you Cadet boys and girls will send your kodak films of yourself I will finish them and send you a sample of my work free. I read UP-TO-DATE, but I do not live on a farm, but I stay on one part of my time. I am fond of outdoor life. All of you write and I will answer and tell you all about life in the Ozark mountains.—John C. Martin, Box 397, Fayetteville, Ark.

DEAR CADETS: I am a farmer's daughter from the Keystone state, and am just 16 years of age. We have been taking UP-TO-DATE FARMING for several years, and all think it is a grand paper. I always look forward to its coming, as I enjoy reading the Cadet letters very much. I spent the summer in Doylestown and had a very nice visit. Our crops are corn, wheat, oats, potatoes and tobacco. I am going to high school in our nearest town, which is a mile south of us. I expect to graduate in the spring. I would like to exchange cards or letters with any boys or girls near my age.—Ruth E. Seymour, Gap, Lane Co., Pa.

DEAR CADETS: I am 27 years of age, and have worked on a farm for the last 10 years, and I like the work very well. I would be glad to hear from some of the Cadets. I will try to answer all postal cards and letters I receive. I think it is a fine thing to have a department dedicated to our boys and girls.—Nelson J. Edington, Ellicottville, N. Y.

DEAR CADETS: I am a girl from the central part of Nebraska. I like to read the letters from the Cadets, they are so interesting. I live in a town, though I lived in the country 11 years. My father has half interest in a blacksmith shop and the electric light plant. I suppose nearly all the Cadets are getting ready to start to school. I shall be glad when school begins. I would like to exchange letters, cards and photos with all the Cadets and I will be glad to tell them about the country around here. I wish to hear from them all.—Elna M. Kittle, Maxwell, Neb.

DEAR CADETS: Here comes an orphan girl from good old Pennsylvania. I live on a farm of 116 acres and like farm life fine. I am 15 years old, and would like to exchange letters and cards with the Cadets. Will try to answer all I receive.—Lena Brown, Fairmount City, Pa.

DEAR CADETS: I am not a farmer, but I would like to be one. I work in a coal mine, and am 19 years old. I would like to exchange letters, cards or photos with the Cadet boys and girls. I will answer all.—Joseph S. Lebo, Tower City, Pa.

DEAR CADETS: I am a farmer's daughter, 18 years old, and live on a 400-acre dairy farm. My home is near the world-famed Lake George. It is noted for its beauty. Any Cadet wishing a card of the many pretty views of this lake may have one from me if they will send me a view of some noted place where they live. I am fond of music and good books.—Frances J. Smith, Hague-on-Lake George, N. Y.

DEAR CADETS: I am a little brown-haired girl, and live on a farm of 40 acres in the northern part of Oregon. I am 15 years of age, and have an organ and a pony, and I love to ride very much. I would be glad to exchange cards or letters with the Cadets.—Grace Sipp, Banks, Ore.

DEAR CADETS: My uncle takes UP-TO-DATE FARMING, and I think it a fine paper. It is the best paper I know of. I like to read the Cadet letters, and I would like to hear from all the Cadet boys and girls. I will answer all letters or cards.—Sadie M. Hall, Greenfield, Ind.

DEAR CADETS: I certainly consider it a great privilege to become acquainted with girls and boys in different states. I am 18 years old and live on a small farm of 100 acres in Ohio. I have been a reader of UP-TO-DATE for two years, and I think it is the finest paper that comes to our home. I would like to exchange letters, cards and photos with the Cadet boys and girls.—Alma Lohse, Athens, O.

DEAR CADETS: I have been a reader of UP-TO-DATE FARMING for quite a while, and have taken great interest in the letters from the different Cadets. I live on a farm among the hills of the Granite state. I will be 17 November 18, and am a junior in the high school at Concord, N. H. I take great interest in my studies. The farmers here raise corn, oats, barley and Hungarian to feed the cattle in winter. The scenery in my state is beautiful, and the sunsets are perfect. My home is centrally located between Concord, Penacook, Contoocook and Hopkintown. I shall be very glad to receive post cards, letters and photos from the many readers of the Cadet letters. I shall try to promptly answer all I receive.—Madeline B. Gilman, West Concord, N. H.

DEAR CADETS: Please make room for a boy from what used to be the wild west. I am 17 years old, and all my life have lived on a farm in the rich Bitter Root valley in Montana. Land sells here at from $60 to $1,000 per acre. I live on a farm of 120 acres of some of the finest land in the west. I know all about ranching and like it fairly well. I would like to hear from all the Cadet boys and girls. Will answer all letters.—Richard Carlson, Grantsdale, Mont.

DEAR CADETS: I own a farm of 160 acres and am interested in farming and gardening. I find in UP-TO-DATE FARMING many helpful articles for the farmer, especially the fight for a better system of marketing. Where I live we raise livestock, grain, garden truck and some fruit. The nearest railroad is 85 miles from Burns. The country has been on a boom for the past five years, and lots of people have come here to take government land under

the homestead and desert land laws. Harney county is the largest county in the United States, and has an area of over ten thousand square miles. Its largest town is Burns with about 1,000 people. My age is 25 and I would be pleased to receive letters and cards from the girls and boys. —Clyde Embree, Burns, Ore.

DEAR CADETS: I have been reading UP-TO-DATE FARMING for awhile, and find it very interesting. I live in the northern part of Michigan on the shore of Lake Superior. The winters are cold, but the summers are fine. I would like to exchange cards with the Cadets. I am 20 years of age.—Walter Isaacsen, Gay, Mich.

DEAR CADETS: I will be 15 years old the 14th of next November, and live 7 miles south of Portland, Ore., in a little town called Garden Home. We have only 5 acres, but that is better than living in a city. I would like to receive cards and letters from the Cadets, and will answer all. —C. Lalla Paterson, Garden Home, Ore.

DEAR CADETS: I am 14 years old and go to the Leonardo school. I take pleasure in reading the Cadet letters, and would like to join them. I would like to hear from all the Cadet boys and girls, and will answer all I receive.—Ruth Lynch, Belford, N. J.

DEAR CADETS: UP-TO-DATE is certainly a fine paper. I enjoy reading the Cadet letters very much. I live on a farm of 160 acres, and like farm life much better than city life. I will be pleased to get letters and cards from the Cadet boys and girls, and will answer all I receive.—Maude Williams, Walsh, Wis.

DEAR CADETS: I am a farmer girl of 14 years, and I like to read UP-TO-DATE very much. I hope I will receive cards and letters from the boys and girls, and I promise to answer every one.—Myrtle Haven, Ridgefield, Wash.

What a Cadet Letter Did for Her

Three years have passed since this "happy go lucky" Virginia school ma'rm wrote her Cadet letter to UP-TO-DATE FARMING. Many are the cards and letters I have received since then, and all were greatly enjoyed and I have laid them away as pleasant reminders of these writers.

The second letter I received was from a lady in Michigan, Mrs. J. C. Rowe, who was very anxious to move to Virginia. She wrote to learn of the climate, soil, crops, etc. We corresponded quite a while, and finally she sent her son down to look out a situation. He was not well pleased with some of the farming methods. We were 400 years behind the times, he declared. The report he made on his return, however, was not sufficient, and another son was sent. He took the next train for home. But still the folks were not satisfied, and they invited me to visit them so they could learn personally from one who had been born and raised here. I accepted the invitation, and June 16 I started for Ann Arbor, arriving there the following day. They gave me such a hearty welcome that I recognized in it the true Virginia hospitality.

Talk about a good time! I surely had one. There were three grown sons and two grown daughters. It was ride with this one, that one, and the other till my eyes were nearly worn out with sight-seeing. They took me to Detroit twice, to Buffalo and Niagara Falls, and the noted Belle Isle park, situated in the Detroit river several miles from Detroit. This is the most beautiful park I ever visited.

One day I attended the commencement exercises of the training school at Ypsylanti, where one of the daughters graduated. It was very instructive to me to see how other teachers are trained. I found Mrs. Rowe a charming hostess, and her daughters are equally so. After three of the happiest weeks of my life, that had passed all too soon, I bade them good bye, and started home, but to stop for a week on invitation, at Huntington, where I have a school mate and several friends. The days at Huntington only added pleasure to the other part of my visit, and I realized that I had been from home a month.

After being at home a few days, I drove with my mother to visit her sick brother. On the way we encountered an automobile. The horse was frightened and ran away, throwing both of us into a ditch. Mother was worse bruised and hurt than I was, so I have been cook, nurse and general manager, a rather sudden drop from what I had been enjoying. I hope the Cadets will all visit Niagara Falls should they have an opportunity. It is grand.—Elizabeth L. Pack, Pearisburg, Va.

Letters Crowded Out

As we have before stated, these letters are left out for no other reason than that we have not room for them. They are as good letters as the others, and Cadets may write them the same as they write others.

Hunting and Trapping

For Pleasure and Profit

THE trapping and hunting season is now with us again. We are glad of it—glad of a chance to get back into this fascinating and profitable pastime—glad to renew our very interesting and social circle in Up-to-Date Farming. We want all our old hunting and trapping friends to come back with their friendly letters, and stories. We have a warm welcome for them. We want to know of their successes and their failures. We want to publish their interesting experiences. Each month we will award a handsome and useful prize to the correspondent who sends in the best letter, and to all others whose letters are printed we will send post-paid, a little book entitled "A Cart-Load of Fun." More fun in this book to the square inch than Bill Nye or Peck's Bad Boy.

And now, listen: At the end of the season, when we close up camp for the summer, we will award a grand prize of great value to the writer of the most interesting experience of the season. I forsee, we are going to have great times. Frontiership and the pioneer spirit are not passed away. There are still plenty of game animals, game men and game dogs. And we are ready for the game, so come along. Address all contributions for this department to ... ...

TIM, THE TRAPPER
in care of Up-to-Date Farming, Indianapolis, Ind.

BOB CATS IN FLORIDA

Away down in the southern part of the so-called land of flowers there are many attractions for the true sportsman. Here is a photo of two wild cats, killed in the open, and within a few yards of a house, in plain view of a number of people working in a field adjoining a jungle. They were hungry and were after chickens, chasing them nearly to the houseyard. They were

killed within twenty minutes of each other by T. W. Richardson, of Virginia, a newspaper publisher who was spending the winter with the owner of the chickens that were so much desired by the cats. The photo shows Mr. Richardson and his quarry immediately after the killing.

FROG FARMING

By John Latham

Miss Isa Morgan, a Maryland girl, raises frogs. When advised by a physician to give up her position as stenographer in the city and live an outdoor life, she returned to her parents' farm, where the marshy lowlands suggested to her the possibility of earning a livelihood by raising frogs. While it naturally required some time to put her business on a paying basis, she now enjoys the fruits of her labor, having proved her venture not only to be healthful, but interesting and profitable. Her frog reserve, as she terms it, consists of a series of marshy ponds, each enclosed with fine wire netting, which not only serves to prevent the froms from escaping, but to protect them from their common enemies—the snake and turtle. Of the several known species of frogs, Miss Morgan finds the bull-frog to be the most profitable. Their large size make them especially valuable as a table delicacy and their greedy habits render them easy to capture. From May until July, she watches the breeding ponds closely for eggs or spawn, which she removes to another enclosure as soon as discovered. Here she allows them to hatch, and the giant bull-frog tadpoles to develop slowly through a period extending from one to three seasons. Her tadpoles often reach a length of six or seven inches and are carefully guarded, as not only the bulk of the full grown frog, but also the number of years necessary for their development depends largely upon the size attained by the tadpole before its transformation. The young frogs, when they develop, are removed to a third pond, where they can neither molest the tadpoles nor be harmed by their full-grown relatives. Here they spend the time buried in the mud and moss, except at night when they come out and feed on the insects, dead fish, larvae and other deliccacies that make up a young frog's menu. When sold for food, full-grown bullfrogs bring Miss Morgan from $1 to $4 a dozen. Fine extra large specimens she sells to biological laboratories, receiving as high as $3 each for them. Her choice specimens destined for laboratory use are selected first, and those sold for eating purposes have their legs skinned and shipped in ice water.

DEER DESTROY ALABAMA CROPS

Deer are eating crops in Tuscaloosa county, Ala., and citizens and farmers have complained to the state department of game and fish. John H. Wallace, Jr., game and fish commissioner, received a letter yesterday from E. F. Hammer, of Elrod, who said deer had attacked the crops and that farmers were threatening to kill them.

Commissioner Wallace replied with the warning that no deer could be killed before November 1 and then only bucks could be huntsmen's prey. "You are advised that it is a violation of the law to kill bucks in this state under any circumstsances before first of November," he said. "It is highly gratifying to me to know that deer have become so abundant in your county. If any great damage has occurred, and you will notify me of the amount I will endeavor to make arrangements to reimburse the parties damaged."

Notes

The Red River section of Louisiana is a happy hunting ground. Coon, mink, 'possum are there, also fish in the waters. Ducks and geese, too.

Hunting bull frogs is best done at night, with a carbide light, and a two-prong spear with a twelve-foot handle.

Plenty of deer up in Marquette county, Mich. Plenty of hunters there, too.

There will be several proofs before long that hunters' guides in the deer country are mighty poor risks for life insurance companies.

Furs are growing more scarce and more valuable.

Fur farming is getting to be a great business. Ten black fox puppies recently sold for $3,000 each, or $30,000 for the lot.

Wild ginseng is worth from $6.50 to $8.50 a pound, according to the location from whence it comes. New York, New England and Canada produces ginseng of the highest value; Kentucky, Tennessee and other southern states the lowest.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

Men combine to further their business interests and to combat the evils that could otherwise affect their business.

—o—

It has always been that, in business, that strong took advantage of the weak and defenseless. It is not always true that the fittest survive except as the fittest is also the strongest.

—o—

And it is becoming more so every day. Numbers means nothing unless they are organized to exert a combined power. Movements are inert that depend on individual action. Concerted action is what counts. And the greater the number of individuals acting in concert the greater the power, whether for good or evil.

—o—

So in this great country it has come to pass that nothing great is undertaken without a union of men and interests. The tendency is all toward organization, concentration, consolidation and co-operation to gain a common end desired by all.

—o—

As organization grows they naturally look out to protect and promote their own interests. It is to the interest of the Chicago Board of Trade and other similar boards of trade and grain and cotton and produce exchanges to continue conditions in this country that will permit speculation in the products of the farm. There is no doubt of this. Every person will concede it.

—o—

And the condition that permits and makes possible speculation in the products of the farm is the uncertainty surrounding the crops—the uncertainty of yield and the uncertainty of prices after they are produced. People don't speculate in things that are certain and definite for price. If a man or a company of men make an article that they always set the price on it when it is made, and that is the selling price, no person would attempt to speculate in that article.

—o—

But farmers don't set the prices on their products. In this respect they are the one conspicuous exception in all the classes of producers. The farmer alone of all the people who produce something valuable does not set the price on it and because he does not it has become the object of speculation and exploitation of a class of people who are very much determined to hoodwink the farmer and make him sidestep so farm products may continue to be the chips with which the gamblers play their games.

—o—

From everywhere comes advice to farmers to organize. A paper before us says: "Farmers want better methods of marketing." From another: "Farmers may complain until they burst and will get help or sympathy from no one. But united and in action they will become invincible. If farmers wish to put the grafting politicians, grasping financiers, exploiting trusts and gambling boards of trade out of business they can do it if they unite for the job." And so all along the line comes the advice to farmers to "get together, "to organize" and to "co-operate."

—o—

But how?

—o—

These solicitous friends of the farmers consider their duty done when they tell them what to do, but they leave them in their perplexity as to how to do these things. As well for the doctor to say to his patient: "You are sick. You must get well," and leave him no medicine or give him no perscription. Under such conditions the patient is very apt to fall into the hands of the quack who has no real cure.

—o—

The farmers are sick of their old business system. They know it is bad and they are looking for relief. Some of them are finding a real physician and such are on the way to full recovery. But the real physicians are scarce, yet ,and most of the patients are falling into the hands of quack doctors. The last condition of such is likely to be worse than the first but we have faith that all will be cured in the end.

—o—

In the last two issues we referred to the movement to put a county expert in each agricultural county in the country. Several hundred counties already have the expert. The great purpose of this movement is to raise larger and better crops. As we have often said, the purpose we approve of, as far as the increase in crops can be sold, and as far as the greater crops bring more money than moderate ones do. But every large crop the country has ever raised has sold for less money than small ones. The great crops of 1912 was valued at billions less than the moderate ones of 1911, and the moderate crops of 1913 are already being valued higher than the bumper crops of 1912.

—o—

Of course, we can see that if the movement were confined to comparatively few counties, the farmers of those counties could reap substantial benefits, providing the expert advice had any effect in increasing the crops, because the farmers in those counties, producing larger acre yields, could take the price set for the total crop and get more money than their neighbors who did not have the same expert advice. But this would not be fair to the farmers in other counties, and it is not the intention of the promoters of this scheme to confine it to a few counties, but to put its experts IN EVERY COUNTY. Naturally, then, all will be on an equal basis and one farmer cannot have any advantage over his neighbor unless his neighbor refuses to avail himself of the expert's help.

—o—

We used the words "promoters of this scheme," above. Since our last issue we have made some further investigation and the result of it will go farther to confirm our suspicion that the crop improvement movement was not intended to improve the marketing, but rather to get more produce to handle BY THE OLD SYSTEM.

—o—

It is an old, true saying: "By their works ye shall know them." And this, "A man is known by the company he keeps." Be it therefore known that the county expert is selected by the State College, and the State College is assisted by the Crop Improvement Committee of the Council of Grain Exchanges. More than this does not usually come to the surface.

—o—

But what is the Council of Grain Exchanges? It is a name adopted by the leading boards of trade and exchanges in the big cities of the country to promote the movement for greater crops without any intention to improve the marketing system. The names of the institutions composing the Council of Grain Exchanges follow:

—o—

Chicago Board of Trade, Kansas City Board of Trade, Toledo Produce Exchange, St. Louis Merchants Exchange, Duluth Board of Trade, Cairo Board of Trade, Memphis Merchants' Exchange, Buffalo Corn Exchange, Baltimore Chamber of Commerce, San Francisco Merchants' Exchange, Cincinnati Chamber of Commerce, Minneapolis Chamber of Commerce, Milwaukee Chamber of Commerce, New York Produce Exchange, Wichita Board of Trade and Peoria Board of Trade.

—o—

Each of these institutions, as far as we are able to learn now, even though the name may not betray it, is for speculating in farm products. The ideal condition for speculation obtain under the present system of marketing. Therefore would these boards, chambers and exchanges combine to help the farmers to bring definiteness and certainty in the marketing? Would they do such a thing and ruin their own business? Or did they hear the universal call for an organization of farmers and recognize the opportunity to lead in it and thus hope to not only perpetuate their own business but make it more lucrative by enlisting the government and state forces to help farmers to produce more for them to handle?

—o—

While we are not opposed to the work of the Council of Grain Exchanges assisted by the government and the agricultural colleges to secure greater and better production, we do condemn the effort for its one sidedness. But this the farmers themselves can remedy.

—o—

It is worth while for farmers to get together for any good purpose. But farmers will make a great mistake if they do not use their organization for more than producing only. Having an organization in the county, if the farmer then fails to use it to get what he should for his crops, nobody is to blame but himself. True, the people who led in the organization work did not expect it to be used for co-operative and direct marketing. But we say, if the farmers do not use their organization for this very thing they are missing the greatest opportunity that ever came to them, and all that can possibly justify the organization at all.

—o—

We would far rather that all farmers would organize of their own initiative and for marketing as the first object, instsead of being organized for greater production as the chief object, and in many localities, particularly where this paper circulates, they are doing that. But we know the tide is turning strongly to marketing where ever there is any kind of a farmers' association and at no very distant time all present organizations will acknowledge marketing as the greatest problem and they will all unite, federate, to solve it.

—o—

The carrying out of such a program will, of course, be a disappointment to the speculating boards of trade and other lines of business that thrive on the uncertainty of the crops and prices. But other business will have nothing to fear, in fact it will share in the benefits of a stable agriculture.

—o—

We hope our agricultural colleges will admit the greatest need of farmers and see to it that the movement they are so actively promoting is broadened to include it. If they refuse, what will farmers think of them? How can the agricultural colleges serve farmers best while assisting the boards of trade to continue the present gambling marketing system which is the greatest curse on the nation? In their ambition to have more money to spend and more people in their employ and under their control will they desert the farmers entirely and go over to the farmers' enemies? An exchange also saw this tendency and we copy from it as follows:

Here are the agricultural colleges drifting away from us. You see that so long as

The advantages of a marketing system, owned and directed by the farmers themselves, will take time to be recognized by all the farmers as was the advantage of dividing the grain in the sack instead of putting a stone in the other end.

Read the advertisements in this paper as carefully as the reading matter, and if you see anything that you want or will need later, write for it.

This will help the paper and that will help YOU and and US.

Thank You!

they advocate "research" and the two-blades-of-grass theory they need fear nothing from the "big business" which charges us 65 cents of the dollar for carrying and handling and financing one dollar's worth of our goods. Thinking will also show you that whenever these colleges honestly and fearlessly take up the 35-cent-dollar problem they will at once have a battle with this same "big business."

—o—

Is this true?

—o—

Are our agricultural colleges being prostituted to the service of the "interests" perhaps to have their backing when they want additional federal or state appropriation?

—o—

"Farmers unite!" This should be the slogan. But be careful to unite for the right objects and on a plan that will guarantee that you can accomplish your objects.

—o—

Any man can go on a piece of ground and produce something, but as soon as he does he wants a good market. Under the old conditions he oftentimes could not find it. The greatest problem today, is not more production, but systematic control of crops and scientific marketing.

The idea must be to focus this

—o—

thought in each community and organize it. Where there has been a getting together for any object the accomplishment should be quite easy. But whether organized or not farmers should not rest while all other people are strengthening their organizations. Take a lesson from the fable of the foolish man who "sat and sat and lost." The first step in the farmers'

(For more names attach paper. We will write a letter to all names and send literature.)

sound and successful organization is the local union, the locals to be united in a county union and the county unions to unite to form district unions or clearing houses and eventually all to unite under one central head which will possess all the intelligence of crop supplies and demand, with the ability to connect them with the least trouble and expense.

—o—

We want each reader where there is not an equity organization now to consider this a personal invitation to him to take the lead in this work. Select some of your neighbors and write their names with address in the blank below and send to the Farmers Society of Equity, when full instructions will be sent The demand for the right kind of organization is great. With the helps you will be given, the work will be easy, and besides, you will be paid for what you do.

—o—

If your county has an expert agent, or if there is an organization at your market or shipping town now, send the blank just the same and note this fact as yours may be a federating proposition instead of organizing. The F. S. E. does not tear down, but always builds greater.

—o—

Don't wait for an organizer. Become one. When you organize your community if you want a larger field you shall have it. Send the coupon for instructions and blanks and begin to talk it up amongst your neighbors at once.

„Die Farmers Society of Equity in Florida."

Es gereicht mir zur besonderen Freude, den Wunsch der Redaktion dieses Blattes, für jede Ausgabe einen deutschen Artikel zu schreiben, zu erfüllen. Zwei besondere Gründe habe ich dafür. Erstens fällt es mir bedeutend leichter, mich mit meinen Landsleuten in der deutschen Sprache zu unterhalten und zweitens hoffe ich, daß diese Artikel die Anregung dafür geben werden, daß wir mit der Zeit eine ganze deutsche Ausgabe der „Up-to-date farming", jedenfalls soweit es den editoriellen Teil anbetrifft, erhalten werden. Ich hoffe gern, daß diese deutschen Zeilen in der englischen Zeitung meine Landsleute traulich ansprechen werden.

In der letzten Nummer konnte ich über die Gründung eines Vereins unserer Gesellschaft im „Barrineau-Park" berichten und freue mich im Anschluß an diesen Bericht mitteilen zu können, daß dieser junge Verein am Sonnabend, den 6. ds. Mts., eine sehr interessante Versammlung abhielt. Verschiedene sehr wichtige Fragen standen auf der Tagesordnung und aus diesem Grunde hielt es der Schreiber dieser Zeilen für angebracht, selbst diese Versammlung zu besuchen, dabei das Angenehme mit dem Nützlichen verbindend, denn ein Besuch in dem freundlichen „Barrineau-Park" ist immer eine sehr angenehme Abwechselung.

Die erste Frage war wegen Anbau von Kohl. Da die letzte Ernte in jeder Weise ungenügend ausgefallen, ist eine große Nachfrage nach Kohl und mit derselben verbunden ein guter Preis bestimmt zu erwarten. Aus diesem Grunde hat unser altbewährter Herr **„Lozier"** in Robertsdale an alle Nachbarvereine den Aufruf erlassen, soviel wie möglich den Kohlbau zu betreiben. Wenn nun auch der Anbau von Kohl nicht ohne Unkosten zu bewerkstelligen ist, so gerechtfertigt doch der Ertrag die Unkosten in jeder Weise. Die Hauptsache ist, daß eine Sorte zu möglichst derselben Zeit gepflanzt wird, damit nachher beim Verladen es nicht schwer fällt, eine Waggonladung zu bekommen. Durch Vermittelung des Herrn „Lozier" wird dem Verein der nötige Samen zugehen. Soweit wie wir vorläufig feststellen konnten, haben sich die Mitglieder des jungen Vereins entschlossen, mindestens 40 Acker mit Kohl zu bestellen, welche an Anzahl Acker einen Erfolg bedingt. Die Anlage von Samenbeeten wurde ausführlich besprochen und erklärt.

Die Bodenbeschaffenheit in „Barrineau-Park" ist speziell für den Kohl- und Kartoffelbau äußerst günstig und somit kann an einem pekuniären Erfolge absolut kein Zweifel sein. Da der Anbau von Kohl das erste gemeinschaftliche Unternehmen des jungen Vereins ist und alle Mitglieder ernstlich bestrebt sind, etwas ordentliches zu erreichen, wäre es sehr erwünscht, daß eine reichliche Ernte die Mühen der Farmer belohnt.

Die zweite Frage wegen Anschaffung von Kunstdünger wurde ebenfalls zur vollen Zufriedenheit aller Anwesenden erledigt.

Nachdem diese beiden Hauptfragen zur Zufriedenheit aller erledigt waren, war man noch nach altdeutscher Weise ein paar Stündchen gemütlich zusammen, und nur zuhalb mahnte die anbrechende Dunkelheit zum Aufbruch.

Die nötigen Anbahnungen sind getroffen, Nachbarvereine zu gründen, und hoffe ich in der nächsten Nummer von der Gründung dieser Vereine berichten zu können.

Heinrich Schneider,
220 N. Palafox St.
Pensacola, Fla.

BEFORE AND AFTER

Would you please send the literature and other necessary information you have for the purpose of propagating the Farmers Society of Equity. We are beginning to find that we must organize or go to the wall, and that it is up to the farmer to do the work himself. Farmers in this neck of the woods have been "skinned to a frazzle." When we talk of organization we get the frigid look from those who profit most by our lack of unity. We have one of the finest valleys and most productive; but at present are at a standstill. No market, rank discrimination and robbery by middlemen have almost put us out of business.—J. F. Lemons, Mt. Vernon, Ore.

We will take in several new members at our next meeting, and expect many more before very long. We are shipping sweet potatoes by the carload. Now that the Farmers Society of Equity is taking hold in this section, our farmers will soon begin to live like white men. For years unscrupulous commission men have plucked the riches of the land from the hands of our farmers, and have broken small organizations of farmers one after another. No amount of "bucking" can break the Dawes Local 7156 of the F. S. E.—W. J. Thyfault, Secy., Dawes, Ala.

Awl Given

Needed on Every Farm

Save money daily with awl by pairing shoes, harness, belts, rugs, gloves, grain bags, etc. Everything enclosed. Full size 6½ in. long. Makes lock stitch. Use any thread. Full instructions included.
OUR OFFER—Awl given with a two years' subscription for 75c. Satisfaction guaranteed or money refunded.

Best Car of Its Size in the World

For Spare Time Workers

THIS IS THE FIFTH CAR WE HAVE GIVEN AWAY

Prairie Farmer's Eighth Semi-Annual Free Voting Contest for Spare Time Workers will begin Oct. 15 and close Dec. 31, 1913. So many of our readers have entered our contests in the past that our big prize distribution plan has become a regular feature of our Spring and Fall subscription work. Anyone who has a little spare time this Fall can take part in the contest and win a valuable prize with a little effort. This is the best chance you will ever have to get what you want, without costing you one penny. A beautiful new Ford Touring Car, latest model, completely equipped, a dandy $250 Harley Davidson Motorcycle, Upright Kimball Piano, Diamond Ring and many other splendid prizes will be given away absolutely free to our good friends who take part in the contest.

Don't let this **BIG OPPORTUNITY** escape! Don't put up a cent or do any hard work. No matter who you are or where you are, you have an **equal chance** at one of these big, handsome, valuable prizes.

Here is the Big List of Free Prizes
Automobile
Piano
Motorcycle
Top Buggy
Diamond Rings
Gold Watches
Fur Coats
Phonographs
Shotguns
Silverware
China Sets and MONEY BESIDES

Prize for Everybody!

Yes, that's just what we mean. We **guarantee YOU** a prize. We guarantee a prize—and a good fat cash commission besides—to every person who sends three orders (besides their own), for the **Prairie Farmer—America's Oldest Farm Paper,** published in Illinois since 1841, and is read twice a month by over 105,000 Middle Western farmers.

It's a regular cinch to get these subscriptions, too — Splendid Free Premiums!—But that is something we want to **write** you about. Enough to say that probably **never before** has a publisher paved the way to such results by a **plan** that works out **so easily** and **so surely** and **so AGREEABLY** for **YOU** as this one does! Last year hundreds entered this contest—people who were not one particle better qualified than you are this minute. And today many of them are enjoying the prizes that right now are within your reach. We haven't room to give all the facts except to name a few **first prize winners.** Our letter will bring full details—also tell you the wonderful and varied assortment of articles from which you can take your choice.

Every Penny of this Prize Money Will go to SPARE TIME WORKERS

Anyone who has sent us more than 25 subscriptions in the past 12 months cannot compete in this contest.

HERE ARE THE NAMES OF SOME LUCKY PRIZE WINNERS

SAMUEL WHITE, KNOX CO., ILL.
Winner of Ford Car in Spring Contest 1913

A REMINDER

IN OUR preceding issue was a notice of October 1, dues paying date. If you are a member-at-large and have not remitted the annual dues, $1.50 to headquarters yet, please send it at soon as possible. If you are a member of a local union, please see that the dues are paid to the secretary. If you are an officer of a local union see that the collections are made as near the 1st of October as possible. We quote from section 6, of article IV, of the National Union Constitution and By-Laws, as follows:

The annual dues $1.50) shall be apportioned as follows:

To the National Union	$ .50
To the State Union	.25
To the County Union	.10
To the Local Union	.40
To the Official Paper	.25
Total	$1.50

If a state union remit all but the local and county shares to the state secretary. If no state union or county union remit their portion to National headquarters.

The Farmers Society of Equity is growing more than five times as rapidly as ever before, so let's all stick together and each do all he can to help complete the Society. It costs you $1.50 a year to maintain and build up the organization. Until it is completed the cost will be sixty-five cents to market thirty-five cents worth of your produce, on an average.

THE NOMINATION BLANK

IN THIS number is printed a blank with instructions for making nominations for the officers to be selected in the 1913 annual convention of the F. S. E. Each member should refer to it on this page. Its use is explained there. The important thing now is to use it. The secretary of your local union has had an advance copy of the blank and a letter of instructions. Perhaps steps have already been taken by the officers to secure a full attendance at the next regular or a special meeting to act on this important matter. But members should make it their business also to see that it is not neglected.

Also it is time to select your delegate to the 1913 convention. Don't treat this matter of a delegate lightly. Too many people think that they will leave important matters "to others" to do. We want to say that the 1913 convention needs a delegate from each local union. Of course it will cost the members a little, but it will be only a little for each when shared by all. So select your delegate and all co-operate in sending him. We believe this will be the last year when a local will be required to pay the expense of its delegate, but that the laws will be changed for headquarters to pay it in the future, like some other organizations do now.

From everywhere comes the word that the Farmers Society of Equity plan is the right one for farmers' successful co-operation. What is before us—to complete the organization—must be done some time. So since we are on the right track lets look carefully to the nomination of good men for the offices and then hold a convention that will give our Society such a boost that it will soon be completed and so we may enjoy all the blessings, that can only come through it, while we live.

Every member and officer should act on these suggestions.

1913 National Convention of the Farmers Society of Equity

The next national convention of the Farmers Society of Equity will convene at Indianapolis on December 16, 1913.

At that convention national officers and directors for a year will be elected and every other thing done that may be considered for the benefit of the Society. As relates to the election of officers, we quote from the by-laws as follows:

ARTICLE VIII

Officers

Sec. 3. The officers of the National Union shall be a President, a Vice-President, a Secretary, a Treasurer, a National Organizer, and seven directors.

Election—Representation—Term

Sec. 4. The officers and directors of the National Union, with the exception of the Secretary, shall be elected by a popular vote of the members on blanks furnished by the National Union, or printed in the official paper, and forwarded to the National Secretary by mail or by delegate representing the union or unions, to be voted in the Annual National Convention of the Society.

Sec. 6. The term of the officers shall be for one year, or until their successors are elected and qualify. The names of all candidates must be published in the official paper at least three times, the first publication being at least six weeks before the time of the annual meeting.

To comply with the terms of the by-laws it will be necessary to print the names of all candidates in the November 15th number of UP-TO-DATE FARMING the first time. To do this the nominations must be in the office by or before November 5th.

Any member can make nominations or local unions can agree on the candidates and cast the membership vote solid for the nominee. The nominations should be accompanied by a statement of the fitness of the candidate for the position, which may be published for the information of the members. Local unions should take this matter up in their next meeting, although the nominations need not reach headquarters before November 5th. The names of candidates will be published in the issues of the official paper until the convention meets.

Nominations should be made on this blank and sent to Farmers Society of Equity, Indianapolis, Ind.

Spectacles ON TRIAL Free

—And They'll Even Make A Blind Man See—

Of course, I don't mean one blind from birth or disease—but near-blind and weak-eyed on account of old age.

Now it makes no difference if you're as near-blind and weak-eyed as the old gentleman shown in the above picture, I'm going to send you a handsome pair of 10-karat SOLID GOLD FILLED "Perfect Vision" spectacles without a cent of money, and if you like to go out hunting occasionally, you'll find that you can shoulder your gun and drop the smallest squirrel off the tallest tree top at the very first shot sure, with the help of these wonderful "Perfect Vision" spectacles of mine. And in the evening, when the shadows are gathering in the dusk, they'll easily enable you to distinguish a horse from a cow out in the pasture at the greatest distance and as far as your eye can reach.

Write me today for a pair of these wonderful "Perfect Vision" spectacles of mine, and as soon as you get them I want you to put them on your eyes, no matter how weak they may be; sit down in front of the open hearth one of these cold wintry nights, and you'll be agreeably surprised to discover that you can again read the very finest print in your bible with them on, even by the dim firelight; you'll find that you can again thread the smallest-eyed needle you can lay your hands on, and do the finest kind of embroidery and crocheting with them on, and do it all night long if you like without any headaches or eye-pains and with as much ease and comfort as you ever did in your life.

Now Don't Take My Word For It

but send for a pair at once and try them out yourself for reading, sewing, hunting, driving, indoors, outdoors, anywhere and everywhere, anyway and everyway. Then after a thorough try-out, if you find that every word I have said about them is as honest and as true as gospel, and if they really have restored to you the absolute perfect eyesight of your early youth, you can keep the lenses forever without one cent of pay, and

Just Do Me A Good Turn

by showing them around to your friends and neighbors, and speak a good word for them whenever you have the chance. If you want to do me this favor just write your name, address and age on the below $3.50 certificate at once, and this will entitle you to a pair of my famous "Perfect Vision" lenses absolutely free of charge as an advertisement.

3.50 DR. HAUX SPECTACLE CO.—Room 130 ST. LOUIS, MO. 3.50

Please send me on 7-days' free trial a handsome pair of 10-karat SOLID GOLD FILLED spectacles, set complete with your famous "Perfect Vision" lenses, all ready for use, also a fine leatherette plush-lined German-silver-tipped gold-lettered pocketbook spectacle-case, and if I find that the 10-karat SOLID GOLD FILLED frame is really overlaid and stiffened with genuine 10-karat pure gold, and will positively stand the 10-karat solid gold acid test without the slightest discoloration (so that I will be proud to wear them in company and to church on Sundays) then and then only will I pay you your special reduced advertising price of $1.50, if in my opinion they are really worth $5, the price you have them stamped in the nosepiece, as shown in the above picture. If, however, I don't want to keep the spectacle-frames for any reason whatever, I am positively going to remove the lenses and put them into my own frames without paying you one single solitary cent for them, as you have agreed in the above announcement to accept this certificate in full and complete payment of a pair of your famous "Perfect Vision" lenses as an advertisement, and I am certainly going to make you stick to that contract.

MY AGE IS.....

Deafness

From All Causes, Head Noises and Other Ear Troubles Easily and Permanently Relieved!

Thousands who were formerly deaf, now hear distinctly every sound—even whispers do not escape them. Their life of loneliness has ended and all is now joy and sunshine. The impaired or lacking portions of their ear drums have been reinforced by simple little devices, scientifically constructed for that special purpose.

Wilson Common-Sense Ear Drums often called **"Little Wireless Phones for the Ears"** are restoring perfect hearing in every condition of deafness or defective hearing from causes such as Catarrhal Deafness, Relaxed or Sunken Drums, Thickened Drums, Roaring and Hissing Sounds, Perforated, Wholly or Partially Destroyed Drums, Discharge from Ears, etc. No matter what the case or how long standing it is, testimonials received show marvelous results. Common-Sense Drums strengthen the nerves of the ears and concentrate the sound waves on one point of the natural drums, thus successfully restoring perfect hearing where medical skill even fails to help. They are made of a soft, sensitized material, comfortable and safe to wear. They are easily adjusted by the wearer and out of sight when worn.

What has done so much for thousands of others will help you. Don't delay. **Write today** for our **FREE** 168 page **Book on Deafness**—giving you full particulars.

WILSON EAR DRUM CO., Incorporated
215 Inter-Southern Bldg. LOUISVILLE, KY.

Equity Field Work

The Farmers Know Equity is Good

Many are growing deeply interested in the Farmers Society of Equity in Utah. It is indeed high time the farmers were awake to the fact that "Union is Strength." I am glad to say the Equity is taking very favorably. I have just returned from a trip to Weber county, and on telling farmers there of the organization they were greatly pleased with it.—Ivon Summers, Utah.

Farmers Clubs Marketing Hogs

Louisiana farmers, in many localities, have organized hog shipping clubs for marketing their products. They have found such an arrangement of great value, especially to those farmers who have small quantities of certain products for disposition. The Louisiana Swine Breeders' Association is pushing the movement, and new clubs are being formed all over the state.

The local club operates as follows: A date is announced by the local secretary as shipping day, and on that day all members who are ready bring in their hogs, and load a car, or two cars, as the supply justifies. A special mark is put on each lot, so each farmer will receive pay for his own product, as each lot is sold separately.

By intelligent co-operation, the farmers arrange their affairs so that all have hogs to market at the same time, and they try to have their shipments as nearly uniform as possible. Shipments are made direct to commission firms of known ability and integrity.

This is the right kind of business progress; and when these local clubs are all federated into a national association, so they can have much greater control over the markets, by a thoroughly intelligent system of distribution, still greater benefits will be possible.

The Right Mission

I hope to see your paper succeed as it deserves for it is a paper in the interest and for the welfare of the farmer, and with the success of the farmer lies the success of the city and town as well. It is a paper with the right mission.—Walter R. Cibart, Keldron, S. D.

From the New President, Oregon State Union, F. S. E.

I believe the Equity plan to be the thing farmers throughout the United States have been in need of. We expect great things of this organization, just started in Oregon, and intend to work to help make it the greatest of all farmers organizations. We already have hundreds of enthusiastic members, and hope, before spring opens, to double our membership.—Wm. Grisenthwaite, President State Union, Oregon.

We Must Do It Sometime—Why Not Now

I am but a small farmer. I take UP-TO-DATE FARMING and like it. I know it teaches just what the farmers of this country will eventually have to do—co-operate and pull against the tide, or continue to float down the stream. I send you $1 to renew my subscription for three years.—J. A. Shaver, N. Y.

Reality in Drawing

It is said of a bright school girl that the pictures she draws are very real, so much so that recently she made a picture of a hen so natural that when she put it on her desk it actually laid there.

Finds Equity Fully Satisfactory

I have read your literature and am very much impressed with the plan of your organization. I think it one of the best things ever offered the farmers, and any farmer should be able to see the great possibilities in it. As soon as I can make arrangements I want to take the work of organizing.—J. E. Hidden, Burnell, Fla.

Only One Way Out

Having talked with many farmers here I find them not only interested, but anxious to organize on the Equity plan. We have had the Alliance and the Grange, both good so far as they went, but neither gave what was most needed. Only through the medium of a national marketing organization can farmers ever succeed in getting their just dues.—John C. Kull, New York.

Young America for Equity

Mr. J. A. Everitt.

Dear Sir: I have chosen "The Farmers Society of Equity" for the subject of my oration, being a junior student in the Fremont high school. I consider it a most appropriate subject for this particular community.

I will be very grateful if you will send me whatever you conveniently can to enable me to present the subject properly and do it justice. Yours respectfully,

Sidney Harns.

ORGANIZED FARMERS DEMAND GOVERNMENT MONEY

The organized farmers of Idaho are insisting that the Secretary of the United States Treasury loan them money at a low rate of interest, on warehouse receipts for farm products stored for reasonable prices. At a regular meeting of the Ashton Local 6994, F. S. E., the following resolutions were passed:

Resolutions

WHEREAS, the Secretary of the Treasury is depositing vast sums of government funds with certain national banks at two per cent. interest, to aid farmers in moving their crops—therefore, be it,

RESOLVED, that in the judgment of the members here assembled, the farmers would be better served by loaning farmers direct through postal savings banks, or otherwise, on warehouse receipts for farm products stored therein. By so doing, we would be saved at least from six to eight per cent. interest, and our crops would not be forced upon the markets, regardless of demand or price; and be it further

RESOLVED, that these resolutions be forwarded to our state union secretary, with instructions to him to forward them with others to Hon. Wm. McAdoo, Secretary of the Treasury.

FREE Necklace and Ring We positively give to boys and girls a beautiful Four-Strand Pearl Necklace; a beauty. Also dainty ring set with sparkling similitude diamond for selling only 20 jewelry articles at 10c each. Order jewelry today. When sold, send us the $2 and we will send necklace and ring immediately. What 15c Will Do

The little matter of 15c in stamps will bring you the **Pathfinder** for 13 weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its 21st year of increasing in success. The paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the PATHFINDER is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper and we will send the PATHFINDER on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new Friends.

Or send $1 for full year; money back any time if not satisfied. Address Pathfinder, Bx 7, Washington, D.C.

Coral Necklace FREE!

5000 Prizes

Shetland Ponies FREE

Do you want a Pony like this one? I gave this pony free to Miss Haney. See her smile! See how pleased she is! Wouldn't you be pleased, too? Well here is your chance. The best you'll ever have. I'll give you one too—Pony, Wagon, Saddle, Bridle, and the Whole Outfit.

To Boys To Girls
The ponies I give away are all young and beautiful Broken perfectly so any child may ride or drive them. They are real little pets that's what they are. Some of them have been taught to do tricks just like they do at a circus. The carriages, saddles and bridles are the best that money can buy. The very highest quality and the prettiest. I wish you were here to see them.

Send Me Your Name Today

I'll give you money to help keep the pony! My plan is new, original and easy. My plan is to allow you "Pony Votes;" (I give you 2000 votes for answering this advertisement) the one who gets enough votes gets a pony, carriage, harness, saddle and bridle and cash, all free. I even pay the shipping charges so as not to cost you a penny. The votes are easy to get. My plan will do that. I'll show you how to get a pony, just as sure as the sun shines. My plan is entirely different from all others. The answering of this advertisement may be the means of your getting a pony outfit free. Will you do it? Do so and see what I have to say to you

A postal will do. Address, **Uncle Billy, Pony Man, 142 W. Ohio St., Chicago, Ill.**

DEFORMITIES CURED

CLUB FEET of any variety, and at any reasonable age, can be made straight, natural and useful. No plaster paris, no severe surgical operation, and the result is assured.

POTTS DISEASE when treated in time should result in no deformity; paralysis can be prevented and the growth not interfered with. Write for information and references.

SPINAL CURVATURE Recent cases usually make good recoveries and even those of long standing do well. No plaster paris, felt or leather jackets. Write for information and reference.

HIP DISEASE in the painful stage can be relieved and the inflammation permanently arrested. Shortening, deformity and loss of motion can often be corrected. No surgical operations or confinement.

INFANTILE PARALYSIS We can refer you to many responsible people all over the country, whose children, afflicted with Infantile Paralysis have been practically restored at this Sanitarium.

DEFORMED KNEES AND JOINTS of many varieties yield to our methods of treatment, and if interested you should know about it.

This is the only thoroughly equipped Sanitarium in the country devoted exclusively to the treatment of crippled and paralyzed conditions.

ILLUSTRATED BOOK FREE Write us for illustrated book which will be sent free on request to any address.

THE McLAIN ORTHOPEDIC SANITARIUM
924 Aubert Avenue ST. LOUIS, MO.

Question Box

QUESTION: *Please let me know whether the Farmers Society of Equity ever provides rigs for its organizers. I could get around much faster with a rig and I believe I could have this whole community organized in a month with such help.—John Dawson, Vermillion Co., Ind.*

ANSWER: It does not for local organizers.

Q. *We wish to have some kind of an entertainment to teach the farmers of our community the workings of Equity. Have you anything in the line of a play suitable for such purpose, to present in our local.—Mrs. H. C. Catlin, President, and Miss Lucy Whittle, Secretary, Tioga Center, N. Y.*

A. We regret to say that we have nothing to meet your requirements.

Q. *Our local has decided to disband and join with the Clatskania Local Union. What course do we have to take to do this lawfully?. 2. What becomes of our supplies?—John Kleger, Secretary, Marshland, Ore.*

A. Surrender your charter and send it to your state union. The state union, after making proper record, will forward to the national union. You can issue to each member a demit, or you can make application as a body to the Clatskanie local, which local can accept your members in a body or pass on them individually, as may be its custom. Your supplies should be turned over to the benefitting local union. Also, your records should be delivered to it.

Q. *I have several stacks of good wheat. Do you think it will pay me to hold it a while for higher prices? I am a subscriber for Up-to-Date Farming and find many helps in it.—John A. Breder, R. R. 2, Sandusky, O.*

A. We advise holding it.

Q. *The farms of the future will be as up-to-date as a man may expect. They will have all the conveniences the city homes have besides some advantages for health and living in the country that the city cannot give. In view of these things I believe the future farmer should have an education and polish in keeping with the improved country conditions. I wish to give my boy, who is nineteen years of age, and who has had a grammar school education, such an education and polish as he should have, but I don't want to spoil him. Please advise.—H. O. Yarrow, Bowman, Cal.*

A. Assuming that the young man has inherited, and acquired through his daily surroundings and family direction, good common sense, you can safely give him a college education, if you desire. But this we do not consider necessary to reach the greatest success as a farmer, and is not indispensible, even, if he seeks, or is sought for to fill public offices in the future. So you might wisely let his education end with the best your community affords; or let him take a normal course, or even a college short or long course. A season away to school ought to develop the youth in other ways than education, too, and help to give the "polish" which might be said to be the ability to do the thing that comes up to do and the confidence in himself that he can do it.

In this connection will say that the local unions of the Farmers Society of Equity are highly educational and any young man who will take an active part in the proceedings in such meetings, is in line to prepare himself for any public office to which he may be called. We recommend the local union highly to give the "polish" that the future farmer will need.

Q. *We have three local unions in Itasca Co., Minn., with prospects of more. We feel that we should now organize a county union. Please let us know how to proceed to organize.—C. W. Sargent, Organizer, Leipold, Minn.*

A. Full instructions are given in Constitution and By-Laws of the National Union of the Farmers Society of Equity. Please see under Article VI, page 7.

Q. *We organized a local union here last night and I think the prospect for a large union is excellent. Our members want to know how they can hold their cotton with their obligations coming due. I am not able to answer that question, therefore, appeal to you for instructions. Cotton is our money crop this year and we want to get the best results we can, but we will need some money promptly.—W. S. Perkins, Secy., Harrah, Okla.*

A. Communicate with Wallis, Currie & Co., Galveston, Tex. (See the name in the Directory of the F. S. E., which is sent to you), for shipping blanks, etc. This company will store your cotton and hold it until the market suits you and advance cash up to its value.

For the information of many people who have asked for advice where to market wheat, we refer them to the following representatives of the F. S. E.:

Kansas City Grain and Seed Co., Kansas City, Mo.; Valley City Milling Co., Grand Rapids, Mich.; Lincoln Grain Co., Lincoln, Neb.; Eisenmayer Milling Co., Springfield, Mo.; Goodlander Milling Co., Fort Scott, Kas.; Carscallen & Cassidy, Jersey City, N. J.; Derby Mills, Burlington, Ia.; Igleheart Bros, Evansville, Ind.; Liberty Mills, Nashville, Tenn.; Bernet-Croft-Kauffman Milling Co., St. Louis, Mo.; Boney Harper Grain Co., Omaha, Neb.; McKinley Mitchell, Portland, Ore.; Phoenix Milling Co., Sacramento, Cal.; J. R. Hale & Sons, Nashville, Tenn.; Caswell E. Ross, Nashville, Tenn.; H. H. Carr & Co., 439 Postal Telegraph Bldg., Chicago, Ill.; Minerd, Hilliard Milling Co., Wilkes-Barre, Pa. (Mills at seven different places in Pennsylvania).; Elwood Grain Co., St. Joseph, Mo.; Davis-Milling Co., St. Joseph, Mo.

All of these people want to buy farmers' grain direct. Clip this list out and preserve it. For help in marketing all kinds of grain, live stock, cotton, fruit, vegetables, hay, etc., send $1 to the F. S. E. and become a member-at-large and receive the "Directory" of the Equity System.

Q. *As we are about to complete the organization of a local union of the F. S. E. at this place, we are in line for instruction how to market our produce, also how to buy our supplies. We have wheat to market now, also some fat hogs.—A. O. Alexander, Arnold, Neb.*

A. Please refer to the "Directory" of the Farmers Society of Equity for market representatives. Also, directions to other inquirers as printed above for marketing wheat. About buying please examine the advertising columns of this paper, also send headquarters a memorandum of what you want to purchase for our definite advice.

He Was a Roarer

"When you sold me this horse you said he was sound as a lion, but if I drive him half a mile he roars to beat the band."

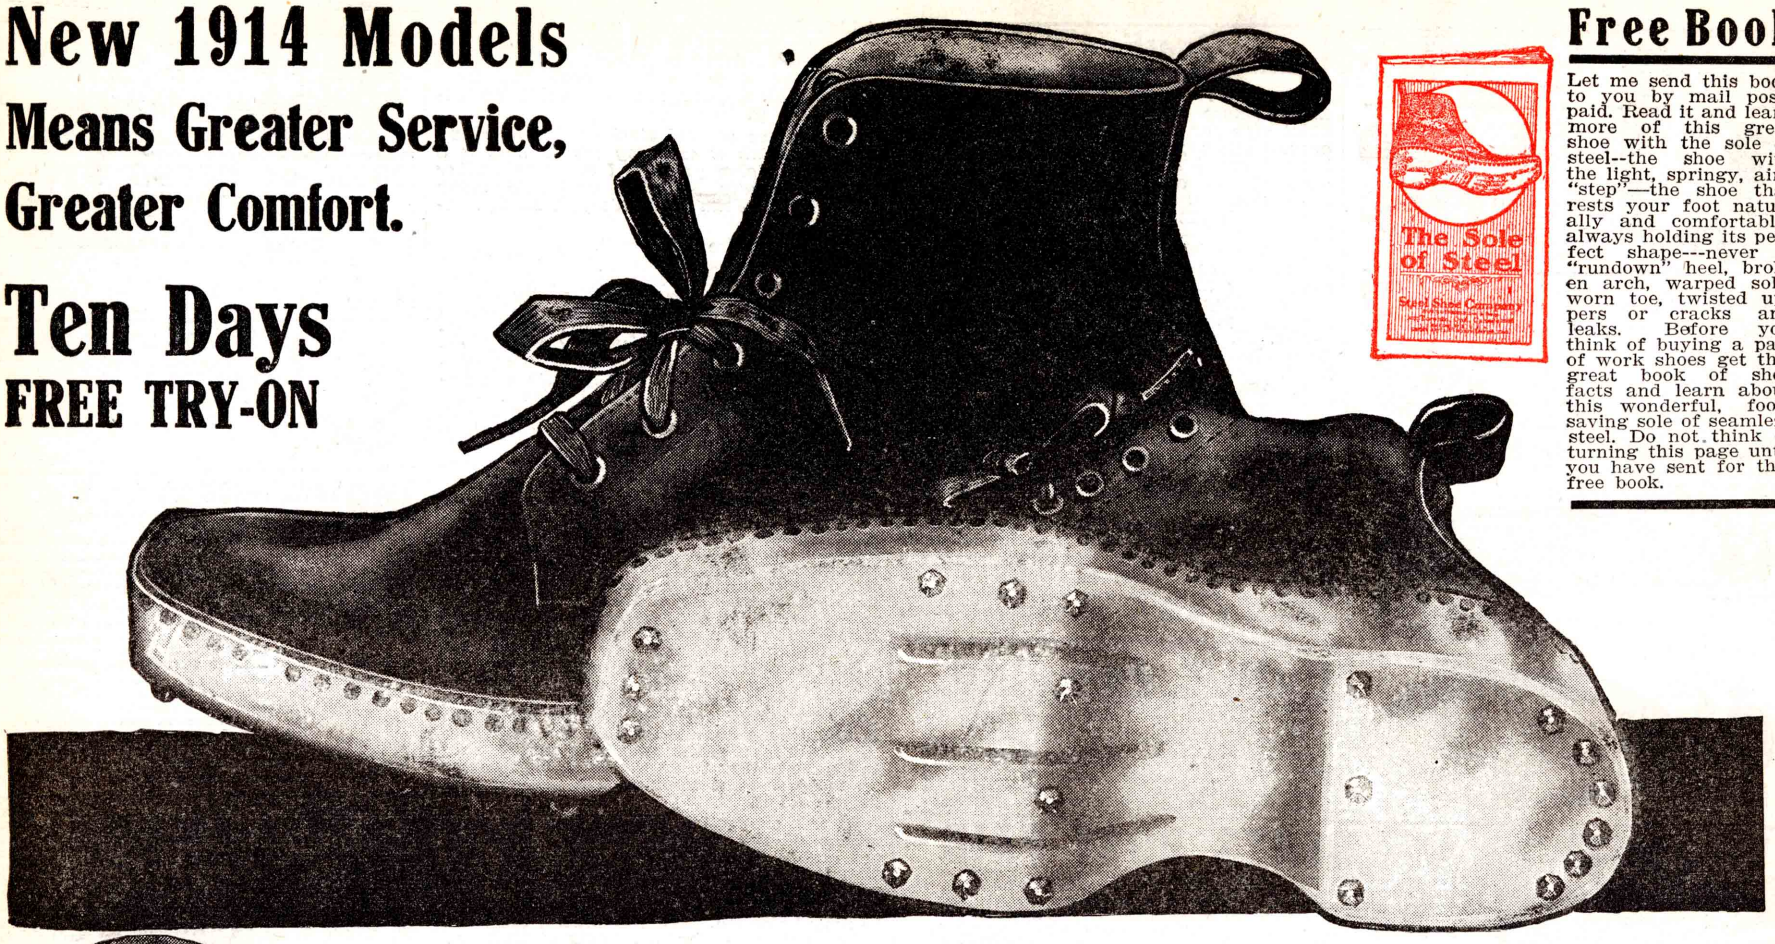
New 1914 Models
Means Greater Service, Greater Comfort.

Ten Days
FREE TRY-ON



Free Book

Let me send this book to you by mail postpaid. Read it and learn more of this great shoe with the sole of steel--the shoe with the light, springy, airy "step"—the shoe that rests your foot naturally and comfortably, always holding its perfect shape---never a "rundown" heel, broken arch, warped sole, worn toe, twisted uppers or cracks and leaks. Before you think of buying a pair of work shoes get this great book of shoe facts and learn about this wonderful, foot-saving sole of seamless steel. Do not think of turning this page until you have sent for this free book.

N. M. RUTHSTEIN
The Steel Shoe Man

I Have Spent $50,000 in the Improvement of My New 1914 Model the World's Greatest Work Shoe

I want to know WHY you have hesitated—why YOU have held back—in the face of my open, frank, man-to-man offer to let you TRY a pair at my own risk, without your taking a chance of running the risk of losing a single penny.

I don't know how I could offer you anything more than that. I don't know how I could better offer to prove to you the absolutely wonderful advantages of this shoe, than to let you put them on your feet and try them for ten days at my risk.

Over a million other men in all occupations have accepted—have tried, tested, used and proved the actual value of this wonderful shoe with its light, springy, sensible sole of seamless stseel.

The Leather Trust Thunderstruck

You know from your own experience that the leather shoe you now buy at whatever price you pay, is inferior in quality and gives one-third less wear than the shoe you bought three or four years ago. Leather has gone up 33 1-3 per cent—and is still going. You are the one who must pay the advance.

With my steel shoe it is just the reverse—you get even better shoes from me today than you did for the same price you paid me four years ago. Through the invention of special automatic machines for shaping, finishing and attaching the steel soles, I have reduced the cost of manufacture sufficiently to save the difference made by the advance in price of leather—and you get the benefit. The shoe is better in every particular, absolutely the highest quality in every piece of material, and absolute perfection in every detail of workmanship.

Parcel Post Will Bring These Shoes to Your Door

You do not need to go to town or to the express office after them—and, as the capacity of my great Racine factory alone is now far above 5,000 pairs a day, shipment will be made the day your order is received.

New 1914 Models in All Sizes—For Men and Boys

For men in sizes 5 to 12—6 in., 9 in., 12 in. and 16 in. high. For boys, sizes 1 to 4—6 in. and 9 in. high. They cost no more than ordinary all-leather work shoes.

I Want to Let YOU Be the Sole Judge

I want to leave it wholly and entirely up to you to say, from your own trial and examination, that this shoe will preserve your feet, protect your health, and save you the money that you now waste in continuously buying the old, heavy, leaky, warping, unsanitary shoes that look bad, smell bad, feel bad, and wear out every few months at the very best.

I Can Save Your Feet and $10 to $20

I can do this because I have done it for a million others. I can do it because I have created a shoe that is comfortable, dry, sanitary and economical—

Because each pair will outlast three to six or even eight pairs of best quality all-leather work shoes. Furthermore, there are no repairs—no loss of time or trouble of any kind. This shoe is made for comfort and made to last. The soles and sides (as shown in illustration) are stamped in one seamless piece from light, thin, springy steel, secured firmly to the uppers, which are of the very best quality soft, pliable leather—absolutely waterproof and almost indestructible. The soles are studded with adjustable steel rivets which give perfect traction, firm footing, and protect the soles from wear. The rivets themselves (which take all the wear), can be quickly replaced when partly worn. The cost of these is almost nothing—50 adjustable rivets for but 30 cents, and they will keep the shoes in good repair for from two to even three years.

Abolish Corns, Blisters, Bunions and Callouses

This shoe will give you absolute foot comfort because it has absolute foot form—and the sole being steel, it cannot warp, twist or draw out of shape. Consequently, corns, bunions, callouses, etc., cannot be irritated and no portion of the foot rubbed so as to start new miseries of this kind. You know very well that a perfect fitting shoe never made a corn in the world—and you also know that an all-leather shoe can not fit after it has a twisted, broken sole, that allows the uppers to crease up into galling wrinkles.

Save the Arch of Your Foot

As soon as a leather sole becomes wet and slightly worn, the arch gives way and flattens out—immediately endangering the very life and service of your foot. In this shoe the steel arch cannot break or get out of shape—it is a continuous, elastic restful support, always remaining exactly the same during the entire life of the shoe.

Banish Wet Feet, Colds, Chilbains, Rheumatism

With this shoe you can work all day in mud and water—*and your feet will remain powder dry.* It is an absolute protection to your health. You escape colds, rheumatism, neuralgia, the dreaded pneumonia and the long list of ills and dangers that result from damp or wet, cold feet. In fact, these shoes pay for themselves again and again simply by preventing sickness—saving doctor's bills, and allowing you to work in weather in which you would not otherwise dare to leave the house.

Lighter Than Leather

The firm, yet springy, elastic tread gives you an ease and lightness of step and comfort that delights your feet and gives your whole body a resiliency that lifts the pain and burden from the work of the day. You can stand more, walk more, do more, earn more—and live longer in perfect muscular health and strength.

Join the List of Happy Users

Become a Knight of the Steel Shoe. Save yourself and save your money. Farmers, miners, smelters, railroad men, hunters, and all workmen raise to the skies their praise of this shoe with its wonderful, yet simple, sensible sole of steel. Break away from the traditions that have cost you pain, loss of time and unnecessary expense. Accept this proposition that I have made to prove to yourself the comfort, the economy of this shoe.

Amazing Success

Indeed, the success of this shoe has been truly amazing—for within five years I found it necessary to establish great factories in Racine, Wisconsin; Toronto, Canada, and Northampton, England, to meet the demand which has arisen in such tremendous volume from all over the world. This astounding growth is the result of good words spoken by delighted wearers to their friends and neighbors, and because I have not been afraid to place my shoes upon any man's foot to absolutely prove for them every word, every claim that I have made. This same proposition is made to you today. Do not think of buying a pair of work-shoes without learning all about this wonderful shoe with the sole of steel.

Get Your Canadian Home From the Canadian Pacific

The Home Maker

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay

Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000 For Improvements

The $2,000 loan is used only for erecting your buildings, fencing, sinking well and breaking. You are given twenty years in which to fully repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle, sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based on Good Land

Finest land on earth for grain growing, cattle, hog, sheep and horse raising, dairying, poultry, vegetables and general mixed farming, irrigated lands for intensive farming—non-irrigated lands with ample rainfall for mixed and grain farming. These lands are on or near established lines of railway, near established towns.

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps with full information *free.* Write today.

Are You a Government Crop Correspondent?

If you are, we want to hear from you in regard to the new "Weekly News Letter" being issued by the United States Department of Agriculture, and sent to you for the advancement of agriculture in your community.

Seven or eight issues of this publication will have reached the crop correspondents of the department by the time this is in the hands of our readers. What have you done with them? How have you used the information contained therein? Of what benefit has it been—can it be, to either you, a correspondent, or to the farmers of your community?

This "Weekly News Letter" is the result of discontinuing the old monthly "Crop Reporter," which was never of any actual value as it was used, and Secretary Houston wisely cut it out. The new publication is intended to be of value—to be of real help to farmers. Will it prove so, or will it be as useless as the defunct "Crop Reporter?"

Information, to be of value, must enable the possessor to do something that improves his condition, either by lessening his labor, increasing his pay, or providing him with facilities for better work or greater enjoyment. What have you found, Crop Correspondents, in the "Weekly News Letter" that has been of value to you in any of these ways? And, how did you pass the helpful information out to other farmers, so they might also be benefited by it, as the secretary states is the department's intention? We ask these questions for information. We want to know just how valuable this new service can be made for farmers. We want to hear from all our readers who are crop correspondents.

What About the New Corn Grades?

While we are discussing the corn crop, it is well to consider the new system of grades tentatively fixed by the Secretary of Agriculture, and soon to become the legalized, standardized grades throughout the country. These grades are of importance only to farmers who sell corn on the market for the general trade, and to dealers and purchasers.

There are seven grades in all, classified as follows:

No. 1, which must not contain over 14 per cent. moisture, 2 per cent. damaged, 1 per cent foreign material and 2 per cent. broken kernels.

No. 2 corn shall not contain more than 15.5 per cent. moisture, 4 per cent. damaged, 1 per cent. foreign material and 3 per cent. broken.

No. 3 corn shall not contain more than 17.5 per cent. moisture, 6 per cent. damaged, 2 per cent. foreign material, and 4 per cent. broken.

No. 4 corn shall contain not more than 19.5 per cent. moisture, 8 per cent. damaged, 2 per cent. foreign material and 4 per cent. broken.

No. 5 is allowed 21.5 per cent. moisture, 10 per cent. damaged, 3 per cent. foreign matter, and 5 per cent. broken.

No. 6 corn is given 23 per cent. moisture, 15 per cent. damaged, 5 per cent. foreign material and 7 per cent. broken.

All corn not described in the six grades named shall be known as "sample" grade. All grades of white corn must be 98 per cent. white. All grades of yellow corn must be 95 per cent. yellow. "Mixed" corn includes all not up to color requirements of white and yellow standards.

Experts from the Department of Agriculture have been going about over the country, talking with dealers, farmers, grain brokers, and the large consumers, trying to find what classification of corn will be best suited to all concerned. The grades here given are the result. A formal hearing for any one interested to offer objections or suggestions will be had before the grades are finally determined. If any changes are made it is thought they will be very slight.

It is interesting to note the views of dealers regarding these new grades. C. E. Lowry, of Cushing, Iowa, says there are too many grades, and their adoption will cause great dissatisfaction amongst farmers. J. S. Cameron, Elliott, Ill., does not believe in any moisture tests at all, and says the new grades makes a bad matter worse. A. G. Dickinson, of Humboldt, Kas., thinks it will put a stop to bad practices of dealers at grain terminals who mix "no grade" corn with No. 2 and sell it as No. 3. W. P. Lewis, of Meeks, Ill., says the new grades will put 90 per cent. of the country grain dealers out of business, and wants the government "experts" to keep their noses out of other people's business. E. A. Lee, a retail dealer of Rushville, Ind., thinks it will have a good effect on both dealers and farmers, by compelling them to deliver honest goods—to actually sell what they pretend to sell, and to get pay according to the real value of the article. Bossenmeyer Bros., of Superior, Neb., say they are mighty glad to see uniform grades established, but think seven grades too many; that three or four is sufficient. Elliot Myers, of the same place, thinks the new rules will put a premium on first class corn, and learn farmers to feed, rather than sell the low grades.

Now, brother farmers, the dealers have had their say, and many of them have volunteered to talk for the farmer as well, saying that it will, or will not, be a good thing for farmers to have the new grades established. We now want to hear from the farmers themselves. What is your opinion of the matter, and how do you think it will affect you? Let us hear from all of you.

OUR ADVERTISERS—GUARANTEE

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this UP-TO-DATE FARMING stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in UP-TO-DATE FARMING" when writing to the advertiser. Medical advertisements are not accepted.

With the Up-to-Date Farmers

Money talks in all languages.

Putting wings on a house does not make a house-fly.

The saloon is a going business, and the sooner it goes the better.

Mother makes great pies, but it takes dad to make the dough.

One way to keep the boy on the farm is to take him into partnership.

The farm is the mainspring of commerce, but has no power when it's run down.

Sam Saxon says that some wealthy folks he has seen have more cents in their pockets than sense in their heads.

Opera singing is nowhere, compared to the singing of mother's teakettle on the kitchen stove when nights are stormy.

The high cost of living is partly in the high cost of labor, but who is going to start a movement to cut that down?

It's a fine thing to know you are on the right road, but still better to know you're traveling in the right direction.

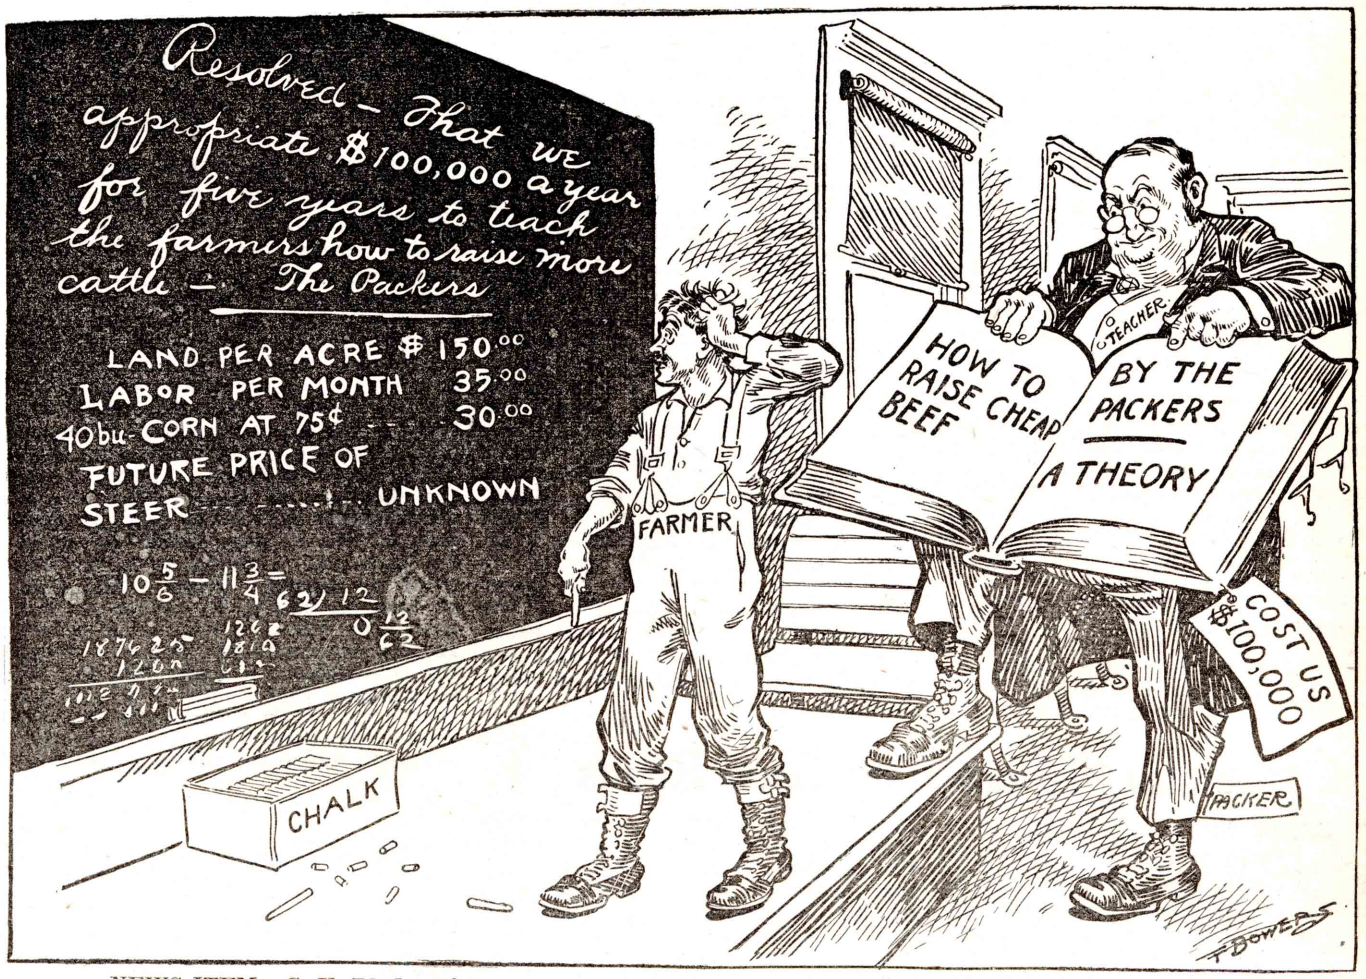
How many real farmers are in Congress? Do you know? Did you ever send a farmer from your district? If not, why?

Don't wait for opportunity to knock at your door. Meet it at the front gate. It might pass by and never get to your door.

We might as well try Mother Partington's plan of sweeping back the ocean tide with the kitchen broom as to oppose woman suffrage.

The Chicago packers say the reason we are such a progressive nation is because we eat the "rich, red, juicy beef steak." Then they say farmers are not progressive enough to raise the beef needed.

There are still far too many localities that are not served by the telephone. There should be a telephone in every farm house. It is not a difficult matter to organize a local telephone exchange. Now is a good time to do it. Get it in working order before Christmas.



NEWS ITEM—G. V. Blades of Iowa, who marketed a big drove of 1,531-pound bullocks, fed ten months, at Chicago this week, figured his loss on the operation at $25 per head, despite the fact that they realized $9.50. QUERY—How many more head of cattle do the packers think Mr. Blades should have raised at $25 loss per head? Also, how many other farmers do they advise to follow Mr. Blades' example?

Lessons in Co-operation

Lesson No. 4

Many a local organization of farmers has gone glimmering for one of two reasons: Either they attempted tasks too heavy for them, without sufficient experience, or they did not attempt anything.

Co-operation is a new work and must be learned a step at a time. The members must have time to know each other better than they do, before they can work together to best advantage.

One duty a local organization should early undertake is to improve the social life of the community. Meetings should be held regularly, with entertainment and refreshments that will make each occasion an enjoyable one. A short program of literary and musical selections is always good and always possible. If the meetings are held in the evenings, refreshments are in order during the "social half-hour," a recess for everybody to visit with neighbors.

The first business to be attempted should be co-operative marketing or buying. Start in a small way. Do not attempt too much. Appoint a member of good business ability to the position of manager. Do all the business you can in a co-operative way. Ship your products together in car lots. Buy staple supplies in club orders. Co-operation means working together, not pulling apart.

The local should be made of great educational force. Secure lecturers to visit you and make addresses. There are many bright men in your county who like to talk and tell what they know. Invite the doctor to talk on some subject relating to health. Invite some lawyer to discuss some legal problem of interest to your county. Ask your representative in the State Legislature to tell you how laws are passed; what the lobbyists do at the Capitol. Ask your minister to talk on some subject. The county school superintendent will tell you things you need to know about the education of your children.

Use your local club for pleasure, for profit, and for increased knowledge. Every community can do this, at least.

More Money to Teach Farmers

AT a recent meeting in Chicago of the American Meat Packers' Association, a resolution was adopted appropriating $100,000 annually for a term of five years to be used in teaching farmers how to raise beef cattle. "What the farmers of the country need," said Mr. Bischoff, president of the Independent Packing Company of St. Louis, who introduced the resolution, "is education along the lines of how to operate their farms."

What a pity it is that the packers and other great business monopolists are not all farmers! This is the sentiment expressed by nearly all of them, and many of them have offered large sums of money to teach farmers how to operate their farms. And the unfortunate part of it is that most of the agricultural schools and colleges have taken up the refrain, and are eagerly watching the money getting opportunities, not only through state and national appropriations, but from these monopolistic gifts, and are so pandering to the givers as to neglect the essential elements of agricultural education.

We quote the two following paragraphs from the address of Mr. Bischoff in moving the adoption of the motion making the appropriation:

As a matter of fact, there is not a farmer in the land who could not raise a few beef cattle to good advantage. What

(Continued on Page 5)

Another Solution of the High Cost of Living

WE TAKE IT that these matters are of at least passing interest to the farmer, who produces the high-priced articles, also buys some of them. Farmers have grocery bills, even as city consumers, and the food commodities they purchase are the products of other farmers. Therefore, when some one comes along with a solution for the high cost of living, it should interest the farmer to know whether it will affect him by lowering the price of what he has to sell or of the commodities he must buy.

A gentleman we do not know, even by reputation, in an article in a current magazine of economics, gravely informs us that the real reason food products are high is because land is high in price. Farm land values, he says, is the worst case of "watered stock" in the history of the world. When the consumer pays 40 cents a dozen for eggs, 30 cents for butter, 20 cents a pound for beef roast and 15 cents a pound for lard, he is paying dividends on inflated land values. In other words, because land is worth from $60 to $200 an acre, which a few years ago was worth but from $20 to $80 an acre, the farmer charges enough more for his crops to pay dividends on the higher valuation.

The remedy, then, must be to cut down the price of land! Put farms on the market at half the present prices and, according to this gentleman's theory, the farmer would be able to sell his crops at half-price. A pretty severe remedy, from the farmer's standpoint, it seems to us, to find both his farm and his farm products worth half their present values.

The truth of the matter is that land is high in price because land is becoming scarce in comparison with the population, not because farming pays profits on high valuations, for it does not. A farm is a home as well as a business enterprise, and people are anxious to have homes, willing to pay for them. The demand for homes is exceeding the supply and prices are going up in consequence. Farmers who own good farms, free from debt, are able to make a comfortable living on their land. The farmer who tries to buy a farm home and pay for it out of the products of the farm, and pay interest on the money involved, finds he has a heavy burden to carry, and prices on farm crops are not too high. It is quite true that the price of land is too high, compared with the income obtainable from the land, but there is no way to increase the supply of land, or decrease the demand for homes. Lower priced products will not make lower priced land, not in this country. Neither will reducing the price of land decrease the price for farm products. Wheat has sold for $1.50 a bushel and hogs at 10 cents per hundredweight when good land could be bought for $1.25 an acre. When that same land became worth $30 an acre wheat has sold for 50 cents a bushel and hogs at 3 cents a pound. Supply and demand still have an influence over price, whether on land or the products of land, and always rules price except when interfered with by artificial causes. One thing is certain: While the farmer sets the price on his farm, which he is not compelled to sell, he does not set the price on his crops, which he must sell. Consequently the price of farm products is not based upon the price of land, the unknown gentleman to the contrary notwithstanding.

Secretary Houston on Good Roads

THE Secretary of Agriculture, who will be the most influential person in the present administration in forming the government's good roads policies, made an address before the good roads convention recently held in Detroit, Mich. He sees great and serious problems in the idea of Federal aid for good roads, but believes in it, under proper safeguards which will not permit raids on the United States treasury for the pleasure of some, or the profit of petty politicians, at the expense of the many. The Secretary favors Federal aid for road building on a basis that will build better roads from farmers' homes to their market towns, and along the routes of rural mail deliveries, rather than state or national thoroughfares, and he was emphatic in his insistence that before funds are appropriated for use in road building, a system of management shall be devised that will give the people roads worth the money they will cost, and return benefits to justify the expense. It seems to be his idea that before the nation opens its treasury to the people for road building, the people themselves must show their genuine interest by bearing a part of the burden by direct taxation.

The position of the Secretary is right in all these matters. Good roads are always of great benefit, therefore desirable, but they are also expensive when it comes to the rock-paved or macadamized road—expensive to build and to maintain. They are worth their cost, doubtless, when properly and economically built and cared for. Their construction will be an added burden, nevertheless, and we are glad to see the Secretary of Agriculture is determined that the burden shall not be too heavy and that the people must have a dollar's worth of improvement where improvement is most needed for each dollar expended.

A Public Waste

WE WOULD much rather approve what is good than criticise what is bad, but the good is welcomed by the public without argument, whereas the bad must be opposed if the people be saved from its effects. In almost every department of government, state and national, public moneys are spent with a recklessness that can not be excused. Every cent improperly, or extravagantly, or unprofitably spent is unwarrantably taken from the earnings of the people, for all public money must be drawn in some way from the people. We wish our lawmakers and administrators would consider that and let themselves be governed more by a desire to save money for the people.

We do not urge niggardliness. This is a great country, and it is able to meet all necessary expenditures and to pay for whatever is worth to the people what it costs. But it is an open fact that millions and millions of dollars are spent that can not result in any benefit to those who are compelled to furnish the money. When such a man as Aldrich is able to declare that the United States could save millions of dollars annually without in the least impairing the efficiency of the government, the masses of the people would do well to take notice.

We are thinking now especially of the National Department of Agriculture. That is a powerful instrument for good srvice, and its great work for good should not be minimized. More than that, we should be liberal towards it. But what seems to us mistaken ideas of the public service have introduced divisions and bureaus and employed experts (so called), whose work results in no good to the general agricultural public. We often called attention to the bulletin and press service of the department under ex-Secretary Wilson's administration, and expressed the hope that Secretary Houston would cut out the unimportant or unprofitable part of that kind of service. But we suppose Mr. Houston thinks everything prepared by his "experts" and sent out to the people must be educational, and so he is outdoing Mr. Wilson in this regard. Some of this work we concede may be useful, but much of it—most of it—is entirely worthless so far as the masses of the farmers are concerned. It is not even remotely educational, and, though sent out in vast quantities to the people and the press, it seldom finds its way into the most ordinary papers. There now lies before us an article of nearly seven hundred words from the "Office of Information, United States Department of Agriculture," entitled "Goat's milk should be boiled before drinking." The article is a warning against a disease that may result from the use of raw milk of goats, but who in this broad land are interested in it or may be benefited by it? Possibly a few in Texas and New Mexico. Then why go to the expense of sending it all over the country? This is only an instance, and what we plead for is discretion and judgment in sending out these articles if it is considered wise for the department to have them prepared. It is not our purpose to find fault, but rather to correct errors and save public money.

Needs Unsupplied

THIS is one of the years when many needs will be unsupplied. It is a year of short crops, but those who have been accustomed to store the surplus and dole it out to the nearby demand at high prices will take more than their usual advantage of the consuming public. Behind them will be the argument of short crops, and prices will go beyond the reach of many. What a pity it is that the producers themselves are not accustomed to supplying demands direct. If they were, the shortness of the present season would not be so severely felt. In that case all the surplus would be made available, and it would go to the demand as needed. Prices would give as near as might be profits to the producers, but they would not extort greed's unwarranted demands from the consumers. It looks like this is a condition that ought to appeal to everybody. It is a condition that all should do their utmost to remedy. Why ship the scant supply to the distant central markets when the real demand is in the country and near the home of production? Why add to the price even the legitimate cost of double shipment? And why waste in a distant market what is needed near at home? Oh, for the information that will enable farmers themselves to know of the demands that are near them, and for facilities that will enable them to supply those demands without either waste or extortionate charges. Time and again have we shown how this can be done. The Equity System will not only handle economically and get the greatest possible supply from meager crops, but it will handle to the best possible advantage the overabundant production that sometimes crowns the work in the fields. This is not a theory; it is a fact, as hundreds who have availed themselves of it can testify. Once more we appeal to farmers to unite more solidly; to organizations to confederate for this great purpose, and to all to aid in so desirable an accomplishment.

The Producer, the Consumer and Prices

(First Article)

WHAT is a fair price to the farmer for the products of the farm? And just how would it affect the consumer if the farmers were to receive prices that would make farming really profitable, year in and year out? Let us get into the heart of this matter and uncover the facts as they are.

The farmers are told the city consumers are suffering from a disease known as the high cost of living. Government investigators have found that retail prices of many products have been advancing right along, until, it is said, the average city workingman finds it almost impossible to obtain all he should have of life's necessities. And the best, if not the only way to bring relief to these burdened consumers, is to lower the prices paid to the farmer, which will be accomplished if greater quantities of farm crops are produced. These are the claims made. What are the facts? Is the cost of living as burdensome as it is said to be? If so, how is the farmer to blame? Are prices paid to farmers for their products too high, in the main? Can he produce them for less without hardship to himself? If prices advance still more, how much will the increase cost the average consumer? Just what constitutes the high cost of living, anyhow, and who or what is the cause?

We believe that the farmer is not even now receiving all he should receive for his crops; that he is not getting sufficient returns, year in and year out, to live as he should, improve his farm and his stock as he should, educate his children as he should, or do those things he should be able to do for himself and his community. We also believe the average consumer is living better than he has ever lived; that he gets higher wages, enjoys more pleasures, has better clothes, better furniture, better food than ever before. We believe the increase in his living expenses, outside of rents and taxes, with which the costs of food products have nothing to do, is caused by his mode of living, and not because life's necessities cost him materially more than in the past. He is no longer satisfied with the living he had ten years ago, but demands better, and as his wages have increased, enabling him to have better things, the demand for these better things have increased until they do indeed cost him more than his former mode of living cost him. On some of these the farmer receives better prices than formerly, but the increase paid to farmers on these articles is but a fraction of the increase to the consumer. We assert, and will bring facts to prove the assertion, that if the consumers will live as economically and frugally now as they did ten years ago, their increase in wages, and the regularity of their employment, will enable them to live even better than before; that the burden of the high cost of living is more apparent than real.

It is our hope that every reader of this paper will follow this series of editorials through with earnest consideration. Great pressure is being brought to bear to bring about lower prices by increased production. Greater production is necessary, but lower prices are unnecessary and most inadvisable. The prosperity of farmers is an essential in the welfare of the nation. It is absolutely essential to the much-desired greater production, and can be made posible when farmers come to a knowledge of how easily good prices can be made, and how little this need affect the pocketbook of the consumer. These things will be made clear in the following issues.

More Money to Teach Farmers

(Concluded From Page 3)

the farmers need is education. With this in mind, I move that a fund of $100,000 a year be voted for a period of five years, to be expended among the farmers in a campaign of education. Until the farmers raise cattle for beef, the price of meat can not be lowered. As long as the supply is scant the price must of necessity be high.

* * *

Unless the farmers of the United States are educated at once to the necessity of raising cattle, a period of national decline will set in within the next ten years, porterhouse steak will be sold at $1 a pound, and the American workingman will begin to lose initiative and take on the characteristics of the rice-eating Chinese."

Among other things the president of this great packing company declared that unless more beef cattle is raised the "packing houses will be closed up and workingmen who now are making good wages and comfortable livings will be thrown out of employment." We also make the following quotation:

Much of the success of the American people—much of our virile force and splendid enterprise—is due to the fact that as a race we are eaters of rich, juicy, red beef. Draw a comparison between the meat-eating Americans and the rice-eating Chinese. What is more reasonable than to suppose that, should our workingmen be confined to a diet of rice and potatoes, their characteristics will take on something of those of the Chinese?

The reader must not forget that the business of Mr. Bischoff and those he represents is to buy beef cattle, butcher them, make everything possible out of the "waste" and pack the meat and hold it until a hungry demand compels the payment of the most extravagant prices. The most unthinking of our readers know that the more beef cattle there are in the country the lower are the prices paid for them by these same packers, and the lower the prices paid for the beef stock the greater the profits between the buying prices and their self-storage selling prices. Liberal as this action of the packers seems, and backed up as it appears by plausible arguments, it is selfish in the extreme. It is so with all these great monopolistic benevolences. The fertilizer companies want the farmers taught to use fertilizers because their business is to sell fertilizers. The handlers and speculators in farm crops want greater crops because there will be more to handle and greater latitude in speculation. The great railroad companies wish the farmers taught to raise more stuff because it is their business to haul it to market. This we regard on the part of the railroads as an entirely legitimate effort to increase business, for they have nothing to do with buying or selling or price. But in the other cases it is entirely otherwise. If the beef packers fear the people of the United States are to degenerate physically and mentally without "the rich, juicy, red beef," why do they not reduce their exorbitant profits and thus place "the rich, juicy, red beef" before the people at prices they can afford to pay? If they wish the people to have this civilization diet, why do they not make an appropriation to establish local butchering and packing plants that can buy the beef cattle at remunerative prices to the growers and then sell the finished product at reasonable prices to the consumers? If they want the farmers to raise more beef cattle, why do they not resolve to pay the growers remunerative prices for all that may be raised? Suppose that resolution had been to fix a definite and remunerative price to be paid for beef cattle during all of the next five years. Would not that have done more to increase beef production than all the educational campaigns and appropriations the packers can make? The farmers of the United States know how to raise cattle. they know how to raise corn; they know how to raise wheat, cotton and all other crops. Guarantee them a definite and remunerative price and there need be no fear of a lack of production. And the fertilizer people would thus accomplish THEIR purpose—the farmers would be served also, for crops would increase and there would be more freight to haul and not one way only, but both ways, for the farmers would become increased buyers as well as increased sellers. A guarantee of the price will do more to accomplish these desirable purposes than all the educational funds or extension campaigns that can be appropriated or devised. In fact, without the definite or assured fixing of the price, all these efforts, no matter what the motive, must fail. Farmers may need education, but a reward for their labors is very properly their first consideration.

Yes, we treat these matters different from the way they are treated by writers in other papers, but we can confidently leave with our readers the question of whether or not we are right. We study these things for the FACTS, and we feel it our duty to give them to our readers. We do not do so in the spirit of antagonism, but in the spirit of TRUTH and for the general welfare.

Need of Independent Thought and Action

THINGS get to running in grooves. This seems to be a fact, if not a law of nature. Water finds an inviting course and follows it until often a ruinous ditch is formed. In fact, it is thus the creeks and rivers came to be where they are. The ruts in the roads are thus made, and many evil things are the result of running in grooves It is characteristic of the human family, and has been since mankind has had a history. We are so inclined to do today what we did yesterday, and to follow in the same line tomorrow. It is so with human government. Rulers are very likely to follow in the steps of those who preceded them, and unfortunately, as in the roads and fields, the grooves become deeper and deeper, the evil in them constantly increasing. By and by a revolution—it may be of thought and quick action, or of turbulence and blood—fills up the grooves, and humanity moves on for a time on possibly a higher level.

Farmers are struggling in a disastrous groove, one that many years have made deeper and deeper. The agricultural world has become so accustomed to it that even the most progressive seem unable to see a way out of it. The teachers and creators of public opinion see no other way, and teach little that is new. It is plow and plant and cultivate; produce more and more of everything that grows; harvest at the appointed time and hurry the surplus into the market. This course has been traveled so long and the groove is worn so deep that few can see over the banks the better methods that everywhere surround them and the opportunities that are hidden from the multitudes that struggle along in the marketing groove.

Yes, there is a need for independent thought and action. Farmers must get out of that groove. Every bit of their stuff is needed, and they may produce more and more, and yet it will all be needed. It is only a question of getting it out of the groove, and to the ones that are eager for it and are fully able to buy it. Farmers, when you pass through the fields and orchards and note the waste too often there for lack of a price, and then listen to the increasing demand that you produce more and more, don't you think there is something wrong somewhere—something inconsistent? Don't you realize that this old-time system of marketing, this century of grinding along in a groove, has become an unbearable evil that belies the agricultural intelligence of today and calls loudly to progressive farmers to get out of it?

But how? Organize, confederate—co-operate. As a class be the managers of your own business. Supply your customers with unswerving fidelity and receive a business man's reasonable reward. Study equity. Learn of the Equity System. But whatever your organization, co-operate with us and get out of the old marketing rut.

Why We Must Farm Better

TEN YEARS from now, possibly sooner, the people living in the United States may require every bit of the foodstuffs grown here. In the past we produced far more grain, meat and vegetables than was needed to supply our population. We still produce a surplus, though much smaller. In a few years, unless our farmers bring much more land into cultivation, or make their acres yield with much greater abundance, consumption will overtake production and this country of ours be looking abroad for food supplies.

The most successful methods of planting and cultivating crops, and of maintaining and increasing soil fertility, can not work miracles. It will take the average progressive farmer ten years to so build up his farm and readjust his farming operations that his average yields will be increased by half. It will take many farmers much longer than ten years to do it. Hundreds of thousands will not even try to any great extent. Thousands are already producing close up to the maximum. So, while it is a possibility to eventually double our acreage yields, there is little probability that the farmers of this country will double their present output in the next twenty years. Farms that have been "mined" for thirty years can not be immediately restored. It will require many years of careful soil building to accomplish the feat. In twenty years of scientific soil building and farming, Germany has not succeeded in doubling her yields, with millions of tons of commercial fertilizer to help. The German farmer tills much less land than the American farmer, and, though he raises more bushels per acre, each bushel costs him much more to produce. The German farmer, with his larger yields, is not as well off as the American farmer with his larger fields and less expense.

The problem of our agriculture is not to farm less acres per person, but to adopt a soil-building system of farming. Improved machinery, improved stock, improved varieties, improved methods of producing and marketing are the means whereby our farmers should meet the future's demands for food and clothing.

Smile Awhile

Kept It Convenient

"No, my husband is not in. He walks out every morning for a 'constitutional.'"
"Mine buys his by the gallon and keeps it in the house!"

A Natural Croak

"Jim seems to have a frog in his throat."
"I suppose that accounts for his being such a croaker."

Loved Nature

"I love the very noise of the forest."
"Does that include the bark of the dogwood?"

In a Safe Place

"That was my first battle and the bullet struck me just under the heart."
"It's a wonder it didn't kill you."
"Not at all. My heart was in my throat at the time."

More Than Ordinary

"I am sure you and your wife only have sham disputes."
"That may be, but they cover more than the pillows."

Small Business

"See that woman. She is small enough to go through her husband's coat sleeve."
"My wife beats that. She goes through my pockets."

Only One Kind

"What variety of corn is this?" asked the boarder from the country.
"Canned. That is all the variety there is this year," replied the waiter.

It Was His Trade

Dentist—Now open your mouth and I won't hurt you at all.
Patient (after the tooth was out)—I know what the business of Ananias was now—he was a dentist.

Quite Likely

"You are the wise man of this neighborhood, and I want to ask you a question."
"Out with it."
"Is an inquisitive man a questionable character?"

Gets the Last Word

"Does your wife always have the last word?"
"No, I say 'Yes, dear,' or 'Certainly, darling,' and that ends it."

Mr. Dooley and the Packers

"I see by th' paypers, Hinnissy," remarked Mr. Dooley as he rubbed up against the door and scratched his back, "that our ould frinds, th' bafe an' pork packers, in convinshun assimbled in th' hogshtockin' city iv Shekawgo, wint on record as offerin' foive hoondred thousand good hard dollars if any man would take upon himsilf th' trayminjous task iv idjukatin' th' fahrmers in this land iv cahrn flakes and shlap jacks an' lahrnin' thim to kape their baythin hands off th' bald-faced calves whin they shtick their heads through th' fince an' bawl f'r sivinty-cint cahrn.

"Hinnissy, it's a boornin' shame th' way th' farmers slaughter their calves f'r veal loaf an' their soocklin' pigs f'r sassidges. Why, they think no more iv cahrtin' a heifer calf off to markit than they do iv wringin' th' nick iv a shpring chicken till they take all th' spring out iv it.

"What do thim packers want to lahrn thim, Mister Dooley?"

"To plant shpring calves in their paschoor lands and lave thim shprout until they're able to cast their vote to raydooce th' cost iv high livin'."

'An" thin what, Mister Dooley? Who's goin' to git th' binnyfit? Is it th' mon with th' impty feelin' rattlin' around in his dinner boockit, or is it th' fahrmer with th' mud on his boot-heels an' th' mortgage on his sway-backed roof, or is it th' packer himsilf with his autymobeel loaded down with golf shticks an' poodle dawgs?"

"Hinnissy, ye're gittin' more inquisitive than th' Amerrycun fahrmer himsilf. Year after year he's bin raisin' shteers an' crammin' th' cahrn down th' pigs, an' some wan ilse has bin crammin' th' money into his pockits an' laffin' oop his fat shleeve. Th' fahrmer should lahrn his lisson frum th' harvist field. Whiniver he wants to thrash, what does he do? He calls in th' naybors. He couldn't thrash without thim. Whiniver he wants to raise bafe an' pork, what should he do, Hinnissy? Don't till me, f'r it's on th' tip iv yer tongue, but think, mon, think!"

OUR MARKET REVIEW

Semi-Monthly Review of Crops, Markets and Trade

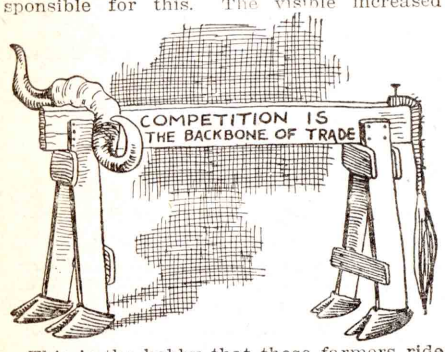
WE WILL soon begin to see how American farmers will fare under free trade. The new tariff may prove the most stunning blow ever given a great American industry. We hope not, but we can not but be apprehensive. It is too late now to make any change, but we may, perhaps to good purpose, make some observation. One of them is that farmers themselves were passive while the bill was before Congress. Inquiry reveals that out of the thousands of letters received by congressmen, not one in a hundred was from a farmer. Other interests and industries were alive to the situation, and that their protests counted is evidenced by the new law. We believe if there is one American industry that needs protection more than another it is agriculture. This belief is founded on the fact that free farm products bring the American farmer in direct competition with the cheapest labor in the word—for instance, the farm labor of Argentina, Russia and India. This competition will come heaviest on wheat and oats, as there are practically unlimited areas in the world yet that will produce wheat and oats, and which will not produce many other crops, and with cheap labor and the new land practically for nothing, can produce wheat on the basis of 50 cents a bushel and oats at 25 cents a bushel in the United States. Even now our prices are being affected by the prospect of such foreign competition, as shown by this market report:

"Chicago, Oct. 6.—Possibility of Russian, Manchurian and Indian wheat being shipped to the Pacific slope and of Argentina taking steps to compete in Atlantic ports of the United States formed a weight on the wheat market here today. The close, though steady, was at ⅝c net decline. Other leading staples, too, showed setbacks—corn, ⅛@¼c to ⅞c; oats, ⅛c to ¼c, and provisions a shade to 15c.

"Russian shipments of wheat to this country under the new tariff will, it was said, be of considerable magnitude. Shipments from the other countries referred to were thought likely to be less important."

We believe there will be a gradual reduction in the crops of wheat and oats in the United States and an increase in the cultivation of corn. Also there must be a readjusting in many lines. Whether this, if it comes to pass, was worth while, only time can tell.

Wheat seeding has been done under favorable conditions. Reports indicate an unusually large acreage sown. The failure of the corn crop in some sections is partly responsible for this. The visible increased



This is the hobby that those farmers ride who continue to think that competition is the backbone of trade. About all they get out of farming are the horns, hoofs and tail, while the other fellow gets the meat and hide.

nearly three million bushels, against five million in the same period last year. Corn, oats and barley also show increases.

The price of wheat has advanced 1 cent a bushel at Chicago, but declined at St. Louis and Kansas City. The price is 11 cents under a year before. Corn is decidedly lower and will rule still lower on the pressure of new corn that will soon be in the market. Oats are also lower, although 10 cents a bushel higher than a year before. Wheat and oats are world crop and will suffer most because of the tariff law, while corn is very strictly an American grain and need not fear importations. While the new tariff law is now in effect, its influence on grain, whatever it is, is only sympathetic, because grain can not come in from Canada until that country changes its law to also let our grain into that country free.

Potatoes have suffered a big decline in price, being 20c a bushel lower in two weeks. The crop in this country is a very moderate one and higher prices would rule except that potatoes are also on a world's basis, with the duty removed, and handlers are wondering what Canada will do in the way of exporting to this country. Therefore the business is largely of a hand-to-mouth order and little storing being done. Higher prices will be paid later.

Cotton reports show 7 per cent more ginned to Sept. 25 than last year, while the last government report of condition is 64.1, against 68.6 as the ten-year average. Price fluctuations have been quite wide, with a gain in two weeks of 65c a cwt. With free marketing now, as the ginning report shows, 15-cent cotton is hardly to be realized for some time yet.

Advice

WHEAT—Hold it for higher prices or feed it. CORN—Market surplus old corn and contract new corn from the field if at 55 cents or better. OATS—Hold for higher prices. POTATOES—Hold for higher prices. Prices are temporarily low, but don't depend on such high prices as potatoes have sold for in the past under protection. HAY—Market gradually. BROOM CORN—We look for higher prices. BEANS—Will be higher. APPLES—Ask a good, fair price. Growers should store if it will not be paid.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on Sept. 27, 1913, with comparisons, are shown in the following table. (The sign — before figures means decrease, X means increase.)

	Sept. 27, '13. Bushels	Change from 2 wks. before Bushels	Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
WHEAT	55,108,000	X 2,788,000	X 5,104,000	X 17,493,000	X 3,851,000
CORN	8,751,000	X 2,050,000	X 1,550,000	X 4,528,000	X 1,339,000
OATS	37,310,000	X 2,747,000	X 3,892,000	X 14,307,000	X 11,085,000
BARLEY	5,182,000	X 2,278,000	X 1,105,000	X 2,088,000	X 1,616,000

The visible supply of wheat in Canada on the same date was 22,681,000 bushels. This is 14,751,000 bushels more than two weeks before and 13,019,000 bushels more than a year before. The visible supply of oats was 5,629,000 bushels on the same date, which is 74,000 bushels less than two weeks before and is 4,651,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Oct. 4, two weeks before and a year before as follows:

WHEAT, No. 2 RED

	Oct. 4	Two weeks before	A year before
Chicago	93¼@94	92 @93	1.05
St. Louis	92½@94	94 @95	1.07
Kans. City	84½@90½	92 @93	1.03
Cincinnati	.....	96½@97	1.05
New York	96 @97½	96 @97½	1.05

Minneapolis—Spring wheat, No. 1 hard, 86¼c; No. 1 northern, 83¼@85¾c. Two weeks before, 85¾c and 83¼@85¼c respectively. A year before, 90½c and 87@90c respectively.

CORN, No. 2 WHITE

Chicago	70 @71¼	75½@75¾	67
St. Louis	72¾	75½@76	68
Kansas City	73½@73¾	76½@77¼	71
Cincinnati	.....	77 @77½	72
New York	78½	82½	59¾

OATS, No. 2 WHITE

Chicago	41¾	43½@43¾	35½
St. Louis	42½@43	44	34½
Kansas City	42¾	43¼	34½
Cincinnati	.....	46 @46½	37
New York	46 @46½	48 @48½	39

Future Grain Prices

Chicago grain futures closed on Oct. 6, 1913, and two weeks before, as follows:

WHEAT—December, 86⅝c; May, 91¾c. Two weeks before, 87⅞c and 93¼c respectively.

CORN—December, 68⅞c; May, 70⅝c; July, 70¾c. Two weeks before, 72⅜c and 73⅝c respectively.

OATS—December, 41⅞c; May, 45¼c. Two weeks before, 43¾c and 45⅝c respectively.

COTTON—New York, Oct. 6.—Cash cotton closed as follows: Middling uplands, 14.20c; middling gulf, 14.45c. Two weeks before, 13.55c and 13.80c respectively. A year before the prices were 11.10c and 11.35c respectively.

Chicago Produce Market

Chicago, Oct. 6, 1913.

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers' Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	125	135	110

Market was 2@3c lower. Some of the receivers were inclined to balk at making reductions, and only a moderate business was done. Sales made were at reduced prices, however, and the demand was not particularly urgent. Weather conditions were unfavorable, it being warm and sultry.

Sales reported were, per bushel: Wisconsin round white in bulk—3 cars at 55c, 3 cars at 58c, 6 cars at 60c. Burbanks—1 car at 57c, 1 car sacked at 60c. Dakota mixed—12 cars at 53c, 2 cars at 60c.

Per bushel, Minnesota and Dakota

Ohios, bulk or sacked.....53@60c

Wisconsin round white, bulk or sacked .....55@60c

Rurals .....55@60c

The price is 23c a bushel lower on Ohios and about 20c a bushel lower on white stock. A year before round white were quoted at 40@46c.

SWEET POTATOES—Were selling pretty well today. Trade usually is good on Monday. There is an ample supply with prices ranging as below:

Barrels, Virginia	$2.00
Baltimore	1.75
Jerseys	2.85@3.00
Hampers, Jerseys	85@ 90
Delaware	60@ 75

Virginias are about 10c lower and Jerseys a little higher than two weeks before. No demand in the north now for southern sweets, which should seek markets in the south and southwest.

HAY—Receipts, 913 tons. Demand continues good and market firm for all descriptions. Offerings small.

Choice timothy hay	$19.50@20.00
No. 1 timothy	18.50@19.50
No. 2 timothy	17.00@17.50

The price is $1.50 to $2 a ton higher than two weeks before. The price is about $1 a ton higher than a year before.

STRAW—Rye straw quotable at $7.00@8.00. Oats straw at $6.50@7.00. Wheat straw at $6.00@6.50.

Rye and oats straw are 50c a ton higher than two weeks before. Wheat straw is unchanged.

BROOM CORN—Not a great deal doing. The offerings are very moderate. A firm feeling prevails.

Per ton, Illinois corn	$150.00@160.00
Oklahoma	110.00@150.00

Illinois corn is $20 to $40 a ton higher than two weeks before and Oklahoma corn is unchanged to $30 a ton higher. A year before the price of Illinois corn was $90.00@100.00; of Oklahoma, $60.00@100.00 a ton.

BEANS—Are quotably firm. Not enough on the open market to take any notice of. Beans in hands of dealers are steadily held.

(Concluded on Page 22)

To Bring Seller and Buyer Together

This department is exclusively for producers and handlers of farm produce, grain, live stock, cotton, vegetables, fruit, hay, poultry, eggs, etc. :: ::

There is no charge for this service but a condition is that before using it the accompanying Crop Report be sent for full instructions, blanks, etc., so all business may be conducted systematically. You will appreciate the advantage of this after you get the instructions.

This department is instituted to enable farmers to sell at the right time and place, and to reliable customers; to help you get the real worth of your crops, your rightful share of the consumer's dollar—therefore do not do any marketing without first consulting with our market experts. If you want to obtain the highest prices your available market affords, report your crops on the blank provided and get the benefit of our advice and service. Our representatives in all the best markets are reliable, capable and *thoroughly equipped* to handle your products to best advantage. "Team work" and co-operation with headquarters will result in larger profits to you. If you have any crops to market in car lots, or could co-operate with your neighbor and make up car-lot quantities, fill out the blank below and mail at once to Farmers' Society of Equity, Indianapolis, Ind., and we will advise you where, when, how and to whom to ship for best results. Your shipments will be followed by this department until sold. The net proceeds will be sent promptly to you from our special representative to whom you shipped. This service will save and make you money. Send in the report today, now. This will supply us with advance knowledge of products to be marketed and our service will be made more efficient and satisfactory to you.

WHEAT—We have 15 cars good milling wheat for sale. Those interested should write for further information.—H. C. Miller, Carlton, Neb.

POTATOES, CANE, KAFFIR CORN, MILO MAIZE, FITERATTA—Members having any of the foregoing for sale should write J. H. Harmon, State Union Secretary, Shawnee, Okla.

BLISS TRIUMPH SEED POTATOES WANTED—Preferably from the northwest, for our Gulf Coast District planters. C. B. Lozier, Business Mgr., Robertsdale, Ala.

APPLES, POTATOES, WANTED—in carlots. Geo. M. Wolfe, Secretary, Dennis, Kans.

TIMOTHY HAY FOR SALE—H. E. McDade, Hagerstown, Md.

DRIED PEACHES—Two cars for sale. A. L. Cross, Kingsbury, Cal.

CORN, HAY, FOR SALE—J. A. Huston, Mulbury Grove, Ill.

APPLES—Three cars choice for sale. W. S. Kerstetter, Secretary, Sunbury, Pa.

HORSES—Carload for sale. Parties interested should write to Oscar Burns, Upton, Wyo.

POTATOES—One car medium size and smooth. Ready now.—Fred Newmiller, R. R. 4, Clyde, N. Y.

APPLES—Wanted. 100 to 500 bushels now and a car load of winter apples later.—J. E. Evans, Sisterville, W. Va.

CORN—This community wants a few cars.—W. D. Reddock, Personville, Tex.

FENCE POSTS, MOLASSES, CHRISTMAS TREES—For sale by Sulphur Local Union, James F. Powell, Pres., Sulphur Springs, Ind.

POTATOES, APPLES—We have lots of potatoes to sell and want to buy apples.—J. U. Flemming, Organizer, Ellendale, N. D.

POTATOES—Wanted to buy in car loads.—A. E. Weber, Sec., Geneva, Neb.

DRIED FRUIT—Prunes, raspberries and canned fruit and vegetables, also winter apples and potatoes to sell.—Equity Warehouse Co., Portland, Ore.

SWEET POTATOES—Car loads to sell.—C. B. Lozier, County Secretary, Robertsdale, Ala.

CORN, OATS, BARLEY, POTATOES—We want to correspond with locals that have these to sell.—Henry Vauck, Sec., Shiekley, Neb.

WHEAT, OATS, APPLES, POTATOES—For sale. W. S. Kerstetter, Sec., Sunbury, Pa.

WHEAT—300,000 bushels for sale.—F. C. Saxowsky, Sec., Hebron, N. D.

WHEAT, POTATOES, APPLES—Large quantities for sale.—O. E. Scott, State Secretary, Pocatello, Idaho.

POTATOES—Parker's Prairie Local Union has car loads to sell.—L. H. Brockman, Sec., Parker's Prairie, Minn.

WHEAT, POTATOES—Carlots, to sell.—C. H. Dent, Sec., Dent, Minn.

Crop Report

Crop Report of .....

P. O. .....Co. .....State .....

For and in consideration of the advantages to be derived from co-operating with the Farmers Society of Equity, National Headquarters at Indianapolis, Ind., and in consideration of the services rendered by Headquarters I hereby report the following crops which I can furnish in car-lot quantities and I agree to co-operate with headquarters in preparing and marketing same to best advantage:

Kind of Crop	Number of Cars	Grade or Variety	When Ready	Sacks, Boxes or Bbls.

Put Yourself in His Place

"All Things Work Together for Good to Those Who Love the Lord"

PERHAPS I should have taken "Thou Shalt Not Kill" as my text for this sermon. Instead I have chosen the above scriptural promise, for reasons that will appear later.

The old farmer depicted on our front cover is having troubles of his own. Every farmer has them. And if what we now read in newspapers is true, the calf problem is assuming a far more serious aspect. On account of the high cost of living, especially of that class of living that requires porterhouse in its daily fare, pressure is being brought to bear to prohibit by law the slaughter of calves for veal. No farmer is to be permitted to dispose of veal calves, if the wishes of the promoters of a lower cost of living are to obtain.

As this article is written partly for farmers and partly for those who are bent upon regulating the farmers' business, I shall, in strict compliance with scriptural usage, deal with the last division first. "The first shall be last and the last shall be first," you know. So to the self-appointed guardians of the consumers' tables I would say, put yourself in the farmer's place in this matter before you pass judgment upon him. Remember that a farmer is not farming merely for fun, nor particularly to gratify the wishes of any certain class of consumers. He is farming to make a living, and as he, like others, has many expenses to carry, he is also farming to make the money he needs. He has rents, taxes, interest and doctors' bills to pay. He must buy food and clothing, notwithstanding he is a farmer. He must be constantly replacing his machinery, repairing his buildings, replenishing his farm stock. He must face crop failures and disasters. Then, too, until this time, he must sell his products not always at what they are worth, or cost him, but whatever he can obtain for them. Consequently he must look ahead and plan his work as nearly as he can for the greatest measure of profit. He has no assurance of a profitable price on any crop he may produce, so he plans to take the least possible risk. It is absolutely necessary that he should do so.

Do you gentlemen who chafe under the high cost of porterhouse know what it costs to produce it on the average farm? Do you realize the added burden that the enactment of such a law as you propose would place upon the farmer? And have you any sound foundation upon which the farmer can base his hope for profit in the cheaper beef you would have him raise? Go out on the typical farm and view the matter from the farmer's standpoint, and see if you would want to assume those expenses, those burdens, those risks. What would it mean to the farmer to be compelled to increase his herds immediately to the extent of your desire? It would mean the employment of more help; to increase the extent of his pastures; building more fence, and erecting new buildings; the production of more grain and grass, and many other things requiring extra labor and expense.

Where is the money, the time, the labor to come from to effect all this reorganization? Farms can carry only a certain amount of live stock. To protect himself, in order to raise his calves, many a farmer would need to sell part of his cows. It would be many months before the calves arrived at maturity. Taking veal off the market would enhance the price of beef. I fear me your scheme to make beef plentiful and cheap would react, and beefsteak at a dollar a pound might become a reality instead of a nightmare.

You are going at this matter the wrong end first. In the days of cheap grain, big grass ranges and range cattle, beef could be produced at low cost. That day is forever past. It is no longer possible to produce the cheap grain. The farmer is doing his best, so far as he knows, and he really does know something about farming, regardless of the impression that has gotten abroad to the contrary. True, there is much for him to learn, but he knows enough now to know that he can not improve his farm as he would gladly do, with the prices of his products a risk on his hands—a risk that experience has taught him is a very real one. Assured of good prices for all he produces, the farmer can gradually bring up his farm to produce more, and, possibly, produce at less expense. But it can not be done by fiat of law.

No doubt you think, gentlemen, that at the prices the butcher charges you the farmer is rolling in wealth at the prices he receives. To make sure about it, before you call the culprit before Congress, why not go out and obtain a few figures on first costs, and base your reasoning on facts? Then, if you still believe the farmer is wilfully shirking his duty to his country, suppose you take the farm under the same conditions he must be governed by, and wrestle with the weeds, the weather, chinch bugs, grasshoppers, hot winds, disease and disaster, and raise a lot of additional beef "right off the bat" and then sell it to the packers at a price that will insure the consumer all he wants to eat, cheap as dirt! Try it, then fix up your law.

A few words now to the farmers who are the objects of the solicitous consideration of a group who have started out to "reform" agriculture. I call your attention to the second part of my text: "All things work together for good to those who love the Lord." The old farmer on the cover—does he truly love the Lord, I wonder? And when I see so many strange and marvelous things "working together" in your behalf, with tendencies that are so distinctly bad, I am constrained to think none of you love the Lord as you should! However that may be, there are now no end of things working together to reform the farmer, his wife, his children, his mode of living and the way of doing his business for him. All the ills of the high cost of living high are laid at the door of the ignorance or indifference of the sons of toil who till the soil. So the railroads, the grain exchanges, "the butcher, the baker, the candlestick maker, lawyer, doctor, merchant, chief, rich man, poor man, beggar man, thief," all start working together to show the farmer how and then compel him to do it. If the true facts were known, the writer believes it would appear that those who are making the most noise about the high cost of living are those who, after paying for luxuries which a few years ago were considered the exclusive privileges of the Astor-Vanderbilt-Gould class, find that choice cuts of beef, breakfast bacon, and Smithfield ham and eggs every day, and chicken for Sunday, eats rapidly into what remains of their income. Therefore, in order to make expenses meet (and meat expenses), the rich, lazy farmer must bestir himself and turn out endless supplies of 60-cent wheat, 30-cent corn, 5-cent cattle, 4-cent hogs, 15-cent eggs and other products on the same basis! Of course, the farmer can do it if he wants to! He has horses and hired men, mules and muscle, and plenty of dirt, so why can't he? And if he proves stubborn and perverse, why, Congress must pass laws to bring him to time!

This is an exaggerated statement, but it takes something out of the ordinary to enable some minds to see things as they really exist. It will be well for all farmers to plan to keep more stock, and to produce larger crops. They need all the practical knowledge and assistance the agricultural colleges, experiment stations, farm papers and others can give. But the law of profit and loss is far more potent in effect, so far as increased production is concerned, than enactments of Congress to regulate the methods of farm practice. Price is more potent than statutes in increasing crops. With profitable prices farmers will increase the quantity they produce as rapidly as their intelligence, their soil and the weather will permit, and they will be quick to take up new methods to increase production without the necessity of legislation.

Be not deceived and misled by the howl over the high cost of living. You have for years supplied the consuming world with food and clothing at prices that made your life a hard battle with poverty. Your own expenses are increasing and will increase. Now that the demand for certain food products has reached a point where you can see light ahead, and have a chance to get a taste of the fruits of your labor, you should weigh carefully the words of those who are leading you to make strenuous efforts for greater production for their own benefit, regardless of what may be your portion. The needs of the world are for more food than you have yet produced. The desire of the world is to obtain its food as cheaply as you can produce it, but there is no justice in the world's demand that the farmer shall give a service for which he is not well paid.

The Benefits of Practical Co-operation

South Dakota Farmers Make it Pay

NOTE—This article was prepared by the Farmers' Elevator Company, of Antler, S. D., having ninety-two members and owning an $8,000 elevator.

WHY is co-operation among farmers an agency for good, and a blessing to every individual in our land? Because co-operation means an elimination of waste, a fair distribution of earnings. It is, in one form or another, the order of the day in which we live.

"The grain dealers and grain commission merchants at terminal markets organize stock and grain exchanges and establish rules for the guidance of their members in selling and buying. Those familiar with the operations of these organizations know how well this form of co-operation among the terminal grain dealers, stock and grain commission merchants protects the interests of the country dealers. This co-operation gives dealers a sense of security, for they know that they have protection in the strict enforcement of the rules of the organized grain and stock exchanges.

"Two hundred people of any community, patronizing and supporting an individual or private corporation in a business way, contribute toward making the individual or corporation rich.

"Co-operation has saved to the grain growers of our great grain growing states over a billion dollars in the last five years; keeping that amount away from the coffers of the greedy line house monopoly, where it would have been used to debauch our politics and build palaces for the rich instead of being applied to the improvement of the farms and to the purchase of the comforts of life for those who produce them, as is done now.

"Some who call themselves co-operators are in the movement from a selfish motive and cannot, or possibly will not, understand that real co-operators are prompted by a higher motive and a nobler ambition than the mere accumulation of dollars for themselves regardless of the cost to or influence upon co-operation in the future. Of course, we are all liable to extremes. After farmers have been enjoying the benefit of co-operation for a number of years they are prone to lose sight of the fact that 'loyalty' to the co-operative cause is as essential to success and a lasting benefit today as well as yesterday.

"We frequently hear farmers make the remark somewhat on the following order: "I want to take my grain to the elevator offering me the highest price. I am entitled to all I can get out of my crop, and what is the use of supporting the Farmers' Elevator Company when the line houses pay more than I can get at the farmers' house.' It is just on account of such individuals, who can only realize what they can see in their hands for the time being that hinders the solution of this problem of creating better conditions and making farming more profitable and pleasant. It is hard to argue with them. But patience will do her work though the few who have faith in the ultimate triumph of the co-operative principle must do a lot more than ought to fall to their share.

"The expense of operating our plant is approximately $3,500 annually, whether we handle 100,000 or 400,000 bushels, for the expenses of an elevator are somewhat fixed regardless of the volume of business done by it. Now, if we handle only 100,000 bushels of grain three and one-half cents a bushel must be retained to pay operating expenses. But we could handle 400,000 bushels at less than one cent a bushel margin, and could pay over two and one-half cents more a bushel for grain we buy, as compared with the price we would pay on a 100,000 bushel volreceipts yields a great advantage in enume of business. If we could get every bushel of grain sold in Antler we could pay two cents a bushel more for it than is paid now and have a greater net profit. If we could sell every pound of coal sold in Antler at the same price it is sold for now, by the five dealers, the profit on coal alone would pay all our operating expenses and we could then handle the grain at freight off and yet be almost even. What a financial gain to both producer and consumer that would be!

"But to return and in conclusion. If the farmers want all they can get out of their crop why do they not adopt the only method that will bring them the desired results, namely, by selling every bushel of their grain to the farmers' elevator and buying every pound of coal from the Farmers' Elevator Company? Nothing but jealousy, ignorance, disloyalty to their own interests, prejudice fostered by the line houses stands in the way."

Our Country Contributors

Semi-Monthly Prize Letter Competition:

Subject: My Most Profitable Crop:

First Prize $3.00 Second Prize $2.00 Third Prize $1.00

NOTICE TO SUBSCRIBERS

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

KIT AND TOPSY—STANDBYS

(First Prize)

As I look over the record of the money-producing crops on my farm, I find that my greatest profits were realized from my two mares, Kit and Topsy.

These mares have produced sixteen colts. Each has her eighth colt by her side this season. They have all been good individuals and bring good prices. I have usually sold them when three or four years old, and have received as much as $200 for a four-year-old.

When I consider that these mares do nearly all the work on a 135-acre farm I believe their colts are nearly all clear profit.

I give them no particular care. In winter, when not doing much, I feed little grain, mixed with bran. Corn should not be fed to a brood mare. I have never lost a colt, and but two were blemished.

I work the mares until the colts arrive, at which time they are allowed a week's rest. They are then worked with care, never being overheated. The colts are kept in the barn, never once being allowed to follow their mothers. Topsy, the one of which I think the most, came to me from a horse trader. She was in poor condition and cost me $75. With kind treatment and good feed she showed great constitutional vigor. She has brought eight colts, three of which I have sold for $525, and have five left.

Both mares are in foal. I consider them money makers and I will keep them as long as they live. When unable to work I will give them a comfortable old age.—J. R. Timmons, Pennsylvania.

PROFITABLE CHILDREN

(Second Prize)

Farming and fruit raising has been my occupation all my life. I am now three-score-and-ten years old. I consider our children the main and most important crop I have ever raised—a family of five robust and industrious boys and a buxom girl, all of them with us on the farm at this time. Their mother and myself have raised them with industrious, praiseworthy habits, and we have succeeded admirably by setting them the example.

To keep children happy and contented on the farm, numerous things must be done by the parents. Buildings must be kept in repair and neatly painted in order to give them pride in their farm home. An ample lawn with nice grass, shrubbery, a croquet set and an abundance of shade trees all contribute to make home life on the farm a pleasure.

Plenty of fruit trees and berry bushes and a good strawberry patch, all well cared for, also help to make life on the farm worth living. Above all things else, provide good reading, books, magazines and a good, live, up-to-date agricultural paper that is up-to-date in all farming operations. Keep good live stock, a flock of thoroughbred chickens, a good horse and buggy and an automobile if possible, and the children will appreciate their home and work for its elevation and advancement. A family raised under such conditions can not help but be profitable, not only to the father and mother, but also to the community and to the country.—H. G. Norris, Michigan.

MONEY IN RIPE RED WATER-MELONS

(Third Prize)

There is money in raising watermelons if you go at it right and have the proper soil. To go at it right you must have the very best seed you can procure from the most reliable seedsmen, of varieties that are delicious and will do well in your locality. Proper cultivation will do the rest. Those who have a deep, sandy loam soil can do well with melons if they will follow simple rules of operation.

I plow the ground late in the fall, just before freezing. This helps to destroy the insects, which may be very troublesome if plowing is left until spring.

As soon as the soil is workable in the spring, harrow thoroughly and repeat the harrowing to kill the small weeds until the time to plant melons. Commercial fertilizer and well-rotted manure in proper proportions will be a wonderful help in procuring a large crop of highly flavored melons. I use a very small amount of commercial fertilizer immediately in the hill—just sufficient to start the plant.

My melons are planted in hills about seven feet each way, on a slight ridge thrown together by a back-furrowing. I cover the small plants to help protect them from the bugs, and also use air-slacked lime. The hoe is the most valuable implement in raising melons, and should be used frequently and with effect. After the vines begin to run, I mulch the entire patch in order to keep out the weeds and keep in the moisture. This also protects the vines from being blown around in the wind. I am careful at all times not to bruise any of the vines, which would decrease the quantity and quality of the output, from my acre patch of melons. I raise from 3,500 to 4,000 melons and get a net profit of 10 cents each, making from $350 to $400 on my acre. If any others have made a larger profit from the same acreage, without more labor or expense, I have not heard of it.—S. D. M., Pennsylvania.

TURKEY RAISING

My most profitable crop for several years has been turkeys, and this year will exceed all former years, for the amount invested.

I started this spring with three hens and one tom. Hitherto I have always raised Mammoth Bronze, but hearing that Bourbon Reds were hardier and more easily raised, and about as large as the Bronze, I purchased one fine pair and kept two Bronze hens, which mated with Bourbon Red tom. I sold $12 worth of eggs, besides raising forty-two youngsters, which are now nearly all half-grown, and so far have not lost a poult this season by sickness, but several by accidents. They are now past the danger point, when they begin "to shoot the red." The Bourbon Red hen I broke from setting every time until she had laid four settings. The last setting I let her hatch.

I now have twenty-two thoroughbred Bourbon Reds, for which I ought to obtain a good price, for breeding stock, and twenty fine birds of the cross, many of which will also go for breeders at a good price.

Here, where we have so much green alfalfa, it is only necessary to feed the poults for about four weeks, and then after that just a little each morning. Evenings they come in so full they can hardly walk. Amount of cash paid out for feed up to date has been about $1.50, mostly expended for oatmeal, the balance of their rations being onion tops, stale bread and curd.

If I obtain the price for mine which I paid for the pair I purchased, they will net me over $200, and I have no doubt I can, as there is a great demand for them because of the hardiness of the poults, and I will advertise extensively.—Mrs. H. E. Guthrie, California.

BEE KEEPING FOR WOMEN

This letter comes from a woman who lives in sunny Arkansas, and who makes a little pin money by keeping bees.

The bee business is interesting beyond measure and quite a profitable thing in which a woman on the farm can engage. Bees are but little trouble, and they board themselves. They do not take much time from other duties. It is not expensive to get a start. Even with a single colony, by good care and management one can soon have quite an extensive apiary.

I know nothing whatever about the care and management of bees, except what I have learned by experience. At present I am using the old-fashioned stands, which I can make myself with little expense. Later on I hope to supply myself with modern, improved stands.

I have the Italian bees, and they are not bad to sting, especially to those who are not afraid of them. My little girl helps me, and we do everything in connection with the bees. We are very seldom troubled with stings.

Last year I took 170 pounds of fine honey from four stands of bees and will do as well this year. I received 16 2-3 cents per pound in the comb, or 30 cents per pound drained. After one becomes acquainted with the busy little workers they find them not half as formidable as they think, and one can make them pay the little household expenses. I sell from $3 to $4

What a Penny Will Do

Consider the postal card—a piece of card 3¼x5½ inches, costing only 1 cent, but millions are written daily, carrying messages even around the world.

A postal card written to one of UP-TO-DATE'S advertisers will cost you 1 cent, but may bring you information about a new machine or new articles that will save you many dollars.

Our advertisements are guaranteed. Answer them.

BUY A BOHON STORM BUGGY
And Save $25 to $50
It has ALL the good points found in any Storm Buggy ever made and NONE of the bad ones. It is not too heavy, weighing but little more than the regular top buggy. Seat is wide and roomy and set back to give plenty of leg room. I will positively guarantee that the doors, windows or other parts will not rattle. The window construction is such as to keep out all wind and rain. I could say much more about the body, the gear, the axles, the wheels, etc. But "seeing is believing" and I just want to ship it to you on
30 Days' Trial—2-Year Guarantee
Give it a good hard trial on your own roads—I don't care how bad they may be—and if you are not satisfied with it in all respects ship it back and I will pay the freight both ways. If you keep it you are further protected by my binding two year guarantee.

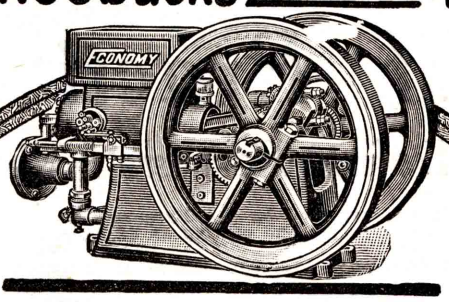
Sears-Roebuck's ECONOMY Engines



Strength and Durability
We guarantee Economy Gasoline Engines to last *as long as any other gasoline engine*, regardless of name, make or price, and we guarantee them *as long as they last.* They are built of the highest grade materials, in the most up to date engine factory in America, by the most skilled workmen money can hire. All parts are standard and absolutely interchangeable. Every Economy Gasoline Engine is given an actual overload brake test at the factory to make sure it develops *more* than its rated horse power.
Our low prices are the result of modern methods of manufacture, enormous output and direct from factory selling. Our guarantee and reputation make you *sure* of satisfaction.
Our New Engine Book Free
Learn how to do your work quicker, better, easier and cheaper. Our Gasoline Engine Book tells you how to do it, tells how high grade Economy Gasoline Engines are made, what they are made of, what they do, and helps you decide on the best size for your work. worth of honey from each colony of bees.—Mrs. L. L., Arkansas.

A SOUTHERN LAD AND HIS CORN

I have always declared my intention of becoming a profitable farmer. My father plants a large area to corn every year on the side. I took one acre of land, turned it deep in the fall and sowed to rye. In the spring I re-turned this land, turning under the rye as a green manure crop. I then harrowed my ground until it was perfectly pulverized. I then took a bull-tongue plow and laid off my rows four feet apart. Then I sowed my fertilizer in the rows, using about 500 pounds to the acre. I then took a narrow calf-tongue plow and ran through the rows so as to mix the fertilizer with the soil, and drilled my corn one grain every six inches. After it had come up I cultivated it according to the instruction of the best scientific growers. On this one acre of corn I went through at the proper time and selected twenty-five bushels of seed corn. In selecting this corn I took into consideration the height of the stalk, where the ear was on the stalk and several other minor points that I will not mention. At gathering time I gathered seventy-five bushels of good corn, besides twenty-five bushels of seed corn, which made a total of 100 bushels off of my acre, while my father gathered about thirty bushels off of the adjoining acres. I sold my seventy-five bushels of corn for $1 a bushel and the twenty-five bushels that I gathered for seed I sold for $1.50. Thus the one acre of corn brought me $112.50. The cost of fertilizer and cultivation was $30, thus leaving me $82.50 net profit.—E. W. Wyatt, Tennessee.

GOOD FOR GEESE

In the year 1911 I was keeping Brown Leghorn hens, and their yearly profit over and above feed, etc., was $2 a head. I have something now that beats them in this section of the world, on the Straits of Juan De Fuca.

In the spring of 1911 I traded a setting of fifteen eggs to a neighbor in exchange for a pair of baby goslings, just two days old. I brought the goslings home and raised them by hand, with no expense except the little watching they required the first three weeks until they no longer needed a brooder.

They ate nothing but grass and such weeds as they liked, no grain or table scraps being eaten by them at all, as I could not coax them to eat anything that did not belong to the grass family.

The next spring the young goose laid thirty-one eggs during March and April and I sold all the eggs but nine that the goose was sitting on, and on May 30 she hatched seven goslings. She raised six of them, and in the fall I sold them for $2 each, dressed, and had five pounds of feathers left, worth 50 cents a pound here. I fed the pair of geese during the winter $1 worth of grain and what vegetables they would eat.

This year the same pair has fifteen goslings worth $2.50 apiece, weighing twelve to fifteen pounds apiece alive and having cost nothing.

This is what I call finding money, and is surely my most profitable crop.

I also have Indian Runner ducks, but that's still another story.—Miss Clara Dorr, Port Angeles, Wash.

RAISING SWEET PEAS IN THE SUBURBS

I think I have a good money-making scheme for any schoolboy or girl who lives in the suburbs.

The year 1911 was my first in business. That year I had six rows of sweet peas, each seventy-five feet long. Three rolls of 36-inch woven wire, 1-inch mesh, and three pounds of seed cost me $7.80. The posts were given me by my father.

A florist in town gave me 40 cents per hundred for all he could handle. After counting up at the end of vacation I found I had made $68.

Last year I tried a few asters in addition to peas. The peas netted $71 and the asters $35. Having such success, I tried again this vacation. I planted the seed very early and they got a good start, but continual dry weather made the bearing season short, so I only cleared $35 on both flowers. The above is my best and only crop.

My father has his vegetables, but none pays as well as my flowers.—R. Paul Kite, Delaware.

GROWING SWEET POTATOES IN ALABAMA

My most profitable crop is sweet potatoes. I will mention a few things I consider essential to profit. Success in growing this crop, to my mind, is getting a big yield and a good price as well.

I bed the seed in an elevated bed, warmed underneath by a small furnace at one end and a flue at the opposite end. By maintaining a moderate heat I grow plants by the first of April. I use plants of uniform size and engage plenty of help when the ground is wet—the wetter the better—and set them shallow. Plants should never wilt in the sun and suffer for moisture. I want potatoes to grow shallow, I plant them shallow, getting them to root immediately.

Some will set the plants when the ground is quite dry, by setting the roots deep for moisture, but nine times out of ten a poor crop is the result from such setting. Few potatoes will set, and those that do are injured in digging. Either draws or cuttings may be used, as preferred. I use cuttings of three joints, pushing two joints down evenly, leaving one outside. The object is to get two clusters of potatoes in the same hill, one from each joint.

Inferior plants, or plants set when the ground is too dry, will produce a stringy crop.

The best time to kill weeds is when they first appear, otherwise the grower pays the penalty in dollars and cents.

In harvesting I use a digger drawn by two horses. The most of the work is done by machinery.

A good crop usually grows shallow. Consequently many tubers are partly exposed. Such exposed potatoes, dug after the frost has killed the vines, will develop black streaks lengthwise of the potato. Cool weather may delay decomposition for a time, but these potatoes are not fit for market.

Sweet potatoes should be stored where they can dry out readily and be kept dry. Uniform temperature is necessary for this.

The largest degree of success is obtained by having the potatoes to sell at any time. I have potatoes to sell almost all the year around, and at good prices, and I get the money. A few years ago "prices" were all we got—no money.

All I have to do is to produce. I leave the selling to our secretary, manager of the County Union of the Farmers' Society of Equity.—G. C. Oscar, Alabama.

ONE BROOD MARE'S PRODUCT

As I have been reading this evening about the most profitable crops others have raised, I feel a desire to write to your good paper of my best money maker.

I bought a large draft mare filly some thirteen years ago for $35. When she became four years old she brought forth a fine mule. The next spring she gave me another. I then bred her to a fine perchon sire and in the next four seasons I got four fine colts.

The mules I sold when three and four years old for $400. Two of the geldings were sold when three and four years old respectively for $500. The mare missed one year and I then went back to the jack and got another mule, which I sold as soon as weaned for $70. This makes $970 in money and I have a mare colt left which is worth $225. The brood mare has done as much work on the farm as any of the other horses.—Charlie Scheffler, Indiana.

EDITOR'S COMMENT.

We give the blue ribbon this time to Kit and Topsy, the old standbys. Possibly our love for the faithful farm horse influenced us. We've owned them, and know their worth. One thing worth the prize money in neighbor Timmons' leter is his assurance that Kit and Topsy are to be cared for in their old age. This is right. Kindness and consideration of of great value to the world. Money isn't all that is worth while. So many people, we are sorry to say, sell their horses, when too old to be of regular service, to some one who wants a "cheap horse," and, being cheap, they receive scant consideration. Good for you, friend Timmons! May your tribe increase and your own shadow never grow less.

Our venerable friend, Mr. Morris, out of his ripe experience, gives the key to success in producing the kind of children in whose hands the future of our country is safe. With an appreciation of the good, the true and the beautiful, by personal contact, possession and enjoyment, such children will be a credit to their parents, and builders of high ideals. Keeping children at home isn't hard if one goes about it right.

Whatever else we may do, if we would succeed we must start right, and in growing crops the best is none too good, and anything less is not good enough. S. D. M. knows that in the seed he plants is the vital spark of vigor and life that makes his melon crop a success. Good seed alone can not bring success, truly, but without good seed the very best of soil and cultivation would be a disappointment. In building profitable crops a good foundation is half the building, and good seed is the best foundation for any crop.

No less interesting or valuable in their suggestions are the letters of the others. Our contributors' department is growing more and more valuable. Here we are seen at our best. Everybody welcome.

Don't Buy an Engine

until you investigate the Temple Gasoline-Kerosene Engines. Sizes: 1¾ to 50 H.P. All Temple Engines are slow speed, heavy duty. They weigh and bulk from one-third to one-half less than horizontal engines, and notwithstanding, they are built stronger in proportion to strains. These advantages greatly increase their range of use.

Temple Engines cost nothing. They pay for themselves in fuel saving. They secure from the machines operated top-notch efficiency. They save from one-quarter to one-half the fuel of the average engine.

Temple Engines Have Won Five 1st Premiums for Low Operating Cost, Stability and Steady Power

This is the Company's 61st year as manufacturers. It is one of the pioneer engine makers of the country, which means reliability of its product.

"PITTSBURGH PERFECT" FENCE

IT IS IN STRENGTH, safety, long life and distinctive appearance that the "Pittsburgh Perfect" line of fences and gates excel. The greatest strength is in the special-formula Open Hearth wire, the toughest, most durable and uniformly dependable wire ever used for fabricating fences and gates. Pure zinc spelter is thickly and evenly applied to the wire by the latest improved galvanizing process, and at every joint the wires are

WELDED BY ELECTRICITY

This exclusive process cuts out the useless wire and needless weight of other makes of fencing, and produces a ***solid, one-piece fabric,*** the EASIEST of any TO ERECT. The frames of the "Pittsburgh Perfect" Gates are also electrically welded at the joints, making one continuous frame of steel tubing, producing the strongest, most durable and satisfactory gates made.

SEE YOUR DEALER—But before buying ***any*** fence, get our new catalogue ***telling how to test wire,*** and showing many "Pittsburgh Perfect" Fences for every FIELD, FARM, RANCH, LAWN, CHICKEN, RABBIT and POULTRY YARD and GARDEN.

PITTSBURGH STEEL CO.

Makers of "Pittsburgh Perfect" Brands of Barbed Wire; Bright, Annealed and Galvanized Wire; Hard Spring Coil Wire; Twisted Cable Wire; Straightened and Cut Wire; Telephone Wire; Fence Staples; Poultry Netting Staples; Regular Wire Nails; Galvanized Wire Nails; Large Head Roofing Nails; Bale Ties, and "Pittsburgh Perfect" Fencing.

Pastoral Paragraphs

Fall plowing helps wonderfully with the work in the spring. Plow deep.

Sam Saxon says it is an uphill business to put a rundown farm on its feet.

Now is the time a willing working tramp would come in handy on the woodpile.

Good health, strong muscles and broad shoulders are an asset not to be ignored. "Jim, take keer o' yerself."

Farming should be a living-making, as well as a money-making, endeavor. The good farmer first makes a good living. If he does that he also makes good money.

No matter what political party you belong to, you ought to belong to a telephone party line. The telephone is more and more a necessity to the progressive farmer.

Farmers have as much time to think as any one. They can think all the time they are at work. Given facts to think about, and they think to some purpose. What farmers want are facts.

Ventilation is an important part of storing seed corn. Cold weather does not injure the vitality of corn kept in a dry, well-ventilated room. The corn should be dried out thoroughly before being stored.

Make it a set rule that each member of the family will do at least one thing each week to make an improvement on the farm, if nothing more than burning some trash or nailing fast a loose board. Keep going ahead.

There are plenty of farmers who have 160 acres of land who are making it yield them an income of $10 per acre each year. It's all in the management. Others with equally as good land fail to do half as well, and work fully as hard.

FACTS ABOUT WHEAT AS A STOCK FOOD

With the largest wheat crop ever produced, and a very decided shortage in the corn crop, wheat comes into prominence as a stock food. There are thousands of farmers who have plenty of wheat, a shortage of corn, and stock to be fed. Corn is high, and while wheat is not unusually low, it is far below its ordinarily relative value compared to corn. Will it pay to sell part or all of wheat and buy corn or cottonseed meal, bran shorts or other foodstuffs?

This problem every farmer to whom it applies must work out for himself. Much depends upon the class and thrift of his stock, the character of his wheat, the market for wheat, and for the live stock, the distance from market, the price of corn and other foodstuffs laid down at the farm, etc., etc. But to arrive at a correct conclusion the farmer must know something of what he could expect in gains from wheat in comparison with the other feeds.

Compared with corn, wheat carries the same total amount of digestible matter per 100 pounds. It has more protein and more starch, but less fat. See the table below:

Name of Feed	Dry Matter	Protein	Carbohydrates	Fat
Wheat	89.5	10.2	69.2	1.7
Corn	89.1	7.9	66.7	4.3

Wheat is more nearly a balanced ration than corn, and is better suited to feeding young and growing animals.

The inferior, shrunken, cracked and broken grain of wheat are as good for feed, pound for pound, as the best wheat. Therefore, in years of low-priced wheat, every farmer should grade his wheat rigorously, removing all inferior grain and feeding it.

Fed pound for pound, corn alone puts on less weight than wheat alone. It requires approximately 470 pounds of corn to make 100 pounds of pork, while 460 pounds of wheat will put on 100 pounds of pork. On the other hand, 500 pounds of corn and wheat mixed, in the proportion of 300 pounds of corn to 200 pounds of wheat, will make about 105 pounds of pork. Cornmeal and wheat middlings, equal parts, will produce 100 pounds of pork for each 440 pounds of mixture fed. The farmer who has wheat, but no corn, can figure out from the price he can obtain for his wheat and what he would have to pay for corn (counting in the cost of hauling) whether or not he should sell wheat and buy corn to feed. This problem was put up to our readers in the issue of Sept. 15, and several solutions are printed elsewhere in this issue.

If the manure is carefully saved and applied to the soil, there is a slight advantage of wheat over corn, as wheat contains a larger percentage of fertilizing constituents, nitrogen, phosphoric acid and potash. In other words, manure from wheat-fed animals is "richer" than that from corn-fed.

Wheat bran is not a satisfactory food for pigs. Bran, however, is a fairly good feed for fattening steers, as 680 pounds of bran and 800 pounds of hay will produce 100 pounds gain on a common, thrifty steer. Wheat alone produces about the same gain in weight as corn alone. A mixture is slightly preferable. Therefore it depends upon local prices for wheat and corn whether to feed wheat, or sell and buy corn.

For dairy cows it has been found that by feeding the same weight of corn or wheat the milk flow is the same, but when wheat is fed the cows gain in weight over corn-fed milkers. For cows to be marketed at the end of the milking season wheat is the more economical with prices of the two grains equal per hundredweight. The best results from milk cows are obtained from mixed grains. The milk flow increases from 5 to 10 per cent when mixed grains are fed. Here again local grain prices are the determining factor whether to feed all wheat or part wheat and part corn or other foodstuffs. It is well, also, to note here that the kind and character of the roughage makes a difference. If timothy or prairie hay, corn fodder or corn silage is fed, wheat will give highly satisfactory returns, while if clover, pea vine or alfalfa hay is fed the advantage of wheat over corn will be less apparent.

With wheat at from 60 to 80 cents a bushel, corn at the same price per bushel, it is our conclusion that it will pay best to feed wheat, or to buy very little corn to give variety. With corn higher, buying corn is not advisable. Lower-priced corn will justify selling wheat and buying corn.

A farmer succeeds or fails according to his judgment, which must depend upon his knowledge. To get the largest possible profits he must know the factors that govern his work. He must know the amount and value of the feeding qualities of the foodstuffs and what he can expect from their use in the different proportions and combinations. Knowledge is power. The farmers, like other business men, must know their business in order to obtain the greatest degree of success.—C. H. Taylor.

FEEDING WHEAT TO HOGS

In the issue of Sept. 15 we published a problem on feeding wheat, which was submitted by a subscriber, offering an award of $1 for what we considered the best answer.

Below we repeat the problem and publish the solutions so far received.

With wheat at 75 cents a bushel, corn at the same price, shorts at $1.50 a cwt., will it pay to sell the wheat and buy shorts and corn to feed a bunch of pigs? Or should the farmer grind and feed the wheat?

Solution No. 1—Corn fed alone to fattening animals yields about 10 per cent less net gain than wheat alone, but when mixed with corn, oats or barley the mixture is superior to any of these feeds. It requires 469 pounds of corn to make 100 pounds gain and 463 pounds of wheat to net the same amount of gain, while cornmeal and middlings mixed yielded 100 pounds gain for 439 pounds of grain, a saving of over twenty-six pounds of grain for each hundredweight of gain. I would sell half the wheat and put the money into corn.—M. O. Gordon, Ottumwa, Iowa.

Solution No. 2—I have always thought that when the farmer let the miller have the grain, while he (the farmer) had the shucks, he was making the miller rich at his own expense. I believe it will pay every farmer to grind, or have ground, his own wheat, with corn added. I am no college graduate, so can not figure as close as you may wish, but will do the best I can.

Wheat at 75 cents per bushel equals $1.25 per hundredweight.

Corn at 75 cents per bushel equals $1.34 per hundredweight.

Shorts at $1.50 per hundredweight is higher than either. The farmer should sell part of the wheat and buy corn to replace it.—Alfred Gregory, Chatham, N. Y.

Solution No. 3—Since 200 pounds of wheat is worth $2.50, and 200 pounds

65¢ FULL ROLL Special Introductory Price RUBBER ROOFING

We furnish cement and nails FREE Anybody Can Lay It Order direct from this ad or write for samples.

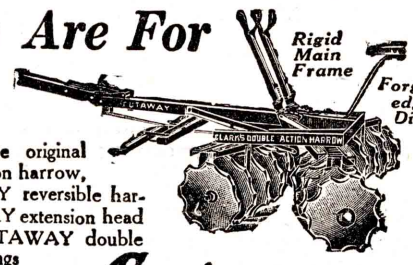
These Harrows Are For Intensive Tillage



Remember, the CUTAWAY disk is the original "cutaway"; the CUTAWAY double action harrow, the original double action; the CUTAWAY reversible harrow, the original reversible; the CUTAWAY extension head harrow, the original extension head. CUTAWAY double action harrows have all four of their gangs compactly hung on *one rigid main frame*, which is the secret of successful double action harrows. That is one reason why double action harrows grind and pulverize the soil finer than other harrows. CUTAWAY double actions are all equipped with the *detachable jointed tongue*, which can be removed or replaced in *one minute*, making the harrow into either a tongue or tongueless machine as desired. Both the single action and the double action are made with extension heads for orchard work, and can be closed for regular field work. They are equipped with the famous CLARK cutlery steel disks, *forged* sharp, and CLARK *hardwood* journals. And remember, CUTAWAY single action harrows are *reversible*. Write for catalog, "Intensive cultivation."

WONDERFUL GALVANIZED Steel Roofing OFFER

Fire, Water and Lightning Resistant. Practically Indestructible.

Special Offer

A fortunate purchase enabled us to secure a limited amount of brand new, high grade corrugated iron and galvanized steel roofing, some of which we are offering, while it lasts, for as low as $1.25 a square of 100 sq. ft., f. o. b. cars, Chicago. This is only one example of how much we can save you on all your roofing purchases. Never before in the history of the roofing business has such a remarkable money-saving roofing offer been made. It doesn't make a bit of difference what kind or make of roofing you have in mind to buy—corrugated, iron, galvanized steel or ready roofing, rubber surfaced, pebble, marble, flint or gravel coated—we can supply your every need with just the kind you want. Write today for—

$1.25 Per 100 Sq. Ft. Buys Best STEEL ROOFING

FREIGHT-PREPAID PRICES

and let us prove that we can save you big money on every kind of Roofing, Siding and Ceiling. We can furnish you the material necessary for re-roofing your house, barn, granary, church, residence, garage or poultry house. We can also furnish you the siding, conductor pipe, eaves trough, and everything needed. METAL ROOFINGS ARE BEST and cheapest in the long run, easiest to lay, longest life, non-absorbent; fire and lightning proof; cooler in summer, warmer in winter; do not taint rain water; with ordinary care will last a lifetime.

New, Heavy, Galvanized Roofing 2¾c per Sq. Ft.

Just another example of how hard we've smashed roofing prices this season. Never before and probably never again will you be able to buy such roofing at this price.

We Save You Money

Now is the time to send in your order for this roofing—don't delay it a single day. Even if you do not intend to use it for several months to come, send your order in now with a reasonable deposit which will protect you in your purchase, and the material will be shipped when you are ready to use it. Metal Roofings are best and cheapest in the long run, easiest to lay, longest life, non-absorbent; fire and lightning proof, cooler in summer, warmer in winter; won't taint water; with ordinary care lasts a lifetime.

Chicago House Wrecking Co.

Prominently known everywhere to the public for 20 years as the great "Price Wreckers" and now owned by the Harris Bros. Co., have decided that their best interests require that the name of the principal owners of the company be more prominently brought to the public's notice. There is no change in our business, except that the four Harris Bros. will, in the future, advertise and sell their goods, under the name of the Harris Bros. Company, instead of the Chicago House Wrecking Co.

Write Today For Free Samples—and Freight Prepaid Prices

REMEMBER, no matter what kind of roofing you are contemplating buying—corrugated steel or ready roofing—it will pay you to hold off a few days until you first get our free samples and freight prepaid prices. Just drop us a postal. We will absolutely prove to you that, quality for quality, we are underselling all competition by a wide margin. You run no risk in sending us your order. Our binding guarantee, backed by this $10,000,000 Company fully protects you. Write for free samples today.

HARRIS BROS. CO., 35th & Iron Sts., Dept. BN-135 Chicago

of corn and shorts (100 pounds of each) is worth $2.84, wheat is the cheaper feed. Corn and shorts are the best-balanced ration, however, and in point of returns would be cheapest. —Laura Lewallen, Arkansas.

P. S.—Tell Mr. Endfield to try gasoline on those thistles.

(Gasoline makes lots of other things "go" and it may do the same with thistles, even though they are great "stickers." Try it, Endfield, and report.—Ed.)

The Editor's Solution—Inasmuch as it takes 470 pounds of corn (which, at 75 cents a bushel, is worth $6.30) to make 100 pounds of pork, the corn produces pork at a cost of 6.3 cents a pound. Of wheat, 460 pounds (worth, at 75 cents per bushel, $5.75) produces 100 pounds of pork at a cost of 5¾ cents per pound.

Two hundred and twenty pounds of corn, worth $2.95, and 220 pounds of wheat, worth $2.75, will make 100 pounds of pork at a cost of 5.7 cents per pound. With wheat and corn at the same price per bushel it will not pay the farmer to haul his wheat and exchange it for corn. With wheat at 80 cents per bushel, and corn 60 cents, wheat would make pork at a cost of 6 cents, and corn at 5 cents. Corn would thus effect a saving of $1 per hundredweight, or about 12 cents on each bushel of corn fed. Under such prices one could sell 1,000 bushels of wheat, buy 1,300 bushels of corn and clear about $150 by the exchange, so far as cost of feed is concerned. The price of hogs, however, must be considered. Will the market prices for the hogs make it profitable to feed either wheat or corn at 75 cents per bushel? With hogs at 6½ cents or above it will pay. If below this figure it will pay the farmer to sell his hogs as soon as marketable, and then hold his wheat for the higher price that is almost sure to come.

Subscribers are invited to submit other problems to UP-TO-DATE FARMING for solution in this way. One dollar will be paid for the best solution of each.

Shorty's Shortcuts
(By Himself)

Every now and then neighbors fall out with each other over something that comes between them. Like as not, it is the line fence. Neighboring women talk over line fences, and neighboring men fight over them, and one is about as big a nuisance as the other. A fence, if it is what it ought to be, can keep cattle from passing back and forth, but if it isn't right where it ought to be it don't keep cuffs and cuss words from crossing the line. It usually takes two lawyers, two lawsuits, two fights, two doctors, the county surveyor and the whole neighborhood to move a line fence six inches either way, and then only half the folks are satisfied. Farmers like to see a good thing come their way, but this doesn't include line fences. In the old days, when worm fences of oak rails, staked-and-ridered, were the only kind we had, I don't blame a man for fighting before he would move his fence. Most men would about as soon die. If they had to move it over on their own land they would prefer to die.

Division lines between farms are pretty well established now, but the fence problem is not settled on the average farm. While the line fence is not so much a source of trouble, there are few really well-fenced farms. Every farmer has more or less fence building to do, and very frequently a fence must be moved. At least the farmer thinks so, which amounts to the same thing in the end. It is almost as big a job to move the modern fence as the old timer. For that reason, when I bought my farm, I made a study of the fields, planned my farming system so that my fences would be permanent and very little fence moving would be necessary. This meant a lot of it at the start, for the fences were not where I thought they would better be. And now, let me tell you, if you ever saw a very short, very fat man hugging a fence post in a vain endeavor to lift it out of the ground, you saw something that looked a lot funnier than it was. I know what I'm talking about. It takes a long, lean, lanky fellow to wig-wag a fence post out of the ground. When a man gets so fat he can't wiggle a fence post loose without pounding himself on the point of the stomach with the post, it is time he invented a new method of doing the work, or hiring a man with a pit to his stomach instead of a point. After wearing out the front of two or three new pairs of overalls, I studied out a plan that beats all others hollow. I rigged up an outfit to make my mules pull the posts.

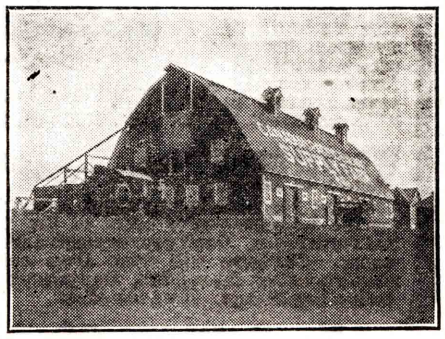
The outfit consists of, to-wit: One oak plank, two inches thick, six inches wide, six feet long; one log chain, one wagon, a pair of mules and a driver. I fasten one end of the chain around the rear axle of the wagon, the other around the post, next the ground. Then I put the plank at an angle from the top of the post to the ground toward the wagon, letting the chain run over the top of the plank, and then drive ahead. As the plank straightens, the chain lifts the post out, easy as you please, and I put it right into the wagon. I only wish I could invent as easy a way to set those same posts again in the ground. Brains help in many things, but it takes a maul and muscle to drive a fence post.

Yours as ever, SHORTY.

RAILROAD HELPS BETTER FARMING

The Canadian Pacific railway has started demonstration farms of its own along its line in the Canadian northwest. This road employs 4,000 men in its sleeping and dining cars alone in that section, and has provided houses for them all across the continent from Toronto to Vancouver. Not only homes, but food supplies, for both employes and the traveling public must be had when needed. The difficulty experienced in obtaining these supplies led the railroad company to start demonstration farms to show what could be done, and profitably done, in the way of producing milk, cream, vegetables, eggs, etc. The farmers near these farms were surprised to see the difference between scientific farming and the old-fashioned way.

The products from the demonstration farms were doubled, and farmers have not been slow to perceive the advantage of copying the farming methods of the company, which today obtains increased quantities of supplies as a consequence of the lesson learned. Milk and cream, pasteurized, are put in sealed bottles, with the date of milking shown thereon, and the bottle is only opened in the presence of the passenger. The eggs, too, are stamped with the date, packed in cartons and sealed for the commissary store, to be turned over to the



Dairy Barn on a C. P. R. Farm

dining cars as needed.

The immense equipment of the Canadian Pacific railway may be illustrated from the fact that this company could transport an army of 30,000 persons from Vancouver to Halifax, giving each a berth to sleep in and supplying 90,000 meals per day, or practically half a million on the five and a half days' journey across the continent.

In order to look after the welfare of the 4,000 employes, in connection with the sleeping and dining car attendants, the men are housed by the company. The quarters are home-like, provided with baths, clean clothes, medical attention and so forth, so that when the men take their trains they are fresh, clean and ready for work.

The C. P. R. is the only company on the continent which has gone to such trouble and expense with respect to its employes and the comforts of its traveling patrons, whose every need and want is supplied from the best the world affords.

Dairy farmers in Cook County, Illinois, making bids for contracts to supply Chicago institutions with fresh milk direct from their farms, bid as low as 4½ cents per quart. Members of the North Ohio Milk Producers' Association in convention declared they could not produce milk for less than 5½ cents per quart. Query—Can the Illinois farmers sell milk at less than 5 cents a quart and make money?

Every farmer who wants to know more about farming by irrigation should write to the Southwest Trail, Chicago, for a copy of the September issue, which is full of examples of successful farming by pump irrigation. Also send for a new book entitled "Irrigation," which will be sent free of charge to any one interested by Henry R. Worthington, 115 Broadway, New York.

Doesn't Walk

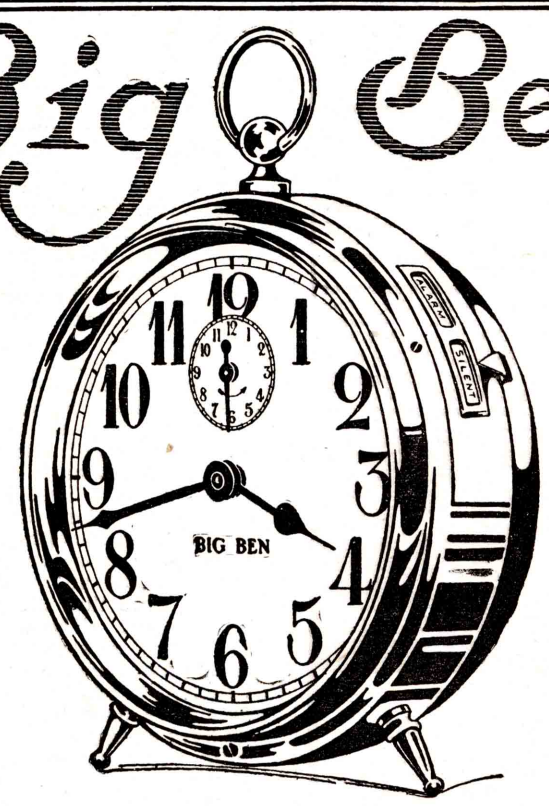
Detroit, Kansas City, Minneapolis

Big Ben



He works 36 hours at a stretch

And overtime when needed. Anyone can afford him, for he only costs $2.50 to buy and nothing at all to keep. 3,000,000 American homes have taken advantage of this and have employed him to get the family up in the morning.

Even if you have a *preference* about waking up, he's ready to get you up *your way*. If you like to be wakened gradually, he'll ring little short rings every other half-minute for ten minutes. If you're a hard sleeper and need a strong dose, he'll sing out with a long, vigorous, full five-minute ring. Either way, you can shut him off at any point.

20,000 jewelers are necessary to take care of the demand he's created for himself. He's made a World's Record as a success.

He's invaluable on the farm, because he not only helps you get the hands out on time, but serves as a first-class clock to tell the *day*time by.

He stands 7 inches tall, is triple nickel-plated—has a vest of good implement steel that keeps him hardy; large, bold figures and hands to tell the time by in the dim light of morning. He is as fit for the parlor as the bedroom.

If your jeweler hasn't him, send a money order for $2.50 to *Westclox, La Salle, Ill.*, and he'll come anywhere in the States by parcel post, prepaid.

He bears this imprint, "Made in La Salle, Illinois, by Westclox," which is the best alarm-clock insurance you can buy.

DE LAVAL
CREAM
SEPARATORS
Make Fall and Winter Dairying More Profitable
THERE are special advantages in using a good cream separator during the fall and winter months.
The milk from cows long in lactation is hardest to cream—and likewise hardest to separate with an inferior separator.
Moreover, cream and butter prices are highest, so that the waste of gravity setting or a poor separator counts for most.
Then there's the sweet, warm skim-milk for stock feeding, alone worth the cost of a separator in cold weather.
There is surely no reason to delay the purchase of a separator or to continue the use of an inferior one. A De Laval machine will save its cost by spring, and may be bought on such liberal terms if desired as to actually pay for itself meanwhile.
See your local De Laval agent.

Live Stock and Dairy

It is quality that pays with live stock.

Clover hay is fine for the pigs. Let them have all they will eat of it.

Sheep can not stand abuse and thrive. Neither feast nor famine is good for them.

Know the exact date your sows will farrow. Then be Johnny-on-the-spot to care for them.

A well-bred, well-fed Hereford steer is one of the best "profit-paying industrial stocks" we know of.

Sam Saxon says he never saw one of the old-timey horse doctors who ever had a good horse of his own.

Plenty of pure water is cheap. Give all kinds of stock all they want of it, and offer it to them frequently.

When ensilage is fed it is not necessary to feed much corn. Oats is best for grain when feeding ensilage.

Daily exercise is an important part of keeping the work horses in good condition during the winter, and having them so in the spring. When not working, turn them out for a run.

High-priced beef will bring mutton into greater favor and use. Sheep can make meat with more economy than cattle. Feed sheep 464 pounds of hay and 383 pounds of grain and they will put on 100 pounds in weight. Cattle fed 464 pounds of hay require 914 pounds of grain to make 100 pounds in increased weight. Sheep are the poor man's friend, if he handles them right.

MILK, BUTTER OR BEEF

There are thousands of farms throughout the country where cows are kept for milk and butter. The milk is hauled to a creamery (co-operative in many instances) and after being "separated" the skimmed milk is returned to the farm and fed to calves and pigs.

For many years a controversy has held the attention of this class of farmers. The question is: Is the dual purpose cow as profitable as the strictly dairy type? Some authorities have gone so far as to say there is no such animal as a dual purpose cow—she is either a beef animal, a dairy animal or else, if neither of these, she is nothing, for she can not be both.

There can be no question but that there are cows that are good for both milk and beef. The actual existence of thousands of such animals on our farms is proof undeniable. Shorthorns, Red Polls, Lincolnshire Reds and South Devons have been bred so that entire herds have averaged over 8,000 pounds of milk per cow, and when it comes to putting on fat and producing beef of high quality at low cost, they are superb. They are very profitable, for the owners of such herds make money. To attempt to quarrel with these well-known facts is pure foolishness.

But here is the real meat of the controversy: Should these same farmers dispose of these dual purpose animals and replace them with Jerseys, Guernseys or Holsteins of the milk and butter type, or Herefords, Angus or beef-type Shorthorns of the beef-producing type, would their net profits be greater or less? Would the increased amount of milk and butter from the dairy types, or of beef in the strictly beef types, outweigh in profit the advantages of the dual purpose type? The calves, steers, inferior milkers and superannuated milkers of the dairy type are not nearly so valuable for the meat market as the cattle of the dual purpose type. Will their greater value as milk producers more than counteract this inferiority? It may be that the dual purpose cow will not produce quite as much profit at the pail as the dairy cow of equal breeding, or as much beef at as low a cost as the purely beef type, but does not her combined advantages outweigh the single advantages of these other types on the average farm, where enough cows and hogs are kept to consume the grain and grass grown?

This is a problem of great interest and importance to thousands of farmers. Send in your solution. One dollar for the best one received. Solutions will be printed in the Dec. 15 issue.

FINE BUTTER MAKING A SCIENCE
No. 2

Good butter is a product of science. There may be more than one way to make good butter, but certain details must conform to certain rules, or the product will not be satisfactory.

What we mean when we say "good butter" is the kind that has a certain color, texture, flavor and keeping qualities. It takes them all combined to make good butter, and as we explained in a previous issue, butter that is to all appearances "good" when first churned may not long remain so. Unless it is made right, it soon deteriorates. The butter maker who wants to build up a reputation and a profitable trade in high-class butter must meet all the requirements.

The first thing in butter making is good milk. It must be kept pure and clean. The care of the barn, the cow, the milkers and the milk utensils must all be considered.

The second consideration is the cream and its management. Cream from perfectly good milk may be so mismanaged prior to churning that a strictly high-class produce is impossible.

The third matter is churning. There is science in churning, also. The churn must be of the right kind and properly operated, or the result may be—in fact, will be—a disappointment.

After the butter is properly churned it must be properly washed and worked and salted, or all the precautions that have been taken up to this point will go for nothing. Then it must be put up for the market in a manner that will win the high approval of the handler, the groceryman, and the ultimate consumer.

This is the outline of successful butter making. To know what good butter is, and what steps are necessary to produce it, is the need of the home butter maker. In our next issue we deal with the first element—milk.

THIS O.I.C. SOW WEIGHED 932 LBS. AT 23 MONTHS OLD
IONIA GIRL
I have started more breeders on the road to success than any man living. I have the largest and finest herd in the U. S. Every one an early developer, ready for the market at six months old. I want to place one hog in each community to advertise my herd. Write for my plan, "How to Make Money from Hogs." C. S. BENJAMIN, 36 St. Bl. Portland, Mich.

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.
Will reduce Inflamed, Strained, Swollen Tendons, Ligaments, Muscles or Bruises. Stops the lameness and pain from a Splint, Side Bone or Bone Spavin. No blister, no hair gone. Horse can be used. $2 a bottle delivered. Describe your case for special instructions and Book 2 K Free.
ABSORBINE, JR., the antiseptic liniment for mankind. Reduces Strained, Torn Ligaments, Enlarged Glands, Veins or Muscles. Heals Cuts, Sores, Ulcers. Allays pain. Price $1.00 a bottle at dealers or delivered. Book "Evidence" free. W. F. YOUNG, P. D. F., 102 Temple St., Springfield, Mass.

Two Money-Making Rules for Every Farmer—
Keep Out the Weeds and Worms

You can't make money raising weedy corn—or wormy stock. It's impossible. Worms cause even bigger loss than weeds, because most farmers don't fight what they don't see. But one thing's sure, and that is—
Every Farm Animal Needs SalTone
Government reports say nine out of every ten animals are wormy—that the annual worm loss is more than $25,000,000.00. It's nine chances out of ten YOUR animals are wormy.
SAL TONE Will Stop Your Worm Losses.
What It Is
SalTone is the oldest medicated salt on the market. John E. Robbins, the famous stockman, has been making it for over thirty years. You feed it like common salt.
Send the Coupon and Try 100 lbs. of SAL TONE
The Wormicide and Conditioner for All Farm Animals.
What It Does
SalTone has made International prize-winners for Mr. Robbins—you've heard of the famous SalTone herds. Don't pour expensive feed into worms. SalTone will drive them out—will make your stock fat and fine. One penny's worth lasts a hog 12 days. Read our offer:
Read These Letters
I have not had a sick animal since I commenced to use SalTone. Oscar Robards, Robards, Ky.
SalTone saved me from losing a bunch of 30 hogs. Louis Krautz, Higginsport, Ohio.
SalTone made my stock do many times better than ever before. Albert Miller, Batavia, N. Y.
My hogs wintered better than ever before Earl Rogler, Atlanta, Iowa.
Try SalTone 60 Days—See for Yourself
Send the Coupon—No Money

Poultry Pickings

Skim milk is fine to wet the morning mash.

Keep every hen busy a part of the day at least.

Common sense, abundantly applied, is anexcellent thing for poultry.

Don't let apples rot under the trees if you can help it. Apples are excellent for chickens.

Now is the time to put the young cockerels, old hens, etc., intended for the market in pens and feed for fat.

Fat makes the meat of a fowl more tender, juicy and delicious. Put your fowls in shape before sending to market.

Hens being saved for breeders need roomy quarters during the winter—light, airy, but not breezy. Fowls need plenty of air, but not in rapid motion.

We want stories of successful work with hens, ducks, turkeys and geese for this department. Write us your experience.

Sam Saxon says that many a poultryman attends to the feeding and housing properly, and then loses out by neglecting the culling.

There are three ways to make money in the poultry business, says an advertisement. Yes, and thirty ways to lose it if you don't go about it right. Learn the right ways.

Concrete makes a good floor for the henhouses. No rat, skunk, 'possum or weasel is going to go through it. A good idea is to make the foundation walls to a height of four or five feet also of concrete.

Chickens need some salt in their food in winter. In summer green grass furnishes salt. Highly salted food, like pickled pork or salt fish, is fatal to fowls. Feed salt by salting the warm mash "to taste."

If the fowls are crowded in the poultry house, sell some of them. The money thus obtained will be clear profit, for the others, with plenty of room, will do as well as all of them crowded together. Do you know which ones to sell? If not, you don't watch your birds as you should.

THE MOST POPULAR BREED

The question of breed is one always before us, and one that will never be settled, at least to the point where one breed will be admitted by all to be the most profitable, for the words "popular" and "profitable" are synonymous when applied to poultry. And as to profit, there are profitable individuals in nearly every breed found on the farm. After all, it is not breed, but individuality, that makes fowls profitable.

But, object some, I raise the —— variety. Some years ago I raised the —— fowls and I find that the breed I now have produces a great many more profitable individuals than the other.

We do not doubt it in the last, yet this very condition was brought about because some one carefully selected a few individuals from that breed and developed a highly productive strain. It is strain, not breed, that has accomplished the result. Other breeders have developed strains of the breed discarded by this objector that are fully equal in productiveness to those of any other breed.

As a matter of fact, class, strain and individuality are all that one needs to consider in building up a profitable farm flock. As for breed, that depends upon class and the personal likes of the owner. Class depends on markets, if one desires the most profitable fowls. There are three classes of utility fowls—the heavy meat producer, the all-purpose bird and the egg machines. Suit the class to your market, the breed to your fancy, but pay close attention to individuality and strain and you will soon have what will prove a very popular (with you) breed of fowls.

New breeds have replaced some of the older ones in superficial popular favor. The Black Langshans and the Silver Wyandottes are not now regarded as being in the same class as producers with the Orpingtons or Leghorns, yet in the great Missouri egg-laying contest the Silver Wyandottes led all the other breeds, and the Black Langshans came second.

The Black Langshans won the Australian egg-laying contest two years ago. Leghorns from England won an egg-laying contest in an eastern contest. A Plymouth Rock hen has a record that has seldom been equaled by any individual from any other breed.

If you want the most popular and profitable breed, produce it yourself by breeding up your own fowls. If you do not feel capable of doing this, get your foundation stock and renewals from a breeder of known ability as a utility breeder. By carefully watching your flock, culling the laggards and feeding for heavy production, either for eggs or meat, or both, there is no reason why you should not have one of the most profitable flocks in the country, and the color, shape or name of the breed will be of no consequence.

TAKE MORE INTEREST IN POULTRY

If the farmer would take half the interest in poultry that he does in other stock, pure bred chickens would take their proper place on the farm. Aside from their value as layers and meat producers they have another advantage and another sourse of revenue is possible. Pick out the best ones and show them at nearby poultry shows. Advertise the stock and sell eggs for hatching, and also breeders to your neighbors. Not only will it become profitable but fascinating work as well. By all means get pure bred poultry as well as pure bred horses, cattle, hogs and sheep on the farm.

Fully Accounted For

Hubby—Did you spend as much before we were married as you do now?

Wifey—Certainly I did.

Hubby—Then I fully understand why your father was so glad for us to marry.

Hard to Do

Teacher—My boy, you don't put force enough into your declamation. Just open your mouth and throw your whole self into it.

Pupil—Gee, I couldn't do that!

Woman's Work and Welfare

Helpful Hints for Homefolks

The Home Builders

A man can build a mansion
And furnish it throughout;
A man can build a palace
With lofty walls and stout;
A man can build a temple
With high and spacious dome,
But no man in all the world can build
That precious thing—a home.

No, 'tis our happy privilege,
O woman, far and wide,
To turn a cot or palace
Into something else beside,
Where brothers, sons and husbands
With willing footsteps come—
A place of rest, where love abounds,
A perfect kingdom—home.

FIRESIDE SOCIAL CHATS

By Aunt Sophia

OUR little department is beginning to grow really quite interisting to me, and I am sure many others find it so. I know there are numbers of our women readers who can, and will ere long, join us in making this department more interesting and helpful. Every woman who may have a message to bring, a burden to share (for did not Jesus bid us bear one another's burdens?) or a favor to ask, is cordially welcome. Enter the portals of our Woman's Progressive Social Club. If you can only send a single thought it will be worth while.

* * *

The editor permitted me to read a communication from "Uncle John." It was not intended for our department, but I begged for it so hard he let me have it. And I wanted it particularly because we folks here where the paper is printed all know Uncle John personally. A kindly man, mellowed by the experiences of a useful life, with that rare touch and insight into the hearts and hopes of humanity that is only acquired by a great and noble soul with a broadened vision. Although approaching the twilight zone of life, Uncle John sees into things with a keenness of vision not found in one in a thousand in the full vigor of early manhood. And he has the happy faculty of letting pleasures flow from his ready pen, "which is why" I wanted him with us for this time.

* * *

The country club idea is spreading in a really wonderful way amongst the farm women, and it would spread a great deal more if the average farmer's wife had a convenient way to go to club meetings. Every farmer's wife should have a trusty horse and a buggy so she can go when and where she likes. Women as well as men stay too close on the farm. I have no use for the gadabout, and far be it from me to encourage neglect of home duties; but a club meeting once a week, or at least once each fortnight, will do wonderful things in breaking the humdrum mototony of farm life, and will contribute greatly to its pleasures. It only takes two or three "leading spirits" to institute and conduct such a club. And right here let me unburden my mind on one thing. Club meetings, to be of real value and greatest helpfulness, must be absolutely democratic. There must be no "cliques," no "class distinctions." All must meet on equal terms. The calico dress must be given the same consideration as the silk gown. No one can be neglected or permitted to feel out of place. No one is one whit better than anybody else, after all, so why make out as though we think we are. Some of us have had better opportunities, greater advantages, that is all. And therefore added consideration should be given to those in less fortunate circumstances. So don't make the club a parade ground for fancy dresses.

* * *

I have been wondering if we can not have on exchange circle, for the exchange of little things, such as books, quilt patterns and, in fact, anything we have we do not now need for something others may have. A really and truly "swapping" club. We have parcel post now, so postage on such merchandise is not burdensome. What do you think of it?

* * *

Well, Mr. Houston, the Secretary of Agriculture, is getting thousands of letters from farmers' wives, I am told, in response to his request that they let him know how the department of which he is chief can help the woman on the farm with her share of the duties. Mr. Houston says he is getting many practical suggestions that will be carried into effect. If there is any good to come of it for us, we must be quick to take advantage of it. I shall try to keep you fully informed.—AUNT SOPHIA.

COUNTRY CLUBS

For farmers' wives in general, and myself in particular, I think a farmers' wives country club has meted out more real profit along all lines than any "crop" which ever grew. Our club is called the Royal Home Workers. We meet once each fortnight on Thursday afternoon. Each member pays $1 a year to cover the cost of the beautiful little calendars, of which we are proud, and other incidental expenses. At these meetings we come together with new ideas to be exchanged better methods of performing the various talks, all the 'shortcuts" are brought forward. Then the literary work in which all take part, and the cobwebs are brushed from tired brains. The current events which have stirred us through the week, and last, but not least, the social side, that subtle influence of the hearty handshake, the friendly greeting, the refreshment hour, all to broaden the soul and increase our capacity for being and doing.

How we all look forward to these meetings! We plan our home duties with greater care in order to have more time for the development of our neglected intellects. We write papers and are ever searching for something new and inspiring. Farmers' wives who read this and haven't a country club, get together and organize; you will be surprised to see how the years roll back and you take on a new lease of life.—MRS. F. S., Iowa.

TO HAROLD'S MOTHER

Dear Aunt Sophia: I think your page is just what we farmer women need. I hope all will contribute something to make it helpful. I would like to say to Harold's mother, "Don't." By all means not now. He is only 16. If he is easily influenced by his young associates, and most children are at his age, in a few months a lad of young associates can undo all the teaching and training you have given him in all those sixteen years, and he will come back to you thinking home is a dull, slow place and become a disappointment to you in many ways. I don't mean he is sure to fall in with company that would thus influence him, but he is liable to do so. Better not take any chances until he is older.

Give him all the opportunities at home your means will admit, and when he gets older, if he feels the need of the training of the agricultural college, he will still have the way to get it. Then he will be more able to resist any evil influences that might beset him.—Laura Lewallen, Hot Springs, Ark.

DOMESTIC SCIENCE

THE whole secret in making stylish and becoming dresses lies in correct cutting and proportion. Clothes without these qualities can never be well made nor becoming to the wearer. There must be a feeling for lines which must be cut true. Do not think that to vary a fourth of an inch more or less in cutting will make no material difference. It may not and again it may spoil the effect of the whole dress. The habit of cutting true lines is easily formed and is the basis of good dressmaking.

If you want to become a good dressmaker it is necessary to learn that the scissors play a more important part than the needle.

A skirt should be fitted and hung from the hips rather than the waist. Whether we wish to make a skirt with the straight lines of the present styles or one with more fullness at the bottom the same principle holds true. In fitting, first adjust the skirt properly around the hips so that it falls in becoming lines. After this fit it and pin it to the waist.

The direction in which the seams of the skirt run has a great deal to do with the general effect of the skirt. If they run toward the front they make the wearer look as if she were tilted backwards. They should slope toward the back. The more flare at the bottom the more slope toward the back.

With a few of the primary principles in mind it is comparatively easy

From Childhood to Old Age
Kimball Pianos
Are Pleasing in Tone
Write Today for Beautifully Illustrated Catalogue

Mrs. Piano Buyer Before making the purchase of a piano for your home and children we are sure you will want to see our catalogue—you will want to know about our new plan of selling and distributing our pianos direct from our factory and from our various factory distributing points. Write us today for

Factory Distributing Prices and Convenient Payment Terms

and learn how easily you can secure the STANDARD Kimball Piano for your home, no matter where you live, on terms to suit your convenience. Monthly, quarterly or annual payments can be arranged.

Valuable Features of the Kimball

Kimball Pianos possess many important exclusive features such as our *hermetically sealed* metal covered pin block—the heart of the piano—impervious to dampness, unaffected by heat or cold, strings scientifically treated to prevent rusting, and other valuable features that give the Kimball that *heirloom value* and most splendid musical quality.

Kimball Player-Piano Perfect in Detail

There are very few persons who are not lovers of good music. Unfortunately there have been but a limited number that could produce it, but now with a Kimball Player-Piano in the home, the young, the old and even the feeble "*indoor*" people can play and reproduce the "Grand Opera" or play any and all of the old time songs or popular pieces.

A Kalamazoo Direct to You

to draft a plain skirt pattern. A little practice in this line will make it possible to copy skirts from magazines. The ability to do this is particularly valuable in remodeling old garments, for then adaptions of styles will be easy. Sometimes the cloth of the old garment is cut into such shapes and sizes that no pattern can be bought to exactly fit the need.—Mrs. A. R. Kohler, in the August Farmers' Wife.

LATE AUTUMN STYLES

THE matter of outfits for school for the junior members of the family naturally suggests new garments for the older ones. These need not be elaborate, for the earlier fall has undoubtedly seen at least one new dress added to the outfit. In the way of the more simple frocks there is nothing to equal the one-piece models and these are either designed as such or are formed by the use of a waist and skirt that harmonize.

In the dresses made in one piece we find the drop shoulder as one of the most noteworthy features. No. 6288 shows how prettily this is introduced in a very simple design, and the same dress gives a good idea of the lines of slenderness which are the prevailing mode.

Other dresses are somewhat more ornate. For instance the one shown in No. 6312. This has the new vest effect which is now so popular and the little frilled guimpe is easy to vary so that the dress has many changes possible.

Quite a novelty is shown in the empire apron in No. 6300. This could quite easily take the place of a dress and it can be made as one without losing its practical qualities.

There is certainly an added amount of material in the newer skirts, even when there is no increase of width. Pleats are introduced at the seams, folds are gathered into straps and other devices are used. Above all we find nearly all the newer skirts gathered around the waist, at least at the sides and in the back.

The manner in which these new additions are introduced into the late skirts is seen in the misses' costume in No. 5988. The same fashion is found in ladies' gowns, while one of the latest skirts will be found in No. 5954. This can be combined with any pretty waist and made into a stylish costume.

It is said that the normal waistline will soon displace the raised waist. If this be true, let us make the most of the high waist while we have it, for it is certainly becoming to all figures, slender and stout alike. We do indeed find the normal waist already in many dresses, but it is somewhat disguised by the use of sashes and girdles, which are perhaps the most pronounced feature of the late fall styles.

What is Now the Fashion

6288. LADIES' DRESS.—Serge or cheviot can be used to make this dress, with the collar and cuffs of contrasting material. The closing is at the front and either the long or short sleeves can be used. The skirt is cut in four gores and can be used with either the empire or the regulation waist line. Sizes 34 to 42 inches bust measure. Medium size requires 4¼ yards of 44-inch material and three-fours yard of 27-inch contrasting goods.

6300. LADIES' WORK APRON AND CAP.—This garment is called an apron because it can be worn over the dress, but it can also take the place of the dress, as is made just like one. It has an empire waist line, with a plain blouse and a plain gathered skirt. Sizes 34 to 42 inches bust measure. Medium size requires 5¾ yards of 27-inch material.

5954. LADIES' SKIRT.—This skirt can be used to complete a coat suit or it can be worn with separate shirtwaists. It is cut in two pieces and closes at the left side of the front. Any of the soft woolen materials can be used for this skirt. Sizes 22 to 30 inches waist measure. Medium size requires 3¼ yards of 36-inch material.

6312. LADIES' DRESS.—This simple dress opens in front, a little to the left of the center of both blouse and skirt. A smart collar trims the neck, which is cut out deep in front to display the front of a one-piece guimpe which is worn with the dress. The skirt is cut in three gores. Sizes 34 to 42 inches bust measure. Medium size requires 4¾ yards of 36-inch material for the dress and three-fourths yard of 36-inch lining and one-half yard of 22-inch net for the yoke.

5988. MISSES' DRESS.—This frock closes at the front and has a six-gored skirt. The sleeves may be either long or short. Serge, cheviot or broadcloth can be used for this dress, with the collar and cuffs of contrasting material. Sizes 14, 16 and 18 years. Medium size requires 5½ yards of 36-inch material, with 1⅛ yards of 24-inch contrasting material.

6035. LADIES' APRON. Linen, muslin or cambric can be used to make this apron, with the trimming of embroidered edging. The apron is made with a bib, which protects the front of the waist. The apron ties with two strings in the back. One size requires one yard of 36-inch material and 2¼ yards of 11-inch wide edging.

6356. GIRLS' DRESS.—This little dress shows the stylish low-belted effect which is the newest thing in children's fashions. The short skirt is kilted and the blouse is fulled slightly into the stitched belt. The long or short sleeves can be used. Sizes 4 to 12 years. Medium size requires 2⅝ yards of 36-inch material.

Price of Patterns, 10 Cents Each

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

THOUGHTS AT RANDOM
By Uncle John

A large portion of the United States felt the need of water during the past season. What a blessing a good pond on each farm would have been! Aside from affording a perpetual water supply, a good pond may be stocked with fish, and if properly cared for and kept clean it may afford an ice supply in winter and a skating place for the young folks.

* * *

During the extreme heat of last summer a supply of ice at the farm home would have been a great thing, wouldn't it? Why not put up a supply this winter? It is a simpler proposition than many farmers think.

* * *

The up-to-date farmer does not allow trash to accumulate in and about the barn and outbuildings. Besides being in the way, it affords rats a harbor and enables one of the very worst pests to multiply.

* * *

Do you think too many apples are produced in this country? Noting the great quantities that go to waste in the orchards, one would say yes, but considering the high prices charged for apples in the cities, and the number of people even in the rural districts that have no apples to use, we are compelled to say no. Bad marketing and worse distribution. That tells the tale of the fruit situation. Help get a better marketing system.

* * *

Some one has wisely said that the Lord helps the farmer to raise stuff, but nobody helps him to market it. The only help for that is for the farmers to help one another. Come to think of it, that is easy if they only would.

* * *

You'll need the cellar pretty soon now. In what condition is it? Like everything else, it needs attention, and right now it should have a thorough cleaning out. Things that ought not to be there accumulate in the cellar.

* * *

Save the steps. There is many a one between the cradle and the grave, but that is no reason we should be reckless of how many we take. Do not neglect the chores or any of the work, but see to it that everything is arranged conveniently so that unnecessary steps need not be taken.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

OUR CADET SCHOOL is still in session, and the young people of the United States, and even of other countries, are learning important lessons. Conditions are different from what they ever were before and it is very clear that, though "all men were created equal," all have not now the same opportunity. Hence we are teaching equity in an effort to bring about equal rights and privileges in all the business affairs of life. The Cadets of Equity are thinking along these lines, and they'll be masterpieces in the new structure that is being erected for the good of all.

DEAR CADETS: Since I returned this spring from college, where I had been for two seasons, I have been reading UP-TO-DATE FARMING and the Cadet letters, which I like splendidly. I also took violin lessons, and I like to play. I am not really a farmer, as my father owns the Richfield flour mills and we are now having a new concrete dam built. I would appreciate postals or letters from Cadet boys and girls.—Frederick J. Mayer, Richfield, Wis.

DEAR CADETS: I am a girl of 16 years and live near the Industrial Home for Girls. They have three large buildings, and it is a beautiful place. I would like to exchange cards with all the boys and girls and will answer all received.—Clara Jenkins, Industrial, W. Va.

DEAR CADETS: I am 21 years of age and live in the small village of Wauneta, near the southern line of Kansas. I have been primary teacher in the Wauneta school during the past two terms, but this term I am teaching ten miles from home. I attend Sunday school and church every Sunday that it is possible for me to do so. I find great pleasure in reading the Cadet letters, and would be pleased to receive cards from the Cadet friends. I would like a card from each state in the Union, and will answer all.—Myrtle Doty, Wauneta, Kas.

DEAR CADETS: I became interested in the Cadet page only a short time ago, and consequently have missed a great deal, but I hope to make good from now on. I am a farmer boy of 20 years, and live on a farm of eighty-nine acres. We take several other newspapers and magazines, but UP-TO-DATE FARMING is my favorite. I have heard from twenty-two states, as follows: Ohio, Indiana, Missouri, Kansas, Pennsylvania, California, Florida, Iowa, Colorado, Wisconsin, Nebraska, Kentucky, Michigan, Virginia, Tennessee, New Jersey, South Carolina, Texas, Minnesota, Arkansas, Oklahoma and Montana. I would love to hear from some girls and boys of Arkoe, O., as I hope to go there in the near future. I would like to receive photos also. Will try to answer all.—Ernest E. Bailey, Rock Fork, W. Va.

DEAR CADETS: I am a farmer's daughter and like the country fine. We live on a farm of 358 acres. I will be 17 years old in February. We take UP-TO-DATE FARMING and think it is a fine paper. I would like to hear from the Cadet boys and girls. Will try to answer all cards and letters I receive.—Clara Hollingsworth, Lincoln, Ala.

DEAR CADETS: I come to thank one and all for the pleasure they gave me last winter. I received almost 400 letters and cards and answered all I could. Some sent stamps, and they were answered sure. We have a good crop of corn here and lots of apples, but not very many melons. There are also a good many grapes, peaches and plums. I would like to have view cards from every state Oct. 16, as I will be 19 that day.—Lillie D. Lovell, Woodburn, Ia.

DEAR CADETS: UP-TO-DATE FARMING came today, and as quick as I could grab it I turned to the Cadet page. I have been reading the paper for over a year, and I think it a grand paper, both instructive and amusing. I am 14 years old, but am large for my age. I keep house for my father and I dearly love both housework and outdoor work. I have only lived on a farm a year, but I dearly love it. I hope to hear from all the Cadets, and will leave room in our glorious paper for some one else.—Pearl White, Almeda, Tex.

DEAR CADETS: Here comes a 16-year-old boy from the southeastern corner of Wisconsin. I love farm life more than anything else. I live on an eighty-acre farm and raise corn, oats, potatoes and fruit. We are running a dairy of twenty-five cows, fourteen of which are giving milk now. We ship the milk. My father has taken UP-TO-DATE for the last six years and thinks it a good paper. I would like to exchange cards and photos with all the Cadet girls and boys, and will answer all.—Clarence Calver, Kenosha, Wis.

DEAR CADETS: I live up in sunny Alberta. We came four years ago, when the country was quite new, but now it is well settled. There is lots of sunshine in Alberta, and looking across the stretches of rolling prairie we can see field after field of wavy, golden grain. The summers are beautiful, but the winters are cold. Our winters are spent in town, but in summer we come back to the ranch. Most people in the states think Canada is a wild and frozen country, but they are very much mistaken. We came from Nebraska, and the only things I miss are the corn and the trees. We have wonderful variety of wild flowers, especially wild roses. In spring the prairies are a solid pink bloom and the fresh air is filled with the most fragrant perfumes. We have taken UP-TO-DATE FARMING for over a year and think it one of the best farm papers published. I am a girl 15 years of age, and if the Cadets will write I will give them a full description of sunny Alberta. I want correspondents, and would be pleased to hear from A. W. McClurg.—Marion V. Osborn, Flowerdale, Alberta, Canada.

DEAR CADETS: Mama takes UP-TO-DATE FARMING and thinks it is grand, and I think so, too. I live on a farm of 180 acres. I would like to get cards and letters from all of the Cadets—will try to answer all.—Mary Sue Warner, Louisville, Miss.

DEAR CADETS: I am 18 years old and live on an eighty-five-acre farm. I think UP-TO-DATE can not be beat. I am taking a course in shorthand and like it very much. I would like to correspond with all the Cadet girls and boys and will try to answer all I receive.—Geary A. Illias, York, Pa.

DEAR CADETS: I never lived on a farm, but I have spent a vacation on one and have relatives that are farmers. I think the farm is much better than the city and I might live on one in the future. I have taken UP-TO-DATE FARMING a long time and enjoy reading it, the letters especially. I am 19 years old and would like to hear from the Cadet boys and girls.—Frank L. Harden, 556 Chestnut street, Manchester, N. H.

DEAR CADETS: I am a farmer boy, 16 years old, and live on an Illinois farm of forty acres, where we raise corn, oats, wheat, some rye and all kinds of vegetables. Now, boys and girls, don't be afraid to write, for you will all get answers. With three cheers for UP-TO-DATE.—Ray Cole, Whittington, Ill.

DEAR CADETS: I am a girl 18 years old and live near a cranberry marsh, where in the fall, or just at present, many Indians and American people come to pick the berries. I am going to pick this week. I would like to exchange cards and letters with all the Cadet boys and girls.—Agnes Sanderson, Valley Junction, Wis.

DEAR CADETS: I agree with others that UP-TO-DATE is the best farming paper published. I live on a ranch in southern California and will be 16 years old Sept. 29. I would like for all the Cadets to write to me telling me about themselves. If possible, send photos.—E. Mae Jones, Lucerne Valley, via Victorville, Cal.

DEAR CADETS: Will you please let a crippled boy of 29 years join your band? I have been afflicted with paralysis all my life, and am blind in one eye. I live on a 215-acre farm and own forty acres of it myself. I am not able to work much on the farm, but I love to live there. I have a little business of my own in taking subscriptions for papers. My idle time I spend in reading, and have a library of nearly 400 volumes. I love nature and love to roam around the farm and in the woods. There are many squirrels in the woods here. I have been out of school for about eight years, but I have been reading some of my old school books that I used several years ago. It did me good. Many a piece came to my memory. How many of you boys and girls are willing to write to me? I will answer all cards or letters.—Lester E. Records, Wadesville, Ind.

DEAR CADETS: I am a farmer boy 17 years of age and live on a farm of 175 acres. We own a traction engine wheat thresher and a clover huller. We have four horses, seven cows and thirty-five hogs. I would like to correspond with the Cadet girls and boys.—Oscar Haynes, Henry, Tenn.

DEAR CADETS: I am 18 years old and live with my parents and three sisters on a thirty-acre farm that joins a nice, large lake. We run a summer resort, but we take UP-TO-DATE FARMING and like it very well. I like farming, but I love to fish and hunt also. I would like to exchange cards or letters with all the Cadet girls and boys, and will send my photo to the first girl that sends me hers.—Virgil Smith, Allegan, Mich.

DEAR CADETS: I am 13 years of age and live on a farm of 800 acres. Papa takes UP-TO-DATE FARMING and I enjoy reading it fine. We plant corn, peanuts, potatoes, oats and peas. I have a lot of box flowers, among them ferns, cactus,

What 15c Will Do

The little matter of 15c in stamps will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its 21st year of increasing success. The paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the PATHFINDER is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper and we will send the PATHFINDER on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new Friends.
Or send $1 for full year; money back any time if not satisfied. Address Pathfinder, Bx 7, Washington, D.C.

Given to Ladies

35 Embroidery Designs
WITHOUT COST

Here are 35 Beautiful Embroidery Designs that I have secured exclusively for the ladies of my large up-to-date family. In the assortment are 6 Embroidery Borders, 4 Butterflies, 5 Emblems, 2 Alphaoets, 2 Initial Wreaths and innumerable other beautiful and attractive designs.

The designs can be easily and readily transferred to the fabric without the use of a flat-iron, stamping compound or any other out-of-date accessories. Each design can be transferred six or eight times. This set cannot be bought in stores, but we give it free for a new trial subscriber.

How to Get the Designs

For a limited time we will give this complete 35-piece Embroidery Transfer Outfit for a NEW three-month trial subscriber at 10 CENTS.

This offer may not appear again.

UP-TO-DATE FARMING, Indianapolis, Ind

FREE to Boys

SEND NO MONEY — JUST YOUR NAME AND ADDRESS —A POSTAL CARD WILL DO

It Shoots 350 Times at One Loading With Remarkable Force and Accuracy—Not a Toy, But a Real Gun Built for Business.

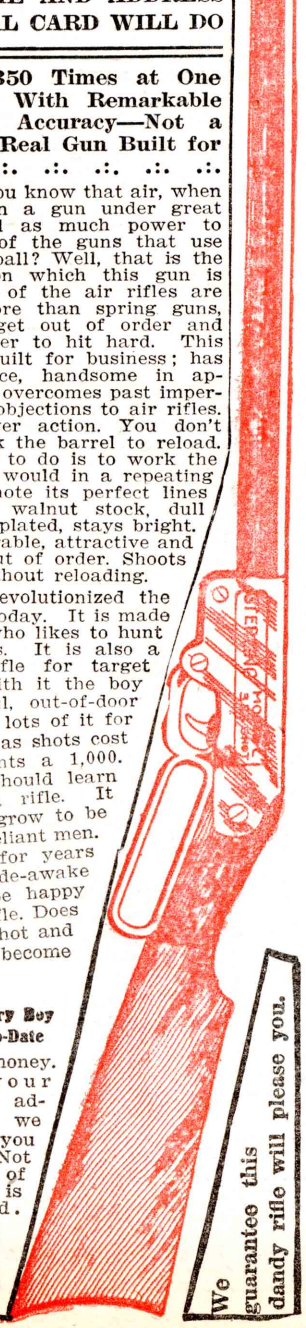
Boys, did you know that air, when compressed in a gun under great pressure, had as much power to kill as any of the guns that use powder and ball? Well, that is the principal upon which this gun is made. Most of the air rifles are really no more than spring guns, which soon get out of order and have no power to hit hard. This air rifle is built for business; has powerful force, handsome in appearance and overcomes past imperfections and objections to air rifles. Note the lever action. You don't have to break the barrel to reload. All you have to do is to work the lever as you would in a repeating rifle. Also note its perfect lines easy action, walnut stock, dull finish, nickel plated, stays bright. Accurate, durable, attractive and cannot get out of order. Shoots 350 times without reloading.

This gun revolutionized the air rifles of today. It is made for the boy who likes to hunt in the woods. It is also a very fine rifle for target practice. With it the boy gets healthful, out-of-door pleasure and lots of it for little money, as shots cost about 10 cents a 1,000. Every boy should learn to handle a rifle. It makes boys grow to be manly, self-reliant men. It will last for years and every wide-awake boy would be happy to get this rifle. Does not cut the shot and can not become clogged.

A Gun for Every Boy who reads Up-to-Date

Send no money. Send us your name and address and we will tell you what to do. Not one cent of your money is required.

UP-TO-DATE FARMING Indianapolis Indiana



We guarantee this dandy rifle will please you.

coleus, pinks and others. I want all the boys and girls to write to me and I will answer all leters and cards I receive.—Erie Falsom, Hakira, Ga.

DEAR CADETS: I am a farmer's daughter of 18 years and live with my father, mother, three sisters and a brother on a farm in Oklahoma. Everything here is dried up. We take UP-TO-DATE and I love to read the Cadets. I would like to hear from all the boys and girls, and I will answer all the cards and letters I get.—Lela Tipton, Butler, Okla.

DEAR CADETS: Here comes a girl from a state that is famous for its mild winters, fruits, flowers and sunshine, for its enjoyable summers with balmy breezes from the Pacific ocean. Tulare county has the largest tree in the world and the highest mountain in the United States, Mt. Whitney. I have a brother younger than I that would like to exchange post cards and letters with the boys and girls. Now all the boys and girls that want answers drop us a card and get a view of California.—Lena Chatterton and Wesley E. Chatterton, Tulare, Cal.

DEAR CADETS: I am a girl of 15 years of age and live on a 200-acre farm near the beautiful Blue Ridge mountains. We raise corn and wheat for our main crops and many other things in smaller quantities. I always anxiously await the coming of UP-TO-DATE so I can read the Cadet letters. I would be pleased to exchange cards and letters with the Cadet boys and girls.—Juliette F. Brown, Novum, Va.

DEAR CADETS: I have been a reader of UP-TO-DATE for a year or more and think there is none like it. I am 19 years old and live on a farm of 220 acres on the banks of a lake famous as a summer resort. I am certainly supplied with all kinds of pleasure at the lake. This is mostly a grain and stock country. Crops look fairly good. I work inside mostly, but sometimes outside. I am my mother's helper, because my sister is not large enough to help much. Girls, do not get scared when I say I can do most any kind of work in the house, and enjoy it, too. Will be glad to exchange letters and photos with the Cadets.—Everett E. White, Knox, Ind.

DEAR CADETS: I have been reading your letters for a long time and think they are very interesting. My father takes UP-TO-DATE and we all think it is a very interesting paper. I live on a farm near Bethany, where we get our mail. I am 18 years old and would like to exchange cards with the Cadet girls and boys.—Daisy Richey, Columbus, Ind.

DEAR CADETS: I live on a farm of 160 acres in the beautiful Snake River Valley. I am 18 years old. We have a nice Sunday school, and I am the treasurer. I would like to receive letters and post cards from all of the Cadets.—Isaac Shultz, Marysville, Idaho.

DEAR CADETS: I am a Texas farmer boy, and live on a farm of nearly 400 acres. I wish to become a Cadet of Equity, for I am sure the Cadets wish to succeed in life. If so, always be honest for "Honesty is the best policy." Be self-confident, for this is the key to success. Be industrious for "An idle brain is the devil's workshop." Be polite, and thus win the confidence of others. Those who observe these things will succeed.—William Cleaveland, Miami, Tex.

DEAR CADETS: I think UP-TO-DATE is a grand paper. I am 17, and live on a farm of 125 acres. Papa has 4 head of horses, 8 cattle and 14 hogs. My brothers make a crop every year, but papa practices medicine. I will teach school this summer. It will be my first school, and I am anxious to succeed. We have picked and canned six gallons of blackberries. I would be glad to hear from the Cadet boys and girls.—Mae Brooks, Bath Springs, Tenn.

DEAR CADETS: I live on a farm of 106 acres in Clarion county, Pa., 4 miles from Sligo and 6 miles south of Clarion, the county seat. I am 15, and the oldest of 9 children, 8 of whom are living. My father has taken UP-TO-DATE FARMING for over a year, and thinks it is a great paper. I love to read the Cadet page. Would like to receive cards and letters from the boys and girls, and will answer all I get.—Amanda O. Byers, Sligo, Pa.

DEAR CADETS: I have been reading UP-TO-DATE for over a year, and surely think it is a fine paper. I am 16 years old, and live on a farm of 78 acres. This is an agricultural country, and I would like to hear from all the Cadets, and will answer all the letters I receive.—Alice Blough, Sunnyside, Wash.

DEAR CADETS: I am 17 years old, and live on a farm of 120 acres. I go to school, and believe every one should have an education. I also think music is grand. I can play reasonably well, and have been teaching some this summer. I would like to exchange letters and postals with the Cadet boys and girls. Will answer all I receive.—Nellie Williams, Vivian, Okla.

Letters Crowded Out

Again we have to give a list of those whose letters we could not print. We feel their disappointment keenly, but we trust our young friends will write them the same as to those whose letters are printed:

Maude Williams, Walsh, Wis.	17
Marion Morris, Delphos, N. M.	17
Lillian Koontz, New Enterprise, Pa.	13
John J. Rodgers, Georgetown, S. C.	15
David Rodgers, Georgetown, S. C.	13
Kathryn Conley, Lanham, W. Va.	14
Mayme Garrison, Tennyson, Ind.	14
Ethel Scales, Tennyson, Ind.	16
Guy Enla Nelson, Jackson, Tenn.	12
Ruby A. Ashford, Monroe, Ore.	14
Jessie M. Wheeler, Blanchard, Mich.	16
Mary L. Allen, Florence, N. Y.	13
Catherine Schmeck, Rte. 2, Reading, Pa.	17
Lottie Herbeck, Athol, Mass.	13
Mildred Burdette, Harnell, N. Y.	18
Harlan Hiatt, Council Bluffs, Ia.	16
Charlie Farries, Leonard, Tex.	18

FIRESIDE TALES

He Was Willing

Most of us have had the experience of dropping off to sleep and, on awakening, being unable to tell anything about the passage of time. The new "hired man" of the following story exhibited his "willingness,' 'as the anecdote is related by a farmer's son:

Father hired a new hand—a big, good-natured Dutchman. Evidently the poor fellow was tired from tramping about the country, for he went to bed immediately after supper.

As usual, father went down to the cellar about half past nine to throw some coal in the furnace and adjust the drafts for the night. Evidently this made enough noise to rouse the new hired man, for mother, who was sitting beside the table in the dining room, saw the stair door suddenly open and disclose the broad form of the Dutchman. Blinking drowsily before the light, he exclaimed:

"Goot morning, misses; Goot morning! I could chust as vell come down von hour ago if you had only voke me up!"

What's in a Name?

A hungry diner in a restaurant ordered some chicken pie. When it was brought he raised the crust and sat looking at the nether contents intently for a while. Then he called the waiter. "Look here, sir," he said. "What did I order?"

"Chicken pie, sir."

"And what have you brought me?"

"Chicken pie, sir."

"Chicken pie! Why, there's not a piece of chicken in it, and never was."

"That's right, sir. There ain't no chicken in it."

"Then why do you call it chicken pie? I never heard of such a thing."

"That's all right. There don't have to be no chicken in a chicken pie. There ain't no chicken in a cottage puddin' as I knows of. Chicken pie—that's just the name of it."

More Than Original

"Don't you think the idea of an Indian opera is original?

"If it is Indian it must be aboriginal."

She Understood It

"Don't it alarm you when the papers refer to your husband as a grafter?"

"Not a bit. He keeps everything fixed so he could stand any kind of an investigation."

YOUR FALL SUIT FREE

Made to Your Measure

$30 to $40 would not buy a better one, but you get it for nothing. Not a cent to pay. Simply wear it, tell your friends where you got it and make

$10 to $15 a Day

taking their orders. It is dead easy. You never saw a nobbier suit or a more stunning pattern, cut in strictly advance style (3 months ahead of the times). Your choice of 60 patterns to choose from. Drop us a postal card for heavy pattern book, inside information about styles, self-measuring, blanks, etc., etc. Don't wait. Everything free—we pay expressage. Get ahead of the other fellows—write this very minute. A postal will do it.

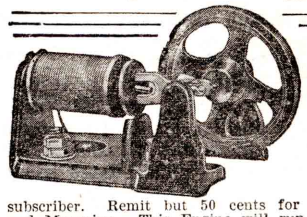
Make Your Boy Happy



In order to introduce **The Boys' Magazine** to thousands of new readers we will give away one of these splendid Electric Engines to each new 4-months' subscriber. Remit but 50 cents for both the Engine and Magazine. This Engine will run 1,000 revolutions a minute on one dry battery. Safe; easy to operate. A marvel of scientific and mechanical ingenuity. (Engine is much larger than illustration.)

The Boys' Magazine is the finest boys' publication in the world. Clean, fascinating stories—beautiful illustrations—handsome covers in colors. Departments devoted to Electricity, Mechanics, Athletics, Photography, Carpentry, Stamps and Coins. Edited by **Walter Camp.**

Order today. We'll refund your money immediately if you are not more than pleased with both the Magazine and Engine. (We prepay transportation charges.)

The Boys' Magazine is on sale at all news-stands

The Scott F. Redfield Co.
1430 Main Street. Smethport, Pa.

A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in "A Cart Load of Fun" are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. "A Cart Load of Fun" is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.

COONER & FORTUNE, Indianapolis, Ind.

Shetland Ponies FREE

5000 Prizes

Miss Ruth Haney and her Pony

"PRINCE"

Do you want a Pony like this one? I gave this pony free to Miss Haney. See her smile! See how pleased she is! Wouldn't you be pleased, too? Well here is your chance. The best you'll ever have. I'll give you one too—Pony, Wagon, Saddle, Bridle, and the Whole Outfit.

To Boys To Girls

The ponies I give away are all young and beautiful. Broken perfectly so any child may ride or drive them. They are real little pets that's what they are. Some of them have been taught to do tricks just like they do at a circus. The carriages, saddles and bridles are the best that money can buy. The very highest quality and the prettiest. I wish you were here to see them.

Send Me Your Name Today

I'll give you money to help keep the pony! My plan is new, original and easy. My plan is to allow you "Pony Votes;" (I give you 2000 votes for answering this advertisement) the one who gets enough votes gets a pony, carriage, harness, saddle and bridle and cash, all free. I even pay the shipping charges so as not to cost you a penny. The votes are easy to get. My plan will do that. I'll show you how to get a pony, just as sure as the sun shines. My plan is entirely different from all others. The answering of this advertisement may be the means of your getting a pony outfit free. Will you do it? Do so and see what I have to say to you

A postal will do. Address, **Uncle Billy, Pony Man, 142 W. Ohio St., Chicago, Ill.**

Hunting and Trapping

For Pleasure and Profit

NOTICE TO SPORTSMEN

This department is open to contributions from readers. Accounts of actual experience, and practical methods of hunting and trapping, either as pastime or as a business, are solicited. Prizes are awarded to all whose letters are published, and at the end of the season, a grand prize of considerable value will be awarded to the best contribution received during the entire season. Write one one side of paper only, and address all communications to TIM, THE TRAPPER, Sporting Editor, Up-to-Date Farming, Indianapolis, Ind.

GAME LAWS OF 1913-14

OHIO and Pennsylvania now require licensed hunters to wear badges conspiciously exposed, bearing the number of the hunting license.

In Manitoba hunters are required to wear white coats and caps, in order to prevent the hunter from being mistaken for game, and shot by other hunters.

Pennsylvania, Vermont, West Virginia, and Wisconsin have prohibited killing of elk under any conditions for a term of years, in order to increase the amount of big game. Massachusetts has provided an absolute closed season for moose, also. Wyoming and Montana, the principal hunting grounds for elk and sheep have limited the hunting area to a few counties in each state, and shortened the season.

Four states at least have passed laws lengthening the open season. Illinois added a week for hunting prairie chickens; Michigan, fifteen days for ruffled grouse and spruce hens, and forty-five days for shore birds and rail; Oregon, sixteen days for ducks, east of the Cascade mountains; Vermont, sixteen days for ruffled grouse and woodcock, and two weeks for plover.

Deer hunting is permitted in thirty-six states, twelve of which limit the hunter to one deer a season, and ten to two. Kentucky, Virginia, Arkansas and North Carolina have no limits, except in a few counties in the last two states.

All hunters, traders and trappers should send at once to the United States Department of Agriculture for Bulletin No. 22, entitled "Game Laws for 1913," which contains a summary of the laws and provisions relating to game, seasons, export, sale, limits and licenses.

ENGLISH RING-NECK PHEASANTS

THIS bird is the finest game fowl known. Superior to the quail in size, in delicacy of flavor, and in characteristics which make it a true sportsman's delight.

The prairie chicken was plentiful a few years ago, but without restrictive laws, the too eager and enthusiastic hunter short-sightedly killed them off so fast he has deprived himself of the sport he once enjoyed. The prairie chicken is about to become practically extinct. "Bob White" is in a fair way to follow. Rigid laws may keep some of them for posterity, but their numbers are so weakened that other foes than man may complete the destruction begun and well-nigh finished by man.

Just now there is an earnest effort being put forth to introduce the English pheasant. Over 200,000 of these birds have been hatched and liberated in Illinois alone, and the intention of our game wardens is to distribute them and protect them from coast to coast until the country is abundantly stocked with them.

It is an extremely hardy bird, and thrives and fattens under wintry conditions that would be fatal to prairie chicken and quail. It prefers an open country at the edge of woods, but will thrive in woodland or prairie.

TRAPPING IN EASTERN PENNSYLVANIA

ARCHIE RIDALL, a young and enthusiastic trapper of Luzerne county, Pa., in a recent letter to a trappers' journal, gives an interesting account of the fur business in his section, as follows:

"For fur we have foxes, red and gray, a very few coon, skunk, opposum, muskrat and weasel, and about one mink every winter in a radius of about five or six miles. Muskrats are fairly plentiful along the river about three or four miles distant, but we don't trap there and there is scarcely any along the creeks. We trap skunks. They are about one-fourth as plentiful as ten years ago. Opossum seems to be increasing within the last two years. Foxes were plentiful till last winter when they just seemed to be almost gone. I don't know what reason.

"About four or five years ago, mink were plentiful, as one would travel up or down the stream we trapped every night we could see, and when there had been a snow, but then a trapper, trap thief, and "digemout" moved into the community and stayed about two winters. Since then I haven't seen one mink track along the streams that used to be full of mink. So you see what one man can do towards destroying fur if he goes at it. Probably some one has put out a lot of poison that almost cleaned up the foxes.

"Then for game we have rabbits, grey squirrels, pheasants, quail and on the river a few ducks, ground hogs, and an occasional porcupine.

"There is a bounty on foxes here, and about all the farmers trap on their own account. They post their land so no one else can trap. The country is more full of trap thieves than it is of foxes.

"My brother and myself trap together. Last season, up to January, we had six skunks, two red foxes, one grey fox, twelve 'possum, one musk rat, and four weasel. Later we caught six more skunk, seven 'possum and four weasels. We hope to have a successful season the coming winter."

In loading shot shells, measure by weight both powder and shot. This is much better than by bulk measure.

Wild ginseng is going up in price right along. The cultivated variety does not share in the advance.

Fur farming is becoming so much of a business they are talking of raising skunk, coon and fox by the square rod.

TRAPS AND GUNS AT FACTORY COST

We pay highest prices for furs and sell you Guns, Traps, Supplies, etc., AT FACTORY COST. Write for FREE CATALOG, TRAPPERS' GUIDE, and Fur Price List. E. W. BIGGS & CO., 118 Biggs Building, KANSAS CITY, MO.

Spectacles ON TRIAL Free

—And They'll Even Make A Blind Man See—

Of course, I don't mean one blind from birth or disease—but near-blind and weak-eyed on account of old age.

Now it makes no difference if you're as near-blind and weak-eyed as the old gentleman shown in the above picture, I'm going to send you a handsome pair of 10-karat SOLID GOLD FILLED "Perfect Vision" spectacles without a cent of money, and if you like to go out hunting occasionally, you'll find that you can shoulder your gun and drop the smallest squirrel off the tallest tree top at the very first shot sure, with the help of these wonderful "Perfect Vision" spectacles of mine. And in the evening, when the shadows are gathering in the dusk, they'll easily enable you to distinguish a horse from a cow out in the pasture at the greatest distance and as far as your eye can reach.

Write me today for a pair of these wonderful "Perfect Vision" spectacles of mine, and as soon as you get them I want you to put them on your eyes, no matter how weak they may be; sit down in front of the open hearth one of these cold wintry nights, and you'll be agreeably surprised to discover that you can again read the very finest print in your bible with them on, even by the dim firelight; you'll find that you can again thread the smallest-eyed needle you can lay your hands on, and do the finest kind of embroidery and crocheting with them on, and do it all night long if you like without any headaches or eye-pains and with as much ease and comfort as you ever did in your life.

Now Don't Take My Word For It

but send for a pair at once and try them out yourself for reading, sewing, hunting, driving, indoors, outdoors, anywhere and everywhere, anyway and everyway. Then after a thorough try-out, if you find that every word I have said about them is as honest and as true as gospel, and if they really have restored to you the absolute perfect eyesight of your early youth, you can keep the lenses forever without one cent of pay, and

Just Do Me A Good Turn

by showing them around to your friends and neighbors, and speak a good word for them whenever you have the chance. If you want to do me this favor just write your name, address and age on the below $3.50 certificate at once, and this will entitle you to a pair of my famous "Perfect Vision" lenses absolutely free of charge as an advertisement.

3.50 DR. HAUX SPECTACLE CO.—Room 130 ST. LOUIS, MO. 3.50

Please send me on 7-days' free trial a handsome pair of 10-karat SOLID GOLD FILLED spectacles, set complete with your famous "Perfect Vision" lenses, all ready for use, also a fine leatherette plush-lined German-silver-tipped gold-lettered pocketbook spectacle-case, and if I find that the 10-karat SOLID GOLD FILLED frame is really overlaid and stiffened with genuine 10-karat pure gold, and will positively stand the 10-karat solid gold acid test without the slightest discoloration (so that I will be proud to wear them in company and to church on Sundays) then and then only will I pay you your special reduced advertising price of $1.50, if in my opinion they are really worth $5, the price you have them stamped in the nosepiece, as shown in the above picture. If, however, I don't want to keep the spectacle-frames for any reason whatever, I am positively going to remove the lenses and put them into my own frames without paying you one single solitary cent for them, as you have agreed in the above announcement to accept this certificate in full and complete payment of a pair of your famous "Perfect Vision" lenses as an advertisement, and I am certainly going to make you stick to that contract.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

From an exchange we get this:

Too many farmers are still dreaming about co-operative associations which will take in all the farmers of the nation or the state or the county. It is time to put aside such ideas. The real business co-operative association is the comparatively small group of men whose interests are identical. For example, the dairymen in a community can co-operate in buying foodstuffs and selling dairy products. The truck growers can unite to market their produce, the cotton growers to sell their cotton, the farmers who feed hogs to secure better markets or to cure their meats. Then all who buy fertilizers—whether truckers, cotton growers or general farmers—can unite to buy their fertilizers. That would be business co-operation. The attempt to unite cotton growers, stockmen, truckers and general farmers into one big organization to handle every man's products or do all his buying would most certainly result in failure.

—o—

As this is exactly opposite to the teaching of this paper, we cannot let it pass unchallenged.

—o—

The writer of the above evidently belongs to the class who, while seeing the ever-present evidences of great benefits from broad and comprehensive organizations and co-operation by other classes of people, believes, or wants the farmers to believe, that they and their industry must always remain an exception and continue the destructive competitive methods.

—o—

On the contrary, we hold to the belief that the underlying laws of business that have been made to rule other businesses, are equally applicable to agriculture. The same plan of organization—the federating and uniting of the many small units, be those units factories, stores, mines, railroads, labor organizations, or whatever they are—that brings all like interests under one central intelligence, are applicable to agriculture.

—o—

The unifying of the knowledge of supply and demand, coupled with an accurate system for accounting, to know every day the whole supply and the whole demands of the markets, and the ability to send just enough from the point of production to the final demand by the direct route, we claim is just as possible for the farmers as for any other class of people. Yes, we will say, because of the indispensableness of the products of the farms, the marketing problem of agriculture presents an ease of solution not found with any other class of commodities.

The writer of the quotation above is the kind of farmers' friend the boards of trade and produce exchanges like. He is a pliant agent in their hands to continue conditions that would perpetuate the gamblers and exploiters in dictating prices for farm crops, and the terms on which they shall be handled between producers and consumers. He is, no doubt, fully in accord with the Council of Grain Exchanges, which is the expression of the leading gambling boards of trade and exchanges of the country, as we showed in former issues. And his paper is approved by those agricultural colleges that "assist and co-operate with the Council of Grain Exchanges" to perpetuate the old, robber marketing system.

—o—

Papers of this kind befuddle the farmers and keep the real marketing issues obscured, which is what many self-appointed leaders in agricultural direction today, want. They talk loud and long about a rural uplift and help for the farmers, but they always mean nine points of uplift for themselves to one for the farmer, and the help they give the farmer is the kind that gets the farmer to help them more.

—o—

"The real business co-operative association is the small group of men whose interests are identical," says the writer. And then he explains: "For example, the dairymen, the truck growers, the cotton growers, the farmers who feed hogs—then all of these can unite to buy fertilizers," etc.

—o—

This means that the farmers who produced the four crops mentioned, milk, vegetables, hogs and cotton to sell, or any other four crops, would have to belong to four associations for selling. But the writer says all of these can unite to buy their fertilizers.

—o—

By this plan the producers would find it necessary to belong to four associations for selling and as many more as he raises crops to sell, and at least one for buying. He would be expected to support a set of officers or a business agent for each association and attend the meetings. If he is a trucker and a dairyman and a grain farmer and has some live stock to sell, he would need to seek advice about marketing at four different places, and it is assumed that the stuff would need to go in four different cars to market, even though the total offering of a day made only a car load.

—o—

"Business co-operation" of the brand recommended by the writer would combine, say, one hundred producers in a community in five or more separate and distinct associations for selling their crops and buying supplies. Assuming that the number of such communities in a county are twenty, then there would be one hundred associations in a county. When the country would be organized on this plan there would be 300,000 associations in the country and each one independent and for itself, because the writer says: "Too many farmers are dreaming about co-operative associations which will take in all the farmers of the nation or the state or the county. It is time to put aside such ideas."

—o—

If farmers can not co-operate in units larger than a community, and if they must be divided there into crop associations, then it must be clear to the most obtuse reader that the farmers' dream of benefits through co-operative marketing is an empty one. No person need have any illusions on this point.

—o—

If the writer really believes what he writes, viz: that "the attempt to unite cotton growers, stockmen, truckers and general farmers in one big organization to handle every man's products would most certainly result in failure," then what do our readers say of his scheme to set up the biggest competitive system that was ever proposed? Can one hundred or more competitive farmers' associations in a county solve the marketing problems? They must be competitive because this apostle of "the real business co-operative association" says "it is time to put aside such ideas that the farmers of a county can be taken into a co-operative association."

—o—

In defense of our well-known position that the farmers of a county, all the farmers in a state and all the farmers in the country, producing all the crops, can co-operate with each other, and all, in marketing, we submit the following:

—o—

First, we organize the community taking all the farmers, regardless of crops produced, into one association. When this is done all the producers of truck report to the business agent for marketing. Likewise all the producers of dairy products report to the same place and the cotton grower, the grain grower, the stockman, etc., do the same. If the volume of business justifies, more than one business agent may be employed. But the advantage will be in having only one association to support, only one place where all the intelligence about all the crops of the community and the markets is obtainable, and the further advantage that often mixed cars may be dispatched, giving an advantage to all who contribute to it.

—o—

We submit to the intelligent reader whether a community can not co-operate to market all crops through one association? We might as well try to defend the proposition that a farmer should not grow more than one crop because marketing more than one crop, as an individual, he could not possibly do it. Individual farmers have been growing diversified crops and they have been marketing them. Then how can it be proved that what they have done individually can not be done co-operatively. If it can not be done, then where can the benefits of co-operation come in?

—o—

Outside of mere theory we know that broad community co-operation is practical because it is being successfully and profitably practiced in thousands of places now. So our next point is to show that county-wide co-operation is just as practical, but with benefits multiplied.

—o—

Take twenty communities in a county that are organized for selling crops. In the first place, each of these local associations gathers a report of the crops of its members that are ready to market or that will be ready soon. Now, if, instead of each local business agent seeking the final markets for the crops of his community and thus com-

Don't confuse this with ordinary "make-shift" roofings. We guarantee it 15 years and inside each roll furnish modern ideas for laying it artistically and permanently.

1913 Annual Convention of the Farmers Society of Equity

The next national convention of the Farmers Society of Equity will convene at Indianapolis on December 16, 1913.

At that convention national officers and directors for a year will be elected and every other thing done that may be considered for the benefit of the Society. As relates to the election of officers, we quote from the by-laws as follows:

ARTICLE VIII

Officers

Sec. 3. The officers of the National Union shall be a President, a Vice-President, a Secretary, a Treasurer, a National Organizer, and seven directors.

Election—Representation—Term

Sec. 4. The officers and directors of the National Union, with the exception of the Secretary, shall be elected by a popular vote of the members on blanks furnished by the National Union, or printed in the official paper, and forwarded to the National Secretary by mail or by delegate representing the union or unions, to be voted in the Annual National Convention of the Society.

Sec. 6. The term of the officers shall be for one year, or until their successors are elected and qualify. The names of all candidates must be published in the official paper at least three times, the first publication being at least six weeks before the time of the annual meeting.

To comply with the terms of the by-laws it will be necessary to print the names of all candidates in the November 15th number of UP-TO-DATE FARMING the first time. To do this the nominations must be in the office by or before November 5th.

Any member can make nominations or local unions can agree on the candidates and cast the membership vote solid for the nominee. The nominations should be accompanied by a statement of the fitness of the candidate for the position, which may be published for the information of the members. Local unions should take this matter up in their next meeting, although the nominations need not reach headquarters before November 5th. The names of candidates will be published in the issues of the official paper until the convention meets.

Nominations should be made on this blank and sent to Farmers Society of Equity, Indianapolis, Ind.

peting with the other nineteen in marketing, and the other nineteen competing with him, they would all report up to the county association what they have to sell and delegate him to sell all of the crops, co-operation would be multiplied twenty times. Under such a condition the county business agent, being relieved of competition over the county, can sell all the crops of the county easier than any one community under the the competitive system could sell its crops, and for more money.

—o—

Again we will say this is not a theory, but it is being done in many places already. Also there are numerous cases where co-operation has been made to cover several counties and all the reporting is done to the district headquarters, all the sales are made there and all the marketing directed from there. And we say that the larger the district organized in the way we are describing, the greater the benefits to the individual producer. This is because the EXPENSE of marketing is reduced, BETTER GRADES are made and HIGHER PRICES are secured.

—o—

Our EXPERIENCE, not theory, is that the satisfaction to the farmer, measured by effort required of him, relief from marketing worry and money returns, are in almost direct ratio to the size of the co-operative effort. The community association organized for all the crops immediately lessens the producer's labors and anxieties over markets and increases his money returns. These benefits are multiplied when the organization reaches a county standard and further increased when several counties combine and operate a district clearing house. These things being true in practice, may we not safely claim that national co-operation in marketing is possible and that it should be the goal toward which all sincere efforts should tend?

—o—

In a crisis such as confronts agriculture now, examples of tried, proven and successful co-operation in marketing are of tremendous value. Every step along lines that lead to a sound national organization of farmers, capable of successfully coping with the marketing problem, writes a new chapter in the history of a movement that is surely in progress for the emancipation of the greatest and most important class of people in the country—the FARMERS.

—o—

The agricultural awakening is becoming general. And as the demand for systematized, simplified, directed marketing becomes more insistent, we will find, and we do find, that the powers that prefer uncertainty to certainty, and who do not want a real change, are more active in their efforts to cloud the issue and to get farmers to move along lines that will bring up nowhere.

—o—

All such opposition, or misdirected effort, must be brushed aside by an aroused, enlightened and intelligent agriculture itself. We want to put the practical examples of successful, comprehensive co-operation in the hands of every farmer in every county.

—o—

In every rural community there must be a leader to co-operate with us. We want to get in touch with this man and we want to hear from him now. In this work the farmers must rely upon themselves when they once are in possession of the plan that is successful wherever it is put in operation. If they have an agricultural expert to teach them how to produce, let them order him to also organize them for marketing. Mr. Stewart of Branch County, Michigan, shows the right spirit when he wrote this in a letter to us on Oct. 4:

I assure you that, as the farmers of Branch County are putting up their money for our experts' salary, they will see to it that his influence will be in their interests and not toward the boards of trade and produce exchanges. I will watch this myself, now that you have brought it to my attention.

—o—

The Council of Grain Exchanges, which is the power behind the throne that is responsible for the county expert movement, may protest, but that should make every county more determined to get the marketing under its own control.

—o—

It is proper that farmers be helped to produce better stock and crops and more of them. They should have every advantage in finance and credit that any other class of people have. But above all else they want to be taught the successful co-operative methods of marketing.

—o—

In the carrying out of this program other lines of business except the speculative lines have nothing to fear, but all will be greatly benefited. The carrying out of the program will cause some readjustment, but isn't our country in great need of readjustment and improvement in many respects? But nowhere is it needed more than in the system of passing the necessaries of life from producer to consumer.

—o—

We want the co-operative idea to spread all over the country and take root in every community. Not the idea that there must be five or more independent organizations in each community, but the idea of community co-operation, joined with district co-operation, and all to build a national co-operative system for the whole country, for all the crops, for all the farmers.

—o—

Yes, we want community elevators, community warehouses, community creameries, community canneries, community packing houses, community cold storage and every other community utility to help produce good stuff abundantly, to receive it, to store it when wise and to market it. But we want them on a basis that not one will compete with another, but that all will co-operate for a common end—that equity and justice and prosperity may abound in our land.

—o—

As a final word: Whenever any one, not actually a farmer, comes and proposes to help you to greater prosperity, look him over carefully to see if he may not be more interested in getting you to work harder and better so he can make more money from what you produce. Look out for yourself. You can, if you have the way all charted for you, as you will find it is when you send the below blank.

—o—

If the Farmers' Society of Equity is not organizing in your community now, fill out and send this blank at once, please.

DEFORMITIES CURED

CLUB FEET of any variety, and at any reasonable age, can be made straight, natural and useful. No plaster paris, no severe surgical operation, and the result is assured.

POTTS DISEASE when treated in time should result in no deformity; paralysis can be prevented and the growth not interfered with. Write for information and references.

SPINAL CURVATURE Recent cases usually make good recoveries and even those of long standing do well. No plaster paris, felt or leather jackets. Write for information and reference.

HIP DISEASE in the painful stage can be relieved and the inflammation permanently arrested. Shortening, deformity and loss of motion can often be corrected. No surgical operations or confinement.

INFANTILE PARALYSIS We can refer you to many responsible people all over the country, whose children, afflicted with Infantile Paralysis have been practically restored at this Sanitarium.

DEFORMED KNEES AND JOINTS of many varieties yield to our methods of treatment, and if interested you should know about it.

This is the only thoroughly equipped Sanitarium in the country devoted exclusively to the treatment of crippled and paralyzed conditions.

ILLUSTRATED BOOK FREE Write us for illustrated book which will be sent free on request to any address.

THE McLAIN ORTHOPEDIC SANITARIUM

924 Aubert Avenue **ST. LOUIS, MO.**

Question Box

QUESTION: *Our local shipped a car load of hogs to the representative in Kansas City. The car was unloaded at St. Joe and held a day before forwarding. The market went down 30 cents a cwt. We have put in a claim against the railroad company through the society's representative. Can you do anything to assist us?—Henry Vauck, Secretary, Shickley, Neb.*

ANSWER: What you have done is right. If more than the usual delay in adjusting the claim, headquarters will get into the case.

Q. *Some of us have joined the F. S. E. here and we are perfectly satisfied. But now some people are telling us that the society is only for white farmers and not for the colored ones. Please let us know if it is also for the colored farmer, the man who is doing the real farming in the south.—Robert Wynne, Helena, Ark.*

A. The Farmers' Society of Equity admits all American farmers, regardless of race or color, to membership. Where race prejudice exists, the colored farmers organize their own local unions. But see Section 3 of Article III, local union constitution and by-laws. We believe no organization can solve the marketing problem of the Southern States that does not take the colored farmers into account.

Q. *Can a widow who owns and personally manages a farm be admitted to membership in the F. S. E.?—A. D. T., Secretary, Satsuma, Ala.*

A. Yes.

Q. *Why not recommend to the farmers of each county the advisability of forming co-operative associations for the purpose of establishing depots in their respective market places where producers can reach the retailer direct and thereby doing away with one set of handlers and reducing the high cost of living? Such depots, it seems to me, could be established at a very small expense per capita for those who would be benefited.—Charles M. Bender, Jamaica Plains, Mass.*

A. The consumers in the cities should select the retailers they will buy of, perhaps one in five or ten now in the retail business. These retailers, co-operating with the citizens (consumers), should select the wholesale house handling each class of produce and concentrate orders there. In large cities the place would need to be districted. Thus the consumers could simplify and systematize the distribution in the cities and the producers would soon learn where the demand was concentrated and reach it there. This could be done without any expense on the part of the consumers, only their agreement to buy through the selected and designated stores. This, we think, is a better plan than to establish new depots, and for the time being at least still further enlarge the handling system and increasing the expense. What is needed is a machine with fewer wheels rather than more wheels.

Q. (1) *Now that Oregon, Montana, Idaho and Utah are well organized in the F. S. E., and states and district are marketing in large units, and as Washington is coming in line, would it be a good idea to make the whole northwest one district for marketing?* (2) *Where should the headquarters or clearing house be located?—W. F. B., Clackamas Co., Ore.*

A. (1) Yes, we think so. (2) This must be decided by your own people.

Q. *I am an organizer for the ——, but I have read the books and circular of the F. S. E. and like the plan better. Why cannot the two societies come together and we all be one grand united society? May God speed your noble work.—H. C. E., Knox Co., Neb.*

A. We hope they will some time. We are heartily in favor of a federation of all societies.

Q. *You seem to have a real live thing in your talks about "helping the farmers to market." I am interested in nearly 300 acres of land here. Do you think we, in Canada, can learn anything from your paper to help us? If we can we shall want several copies of Up-to-Date Farming regularly.—Chas. C. Tixon, Toronto, Can.*

A. The Farmers Society of Equity and its business plan for farmers marketing are as well adapted to Canada as the United States. Also, now that your country and ours have identically the same marketing problems, or will have as soon as your government repeals the tariffs against our products, it is highly important that this movement be developed simultaneously in both countries. Up-to-Date should be almost indispensible to you and your neighbors in teaching sound principles of organization and successful co-operation.

Q. *My regular business takes me to all points between Chicago and Cincinnati, on a certain line of railroad. In my business I come in contact with most of the farmers in each community, and I know of several places where only a leader is needed to establish creameries, elevators, etc. Does your organization include such utilities in its activities? I may in the future become a farmer myself and I am studying the questions of organization and co-operation closely.—H. E. C., Miami Co., Ind.*

Q. *One of my neighbors, Mr. A. H. Daves, in Mobile Co., Ala., reports in a letter that successful in your good undertaking.—F. W. Stewart, Coldwater, Mich.*
I have just received that he will have several carloads of Satsuma oranges. Now can your Society help him to market his oranges? I would like to see you completely

A. Mr. Daves is a member of our local union at Dawes and will get the full co-operation of the Society in marketing his oranges.

Q. *Our people will not accept the Farmers Society of Equity because of its secret work. Can we have a local union without it.—M. H. Hedrick, Sherburn, N. Y.*

A. The secret work, or second degree of the F. S. E., is not obligatory. It is entirely optional with the local union. The first degree, or more properly "The First Great Lesson in Co-operation," as it is called, is not secret and should be given to all members admitted, which can be in open meetings.

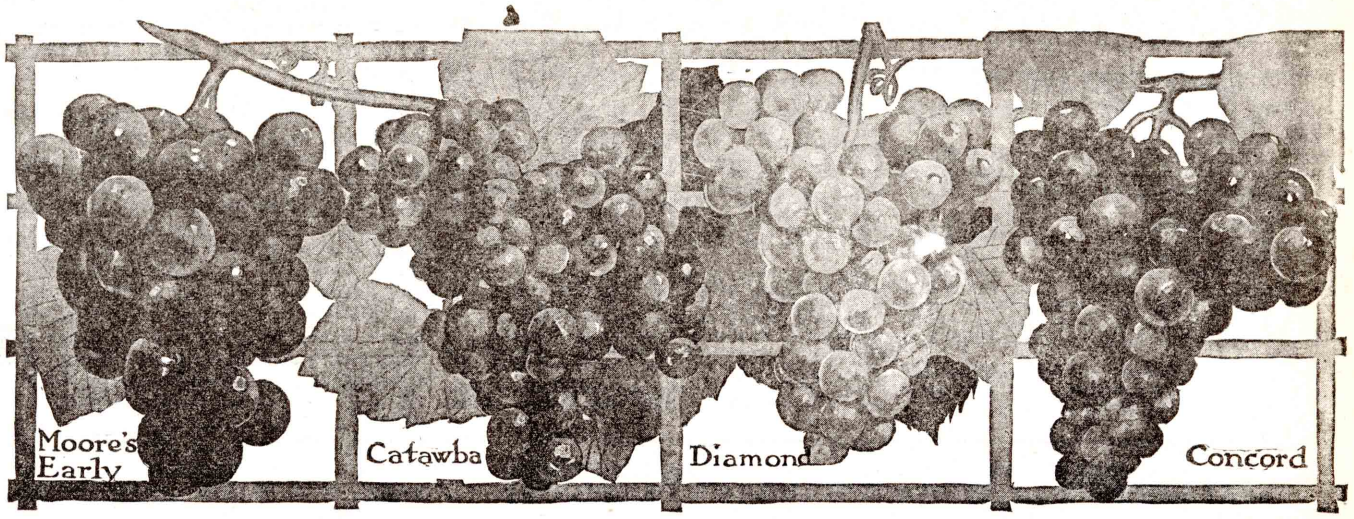
Q. *Having just organized we need instructions for marketing wheat. We have 3,000 bushels of wheat ready now.—A. O. Alexander, Secy., Arnold, Neb.*

A. Send samples and ask quotations of Farmers Grain Co., Omaha; Elwood Grain Co., and Davis Milling Co., St. Joseph, Mo. Also send for F. S. E. "Directory" for other millers and buyers. We believe wheat prices will be higher later.

A Queer Place to Get

"Why does an autoist get under his car sometimes?"

"To look over it, of course."



Grape Vines on Every Farm

WHY NOT? READ EVERY WORD OF THIS

WE WERE surprised when we read in the report of the 1910 census that there were grape vines on only 14.5 per cent. of the farms in the country. Grape vines are inexpensive to start with. They can be planted fall or spring; they are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and lasts longer. And in addition to all these things, grapes bear fruit practically every year and the fruit is valuable and desirable almost second to none that grows.

Considering the sum of these advantages for the grapes, when we received the census report we were in doubt as to its correctness. We thought nearly every farm had some, so we wrote to the Director of the Census and received this reply:

Up-to-Date Farming:

Your letter requesting information regarding the number of farmers reporting grape vines in our recent report on the "Production of Grapes," received. As you probably know, the census reports on agriculture are based on a farm to farm canvass, and if a farmer grew but one grape vine, he would be reported. The intention is to get a report of every farmer who grew a grape vine in 1909.

Very respectfully,

E. D. DURAND, Per W. J. B.

The fact is that only one out of seven farms has a grape vine. Then there are hundreds of thousands of town homes that have until this time neglected this handsome vine and universally desirable fruit. There is no yard or garden that does not have room for a few grape vines, so we have set ourselves the task to place

ONE-HALF DOZEN GRAPE VINES ON EVERY FARM

and in tens of thousands of other smaller places, and at the same time employ the vines as a means to greatly increase the circulation of UP-TO-DATE FARMING.

This is Our Offer

Send 75 cents and you will get UP-TO-DATE FARMING a full year and will also receive by mail or express, all charges paid, one-half dozen (6) strong two-year-old grape vines with full directions for planting. The varieties are Niagara, Moores Early, Concord, Diamond, Worden and Catawaba. This collection covers extra early to late varieties and the three colors, black, white and red. No better sort can be planted.

All vines will be sent at proper season for planting, no matter where you live.

Yours Free Send a club of four at 75c—$3, and we will send you the paper one year and the collection of six vines free. That is, five for the price of four, or we will send you the paper five years delivered. Paper and vines will be sent to separate addresses if requested. Up-to-Date Farming, Indianapolis, Ind.

Our Market Report

(Concluded from Page 6)

The time for new crop beans is about at hand. Quotable:

Pea Beans—	
Hand picked, choice	$2.00@2.10
Common	1.50@1.75
Mediums nominally about same as pea beans.	
Red kidneys, choice	2.25@2.30
Common to fair	1.50@ 75
White kidney nominal	3.00
Brown Swedish, long	1.25@1.50
Round	1.60@1.75

The list is without change of price since two weeks before. A year before hand-picked choice pea beans were $3.15@3.20 a bushel.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week. Cases.	Last week. Cases.	Last year. Cases.
Monday.	6,979	6,525	4,570

A steady feeling is reported in this market and no change occurred in quotations.

Miscellaneous lots, cases returned, 16½@24½c, according to quality. Top prices only realized where shipments contained mostly new-laid eggs.

Ordinary firsts quotable at 22@23c.

Firsts quotably 25@25½c. To bring quoted prices eggs must run mostly to new-laid eggs, with not over 24 eggs loss to the case.

Checks—In good supply and only merchantable stock selling. Some of the checks coming are mouldy and musty and sell anywhere from $3.50 to $4.50 per case for merchantable lots.

Dirties—Good supply and in only moderate request. Quotable at 13@16c, depending on quality.

Refrigerator eggs in moderate demand. April Firsts salable at 23@23½c and extras at 24c.

The price is 1c to 1½c higher than two weeks before. A year before Firsts were quoted at 24c.

GREEN FRUITS

APPLES—There is said to be coming in an outside demand for bulk apples, and a good business in these is in prospect. Oerings fairly liberal. Demand for choice to fine in barrels is fair. For common it is slow owing to some of the trade going to bulk stock. The market is well supplied with barrels. Instead of all selling last week there was some accumulation and some were held over. Bushel baskets rule slow and easy.

CRAB APPLES—Combining the western and Michigan offered and there was a good supply. The demand is tame. An easy feeling prevails. Any a little overripe or showing effects of holding, especially are easy. Hyslops are about the only kind there is any regular demand for. Easier prices quoted.

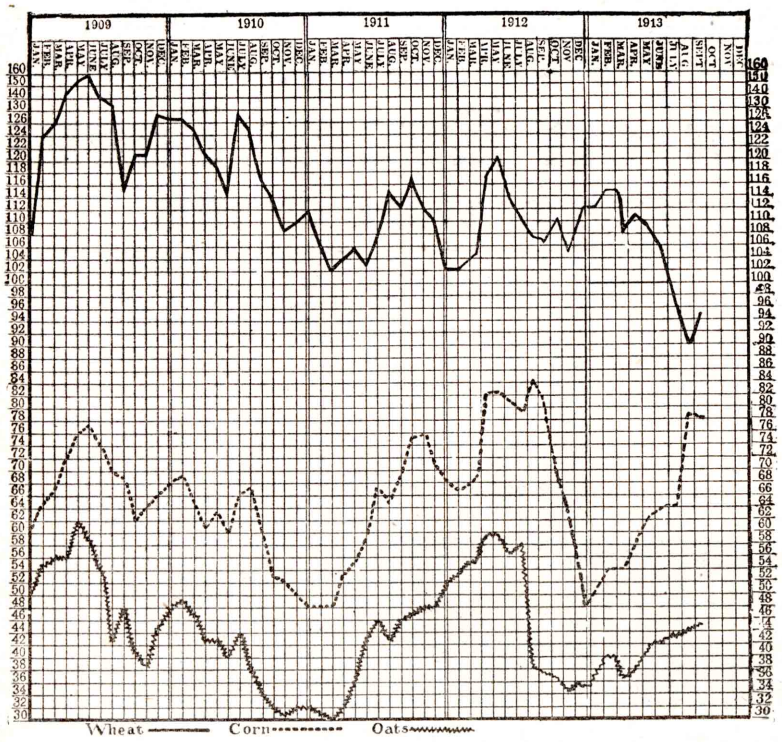
GRAPES—Eastern Concords are now coming. These, with the Michigans, give the market a fair supply. Offerings are not large. Demand is fair. Prices are too high for the usual active demand at this season.

PEACHES—Were quiet. Demand limited for Michigans and mainly for good stock in fifth baskets. Not many bushels offered and they are on sale.

PACIFIC SLOPE GREEN FRUITS—Trade is quiet in Plumbs. Peaches sell fairly. They remain very reasonable in price. Supply good. There are said to be still a good many to come. Grapes and pears have a very fair sale.

PEARS—Fine, large Michigan Bartletts out of coolers are held steady, but rule quiet. Eastern, smaller fruit, rule easy. Supply good and holders desire to keep closed out. They are very fair sale and steady. The other kinds are easy and just moderate sale. Keiffers in barrels and baskets slow and easy.

QUINCES—Are scarce as yet. They are quoted at $5@5.50 a barrel.



This chart shows the highest monthly cash prices for the three varieties of grain at Chicago, for the period, 1909 to September, 1913, inclusive. The prices are indicated on the right, and left margins. The lowest figures in September, 1913, were: Wheat, 90½c, on September 2; Corn, 71¾c on September 27, and Oats, 41¾c on September 2.

Quickly restores gray or faded hair to natural color, removes dandruff, stops falling hair and itching scalp. Grows new hair and makes the hair of man, woman or child heavy and beautifully glossy.

Send your name and address with this advertisement to the Foso Company, 4349 Foso Bldg., Cincinnati, O. Enclose 10 cents in stamps or silver, as an evidence of good faith and to help cover packing, postage, etc., and a full $1.00 package will be sent you at once by mail, prepaid, free of charge.

THE LOCAL AT THE CROSSING

THE attendance was large as usual. The president said the principal object of the meeting was to discuss the question "How Can We Make It Better?" He said the unfavorable season had made every bushel of corn cost the grower nearly twice as much as it ordinarily does, therefore, corn the farmers have for sale ought to bring twice as much as usual in order for there to be any profits. But farmers do not make prices, and consequently never estimate profits like other business men do. Then how can we make it better?

Uncle Joe—I'll be doggoned if I know. On the hill where I live there is nothing but fodder, and a very poor article at that. So I've got nothing to make prices on, and there is no use for me to fool about it.

Jim Birch—It's not quite that way with me. My corn is all in rich bottom land, and I have a pretty good crop, and will have quite a bit to sell. But I have always sold to George Smith in town. He gives me as much as anybody else, and I don't see any use foolin' around town huntin' prices.

Uncle Ashley—That's about the way it is with me. It is about all I can do to get time to gather it and haul it to town. I guess they pay me all they can afford to, and I am glad to get what they give.

The President—But your corn is yours, isn't it? You had to work to produce it, didn't you? How much do you charge by the day when you work for other people? Ought you not to have that much when you work for yourselves in the corn fields? How can you get it unless it comes in the price of what you sell? It seems to me you ought to have something to say about the price.

Uncle Sile—Now, Mr. President, you have just about hit it. When I go to town to buy some soap or axle grease, I ask what it's worth and they tell me the price. Sometimes I jew them down a little, but if I buy I have to pay what they charge. Why? Because the stuff was their'n before I bought it, and they said they had a right to make the price, and I reckon they had. The other day I took to town a bucket of eggs and a few pounds of butter. They counted the eggs and weighed the butter and told me what they'd give. They didn't ask me about the price at all. But the butter, and eggs were mine just as much as the soap and axle grease were their'n. It is the same way if I buy a mowin' machine or sell a load of hay. When I buy the feller I buy from makes the price, and when I sell the feller I sell to makes the price. It's like the old game of flippin' pennies—it's heads they win, tails I lose. Here's one, two, three—yes, twenty-six farmers, and you've every one been playin' that game all your lives. Mr. President, tell us how we can make it better.

The President—I believe it can be done, and I learned how by reading UP-TO-DATE FARMING. But we must stand by one another and work together. We must get out of the old notion that when we produce a crop and harvest it we have no further control over it. It is ours yet and we must market it in a better way than we have been doing. That's what we're here for, and that's what we're organized for. Let's study it out, and get all the farmers to come to these meetings.

A PROGRESSIVE LOCAL

We have all the farmers of this place enrolled, and have been much benefited by thus being organized. We sold our wheat in a lump lot and obtained a better price than we would have received had each one sold his holdings separately. We have benefited ourselves in buying farm implements, as implement houses have made reductions in order to obtain the trade of our organization. Our county union is incorporated, and is doing a big business. Much of our local business is transacted through our county union offices.—W. A. Wagstoff, Idaho.

3-PIECE Kitchen Set

Here are three useful articles. You will need them over and over again every day in the kitchen. They are made of best steel and will prove to be true friends to the housewife. A fine paring knife; a good, strong butcher knife and a cleaver that is heavy and made for work.

This set of three pieces given for a club of two subscribers, at 50 cents each.

The following sent $2 or under $2.50: Joe Johnson, Erin, Tenn.; Arnutt, Mo.

ADVENTURES OF A BONEHEAD

We decided to have a watermelon at our house. "Don't trust the grocer," said the boss, "but pick one out yourself. Better carry it home, too, or they will exchange it on you," she added.

We picked out a melon by thumping it. We never knew just why people thump melons, and the grocer didn't know, but we thumped it, anyway. He wouldn't plug it. If he plugged 'em, he said, he could never sell 'em. This is a true word.

The melon we selected was about the color of Ed Simmon's Sunday necktie, and in general weight and size correspond with other melons of commerce. No one would have suspected that before we got the thing home it would weigh 10,000 pounds.

One peculiarly trying thing about carrying a melon is that it has no place on which to grab. Nature never thought to put a handle on a melon.

We carried it just like an anxious bachelor uncle carrying a baby. Then we carried it like a load of wood. Then over the shoulder like a sack of flour. Ever and anon we sat down to rest. The last lap of the journey was finished easily when we met a little boy with an empty wagon and got separated from twenty-five cents.

The melon, when chilled and cut, had the color of a November sunset and tasted a good deal like wet pasteboard. Next time we want to buy a watermelon we will invest the cash in early cling peaches or shake the box for seegars. It is less risky.

FOOLING THE HOGS

A traveler down in South Carolina at the approach of twilight came to a farm that had a much more attractive appearance than those he had been passing all day. He concluded this would be a good place to stop for the night and turned into the lane leading up to the house. As he rode along he noticed a fine field of ripening wheat on one side and on the other a large drove of hogs grazing in a woodland pasture. His attention was attracted by the peculiar action of these animals, which ran pellmell to the foot of a large tree, rooted around it and grunted for a moment, then were off like the wind to another tree, where the same process was repeated again and again.

On arriving at the house the owner of the farm came to the gate and greeted him, taking his horse and giving him a cordial welcome. The traveler referred to the peculiar action of the planter's hogs, and asked him if he could explain the reason. He replied, "You see, it is this way, stranger: I had a bad case of bronchitis last fall and got so hoarse I couldn't even whisper. Just naturally I had to call my hogs to feed some way way and hit upon the plan of rapping on the fence with a club. They got used to it and now when spring comes along and the birds are here, them goldarned woodpeckers are just naturally running my hogs to death."

FOOLING THE EVIL ONE

TELL this one the next time you are called upon unexpectedly to make a speech and are trying to collect your thoughts, or someone's else's thoughts to use as your own: Uncle Luke, the colored preacher, went to see the minister of the "white folks' " church and was told to go into the study. There the minister sat busy at his desk. After a minute he stopped writing and looked up at Luke.

"Dat am mighty fine writin', sah," the visitor began genially. "Maybe you is aimin' to send it to somebody special?"

"No, Luke," the minister answered. "That's my sermon for Sunday after next that I'm writing out."

"Yo' sermon, sah?" exclaimed Luke, astonished. "De ve'y words yo' gwine to say in chu'ch?"

"Yes."

"You writes it out, sah, and leaves it in yo' desk?" Luke's amazement grew. "You leaves it dar, day in an' day out, rain an' shine?"

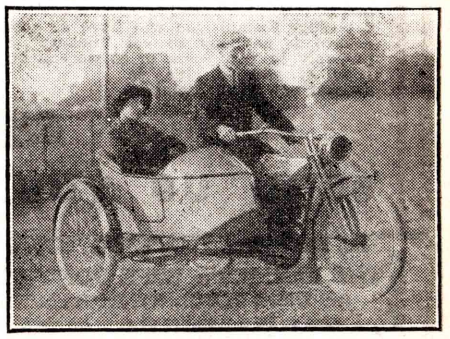
"Yes."

"Luke's voice was raised almost to a shout. "Ain't you know dat de Devil kin read an' write, same as you? Ain't you know he kin come in here, and take out dat writin', and read it? Den he gwine to stir hisself, and mess 'round and put his say-so into de haids of yo' flock fust, so's you' words ain' gwine to take it out. Yes, sah, dat am de way Satan do. Now, me, sah, when I goes to my chu'ch, and gits up for to preach, me an' de Devil hisself dunno what I'se gwine say."

SIDE CAR ATTACHMENT FOR MOTORCYCLES

Quite a number of motor manufacturers are building what is known as "side" cars. These cars comprise a small tonneau and wheel to be attached to the side of a motorcycle whenever the rider desires to use the machine as a carriage.

The metal bodies are carried on springs, which makes them ride easier than automobiles. This car can be attached in a few moments to the



motorcycle. The bodies are upholstered in leather and are amply roomy to carry the mother and the baby or the sweetheart.

The high-powered motorcycles will carry a side car and its rider anywhere, over any kind of roads. With the use of the side car motorcycling for pleasure can no longer be considered a selfish amusement, for its pleasures are now open to the entire family.

Thousands of these three-wheeled rigs will unquestionably be found traveling over the rural roads, carrying their owners on pleasure bound or on business trips. We really believe that the thousands of motorcycles in use in rural communities will be greatly increased, due to the greater pleasures made possible by the side car.

Here's a Regular Weekly Salary For You

Now don't go wrong on this—I'm the man who pays my agents big cash profits on every sale besides regular weekly salaries. Not like other offers that promise a whole lot but won't stand investigation. I've built up a **big** business by taking **big chances.** I believe that every man who will let me pay him a weekly salary—to help him over the "getting started" period—will find the work so easy and make so much money that he will never quit. For I've got the sassiest line of sight-selling soaps and necessary household products ever put out. But it's the low prices that first astonish, fascinate and then clinch orders right and left. It's a winner—a pushing, shoving, pulling winner—you need no special experience or ability to get away with it **big.** How does $25 per week sound to you—$50 per week later. Start in spare time if you want. Thousands of my best agents began that way. Why not try it? I'm ready and willing—and remember, **I'm the one who takes the risk.** Now how about you—wouldn't this money come in handy this winter? Don't dodge the question—**wouldn't it?** Then get busy right away and let me know where you are. Send no money—just your name and address to me—"DAVIS."

E. M. Davis Soap Company
DAVIS BUILDING M. 91 CHICAGO, ILL.

THE MOST WONDERFUL CLUB IN THE WORLD

THE FARMER'S WIFE SHETLAND PONY CLUB of St. Paul, Minn., is the most wonderful club in the world for boys and girls because it gives away Shetland Ponies free to its members. Already over 126 boy and girl members have received real Shetland Ponies and Outfits worth about $250.00 each. If you haven't any Shetland Pony, now is your chance to get "BEAUTY" and her glorious Outfit, the next pony to be awarded to a new member of the Pony Club. All you have to do is to send us your name and address and we will tell you how to join the Shetland Pony Club and get "BEAUTY" for your own. It doesn't cost a single cent to join this Pony Club, the members pay no dues and the Shetland Ponies are given free to the club members who show they are the most deserving.

Notice we print the pictures of 8 lucky children and their ponies we have given them and also the names of 30 more—all we have room for—so you may feel sure we give away real, live Shetland Ponies. Perhaps some of these 126 lucky children live in your county or a county near you and if so you probably know them because our lucky pony winners are now the best known children in their locality. However, it doesn't make any difference where you live, all you have to do is to send us your name and if you are the lucky member to get "BEAUTY" the next pony we are going to give away, she and her whole outfit will be shipped directly to your home without a cent of cost to you. We can't explain our whole Pony Club plan here but we have a great big surprise for you that will double your chances of being the lucky member to get a pony if we hear from you right away.

HERE ARE THE NAMES OF A FEW OF THE 126 MEMBERS TO WHOM WE HAVE GIVEN PONIES

WE WILL GIVE YOU THIS PONY FREE

Or SOME OTHER BOY or GIRL

A DAUGHTER OF A PRIZE PONY WE GAVE TO ONE OF OUR CLUB MEMBERS

"BEAUTY" is a dear spotted Shetland Pony, pure bred and registered and the most romantic pony we ever gave away. "Beauty" is the daughter of "Evangeline" whom we gave to Gladys Houx of Saline County, Missouri, who was one of our Pony Club Members in October 1910. Gladys tells below her picture in the lower right hand corner of this page how she found "Beauty" as a little colt in April 1911. "Beauty" is the first pony we ever gave away which was raised by a member of the Shetland Pony Club so you see that we not only give away Shetland Ponies to club members but we also buy ponies of members and pay well for them when they are old enough to be given to new members of the Pony Club. You never heard of a club like this before, did you? Our club motto is "A Shetland Pony for every boy and girl" and if you just send us your name and address (don't send any money, not even a postage stamp) you will have as good a chance as anybody to get "Beauty" and probably in two years or so we can buy a pony of you to give to another new Club Member.

This is "Beauty"
and Her Elegant Outfit

THE OUTFIT we send along with "Beauty" is the finest and most complete pony outfit that money can buy—pony, buggy, harness, saddle and bridle. The buggy is about the prettiest and easiest riding pony vehicle made and the handsome nickel trimmed harness set off "Beauty" to best advantage as it is a real Shetland Pony harness. Then the hand made saddle and real Indian horse hair bridle complete this wonderful Outfit. The bridle is the most beautiful one you ever saw or heard of. It is made especially for us by an old cowboy at Deer Lodge, Montana, and it takes him and his pardner two whole weeks to weave it out of beautifully colored horse hair,—red, blue, green, black, white and yellow—woven into remarkable Indian designs and mounted with colored rosettes and the horse hair reins ending in a real cowboy quirt. No matter how rich a child's parents might be they could not buy him a handsomer pony or more complete Outfit than "Beauty" and her Outfit which we will send free to some lucky member of our Shetland Pony club.

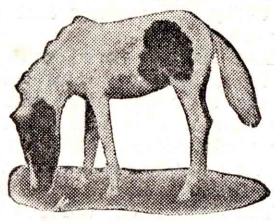
SEND US YOUR NAME TODAY IF YOU WANT TO OWN "BEAUTY"

Mail This Coupon Today or Copy on Post Card

THE FARMER'S WIFE PONY CLUB
549 WEBB BLDG., ST. PAUL, MINN.

I want to be a member of your Shetland Pony Club. Please send me pictures of "Beauty" and the romantic story of her life. Also tell me how to take care of Shetland Ponies. I haven't any pony and want to own "Beauty."

Write Your Name and Address Here



"Beauty," 3 Weeks Old

Name.....

R. F. D.....

P. O.....State.....

GOOD FOR 1,000 VOTES FOR "BEAUTY"

As soon as we hear from you we will explain our Pony Club plan and tell you how to go ahead and get "Beauty". This darling little pony--whose "Mama-Pony", "Evangeline" we gave to Gladys Houx, (picture of whom you will see on the lower right hand corner of this page) is surely going to some new member of our Pony Club who has never yet received a pony. Don't let anybody persuade you that you cannot become the proud owner of "Beauty" because our plan of giving away ponies is different from others. The fact that we have already given ponies to 126 Pony Club Members all over the United States, from the state of Vermont to the State of Washington, is proof that we do as we say. The Webb Publishing Co., publishers of The Farmer's Wife, has been established for 30 years and is one of the largest publishing firms in the United States, so your bank or postmaster will tell you that we can well afford to give away ponies to boys and girls who are members of our Shetland Pony Club to advertise our papers. We never heard of any of these 126 children until they wrote and told us they wanted a pony so you should send us your name and address at once to join the Pony Club if you want us to send you "Beauty."

A PRIZE FOR EVERY PONY CLUB MEMBER.

Every single child who becomes a member of our Pony Club will receive a handsome prize of his own choosing. Besides "Beauty" and her Outfit (and the Big Surprise we have for you) we will give Bicycles, Diamond Rings, Sewing Machines, Rifles, Cameras, Gold Watches, Music Cabinets and many other wonderful rewards that you never could get until now. We would like to give prizes to every boy and girl but we can only reward the few who send us their names and become members of our Shetland Pony Club and one of you will surely get darling little "Beauty" and her whole Outfit, so be sure to send us your name now before it is too late.

BE SURE TO ADDRESS YOUR POST CARD OR ENVELOPE TO

The Farmer's Wife Pony Club,

549 WEBB BUILDING, ST. PAUL, MINNESOTA

Gladys, "Evangeline" and "Beauty"

"I want to tell you something about 'Beauty.' You see the Webb Publishing Company really gave me two ponies. First they sent 'Evangeline' to me in October, and then one morning in April, Dan, the hired man, called mamma and said a little stranger was in the barn. You can imagine my surprise and delight to find that 'Evangeline' had the dearest little colt. We named her 'Beauty.' Pony colts are worth lots of money, so I am getting rich.

"This year 'Evangeline' had another little colt, so papa said, 'Why can't we make some other little boy or girl happy by selling 'Beauty' to The Farmer's Wife for them to give to some member of their Shetland Pony Club?' We all thought that was fine and arranged it with the Pony Editor of The Farmer's Wife. 'Beauty' is such a dear little pony that we are awfully glad she is going to some member of the Pony Club and I do hope the lucky member who gets 'Beauty' will be very good and kind to her. Your little friend.

Saline Co., Mo. GLADYS HOUX.

SPLIT HICKORY WHEEL CO., 516 F St., Cincinnati, Ohio

Given

During the next 30 days one of these Sweater Coats given away to every reader.

Everybody needs a Sweater.

For Men and Women

As Strong, Warm and Elegant as a $5.00 Sweater Coat. GIVEN.

These Sweater Coats are made of extra heavy, strong, gray colored yarn. Large, thick knitted collar, seven pearl buttons, strongly sowed button holes and two side pockets. Sizes 36 to 46 inches. Make a cross (X) below for Sweater wanted.

The reason we give away this elegant and useful Sweater Coat is that we want to introduce to every man, woman and child in America the remarkable discovery made in our laboratory, namely, the concentration of pure malt and hops into a heavy liquid for the making of a healthful and delicious nourishing malt drink.

(Non-Alcoholic—Non-Intoxicating)

Pilsener and Muenchener Beer

have won the reputation of being the finest products of the malt and hops industry. **PERFECTION BREW** as made at home from Lundin's Extract for Perfection Brew is as good, has the taste, color, foam and all the invigorating and stimulating qualities peculiar to the finest malt drinks. It is better than either Pilsener or Muenchener because it is **non-intoxicating.** It quenches the thirst, it satisfies a man's appetite for a good, strong, snappy drink. In taste, color and foam it excels lager beer, but as it is **non-alcoholic** it can be sold everywhere in the United States, even in "dry" or temperance localities

LUNDIN'S PERFECTION BREW is easily made at home. From the contents of one large can of Lundin's Extract for Perfection Brew you can make 7 gallons of Pilsener or Muenchener style drink, whichever you prefer. The price of one large can of Lundin's Extract for Perfection Brew is 65c, sent to any address, postage prepaid.

MAL-TA-BREW is another product made from the finest malt and hops, so highly concentrated that its ingredients have been reduced to a solid substance. Lundin's Extract for Mal-ta-Brew is used for the home brewing of a powerful and extremely nourishing malt beverage with a delicious sweet taste, especially liked by women and children. Each can makes 6 gallons of a very fine **non-alcoholic** malt drink. The price per can is only 35c, sent to any address, postage prepaid.

To give every reader a chance to try both of these splendid malt and hops drinks, we will send one can of Lundin's Extract for Perfection Brew, enough to make 7 gallons of malt beverage, and one can of Lundin's Extract for Mal-ta-Brew, enough to make 6 gallons of Mal-ta-Brew, for $1.00.

With same we will give you absolutely free the beautiful Sweater Coat as pictured and described above. Complete directions with every can.

Should you wish the shipment sent by parcel post direct to your address, all charges prepaid by us, add 20 cents to your remittance.

LUNDIN & COMPANY
117 North Elizabeth Street
Chicago Illinois

Talking Things Over

Being a Few Words on Particular Matters Between the Editor and the Reader

WE KNOW more or less about the inside of country life. Nearly every job you have to wrestle with has had its fling with your humble servants. We know what it means to get up at 4 o'clock, build a fire in the kitchen stove, feed, milk, harness, all by lantern light, and be on our way to the corn field, or the wood lot, long before the sun creeps over the sky line to melt the frost on the barn roof. We know what it is to eat supper by lamp light, and do all the chores long after the chickens have settled on their roosts. It is nothing to boast about—this knowledge of farming at first hand. It is no more than you and all your neighbors do every day. Yet we want you to feel that we realize the life you live; that we are not strangers to a plow, or a husking peg, or a milk stool, or a pig trough. And if we were to come to your farm tomorrow for a week's visit we could make a hand, do as much work and do it as well as the ordinary man on the farm.

What We Are Doing, and Why

We happen now to be at work in a field a little larger than a farm. Printing a farm paper has as many hard jobs to tackle as running a farm. But we have a reason for printing this paper, and it isn't just to make money. If that were our object we would likely print a different kind of a paper. But we learned, while farming, that farmers were not getting as much for what they were doing as they should, and we started in to find out why, and did. Then we started out to help make a change in things for the better, and here we are, printing and mailing this paper to 200,000 farmers with this purpose: To help each one of them find a way to make his farm life all it can and should be. We are constantly searching the country over for every helpful idea, little or big, that we think some or all of you can use to advantage. We gather together as many of such ideas as we can, and every two weeks or so we put them in print and send them out with the prayer and the hope that they will give you a boost.

The Dawn of a Better Day

All of you who have been reading this paper for even a few months know by this time that in our opinion the most necessary and the most profitable thing to be done by farmers is to unite in a good, strong business organization. Nearly all farmers think so, too, but are somehow slow in getting things under way. More or less suspicious of each other, they haven't the confidence needed. But, nevertheless, things are looking brighter and better every day. The thing we need most is sure to come. Just keep thinking about it and talking it over and, sooner than we expect, perhaps, farmers will find themselves out of the old ruts in a new road, where traveling will be fast and pleasant. And in each issue of this paper we send you facts about things that affect you and your welfare that you should by all means know and understand.

Getting at the Milk in the Cocoanut

We are getting into some most interesting studies just now. First, there is the live stock proposition. Why are you not raising more beef? The packers say they are not able to obtain enough to supply the demand. The consumers say beef is too high to allow them to eat what they want of it. They put it right up to you and say you are not raising enough cattle, and that you are getting too much money for what you do raise. If you have read the editorial articles in the last issue, you know what we think about it. Now we want to know what you think. In this number is a coupon which we hope every farmer who reads this paper, and has sold any cattle, will fill out and send to us. We want to know just how much you are getting for the cattle you sell. We want to know how much it cost you to produce them. Can you produce them cheaper? Can you turn out more of them?

There is another problem that is of interest to all of us. What will you do with your corn crop, and how much money will you make on it? We are offering a cash prize for a few good letters discussing this problem. Read about it on page 10.

How You Can Help

One of your problems is to raise crops. It takes a lot of your time and some money to get a good crop. It is hard work to do it. We know just how hard. But we have a problem, also, that takes a lot of our time, a lot of money and hard work galore. We have to raise a crop of subscriptions. This is the season for subscription work. We want a big yield of subscriptions, the same as you want a big crop of corn or wheat, and for pretty much the same reason. Our success depends on it. Now, confidentially, our sucess depends absolutely on giving service to each subscriber which will be worth more to him than the subscription price. And, again, the service we are able to give depends to a very large degree on the size of our subscription crop. There are several thousands of you whose subscriptions end this month and some whose time is in arrears. We hope we shall lose none of them. We are working hard to make the paper better, larger, more helpful and more powerful to represent your interests in the great field of business, where, standing alone as an individual, your rights would get mighty little consideration. We honestly believe the farmer needs just such a paper as UP-TO-DATE FARMING is going to be. We believe you believe it, and believe you will send in your renewal and, maybe, a new subscriber or so.

Going After Better Things

Now, reader, let us gird up our loins, whatever that means, and go right after better things all around—better stock, better soil, better farming, better crops, better houses, better prices, better laws and less rottenness in the market places. We are with you, and here's our hand on't.

THE EDITORS.

BROWN FENCE WE PAY FREIGHT
13 Cents Per Rod Up
Strongest, heaviest wire. Double galvanized. Outlasts others nearly 2 to 1. Low prices direct from factory. Over 150 styles for every purpose—hog, sheep, poultry, rabbit, horse, cattle. Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this UP-TO-DATE FARMING stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in UP-TO-DATE FARMING" when writing to the advertiser. Medical advertisements are not accepted.

Balanced Rations

Common sense is not half common enough.

The gun that goes off at half-cock gets no game.

Some kinds of popularity are not worth the price.

Cheap money—A forty-year loan at 4 per cent interest.

The man who loses his head doesn't lose much of value.

The farm prophet does not often make a farm profit.

A good place to draw the color line—between oleomargarine and butter.

Now is the time to subscribe for a few good papers for the winter's reading.

There are too many nameless farms in this country. Give the farm a name.

You can bank on the average banker to give sound advice on financial matters.

Some "new brooms" have swept away fortunes. Not every new idea is good.

Some milkmen fill the milk bottles so full there's no room for cream at the top.

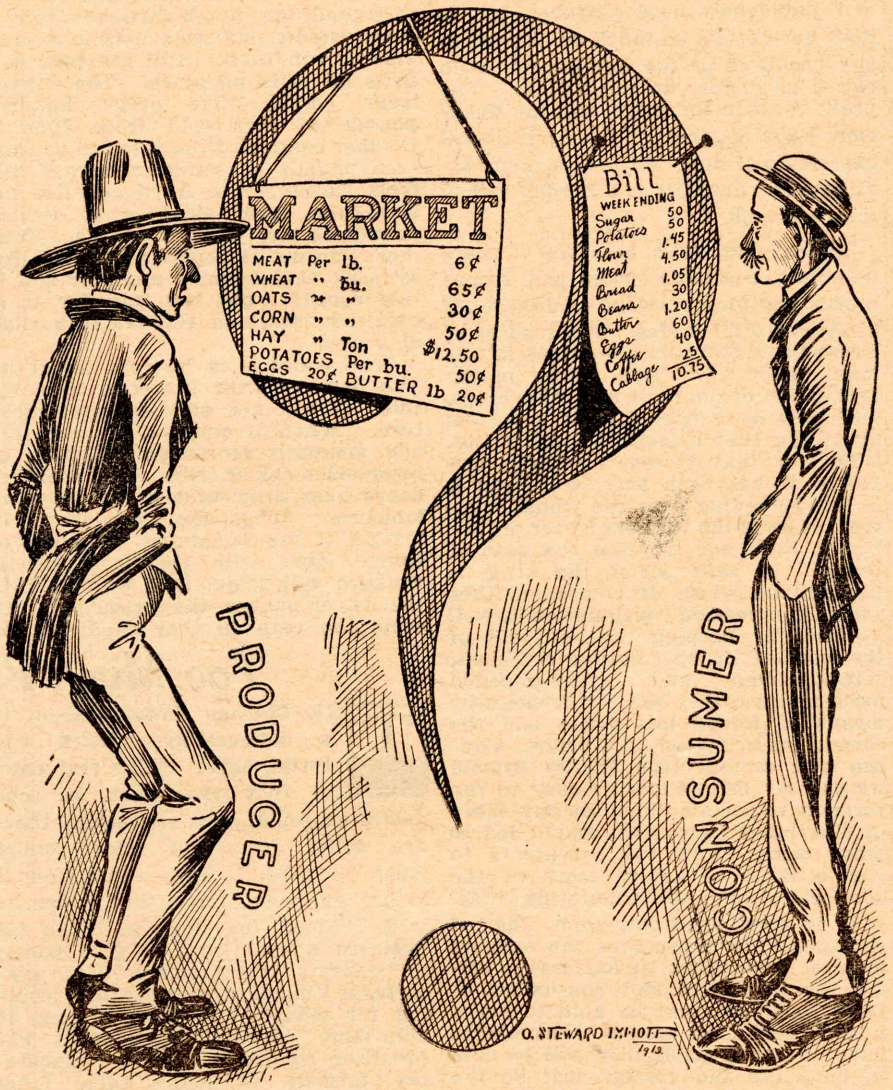
Many a man who runs a grocery bill at the store leaves it standing a long time.

The farmer goes to bed on his vacation. Night time is the only time he isn't on the job.

Iowa has a short crop of school ma'ams, we hear. Better pay might help matters a bit.

Many a man and boy are getting ready to go into the rabbit business. A dog and a gun are all the capital needed.

A good farmer has no use for weeds, thistles, saloons and other expensive but detrimental things. Get rid of them all. Use the hoe and the ax and the ballot.



PROSPECTIVE CANDIDATES FOR A GET-TOGETHER CLUB

The Producer, the Consumer, and Prices

(Second Article)

THIS ARTICLE, like the first which appeared in the preceding issue, is chiefly introductory to those to follow. The series will prove that farmers in themselves are not the chief cause of the high cost of living, so far as farming operations are concerned. It is true that under certain conditions farmers could increase the production of their farms. If this was done to the extent that the increased production on the farm would itself bring about a lower cost of living in the city, the injury to the farmer in the lower prices would be a calamity to the country, far overbalancing any benefit obtained through a slightly reduced cost of living to the consumers in cities. We shall show how increased production is necessary to supply the needs of the country as a whole, but that it is not to be expected that farmers are to be paid less, on an average, for what they produce than they have been paid during the past few years. As a matter of fact, average prices to farmers should be higher, rather than lower. If they are not, general prosperity will suffer loss. Farmers are not paid too much in any case, while examples where they are paid too little are numerous. Agriculture as a whole is still handicapped and its progress retarded because farmers' incomes are insufficient.

That there is, broadly speaking, a high cost of living is not to be denied, but never in this wide world should any one attempt to correct this condition by trying to make lower prices for farm products on the farm. The days of cheap production in this country are gone, and gone forever. No matter how yields may be increased by better methods of farming, the farmers will find their expenses increasing in proportion. The burden of the high cost of living falls upon producer and consumer alike. Labor is high in cost. Taxes are high and keep getting higher. Land is going higher in price, yielding a greater tax return, but not yielding a larger income. Building materials of all kinds, essential to the success of the greater production schemes, are high. Interest on money is too high for farmers to make profitable use of borrowed capital on chance of getting good crops and good prices.

It is doubtless true that the great majority of farmers could increase the yields of the crops they grow by better management and without increased expense of time, labor or capital. It is very doubtful if enough of them will do so to an extent that will increase the production to a very marked degree unless they first have the incentive to learn and practice the necessary methods of farm management, and this incentive will never be found in the prospect of lower prices. To instill interest in the farmer which will awaken an ambition to do better farming, the appeal must be to his desire for gain; and to reconcile the idea of larger profits with the prospects of lower prices is an utter impossibility. The high cost of living, wherever and whatever it is, can not be remedied by any such plan. The sooner this is understood by those who advocate such measures, the sooner the only possible solution will be brought into action.

Our chief reason for following this line of investigation lies in the fact that all those who study the problems involved find a change in some of our time-honored methods of doing business is inevitable. A change, revolutionary in its effect, is coming, and coming soon. Farmers must be ready for it, and to be ready they must understand both its causes and its probable effects. In order to do this they must know the conditions which are bringing the change about. These articles will lay the facts bare to the readers of this publication.

Reader, you who have a farm from which you obtain your livelihood, working the year around, the editors of UP-TO-DATE FARMING are deeply earnest and sincere in their efforts to help you, personally, to make your work return a better compensation. We encourage you to do better farming. Our columns contain the best teaching of the greatest authorities. By study of the principles of scientific farming you can improve your yields. You can change your crops so your acres will grow more value in soil fertility, in market crops or in feeding. We want you to do it, because it will pay you. We are going to do all we can to show you the hows and the whys and the wherefores. We feel, however, our endeavors must not end with your work on the farm. There are other means to make your work more profitable, your home life more enjoyable. There are laws, political and economical, that materially affect your welfare. There are combines and systems beyond your individual horizon, beyond the power of the individual to control. There are the laws that make your taxes, direct and indirect. There are laws which establish and maintain bureaus and institutions to give you services of supposed advantage to you. There are combines and systems that handle your products after they have left your hands, and the manner of their control and management has much to do with the prices you receive. We are going to work with renewed energy and vigilance to protect your interests and welfare in all these vital things. We want you to know what we are doing along these lines, and why. We want you to understand the conditions as they are, and the factors that create and maintain those conditions. We realize, possibly better than you do, that if you do but know and comprehend these matters, you can help to bring about reforms that will redound to your own benefit.

The Farmer and General Trade

REFERRING to the offer by the packers of large sums of money to be used in teaching farmers how to raise more cattle, the Wall Street Journal remarks:

Instead of beseeching farmers to raise more cattle (to save their own business), packers might try the effect of a distribution of a part of their surplus in the way of better prices.

That is exactly the advice we gave the packers in a recent issue of UP-TO-DATE FARMING, but the general reader would scarcely expect such a suggestion to come from Wall street. But there is no place on earth where there are more astute financiers than on Wall street. They know the source of all revenues, the stimulating influence of all business and the world's means for the creation of wealth. None have studied these things more astutely than these same people of Wall street, and it is not at all surprising that they have their eyes turned upon the farms of the country. And they know, too, that if the farmer has money with which to buy things he must get that money in the shape of a reward for his labor and that his profits are in the price rather than in the production. This accounts for that quiet suggestion as to price made to the packers by the Wall Street Journal. It is a fact, as another New York writer declares that "every dollar which flows through Wall street came originally either directly or indirectly out of the soil." And again: "Shut off the farms and Wall street, with all its wealth, would beg like the merest mendicant for food!" And again: "They (the financiers) realize that the life of their stocks and bonds must depend on the share of the consumer's dollar which the farmer receives."

And this is as true of all trading and industrial interests as it is of stocks and bonds, and it comes to all the others much more directly. We quote again from a New York writer: "It is in the country, on the farms, that the real trade necessities are to be found, rather than in town or city." This is based on the fact that the farm house and those who live in it have hundreds of requirements, running from the simplest things of household use to the most ponderous machinery now employed on well-to-do farms—yes, and including pianos and other refined modern home necessities —heating and lighting machenery, water works and automobiles. All of these are arranged for and bought when the farmers ARE ABLE TO BUY THEM. That ability comes from the well-cultivated, fertile acres of their farms and the wisely conserved and judiciously used pastures, but it does not depend so much on the quantity produced or the number of cattle raised as it does on the PRICE. The profit is all in the price, and the financiers know it whether the agricultural experts do or not. Without a remunerative price, quantity is a burden rather than a benefit

Those, then, who help the farmers to obtain equitable prices and secure profits are promoters of trade—of all kinds of useful trades. The readers of UP-TO-DATE FARMING are helped in this way. They have been helped in the production of the most profitable crops, and they have been taught a system of selling that brings the best prices. Wherever that system has been employed it has been successful, and it is fast spreading over the whole country. It gives the farmers better profits, but it does not increase the cost of living. It sells when the stuff is needed and where it is needed, thus actually increasing consumption as well as price by keeping the stuff out of the control of speculating combines, self-appointed and greed-impelled price makers, that rob the farmers by means of forced low prices and the consumers by forced high prices. Thus the new system (the Equity System we call it) brings more money to the farmers to enable them to buy more of the things they need, and it leaves more money with the consumers to enable them to secure more of the comforts of life—all stimulating trade.

It is very apparent, then, that if the country is prosperous the farmers must be prosperous; if business is active the producers and consumers of farm products must be able to make it so. The more money these people have the more goods they will be able to buy, and the greater will be the stimulation of business. In this we are not exploiting a theory. The financial interests of Wall street realize its truth, business men everywhere concede its effects, and the thousands who are practicing it are reaping the benefits.

Expert Aid for Farm Women

EVERYBODY is going to educate somebody. Secretary Houston of the Department of Agriculture now proposes to educate farmers' wives. It is true that one never gets too old to learn, and the more useful knowledge people acquire the better it is for all. But it is possible that notions of this kind may be carried to an extreme and become a fad. What with the "rural uplift," the "country life commission," the "back-to-the-land movement" and other fads that have developed in the cities, one uninformed might think the people of the country are in sore straights so far as intelligence and refinement are concerned.

Secretary Houston has taken this matter up and has had his "experts" to send out 50,000 letters asking farm women to tell him what the Department of Agriculture can do to brighten their lack-luster lives and teach them how to do their work easier and better, so they may live, as we suppose, more like city people.

more like city people. Our illustration on the front cover depicts the interior of the average farm home, and its mistress, who has just received a copy of the letter from the Secretary of Agriculture.

We credit the secretary with good intentions, but farmers' wives and farm women in general are not the ignorant people city folks seem to think they are. As girls they attended high schools, and some of them the colleges. A lifetime on the farm acquainted them with all the details and made them true helpmeets for their husbands. In the house and about the home grounds their true selves become manifest, and each effort is for the beauty and comfort of the home. Families of children, boys and girls, are growing up around them, and in their turn are getting the advantages of the schools. In the home is not only pleasure and comfort, but refinement. This is the average farm home of today, and there is an independence and refinement about it that can scarcely be found in or around the city home of wealth. The writer of this has lived much in country and in city, and there is no comparison between the average home life in the one and in the other. The farm life is open and free, with refining influences everywhere. The city life, the average city life, is almost within prison walls, and in many cases it would be better if it were. Do what you can, Mr. Houston, but let your work be done where it is most needed. However, when you can make the country home better, do it. We'll help.

More Farm Education

THE Department of Agriculture wants the farmers to dry their corn before they sell it. Those who sell direct from the fields unquestionably sell an excess of moisture—of water—but not many sell that way, because the buyers are not inclined to handle it in that condition. The rule is to husk the corn and put it in cribs. In that condition, as all farmers know, it dries rapidly and soon gets in a marketable condition. Still the corn contains no little moisture. The department claims that every hundred pounds of corn sold from June to October contains from thirteen to fourteen pounds of water, and that sold from November to April contains not less than from eighteen to twenty pounds to the hundred pounds. From these figures the department specialists estimate that farmers annually sell in this country, and get pay for it as corn, not less than 15,595,800 bushels of water!

Well, what is to be done about it? The farmers grow the corn from the soil. It can not grow without moisture. When it ripens it is gathered and generally stored in buildings or receptacles called cribs. There nature keeps busy drawing out the excessive moisture. When the time comes to market it the remaining moisture, of course, goes with the corn and is weighed with it and sold with it. But the buyer makes the price. He expects the corn in that condition, as does the shipper and the buyer at the other end, and the prices are made accordingly. It is impossible to take out all the moisture without putting the corn through a drying process. If the farmers were to do that would they be paid a cent more per bushel for their corn?

What does the department hope to gain for the farmers by keeping "several specialists" engaged in work like this? We have been led to wonder if these specialists have been set to work at the request of the farmers or at the request of the buyers, who wish to get the most corn possible for the least possible money. If all this moisture were taken from the corn, as the department urges so impressively, would any fewer pounds of corn be counted a bushel? Corn is now marketed naturally. It is allowed to dry out as nature dries it out. It goes to the market as the buyers expect it, and in a condition satisfactory to the users at home and abroad. If all the moisture were extracted would it be any more satisfactory at any point between the grower and the user, and in such case who would lose the fifteen and a half million bushels of corn that the department says is water? The "specialists" are constantly urging higher grading of farm products, but they never think of any deficiency in price. No one urges honest marketing more emphatically than we, but we want the grade and price to advance together.

Too Much From Education

THE Chicago Evening Post, in a deliberately written editorial, says: "The real point is that too much is commonly expected from education; there are other forms of effort which must be used." That expression is rather an unusual one, but it carries with it food for thought. The big business houses want to give money to "educate" the farmers. The agricultural schools are constantly pleading for money, and more money, to help them "educate" the farmers. The fertilizer companies would "educate" the farmers to make their lands richer. The buyers and storers of farm products would "educate" the farmers to produce more stuff that there may be more to handle and that it might be cheaper as it comes from the fields, but no cheaper as it makes its way to the kitchen. The railroad companies run exhibition trains to show how it is done. And thus it goes to the close of a most remarkable chapter.

It does look like too much is expected of education. These institutions all want big crops, and they want the farmers educated to produce them. And so do we. But we want something else as well. We want the farmers to make something for themselves while they are producing these big crops, and to make something for themselves they must receive remunerative prices. They must do a better job of marketing. "Favorable market conditions," says the Post, "would probably get quicker results than elaborate arguments based upon the farmer's duty to mankind." That's it exactly. If you want a man to work, assure him that he will be paid for it. Guarantee a reasonable reward and there need be no further anxiety as to the quantity produced. This reward must come from the marketing, and it must be the result of the price. Yes, there must be something besides the education the schools and all those other concerns are proposing to give. The farmers must have a price, and they must secure it for themselves just as other business people do.

Can Other Countries Compete With American Farmers?

THIS QUESTION is often asked since the adoption of the new tariff law, which opens to the American markets the products of all other countries. As a lesson we may specially consider the wheat crop. The United States Department of Agriculture reports that this year's product of wheat in the countries named is as follows: Bulgaria, 60,627,000 bushels; France, 322,734,000 bushels; Hungary, 166,672,000 bushels; Italy, 209,440,000 bushels; Roumania, 88,135,000 bushels; Canada, 211,004,000 bushels. We regret that Russia is not included, because that is now the largest exporting country of the old world. We freely concede that not many of these countries can compete much in our home markets. They are so far away and have so much nearer demands that they are but little menace to our farmers. They can compete with us only in the world markets, and that they have been able to do all the time. But it is not so with Canada. That rapidly developing country is at our very door, and it is just as easy to market Canadian wheat in the United States as it is to market our own wheat here. So the effect of the law in question is to add Canada's two hundred and eleven million bushels of wheat to that grown by our own farmers, and every addition to the surplus reduces the price.

It is largely the same with other crops. Countries that produce a shipping surplus of anything produced for market here, and that have access to our markets, may sell here just as freely as they can sell at home. And this applies not to soil products only, but to live stock as well. Previous to the adoption of the present law this was not so. It may be that the short crops of the present year may prevent the effect from being so marked, but the situation is as above outlined.

South American Beef in North American Markets

MANY FARMERS who have been raising or fattening beef cattle are more or less concerned about the South American cattle countries, and are fearful lest these southern countries will send great quantities of meat into the United States, now that the tariff is off, and reduce the prices on fat cattle in this country. Let us examine a few of the facts as they are presented to us at this time.

In the first place, farmers in the United States or elsewhere can not continue long at producing beef unless there is a fair amount of money to be made in the business. In the second place, Europe needs imported beef far more than we need it. Heretofore we have been shipping large quantities of beef to England. So have the South American countries. We are no longer exporting much beef, having little more than we can use at home. This cutting off of supplies to Europe from the United States will probably make England offer higher prices in order to get the beef she needs, and the highest bidder will, of course, establish the price. South America will send no meat to the United States at a lower price than would be paid by a European country. While the packers of this country may take advantage of our cattle raisers and pay less for cattle because some imported beef is coming to the United States, they can not hope to maintain lower prices here, for it would discourage the increased production they very much desire.

Dr. A. D. Melvin of the United States Department of Agriculture has been in South America making investigations of the cattle industry in that continent. He has found Argentina and Uruguay to be the only countries exporting beef in any considerable quantities, and their exports are nearly all to England. Dr. Melvin declares that Argentina is killing right up to the limit of her production; that to increase the production the present high prices must be maintained. In other words, South American cattle raisers are not going to raise cheap beef for us, but they will try to increase their beef stock if they are to be paid for it at present prices.

Much of the cattle in South America are high-grade stock, Durham, Hereford and Polled Angus breeds predominating. They are raised, fed and fattened entirely on alfalfa pastures. The South American grain farmers do not feed their grain to cattle, finding it more profitable to sell it. It takes three acres of alfalfa per head to feed their fattening cattle. To increase the number of cattle by one million would mean to bring three million additional acres under alfalfa cultivation. This will not be done in a twinkling of an eye. If grain farms are to be turned into alfalfa farms the shorter grain crops would tend to increase the demand and price for grain. Unless the cattle raisers get good prices for their beef, they will partially abandon cattle raising for grain farming, just as the farmers of the United States have done and are doing today.

The farmers of this country have no one but themselves and the packers to fear on account of lower prices. Present prices can be maintained on all the cattle our farmers can conveniently raise, if they will but get together and establish a system of marketing that will give them the opportunity to make the price. So long as our farmers unload cattle on the market, taking whatever price is offered, and making no attempt to hold prices up where they should justly be, the packers are not the only ones to blame for their driving a one-sided bargain. There will be a good demand for all the beef we can supply during the next five years at least, and the ultimate consumer will pay enough for his steak and roasts to justify the producer in demanding good prices. Just as soon as the producers get together and put their selling business on a real business basis, they will obtain what they should have and continue to get it.

Announcement to Our Readers

For years the publisher of UP-TO-DATE FARMING has worked early and late, in season and out, to assist our readers in selling their crops where, when and in such a manner that they may bring the largest possible profit.

He proposes to do everything within his power to make both the news and advertising columns of this paper profitable to its readers.

With this object in view, he begs to call your attention to the advertisements, every single one of which is backed by a guarantee of reliability. See statement on Page 3.

You are perfectly safe in patronizing the advertisers whose announcements appear in UP-TO-DATE FARMING. A. H. Ludwig, in the Adv. Dept.

Them and the Others

THE WILSON administration tariff bill is now a law and has gone into effect. The last act, the affixing of the President's signature, was affected at 9:10 p. m. Oct. 3, 1913. We freely and fearlessly discussed features of the bill while it was pending, but it is now a law and, with all good citizens, we await results, with the earnest hope that it may prove a measure beneficial to a majority of the people of the whole country—to the general masses.

We may repeat that the new law practically takes all tariff protection from farm products. That invites the soil products of all countries to freely compete with American products not only in the markets of the world, but in our own markets. It is true that not many countries can thus seriously compete with us, but there are some that can and will. It is evident that this competition must reduce the prices paid for farm products in this country. But in the tariff revision many other commodities are also added to the free list and material reductions are made on others. These additions to the free list and reductions, it is claimed, will compensate the farmers for what they may lose in the forcing down of prices by the free importation of foreign products. But, as usual, the lawmakers and writers and speakers forget that the makers and sellers of other goods make the prices at which they shall sell, but that farmers never do. The sellers of farm products leave the buyers to make the prices that are to be paid for those commodities. This fact puts the farmers more completely at the mercy of the trades people and speculators after removing from their stuff the only protection it had. In this connection we can not refrain from quoting from one who has for many years been a careful observer of legislation, state and national: "They don't hesitate to make all the farmers' products free, but when it comes to something that might bother the trade gamblers—no, never!" But, as previously said, we now await results.

One fact, however, stares the farmers in the face. If it was ever important that they should be organized so as to act in unison, it is doubly so now. The tariff protection helped them some in their struggle with the buying price makers. Even that is now gone, and they are left to struggle for equitable prices single-handed and alone. It must be seen at once that in such a struggle individual farmers are worse than helpless. They must accept prices dictated by importers of products from other countries. These importers, of course, will be sustained in their efforts by our own buyers, who wish to pay the lowest possible prices for homegrown stuff that they may unitedly store and hold until they can force the usual high prices upon consumers. The only protection we can see from this situation is the organization and confederation of farmers all over the country, both in their own and the consumers' interest. This is not as other papers discuss this question, but we are right, and our readers know it.

Mr. Dooley Has an Idea

"Hinnisy," said Mr. Dooley, as he took a seat on a soap box in Hogan's grocery, near an apple barrel, and began searching its contents for the largest one, "the naycissities iv loife are fast comin' to be its looxshuries. The proices me butcher, me baker and Hogan here charges me fer sustenance are so hoigh ye can't raych thim with an airyplane. It's scandalous. It's the talk if th' nayborhood. I'm weak and emashiated frum abshtainin' from me customary porterhouse. Avin calf liver and bacon are almost beyond me raych, and hog and hominy is no longer the shtandby of the workin' mon, but is the dessert av the nabobs. Apples are worth their weight in goold, and pertayties, why—say, Hogan, how're ye sellin' pertayties?"

"Tin cints a quarther av a peck," said Hogan.

"Ay, luk at thot, now, will ye?" responded Dooley. "If ye sold 'em by the bushel ye couldn't sell 'em at all, fer none o' yer coosthumers could raise the proice av a bushel without mortgagin' th' goat."

"What's the poor workin' mon to do, Mr. Dooley," aswed Hennesy, looking much worried.

"Do? Why, I've got a scheme that will hit th' High Cost of Livin' a knockout punch in the solar complexshun. Here's Hogan sellin' pertayties fer tirty-sivin sints a peck, cash. The fahrmer who sold thim pertayties, who planted thim and brought thim up th' way a good pertaytie should grow don't git that much fer a bushel iv thim. Sometimes he don't git enough to pay fer the diggin', and he lets thim rot in the ground, where our stummicks are fairly achin' fer a fillin o' spuds, because we can't raise Hogan's limit. Hogan says he's not to blame. I'm not to blame, and you are not to blame, Hinnisy, this time. The fahrmer is the cause av it all."

"The fahrmer! Dooley, are ye crazy? That poor divil is in the worst fix av all av us."

"Shure, I know it," replied Mr. Dooley, "and here is where my scheme knocks the High Cost of Livin' into the ditch. Thim fahrmers ort to git together and have a big market place av their own in ivery city, with a man av their own in charge. Thin, when Hogan needed pertayties, he goes to the fahrmers' market and buys direct from the fahrmer himsilf, through his representative, who will be running the market. The fahrmer will get forty or fifty sints a bushel and will go to growin' pertayties by th' million. Hogan can have as much profit as he gets now, and Mrs. Dooley can come wid her market basket, and two bits, and take away a peck of pertayties, and the goat can have the peelin's, instead of atin 'em oursilves.

Smile Awhile

Would Need It Later

—"Your money or your life," demanded the robber.

"Take me life thin," answered the Irishman, "for I'm savin' me money for me auld age."

A Bad Division

Mr. Bash—I've half a mind to kiss you.
Miss Dash—What have you done with the other half?

Came Provided

Querist—Did you have any boarders this summer?

Resort Keeper—No, lumber was so high everybody brought his own board.

Both in a Fix

"Sister, I would like to see you a minute, but my skirts are so tight I can't get up the stairs. Will you please come down?"

"I would be glad to, but my new hat is so wide I can't get through the passage."

A Great Sacrifice

"Remember, Arthur, you are the son of a gentleman. Try to be like one for an hour at least."

"I will, mama, but it will spoil the whole day for me."

He Dodged

"Does your wife miss you when you are away from home?"

"No, it's when I'm at home she misses me. She couldn't hit a post."

Selling Nuts

"Are there any worms in those nuts, my boy?"

"Yes'm, but if you'll eat 'em without your specs on it'll be all right. The worms taste just like the nuts."

Understood the Game

"We had a baseball team of girls in ou school?"

"Were any of them good catchers?"

"So many of them caught husbands it broke up the team."

Wrong Remedy

"I think your husband should be treated for the drink habit."

"You must be mistaken, doctor, for it was by treating that he got it.

No Thought of Blowing Up

"Why do they call some of the girls explosives?"

"Because they use so much powder, o course."

May and May Not

"Do you believe the voting machines will be an advantage to the country?"

"It may if the voters work the machine As it is now the "machine" works the voters."

Burning Words

A Spokane girl was required by he teacher to write an essay of 250 words about an automobile. The next day she submitted the following:

"My uncle recently bought an automobile. Last week he was riding out in the country when a tire busted going up a long hill. This makes about 25 words. The other 225 are what my Uncle said while he was walking back to town through the mud, but they are really not fit for publication."

A Few Guesses

Why was the elephant behind all the res in entering the ark?

He had to pack his trunk.

Why did the dog refuse to go into th ark?

He didn't have to. He had a bark o his own.

What is the oldest fruit and the one tha is hardest to keep?

Dates.

What fruit do politicians most hunge for?

Plums.

Why has a preacher an easier time tha a lawyer or a doctor?

Because it is easier to preach than t practice.

Are family quarrels a matter of history

Yes, the first thing Adam and Eve di was to raise Cain.

OUR MARKET REVIEW

Semi-Monthly Review of Crops, Markets and Trade

THE Department of Agriculture, in Farmers' Bulletin No. 360, reports that the estimate of yields of all crops on October 1, 1913, was 16.6 per cent lower than the estimated yields on the same date a year before, and about 9.7 per cent lower than the average condition on the same date in recent years. Very good crops are reported in Florida, Wisconsin, Minnesota and Arizona only. Very poor crops are reported in Illinois, Missouri, Nebraska, Kansas, Oklahoma and Kentucky.

This information, as far as it goes, is valuable to our readers in giving them some of the places of surplus crops and where there are shortages, to facilitate marketing and buying. Farmers who want the department's bulletins should have their names registered in Washington.

The first killing freeze came at Indianapolis Oct. 20, compared with Oct. 24 last year. The mild fall weather, with rains, were beneficial to grass, the new wheat and potatoes. We predict the estimate of yields of the latter will be increased in the November report. A large acreage has been put in winter wheat and reports indicate excellent conditions generally.

The wheat visible shows a big increase in this country and an enormous increase in Canada, notwithstanding the exports from both countries were larger than in many years. The oats visible also increased more, as the table shows, and is the highest now in many years.

The prices of wheat, corn and oats are all lower than two weeks before. Wheat and oats are also lower than a years before, while corn is higher. As grain is on a world's basis for prices now, we may not see much improvement in prices for some months, when the world will need what is held for higher prices. Before the new tariff, or free trade in farm products, our farmers could hold back supplies and compel our handlers and mills to pay the price without interference from outside. Then, when the world caught up with the outside supply, it would also pay the higher price for what we had left. But it is different now. We predict those farmers who hold wheat and oats will eventually get higher prices.

ADVICE—Wheat—Hold it for higher prices or feed it. Corn—Market surplus old corn. Sell new corn at 55c or better from field. Oats—Hold for more money. Potatoes—Market gradually. Hold some for higher prices. Hay—Market gradually. Broom Corn—We look for higher prices. Beans—They will be higher. Apples—Ask a good, round price for good stock. Convert poor stock to cider and vinegar. Cotton—Market gradually to maintain present prices. If marketing will stop when the price goes below 14 cents at New York, this price or above will be paid for all cotton.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreets's reports on Oct. 18, 1913, with comparisons, are shown in the following table. (The sign — before figures means decrease, X means increase.)

	Oct. 18, '13. Bushels	Change from 2 wks. before Bushels	Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
WHEAT	60,579,000	X 5,471,000	X 2,983,000	X 17,681,000	—7,947,000
CORN	8,633,000	— 118,000	X 521,000	X 4,398,000	X 4,500,000
OATS	36,294,000	—1,016,000	—3,861,000	X 24,025,000	X 9,758,000
BARLEY	7,245,000	X 2,063,000	—3,966,000	X 2,098,000	X 2,222,000

The visible supply of wheat in Canada on the same date was 39,149,000 bushels. This is 16,468,000 bushels more than two weeks before and 13,210,000 bushels more than a year before. The visible supply of oats was 7,157,000 bushels on the same date, which is 1,528,000 bushels more than two weeks before and is 5,698,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Oct. 24, two weeks before and a year before as follows:

	Oct. 24	Two weeks before	A year before
WHEAT, No. 2 RED			
Chicago	.92 @92½	93½@94	1.09¾
St. Louis	.93 @94	92½@94	1.12
Kans. City	.88½@90	84½@90	1.07
Cincinnati	.93½@94	.....	1.11
New York	.95	96 @97½	1.06½
CORN, No. 2 WHITE			
Chicago	.70 @70½	70 @71¼	64¾

St. Louis	....41¾@42	42½@43	34½
Kansas City	.39¼@40	42¾	34½
Cincinnati	..40 @40½	.....	37½
New York	.....	46 @46½	39

Future Grain Prices

Chicago grain futures closed on Oct. 24, 1913, and two weeks before, as follows:

WHEAT—December, 84c; May, 88⅝c. Two weeks before, 86⅝c and 91¾c respectively.

CORN—December, 68⅝c; May, 69⅞c; July, 68⅝c. Two weeks before, 68⅞c, 70⅝c and 70⅜c respectively.

OATS—December, 39¼c; May, 42⅞c; July, 42⅝c. Two weeks before, 41⅞c, 45¼c and 43⅝c respectively.

COTTON—New York, Oct. 24. Cash cotton closed as follows: Middling uplands, 14.50c, middling gulf, 14.75c. Two weeks before the close was 14.20c and 14.45c respectively. A year before, 10.95c and 11.20c respectively.

Chicago Produce Market

Chicago, Oct. 24, 1913

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers' Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week	Last week	Last year
Monday	86	100	115
Tuesday	90	55	75
Wednesday	40	70	60
Thursday	80	50	65
Friday	47	60	50
Total, 5 days	343	335	365

Market held firm at Thursday's advanced prices. Buyers took hold freely and receipts were moderate, reported at 47 cars. Some cars coming from Dakota included frozen potatoes and had to be held back to be resorted.

Sales reported were: Per bushel—Wisconsin, round white, 3 cars at 68c, 6 cars at 70c, 2 cars at 72c; Dakota Ohios, 1 car at 65c; Minnesota white, 1 car at 68c, 1 car at 70c. Sacked—Wisconsin white, 1 car at 72c, 5 cars at 73c.

Per bushel, Minnesota and Dakota

Ohios, bulk or sacked.....63@70c
Wisconsin round white, bulk.....67@72c

Fancy sacked bring a premium.
Michigan .....67@72c

Sacked bring a premium.

The price is 10c a bushel higher for Ohios and 12c a bushel higher for white stock than two weeks before. A year before the prices were: Ohios, 35c to 43c; white, 32c to 42c.

SWEET POTATOES—A fair demand for choice Jerseys exists. They are steady. The others are slow.

Barrels, Virginia .....$1.50@1.75
Jerseys ..... 2.65@2.85
Hampers, Jerseys ..... 80@ 90
Delaware ..... 60@ 75

Virginias are 25c to 50c a barrel lower than two weeks before. Jersies are 15c to 20c a barrel lower. The price of Delawares is unchanged.

HAY—Receipts, 939 tons. Demand improving and offerings only fair. Market steady. Prairie hay is not in good demand.

Choice timothy hay.....$18.00@19.00
No. 1 timothy..... 16.50@17.50
No. 2 timothy..... 15.00@16.00
Iowa and Nebraska prarie... 14.50@16.00
Illinois and Wisconsin prairie. 8.50@10.00

The price of choice timothy is $1 a ton lower than two weks before. A year before the price was $1 a ton higher.

STRAW—Rye straw quotable at $8@9. Oat straw at $6.50@7.50. Wheat straw $6.50@7. Rye straw is $1 a ton higher and oat and wheat straw 50c a ton higher than two weeks before.

BEANS—Are ruling firm. Dealers report demand as being very fair. Pea beans in fair supply. The others are scarce.

Pea Beans—
Hand picked, choice.....$2.15@2.20
Common ..... 1.50@1.75
Mediums nominally about same as pea beans.
Red kidneys, choice..... 3.00@3.10
White kidney, nominal..... 3.00
Brown Swedish, long..... 1.75@2.00
Round ..... 2.00@2.25

The price of pea beans is 10c to 15c a bushel higher than two weeks before. White kidney unchanged and Swedish 25c a bushel higher. A year before the price of hand-picked choice pea beans was $3@3.10.

BROOM CORN—Was moderate sale. Market firm.

Per ton, Illinois corn.....$150@160
Oklahoma ..... 110@160

The price of Oklahoma corn is unchanged to $10 a ton higher. Illinois unchanged from two weeks before.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week. Cases.	Last week. Cases.	Last year. Cases.
Monday	4,510	5,710	4,063
Tuesday	5,907	5,941	3,576
Wednesday	4,733	4,382	2,989
Thursday	2,866	4,471	2,182
Friday	4,877	4,435	2,940
Total	22,893	24,929	15,750

A firm feeling prevails in this market and quotations were advanced ½c today.

The market is reported in a healthy condition and the trade is quite satisfactory. The receipts are lighter—showing some falling off, being smaller than last week, but larger than for the same period one year ago.

Miscellaneous lots, cases returned, 22@26c, according to quality. Top prices only realized where shipments contain mostly new-laid eggs. Cases returned, ½c less.

Ordinary Firsts quotable at 23½@24½c.

Firsts quotably 27@28c. To bring quoted prices eggs must run mostly to new-laid eggs, with not over 24 eggs loss to the case.

Checks—In good supply and only merchantable stock selling. Some of the Checks coming are moldy and musty and sell anywhere from $4.50 to $5 per case for merchantable lots.

The price is 1½c higher than two weeks before. A year before Firsts were quoted at 24c.

To Bring Seller and Buyer Together

This department is exclusively for producers and handlers of farm produce, grain, live stock, cotton, vegetables, fruit, hay, poultry, etc: :: :: ::

There is no charge for this service but a condition is that before using it the accompanying Crop Report be sent for full instructions, blanks, etc., so all business may be conducted systematically. You will appreciate the advantage of this after you get the instructions.

This department is instituted to enable farmers to sell at the right time and place, and to reliable customers; to help you get the real worth of your crops, your rightful share of the consumer's dollar—therefore do not do any marketing without first consulting with our market experts. If you want to obtain the highest prices your available market affords, report your crops on the blank provided and get the benefit of our advice and service. Our representatives in all the best markets are reliable, capable and *thoroughly equipped* to handle your products to best advantage. "Team work" and co-operation with headquarters will result in larger profits to you. If you have any crops to market in car lots, or could co-operate with your neighbor and make up car-lot quantities, fill out the blank below and mail at once to Farmers' Society of Equity, Indianapolis, Ind., and we will advise you where, when, how and to whom to ship for best results. Your shipments will be followed by this department until sold. The net proceeds will be sent promptly to you from our special representative to whom you shipped. This service will save and make you money. Send in the report today, NOW. This will supply us with advance knowledge of products to be marketed and our service will be made more efficient and satisfactory to you.

WHEAT—We have 15 cars good milling wheat for sale. Those interested should write for further information.—H. C. Miller, Carlton, Neb.

POTATOES, CANE, KAFFIR CORN, MILO MAIZE, FETERITA—Members having any of the foregoing for sale should write J. H. Harmon, State Union Secretary, Shawnee, Okla.

BLISS TRIUMPH SEED POTATOES WANTED—Preferably from the northwest, for our Gulf Coast District planters. C. B. Lozier, Business Mgr., Robertsdale, Ala.

APPLES, POTATOES, WANTED—in carlots. Geo. M. Wolfe, Secretary, Dennis, Kans.

TIMOTHY HAY FOR SALE—H. E. McDade, Hagerstown, Md.

DRIED PEACHES—Two cars for sale. A. L. Cross, Kingsbury, Cal.

CORN, HAY, FOR SALE—J. A. Huston, Mulbury Grove, Ill.

APPLES—Three cars choice for sale. W. S. Kerstetter, Secretary, Sunbury, Pa.

HORSES—Carload for sale. Parties interested should write to Oscar Burns, Upton, Wyo.

POTATOES—One car medium size and smooth. Ready now.—Fred Newmiller, R. R. 4, Clyde, N. Y.

APPLES WANTED—100 to 500 bushels now and a car load of winter apples later.—J. E. Evans, Sisterville, W. Va.

CORN—This community wants a few cars.—W. D. Reddock, Personville, Tex.

FENCE POSTS, MOLASSES, CHRISTMAS TREES—For sale by Sulphur Local Union, James F. Powell, Pres., Sulphur Springs, Ind.

POTATOES, APPLES—We have lots of potatoes to sell and want to buy apples.—J. U. Flemming, Organizer, Ellendale, N. D.

POTATOES—Wanted to buy in car loads.—A. E. Weber, Sec., Geneva, Neb.

DRIED FRUIT—Prunes, raspberries and canned fruit and vegetables, also winter apples and potatoes to sell.—Equity Warehouse Co., Portland, Ore.

SWEET POTATOES—Car loads to sell.—C. B. Lozier, County Secretary, Robertsdale, Ala.

CORN, OATS, BARLEY, POTATOES—We want to correspond with locals that have these to sell.—Henry Vauck, Sec., Shiekley, Neb.

WHEAT, OATS, APPLES, POTATOES—For sale. W. S. Kerstetter, Sec., Sunbury, Pa.

WHEAT—300,000 bushels for sale.—F. C. Saxowsky, Sec., Hebron, N. D.

WHEAT, POTATOES, APPLES—Large quantities for sale.—O. E. Scott, State Secretary, Pocatello, Idaho.

POTATOES—Parker's Prairie Local Union has car loads to sell.—L. H. Brockman, Sec., Parker's Prairie, Minn.

WHEAT, POTATOES—Carlots, to sell.—C. H. Dent, Sec., Dent, Minn.

WHEAT, OATS, BEANS—For sale. F. A. Bell, Carson City, Mich.

POTATOES—For sale. H. L. Logue, Parkers Landing, Pa.

HAY, POTATOES, HOGS—For sale. J. Whitworth, Shelby, Idaho.

SPELTZ, OATS, POTATOES, HOGS—For sale. I. B. Hale, Acton, Mont.

WHEAT—For sale. C. L. Kelley, Dempsey, Idaho.

ALFALFA HAY, HOGS—For sale. C. W. Brown, Aberdeen, Idaho.

HOPS—For sale. Geo. Humpert, Silverton, Ore.

CANNED TOMATOES AND PEARS—For sale. Samuel Crull, Tippecanoe, Ind.

MULES FOR SALE—Eight young mules, good strong ones, from one to five years of age. Also one six-year-old jack. Prices and full description on request.—J. W. Lathrop, Valida, Kas.

POTATOES, ALFALFA, GRAIN—For sale. E. G. McAllister, Mitchell, Neb.

CORN, HAY, OATS, SWEET POTATOES—For sale. John A. Stephan, Citionelle, Ala.

BARLEY—For sale. Walter Baker, Polonia, Wis.

PEANUTS AND HOGS—To sell. Joe C. Publis, Apache, Okla.

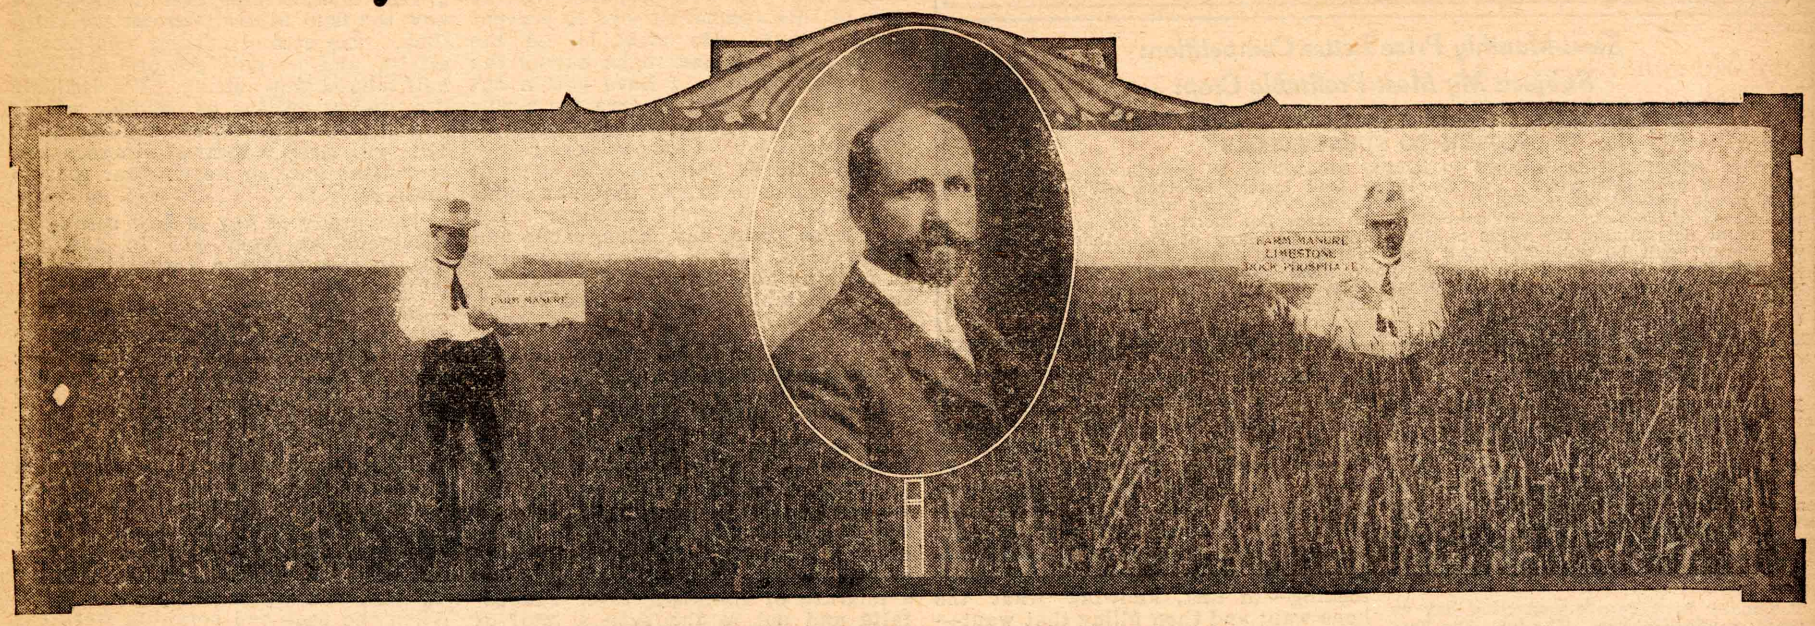
The Rejuvenation of Poorland Farm



Dr. Hopkins Shows How to Build Permanent Soil Fertility With Lime and Phosphate Rock :: ::

A FARM with a rich soil is the one thing every farmer desires to have. Fertility of soil is the very heart of successful farming. To make the soil more fertile, so each acre will yield a greater return, is something every farmer desires, though some of them have not the determination to do what lies within their power to accomplish the feat.

This story relates to a farm that was one of those ordinary run-down farms, just like a number of such farms as you, reader, have in your own neighborhood. Possibly you live on such a one. You will be interested, and if you will but take this lesson to heart and follow out the suggestions it contains, you should be greatly benefited by reading how one farm was made to yield larger and larger crops year after year.

Poorland Farm is owned by one of the foremost men in agriculture, Dr. Cyril G. Hopkins, one of the world's greatest authorities on soil fertility. Dr. Hopkins has long been connected with the University of Illinois in the Agricultural Experiment Station at Urbana. Wanting to see what results could be obtained on an actual run-down farm by methods available to the means of the average farmer living on such a farm, he purchased one and set about the task of making it one of the best farms in the state, from point of ability to produce crops. His story of what has been accomplished, and how, is told here for UP-TO-DATE FARMING readers in almost his own words:

Where Fertility Comes From

The main problem of permanent fertility is simple. It consists in making sure that the soil contains in abundance every element necessary to a maximum yield of crops. Some are in the soil—were always there. Some have to be supplied, not necessarily in the form of high-priced commercial fertilizers, but in a manner that provides the same elements at a cost low enough to be within reasonable reach. Some crops can obtain much of their nitrogen from the air. Others must obtain their supply of nitrogen from the soil. All other elements of plant food for all plants must come from what is in the soil, or placed therein by man. It is a matter of the greatest importance to know how to supply these elements abundantly and inexpensively in form the plants can use. There is an abundant supply of these elements, such as phosphate rock, limestone and potassium minerals, already present in nearly all soils. Instead of making an expensive acquaintance with the fertilizer agencies, the farmer should first make the acquaintance of the natural agents that can help him as much and cost him less. Commercial fertilizer is all right in its place, and that it should have a place in the production of our food supply is not denied or questioned. But the farmer need not pay out good money for commercial fertilizers to do that part of production which careful management and inexpensive materials can do at much less expense.

A Big Question

The bigness of this question can best be appreciated from the fact that the farmers of the United States pay out much more than $100,000,000 for commercial fertilizers. When judiciously purchased and intelligently used they no doubt pay a good profit on the investment. And even when the soil is fairly fertile, in the common usage of the term, there are crops that will pay a profit on a wise use of fertilizer. But the main facts are that the air contains an absolutely inexhaustible supply of nitrogen, the most costly ingredient in commercial fertilizers, and this air nitrogen can be freely utilized by clover, alfalfa, cowpeas, soya beans, vetch and other leguminous crops, all of which are well worth raising for their own good qualties, being valuable both for forage and seed production, while the nitrogen they absorb from the air can be very largely placed in the soil by feeding the crop and spreading the manure over the field, or by plowing down the residue. Then, too, leguminous crops store a certain amount of nitrogen in their root systems, which is available for the succeeding crops. Then the normal soils of most states contain a generous supply of potassium (potash), while subsoils, especially clay subsoils, contain a larger amount than the surface soil. But phosphorus, although the cheapest ingredient in commercial form, is found in soils in very limited quantities and, as a rule, must be purchased to maintain soil fertility. Assuredly must this be done if soil fertility is to be increased. So economical soil building, i. e., increasing soil fertility, is best done by purchasing large amounts of the low-priced phosphate and then, by the aid of lime, leguminous crops, manure and good cultivation, store up large quantities of nitrogen and liberate equally large quantities of potassium.

Finely ground rock phosphate can be delivered at railroad stations in the corn belt for $8 or less per ton. It will require at least four tons of "complete fertilizer," as sold by fertilizer manufacturers, to supply the amount of phosphorus contained in a ton of phosphate rock. Four tons of complete fertilizer will cost from $80 to $120, according to grade.

Ohio's Practical Demonstration

In Ohio experiments, where phosphorus alone was used, $2.60 invested in phosphorus returned an extra profit of $13.93 in crops per rotation of corn, oats, wheat, clover and timothy. What money, therefore, farmers have to spend for fertilizing materials could be most profitably expended, as a rule, in the purchase of phosphorus, supplying nitrogen and potash from the air and the soil by means of other agencies than the purchase of those ingredients in commercial form. For instance, if a farmer buys ten tons of complete fertilizer at $20 per ton and applies it on fifty acres (rate of 200 pounds per acre), it may return him a profit of 50 cents on each dollar expended. If he were to spend but $150 for lime and rock phosphate and the other $50 for clover seed, the chances are that he would get a net profit of $5 or more from every dollar expended, in point of yield, and his soil would most certainly be in superior condition for future crops.

Buying an Illinois Farm

In November, 1903, I purchased a farm in southern Illinois at a cost of less than $20 an acre. It comprised about 300 acres of poor gray prairie land (the commonest type in about twenty counties in that part of the state) and a few acres of timber land.

It was christened "Poorland Farm" by the neighbors and those who knew its impoverished condition, and I finally adopted this as the farm name.

In 1913 a 40-acre field of this farm produced 1,320 bushels of wheat. This particular forty acres was bought at $15 an acre. It had been agriculturally abandoned for five years prior to 1904, and was covered with a scant growth of red sorrel, poverty grass and weeds.

During the ten years, this field has been cropped with a six-year rotation, including one year each of corn, oats (or cowpeas) and wheat, and three years of meadow and pasture with clover and timothy.

A fairly good stand of volunteer clover appeared with the oats in 1911 and this was allowed to produce a crop of clover hay in 1912, wheat being seeded in the fall of that year for the 1913 crop mentioned above.

During the ten years about four tons per acre of ground limestone and two tons per acre of fine-ground raw rock phosphate have been applied to thirty-seven acres of this field. Two applications have been made of each material; the phosphate was plowed down for the corn crops of 1904 and 1910, and the limestone was applied in the fall and winter of 1904-5 and after the ground was plowed for wheat in the fall of 1912.

The entire 40-acre field was covered with one uniform application of six loads per acre of farm manure, with a fifty-bushel spreader.

A six-rod strip entirely across the field (eighty rods) received the same application of manure and the same rotation of crops as the remaining thirty-seven acres, but no phosphate was applied to this strip and no limestone was applied to it until the fall of 1912, when the regular application (about two tons per acre) was applied to one-half (three rods) of the six-rod strip.

Only thirty-nine acres of this field were seeded to wheat in the fall of 1912, a lane having been fenced off on one side, and the 1,320 bushels were produced on the thirty-nine acres.

One and one-half acres with farm manure alone produced eleven and one-half bushels per acre.

One and one-half acres with farm manure and the one application of ground limestone produced fifteen bushels per acre.

Thirty-six acres with farm manure and two applications of ground limestone and two of fine-ground phosphate produced thirty-five and one-half bushels per acre.

The cost of two tons of limestone delivered at my railroad station is $2.25, and raw rock phosphate has averaged about $6.75 per ton, making $9 per acre the cost for each six years, or $1.50 per acre per year.

To this must be added the expense of hauling these materials two miles from the station and spreading them on the land, which I estimate at 50 cents per ton. This makes the average annual cost $1.75 per acre for the limestone and phosphate spread on the field, and this average annual investment resulted in the increase of twenty-four bushels of wheat per acre.

Poverty vs. Prosperity

Thus we may say that the previous applications of these two natural stones brought about the production in 1913 of 864 bushels of wheat, sufficient to furnish a year's supply of bread for more than 100 people. No high-priced or artificial commercial fertilizers are used on this farm. The limestone and phosphate have produced even more marked differences in clover than in wheat, and where the first application of limestone was made to the three-rod check strip, as well as to the thirty-seven acres receiving rock phosphate, the superiority of the phosphate and limestone together over the limestone alone has been exceedingly marked on both clover and wheat, and of course the wheat and other grain crops are benefited not

Our Country Contributors

Semi-Monthly Prize Letter Competition:

Subject: My Most Profitable Crop:

First Prize $3.00 Second Prize $2.00 Third Prize $1.00

NOTICE TO SUBSCRIBERS

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

Editor's Comment

Four hundred hogs annually from a 180-acre farm is unusually good. The small percentage of loss of pigs produced is undoubtedly the result of Mr. Hardy's care in selecting vigor and strength for breeding stock, coupled with good care and common sense feeding. We should have been glad to have had the market returns from this farm, showing amount of feed consumed and proceeds from sales. We all like to know just how profitable a profitable crop has been.

Too many farmers are neglecting hay as a really profitable crop. The idea has long prevailed that seeding land to pasture or meadow is to "give it a rest," and whatever it makes is so much to the good. It seems that the hay plot described by Adair had mighty little time to rest. In fact, it was worked about as hard as soil can be worked, yet by good generalship it grew more productive with each crop. Pasturing, hogging down and plowing under leguminous crops is a sure road to success.—The Country Contributors Editor.

FOUR HUNDRED HOGS A YEAR

(First Prize)

Hogs are the most profitable crop on my 180-acre farm. I grow pure-bred Poland Chinas. I raise two litters a year and breed in November and June. In selecting brood sows I want none with less than twelve well-developed teats. I want a good-dispositioned hog, easy to handle, having a well-sprung rib, a good jowl, a strong back, straight or little arched; a good ham, with plenty of size, combined with quality. I don't care whether the brood sow is a beautiful animal or not. If she is a good animal her looks make no difference. Some of the most profitable sows are hard lookers.

In selecting a sire I want a good, strong hog of good proportions, best of bone, vigorous, well hammed, a good head and ear and a round rib. I raise hogs mainly for pork and I have found the above named points good ones in selecting breeding stock.

I handle my brood sows with great care and have them all bred about the same time. I see that they have plenty of exercise all the time, which is important. My sows are supplied sufficient feed to keep them in an improved condition, but they are not fat when bred. I find a good rye pasture quite an advantage, when the rye has a good start and the ground is in proper condition. They also have the run of a wood lot. In this wood lot I have a number of comfortable houses, in which the hogs go when the weather is very cold, or the snow deep. The wood lot contains a stream of good, clear water.

I have a large corn crib near this wood lot. On the south side of this is a concrete feeding floor. A fence connects the floor with the wood lot and I have a partition through the center of the floor which compels the largest hogs to eat off one-half the floor while the smaller eat off the other half. When feeding time comes the hogs simply pass out of the wood lot on to the feeding floor. I can stay at the crib and feed the hogs corn without having to carry it to them. I have four rows of feeding troughs near the feeding floor, and when feeding swill or thin mash food I haul this from the house in a one-horse cart made of four mower wheels so arranged that I can either use barrels or a box. I feed a variety of feed, most of which is produced on the farm, but I buy a good deal of digester tankage and bran. I find alfalfa an excellent feed at any time. I have nine acres of alfalfa. In the winter time I steam the alfalfa and fork it out to the hogs on the feeding floor. I feed anything the hogs like. In about twenty-five years' experience with hogs I have never lost a half-dozen from disease. By keeping them as close to nature as possible and keeping things clean, being careful about feeding—in fact, knowing what the hogs want and then filling that want—there will be no loss from disease. I have about 200 young pigs born twice a year and it is seldom that I lose more than a dozen out of the 400, but a man must be well prepared to take care of this number of pigs to prevent losing many. He must be on the watch both day and night during the farrowing season. I have gotten out of bed at midnight to care for a sow and her pigs, wading through snow almost knee deep. I keep a close record of the date of breeding and can tell exactly when to expect the young pigs to arrive. I do mixed farming. That is, I raise grain, hay, hogs, cattle and a few colts, but in all my experience in farming hogs have always been my most profitable crop.—William Hardy, Illinois.

GOOD PROFITS IN HAY

(Second Prize)

It is true that there can be more money made on an acre of land with trucking crops, or possibly corn, yet we have made a larger profit on our hay crop this year than we have made on any farm crop for years. We cut a field of five and one-half acres of a mixture of timothy, clover and alfalfa and put in the barn a total of twenty-two and one-half loads of pure, clean hay without having any rain fall on it. As near as we can estimate the amount by measure, there is about fifteen tons of the first cutting and now the field is ready to cut the third time. The second cutting was mostly alfalfa, and we only got one and one-half tons at this cutting. We estimate the present cutting of timothy, clover and alfalfa at two-thirds ton per acre. This will make a total of nineteen and four-fifths tons, or nearly four tons to the acre.

This grade of hay is now selling at Richmond at from $15 to $20 per ton, so this makes a very good profit for the field.

It might be of interest to know how this yield was brought about. Five years ago, when we moved on this farm, we seeded this field to wheat the previous fall and harvested a crop of exactly seven bushels per acre, scarcely paying for the labor. The field was completely worn out. The next fall we seeded it to crimson clover and secured a very good stand, which was pastured the next spring. The field was then plowed deeply and sown to cowpeas and sorghum and this was cut for hay, making a fairly good yield. When the peas and sorghum were cut we seeded the field to rye and hairy

"The World's Greatest Workshoe"

New 1914 Model

Means Greater Service Greater Comfort

Ten Days FREE TRY-ON

Direct to You by Parcel Post

I ship same day order is received

Free Book

Let me send this book to you by mail postpaid. Read it and learn more of this great shoe with the sole of steel—the shoe with the light, springy, airy "step"—the shoe that always holds its perfect shape—never a "rundown" heel, broken arch, warped sole, worn toe, twisted uppers, or cracks and leaks. Before you think of buying a pair of workshoes, get this great book of shoe facts and learn about this wonderful, foot-saving sole of seamless steel. Do not think of turning this page until you have sent for this free book.

I just spent $50,000 to improve my Steel-Sole Shoe

1914 Model "Steels" Better Than Ever

I know, and every wearer knows, that my steel-sole shoes have always been the "World's Greatest Work Shoe"—the best shoe for mechanic, farmer, laborer, miner, hunter—man or boy—ever devised—the only light, practical, economical outdoor shoe ever offered. But I was not satisfied until I spent $50,000 more to make my 1914 Model "Steels" better than ever. Now I'm satisfied—and you'll be more than satisfied with my new, improved, better-fitting, better-feeling, better-service 1914 Model "Steels." My Free Book, "The Sole of Steel"—tells why—my "steels" show why.

Made in all sizes and heights. For men, sizes 5 to 12—6, 9, 12 and 16 inches high. For boys, sizes 1 to 4.

No Advance in Price

Cost of living advanced—leather advanced—steel advanced—labor advanced—the quality of my "steels" advanced—but my price remains the same.

Today my steel-sole work shoe costs you far less than cheap leather work shoes are sold for, and gives six to eight times the wear.

I have kept my price level for five years by spending thousands of dollars for new, rapid, automatic machinery. You benefit by better price, quality and workmanship.

Lightness—Comfort Economy—Health

Leather work shoes are heavy, shapeless, clumsy, in comparison with my "steels." I give you perpetual foot comfort, because my "steels" are foot-form-fitters and never get "sloppy" or out of shape. You pay less and **pay less often** for my shoes because they outwear pair after pair of old-fashioned leather shoes—save $20.00 on your early shoe supply.

And here's another point—my "steels" are waterproof. No more wet feet, chills, pneumonia, colds, rheumatism and other "wet foot troubles." Dry feet mean good health. My "Steels" are Good Health Shoes.

Relieve and Prevent All Foot Troubles

Corns, Bunions, callouses, Blisters, Chilblains, Flat-foot and the many other foot troubles incident to heavy, leaky, shapeless work shoes are eliminated because my foot-form "steels" do not rub or irritate. They are firm, restful, dampproof. They help your feet to good condition and keep them there. My "steels" can not warp or twist out of shape. The steel sole is a natural arch support, made in one piece of specially prepared elastic steel. Do leather shoes give you this comfort and protection? Do these advantages mean nothing to you?

One Reason For My Success

The growth of my business is unequaled in the history of the shoe business. The daily output of my Racine factory alone is 5,000 pairs of "steels."

This big success—this tremendous increase in sales—is due to my open-handed policy. I ask no man to take my word nor the word of my thousands of customers. I prove to every man, at my own expense, every word, every advantage, every feature of my steel-sole shoes.

May I prove to you? Read, sign and mail the Free "Try-on" coupon below. Mail it now—before you turn this page. Ask me to make good my guarantee of satisfaction.

Remember These Great Features

My 1914 "Steels" are Lighter, More Comfortable, Cost Less, More Economical, More Healthful than any other work shoe ever made.

By Parcel Post To Your Door

I mail your shoes direct by parcel post—deliver them to your door.

You don't even need to go to town after them, and, because the capacity of my Racine factory alone is now far above 5,000 pairs a day, I can and will ship the very same day order is received. No waits, no delays—no trouble to get my "steels."

I Trust Your Judgment Mail Free "Try-On" Coupon

Write your name and address plainly on the coupon below, or on a postal, send it to me personally at once, and I will mail free and postpaid my book and full particulars. My proof is yours—FREE.

vetch. Some of this was cut for hay and the rest plowed under. The field was subsoiled at this plowing. We then planted corn and at the second working seeded cowpeas between the rows and the whole field was "hogged down." Crimson clover was then seeded and plowed down after being pastured the next spring by sheep. Then the whole field was top dressed with a good coating of barn manure and part of the field was limed. No commercial fertilizer was used. The field is now far more fertile than at any time previous.—R. Taylor Adair, Virginia.

PROFITABLE DUCK RAISING

(Third Prize)

Last fall I bought five ducks and a drake, Pekin and Indian Runner cross, for which I paid 75 cents each. The duck house was made out of two large packing cases nailed together, covered with rubber roofing. A small space surrounding it was fenced in to prevent them roaming until after 9 a. m., when they should have finished laying. Their swimming pond consisted of half a kerosene barrel sunk in the ground. In spite of this simple outfit I was determined to make a success of this venture of care and trouble meant anything. The ducks proved wonderful layers, averaging 130 eggs per month (for four months they laid 140) until summer. These sold at an average of 25 cents per dozen. I hatched fifty ducklings and raised all to maturity except two. I sold some at seven weeks old for 35 cents each, and at three months of age received 75 cents, or 15 cents per pound, live weight, for the superfluous drakes. I kept three drakes and twelve ducks. The latter began to lay at four months and three weeks old and laid 249 eggs in August.

The secret in raising ducks is dry sleeping quarters, careful feeding, plenty of clean water and, above all, avoid sour food. I fed mine bread crumbs and corn meal for the first few days, gradually changing to two parts bran, one part cornmeal, always 5 per cent sand or ground oyster shell, with some chopped green stuff. For egg production I find bran, cracked corn and occasionally a little cotton seed meal as a substitute for meat, with any green food procurable, is an excellent ration. This is my first year with ducks, though I have raised poultry elsewhere with great success, and consider for the outlay required there is nothing more profitable on a farm than a flock of chickens.—Mrs. R. Hilliard, Alabama.

THOUSAND-HEADED KALE

Perhaps many of your readers have not heard of "thousand-headed kale." I want to tell what a crop it is in western Oregon. It belongs to the cabbage family, but does not head like cabbage. We have had plants six or seven feet high, with a stem as large around as a man's wrist, so that, with its many heads, it resembles a small tree.

The plants are transplanted in well-manured soil early in June. As soon as the plants are large enough, cultivation begins and is kept up until cultivation breaks the leaves, which are very brittle. Between five and six thousand plants are required for an acre. It is nothing unusual to raise plants weighing eighteen or twenty pounds, and is quite possible to raise fifty tons of kale to the acre, especially if the leaves are "stripped" and fed early in the season, leaving the plant standing to throw out innumerable shoots, or heads, which give it the name "thousand-headed kale."

This year we began stripping off the heavy, succulent leaves the last of August to feed the cows, from plants set out in June. We set out over 8,000 plants and the field is really a wonderful sight and will produce, I think, fifty tons to the acre, for my husband is very thorough in his work, and that counts in raising kale. The plants are not yet nearly mature.

Last year my husband had in about an acre of kale. He began feeding it to the cows in September and it lasted until April, although he fed six cows constantly and part of the time seven. He gives them a good feed immediately after milking, as it does not taint the milk if fed at that time. It would have yielded more if he had taken the trouble to strip and feed only the leaves in the fall, but he took the quicker way of cutting down the whole plant.

Sometimes the kale is frozen solid in winter, but we have known only one season cold enough to materially injure the kale by freezing. It stands in the field all winter and is cut fresh as needed, furnishing an abundance of succulent feed keenly relished by cows, horses and chickens.

I must leave the reader to estimate the value of an acre of kale. We know of nothing that will yield such an amount of feed.—Mary N. Badger, Oregon.

OAT CROP

Hello, brother farmers and all readers of UP-TO-DATE FARMING! This is my second attempt to be of some use to you. Through the kindness of the editor a simple article of mine appeared in August last.

In beginning, I must say we had an excellent season for oats this year. Last fall we had two and one-half acres of ground we intended for oats the coming spring. We manured it, using an I. H. C. low-down spreader, set at ten loads to the acre. Then we plowed about eight or nine inches deep, being careful to turn it all good.

This spring, as soon as the frost was gone and the ground dry enough to get into, we worked it up, then left it a day or two so the sun and wind could warm and dry it. After it had dried well we harrowed it over once more. We then drilled it, sowing three bushels to the acre. When it had grown to be about five inches in height we rolled it so as to pack the the value of an acre of kale. We ground down good and hard to keep in the moisture during the dry weather.

The oats grew rapidly and were ripe early. After cutting we let them stand in the shock for a week. We then hauled them in and thrashed them. Off the two and one-half acres we got 195 bushels, or seventy-eight bushels to the acre. If we were to sell them now we would receive $78. I consider this a good profit for the amount of labor.—C. C. Thorner, Michigan.

OUR COWS

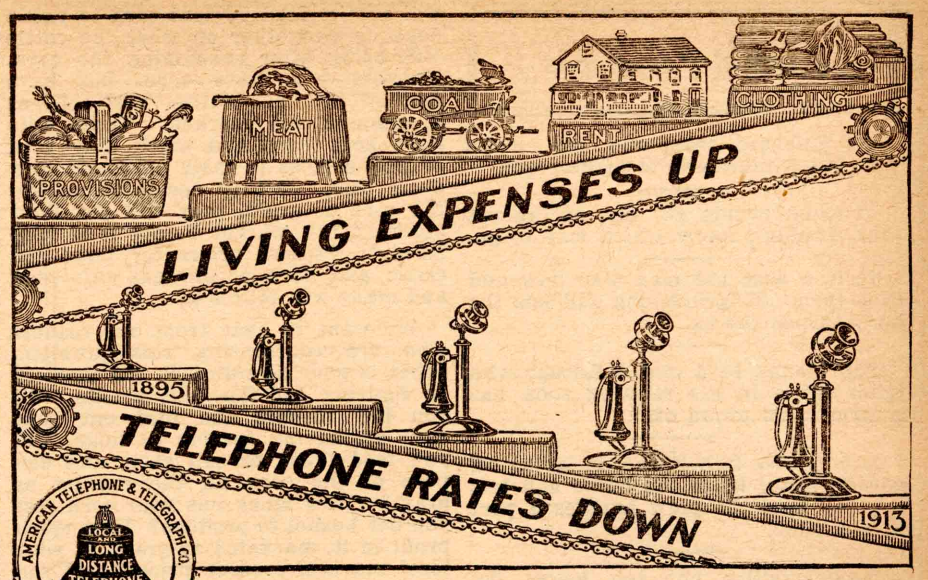
During our past six years of farming nothing has given us a neater sum of clear cash than the sale of extra butter from two milk cows and selling two and three-year-old steers and other cattle. These netted us a clear profit of several hundred dollars. Their main sustenance, summer and winter, was pasturage upon land good for nothing except pasture, so you readily perceive the profit is ours.—Mrs. S. R., Virginia.

HINTS AND HELPS

I am a farmer's wife, with a small family and find my most profitable crop is a crop of ideas.

Any one who has not the talent for regular journalism may make money by writing paragraphs and short articles for household magazines.

Adhere to the following rules and you will succeed: Write but one item or recipe on a page. Put your full name and address on each page. Do not fasten the pages together. Test all recipes for sending them out. As a rule, no manuscript of this kind is returned, so enclose no stamp for that purpose. Keep a copy of each manuscript, and if it is not published, or if it is returned, remail to another editor. Keep a scrap book and copy or paste into it all the ingenious labor-saving household hints you read or can observe or invent. Have regular hours each day for this work, and you will find it both interesting and profitable. From $300 to $500 a year may be made in this way if the work is diligently and intelligently pursued.—Mrs. J. B. Hatcher, Colo.



Economy of the Bell System

Consider this significant fact: While most of the necessaries of life have gone up, the price of telephone service, which is one of the essential factors in our commercial and social life, has moved steadily downward.

Although a pound of these necessities still contains but sixteen ounces, the telephone user has been getting more and more service for less money.

On the average, the people of this country pay 49% more today for food, fuel and clothing than they did in 1895. Since then, the decrease in the average rates for telephone service has been more than one-half.

At the same time, the efficiency and value of the service to the subscriber has vastly increased. Today he can talk to an average of five times as many persons in each exchange as he could eighteen years ago.

This is the inevitable result of the comprehensive policy of the Bell System, which brings together the associated Bell companies and the communities they serve.

Through the very size and efficiency of their organization they accomplish improvements and effect economies which give the greatest service at the lowest rates.

Shorty's Shortcuts
(By Himself)

IT IS soon going to be time to put a load of fat hogs on the market. They are out there in the feed lot now, eating the corn that is putting on fat, making leaf lard, Swift's premium bacon and getting ready to be made up into country sausages and farm-cured hams. My hogs have done well this year, and if the hog market also does well I will be able to buy that automobile I've been reading about. My wife has been talking about it, and when she begins talking about anything she thinks we ought to have, there's no need to debate the question. I just begin to read up so as to be posted and be able to use judgment enough in buying so we will be satisfied with the article bought. Right here is where a lot of us have made mistakes in the past. We do not do enough investigating. We buy something on some one's recommendation, usually that of the man who has it to sell, without finding out all about it. After we buy it we find out, but what is the use? Better find out such things while the money is still in your name. Those fellows who get it on your own recognizance are not often willing to let you have it back, even if you prove that they didn't tell the whole truth and nothing but the truth about the article they sold you. A short cut to wearing a long face is to neglect to keep posted.

But about those hogs. What about getting them loaded? Once I used the method common in this part of the country. I improvised a little chute alongside the corn crib and when loading time came we—my wife, myself and the hired man—fixed up some old gates into a temporary fence to head the hogs up to the chute. Usually the fence was altogether too temporary. About the time we bunched up a few animals in the vicinity of the chute they were seized with a strong desire to go back to the other side of the lot, and their desire was usually stronger than my fence, consequently they went back and—oh, you know how they do, and what a fellow says about hogs in general and those present in particular.

I grew tired of such methods long ago and made a pen with a good, permanent loading chute, and then I set stout posts in the ground near the chute. Next, I made sections of movable board fence that fit the posts. This enables me to keep hedging the hogs in until only the chute remains, with the hogs all in the chute. The rest is easy. By the time I hitch up and bring my wagon to the chute the hogs are tired of it and are hunting a way out. When I open the upper gate to the chute they are ready to go through, and in a few moments they are all in the wagon.

Mrs. Shorty desires me to say to you that you can draw another lesson from this homely story. We are all animals, and we all have animal instincts, and the human animal has some instinctive qualities pretty much like those of other animals, even hogs. For instance, why do many boys leave the farm for a life not nearly so pleasant? Sometimes it is for the same reason those hogs readily leave that chute for their death as soon as the way is open—because they are so hedged about and held in that they are uncomfortable, ready for the first opening to leave such quarters, and DO NOT REALIZE WHERE THE NEW WAY MAY LEAD THEM. A shortcut to keeping the young folks on the farm can be found right here.

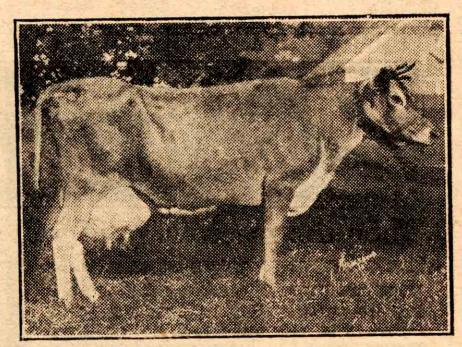
RAISING DAIRY CALVES

Many dairymen make no attempt to raise their own milking stock, but depend upon buying to supply their needs.

In the vicinity of Elgin, Ill., four cow dealers sold 7,000 cows in one year to dairymen in that locality, and many were shipped in by dairymen themselves, in addition to the number handled by the dealers.

These dairymen have concluded it is cheaper to buy cows than to raise them from calves. In other words, the profit on the milk the calf would take, and the grain and grass required to bring it to maturity, would buy the cow and leave a surplus in profit.

So the calves are vealed, the milk is sold, and when a milk cow has outlived her profitable usefulness she is sent to the butcher and a younger cow put in her place.



A WONDERFUL JERSEY COW IS EMINENTS BESS, WHO PRODUCED IN ONE YEAR 1,132 POUNDS 12 OUNCES OF BUTTER, THE WORLD'S RECORD FOR A JERSEY.

This younger cow comes from some farm where there is a surplus of milk cows.

And it stands in reason that the farmer does not sell his best cows from his own herd.

The Illinois Experiment Station, believing that dairymen should grow their own milking stock from the heifer calves of their best milkers only, made some tests to determine the cost, in milk and feed, of raising the calf.

The calves in the test were fed milk until eight weeks of age, when it was no longer supplied. The amount required to produce a good, thrifty growth ranged from 540 to 640 pounds per calf, and over two-thirds was skim milk.

The cost in milk at market price (25 cents per hundredweight for skim milk and $1.40 per hundredweight for whole milk) averaged about $4.50 per calf.

The Department of Dairy Husbandry has found, by a large number of tests, that herds built up by selecting only the calves from the best milkers produce an average net profit annually of over $20 more than herds not so graded. And, as the value of the milk fed to a calf is but little more than $4, it is held that dairymen make a mistake in not raising heifer calves from good milk cows.

We should like to hear from some of the practical dairymen on this very important subject.

THE IRISH POTATO CROP

Unless signs are wonderfully deceptive, Irish potatoes will bring high prices before the new crop of 1914 is ready for consumption, and the potato grower so situated as to store his crop of tubers will find it the right thing to do. They can be stored in a pit safely, if proper precautions are taken. These precautions are to have the potatoes thoroughly dry before storing, and of course they should not be permitted to dry in the sun. The north slope of a hill is the best location for a potato pit, and it should be dug several days before putting in the potatoes, so as to have dry walls. The pit should be well lined, also.

Farmers who raise potatoes as a market crop should follow some system in both growing and marketing. The same varieties should be grown in one community, so that shipments of even lots can be made. The growers should organize a local union and ship collectively in car load quantities. Some capable person should be selected as business manager to look after grading, properly loading cars, making shipments, etc. Where large quantities are grown the farmers should have their own storage houses at shipping stations, so that shipments can be made in midwinter if found desirable.

WINTER CARE OF SHEEP MANURE

Sheep, we recall, are animals with the "golden hoof." The great value of sheep manure is known by everybody. The winter treatment of sheep manure is important. There is no practice that pays better and makes less work than to bed the flock continuously under a shed with litter enough to keep every animal clean. The mass absorbs all liquids and is tramped so hard that it can not heat. Then with the early days of spring, with an ax cut it across every six inches to make the forking easy. Cut it down to the ground, and as it goes on to the spreader it will fall apart enough to work into the stubble readily. A dressing with such manure will make the clover come in, whose color will be noticeable a mile away.

WHAT IT COSTS TO KEEP A PIG

The pig can not use all the food given him in making pork. Some of it he must use to maintain his own existence. He uses up food supply in walking, rooting, eating, digesting, breathing and pumping blood through his veins and arteries. It is the same as an engine, which must use up a certain amount of steam just in making its own wheels go round, regardless of the work it does. This is called the "maintenance ration." There is no profit in the maintenance ration, but there can be no profit without it. It is that amount of feed that will keep an animal at even weight, without gain or loss, and without yielding a material product.

For each 100 pounds of live weight a hog must have daily one-tenth of a pound of digestible protein, one-fourth pound digestible carbohydrates, and three-hundredths of a pound of digestible fat, to maintain its weight without loss or gain.

About one-half pound each of corn and wheat to the hundred pounds of a hog, daily, will be approximately a "maintenance ration." If the hog is in good condition, all above this that is digested is put on in the form of flesh and fat.

A poor milkman will soon spoil a good milk cow.

It takes good soil and good farming to raise a mortgage.

Good molasses is an excellent food tonic for stock. And it is just as good for people.

A dog and a cow seldom agree, so never give them a chance to disagree. Keep the dogs and cows away from each other.

Fall Planting is Best
Our prices are the lowest, on all kinds of Apple, Peach, Pear, Cherry and other trees, and plants. Send for catalog at once, and order for early fall planting. ERNST NURSERIES, Moscow, O., Box 11.

MARYLAND--THE IDEAL STATE
for TRUCK and GENERAL FARMING. Rich land, mild climate. No floods or cyclones. Descriptive Pamphlets and Listed Farms for Sale sent free. Address STATE BUREAU OF IMMIGRATION, Baltimore, Md.

Farm Lands
that will pay you big dividends in a short time can be bought at reasonable prices now. Irrigated and non-irrigated lands suitable for General Farming, Fruit raising, Dairying, Stock Raising, etc. Close to markets. Located in good communities near the lines of the Union Pacific Railroad. Write to me and I will send you complete authentic information regarding these lands.

YOUR OPPORTUNITY is NOW In the Province of SASKATCHEWAN Western Canada
160 ACRE FARMS IN WESTERN CANADA FREE
Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.
New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.
A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wheat, 300 acres of oats, and 50 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

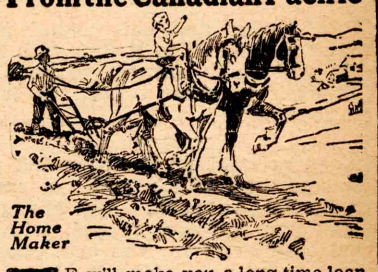
Get Your Canadian Home From the Canadian Pacific


The Home Maker
WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay
Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000 For Improvements
The $2,000 loan is used only for erecting your buildings, fencing, sinking well and breaking. You are given twenty years in which to fully repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis
The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle, sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based on Good Land
Finest land on earth for grain growing, cattle, hog, sheep and horse raising, dairying, poultry, vegetables and general mixed farming, irrigated lands for intensive farming—non-irrigated lands with ample rainfall for mixed and grain farming. These lands are on or near established lines of railway, near established towns.
Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps with full information *free.* Write today.

Sam Saxon says his neighborhood still debates the question of which came first, the hen or the egg.

The poultryman who builds up a reputation for strictly fresh eggs can command better prices every time.

Fancy buildings are all right, if made right, but ordinary buildings are just as good if also made right, and they cost less.

Pure science in poultry keeping is merely "getting back to nature." That is, understanding just what nature will do under given circumstances.

Fowls need care as well as feed. It takes time and work to give chickens the care they need. Too many fowls makes for poor care. Keep only the number you can properly care for.

A flock of pure-bred fowls given to the boy or girl, or both, where there are both, will add a great deal to their interest in farm life, and when they become interested the poultry will add to the farm income.

Right now is a good time to begin to study up on the incubator proposition. Incubators are all right to those who know how to handle them properly, and any careful person can learn.

All of next season's breeders should be selected right now. Select a few more than your desire to retain, as some may prove disappointing and not begin laying early enough to make them desirable as breeders.

POULTRY KEEPING ON GENERAL PRINCIPLES

No plot of ground is too small to keep a few hens on, and no farm or ranch is so large that poultry should not have a place thereon. In fact, no farm is complete without them.

Poultry raising may be, and in reality has been, successfully combined with every other kind of farming known to man. One enterprising individual combines fox farming and poultry raising. Of course these "affinities" are kept divorced.

If given a chance, a bunch of the right kind of hens will make money for their owner on any farm. Yet some farmers fail, while others make this end of the farming operations pay handsomely. Therefore it must be in the management where success lies. In other words, there are some essentials that must be observed if profits are made.

In a general way there are three essentials for poultry keepers which can not safely be ignored. They are: (1) Good stock, (2) good management of the birds, (3) good business judgment in selling the products.

Good stock is not so much a matter of breed as of breeding. There is no way to get fowls of high quality except by breeding. Even though one may buy them, they are not the result of "happen-chance." Somebody bred them up to their high standard.

In breeding, the basis is individuality. The bird must inherit good qualities and vitality to improve those qualities by having proper care and treatment. Hens, by the exercise of their dominant functions, can increase their powers, their ability, even as an artist can develop and strengthen his talent for drawing under the proper teaching, training and exercise of his talent. The breeder of better fowls must be able to recognize the desirable individual characteristics and abilities of a fowl and know how to make that fowl, by certain rules, live so that those characteristics will be strengthened, the abilities increased, in power at least.

The fowl must have constitutional vigor. This, if it is to be increased, must not be weakened by lack of proper food, proper exercise, proper mode of living, as housing, etc.

The breeder must know what food will increase vigor, and how it should be fed to obtain the largest degree of increase. He must know how much exercise is necessary to maintain and increase health and vigor. He must know what sunlight, fresh air, warmth and cold, and all such factors do to the vigor of his fowls. And he can know. Experiment stations have determined all these things, as have many individual poultrymen.

The poultry business is no gold mine, nor an open-and-shut get-rich-quick scheme. But when properly conducted it will be a profitable business in itself, or as an adjunct to regular farming operations. The know-how is the most necessary thing about it.

EGGS OF QUALITY

Finely flavored fresh eggs will always bring a good premium over market price if the poultryman will take the trouble to work up a private family egg trade, which he can readily do if he convinces his prospective customers that his eggs are really superior to the eggs usually sold on the market or in grocery stores.

Every city consumer knows that while eggs look much alike on the outside, there may be a very noticeable difference on the inside, both in color, cooking qualities and flavor. The consumer wants an odorless egg, with a yolk of good color.

The quality of an egg is influenced largely by feeding, the nature of the soil, and exercise. To realize this one has only to compare the eggs of hens enjoying liberty, with plenty of natural food, with those obtained from hens in close confinement, lacking the advantage of the former. We do not for a moment mean to say that all eggs laid by hens in confinement are lacking in quality. Far from it, for it is only a matter of management, and there is nothing that fowls can get by foraging that can not be supplied artificially. Exercise should be encouraged, and any device that will suggest work for the birds is beneficial, such as feeding grain in litter.

Green food, in one form or another, is absolutely necessary at all seasons of the year. A variety of foods is also essential, as however good one food may be, it loses much of its value if used continually.

BLACK DIAMONDS

This is not a story of coal, though the title would suggest that idea, but a short account of the bringing forth into the world of poultrydom of a new breed of chickens which have been named "Black Diamonds."

About eight years ago a poultryman by name of Leigh S. Boche, residing in New Jersey, started out to build a new breed of chickens which would, if he succeeded in his aims, be "different" and be superior in their difference. He began work by selecting a vigorous White Wyandotte rooster and mating him to a Barred Plymouth Rock hen of great vigor, hardiness and productivity. From this mating he secured a number of black pullets. Selecting a number of the best of these pullets, he divided them into two pens. One pen was mated with a Black Orpington male, the other with a Black Minorca male. Selecting a few pullets from the pen mated with the Minorca, he mated them with an Indian Game male. Pullets from the Black Orpington mating he mated to a male selected from the Black Minorca progeny. Then followed crosses and recrosses, following strictly the Mendel law, until the type Mr. Boche had selected was fixed firmly and the new breed established.

Black Diamonds have been highly satisfactory to the originator. With but ordinary care his hens averaged 205 eggs each for the year. They proved very strong winter layers and became broody early in the spring, often before winter had unfastened its grip on the country. As Sam Saxon says, they ought to be good, for they were made of mighty good material.

A Little Contradictory

"Trees do some very queer things."
"In what way?"
"They stay after they leave."

Hits One Side or the Other

"Bennett is a real optimist."
"Why?"
"He hopes for the best and expects the worst."

Woman's Work and Welfare

Helpful Hints for Homefolks

MOTHER O' MINE

If I were drowned in the deepest sea,
I know whose tears would come down to me:
Mother o' mine.

If I were hanged on the highest hill,
I know whose love would follow me still:
Mother o' Mine.

If I were damned of body and soul,
I know whose prayers would make me whole:
Mother o' mine.

—Rudyard Kipling.

FIRESIDE SOCIAL CHATS

By Aunt Sophia

THERE are many things about the rigors of winter weather that are unpleasant. We should, I think, try our best to overcome them, and those we can not overcome should be counterbalanced by some special winter enjoyment. We can not avoid the cold, stormy days. We can not have the fresh fruits and vegetables. We can not hear the songs of birds, and, as Willie remarks, "We can't go fishin', nor swimmin', nor play ball, nor have any fun at all." But can't we do something that will pretty much take the place of all these summer enjoyments for ourselves and our families?

I think we can.

* * *

In the first place, we can put away some fine apples in the cellar to eat as we sit by the fire after the dishes have been cleared away and the men folks come in from the barns. We can have popcorn and nuts. We can have some good books and magazines, and time to look at them, and discuss their articles and ideas. By looking ahead and preparing for these wintry days we can take away their sting with many a little added enjoyment that is not to be had at any other time.

* * *

One thing that we do at our home is to have a chicken dinner once a week—not on Sunday, either. We like to relieve the monotony of six straight working days. So on Monday we have white beans and bean soup, as extra, and cook with the beans the famous egg dumplings of olden days. My family are all especially fond of this dish. Possibly some may not care for it, but there are other things. Then on Thursday we have chicken. I take good care to keep some fine cockerels and feed them for just this purpose. I want to see my own loved ones have the best things our farm can afford, and to have enough of it. So there may be seen in my poultry yard at this time three dozen very fine specimens of poultrydom that will go, week by week, into the roaster or the kettle. Just the other day, Fred, my oldest boy, asked: "Mom, isn't it most cold enough to begin the chicken diet?" Do you suppose that my boy dreads the winter as much as he might? Think you he finds the winters on this farm irksome?

* * *

One of our favorite ways of serving chicken is to make a chicken pie. I wonder if you would not like to know just my particular way of making it. Here is my recipe:

Chicken Pie—Clean and joint a chicken, season with salt, and cook in no more water than is necessary, until tender. Skim out the chicken and remove the bone, skin and gristle. Line a deep, well-greased pie plate with a short biscuit dough rolled about one-half inch thick, then put in alternate layers of mild-flavored ham and chicken cut up in nice little pieces, hard-boiled eggs, sliced, seasoning well with salt and pepper; also a little nutmeg and mace, if liked. Lastly put in a thin layer of potatoes, cut into small pieces and previously boiled in the chicken juice. Pour in what remains of the chicken juice, put on a good, thick top crust of the dough, into which make several incisions to allow the steam to escape, and bake until done. It should be a nice, golden brown. Before pouring in the gravy it may be thickened with a very little flour. A very little lemon juice may be added to the gravy if the flavor is liked, and a small onion may be cooked with the chicken. The dough case should come out nice and fluffy.

* * *

Now for a little chat on a subject that may be a little threadbare, yet it is one which we farm women will continue to talk about, especially in print. That is the true relation between husband and wife in regard to the management of things and the right-of-way to the pocketbook, and the duties of husbands and wives to each other. The other day I heard a man say a woman had no business outside her household duties; that the man should run the farm; he boasted that he was able to supply the house with all the necessities and comforts, and all his wife did was to keep the house in order. She never, he said, did a lick of work outdoors. If he could not himself do all the outside work he hired a man to do it, and would not ask his wife's help. Probably that arrangement just suited his wife, and, as it suited him, it was the ideal way for them. But it would not suit me. I do not believe in any hard and fast rule to govern all households. I enjoy helping my husband out of doors at any work I can do, and I would resent being told that my place was indoors all the time. The house, on our farm, is only a part of that farm. I am interested in all of it. I love every field, and the crops are as much my hope and concern as the house. So, though we have three boys, and usually two hired men, one of my pleasures is to go with my husband to help him in some task. We never miss these opportunities for companionship. Of course, I think it is not good for a woman to neglect her house, or to be compelled to perform heavy tasks beyond her strength, but it is no disgrace to do work out of doors—not a bit of it! A clerk in a store once in my hearing remarked to her fellow clerk, after waiting on a workworn farm woman, that no self-respecting woman would work out in the fields, as she knew this one did. Is the pen field, I wonder, blessed with God's pure air and bright sunshine, a less respectful place to toil than behind a counter? Verily, the mental processes of some minds are beyond my understanding

Did What She Said

"She said when she married him she would go through everything for him."

"Well, I guess she did. He told me yesterday he hadn't a cent."

PUBLIC SCHOOL TEACHER GIVES CREDITS FOR HOME WORK

In the November Woman's Home Companion appear accounts of several public schools in the United States where great progress is being made. One of the stories told is the story of a Wisconsin public school teacher who gives his pupils school credits for home work. Following is an account of this teacher and his plan:

"There is a country school in Manitowoc County, Wisconsin, where the teacher, Mr. H. E. Antholz, has introduced a thoroughly original and practical course in manual training and personal responsibility. Mr. Antholz gives 'school credits for home work.' That is, the children do chores at home and get credit for them at school. Each child has a small memorandum book in which he writes a list of the home duties he performs between 4 p. m. and 9 p. m. and the number of credit points received for each. This list, which is kept 'on honor,' includes sweeping, making a bed, preparing a meal, baking a cake, baking bread, scrubbing the floor, washing and wiping the dishes, milking, feeding horses, cleaning the barn, cleaning and currying horses, splitting and carrying wood, sleeping with open window, cleaning the teeth, coming home with feet dry in wet weather.

"At the end of each month the names of the three pupils who have the best records, with number of points each received, are published in the local papers. At the end of the year

The accompanying picture speaks for itself. It represents Grab's Automatic Foot Scraper, which is coming into extensive use because of its real merit. The brushes are set with springs, rendering them adjustable to any sized shoe or boot. Our folks would find one at the kitchen door very useful.

WIPE YOUR FEET

Mud, snow, dust and dirt will not be tracked over your floors if you use

Grab's Foot Scraper

outside your door. The only device made which cleans bottoms and sides of shoe in one operation. Has ten parallel plates for scraping soles and two stiff bristle brushes which clean sides of shoe.

Over 1,000,000 in Use

AUTOMATICALLY ADJUSTS ITSELF to any size shoe. Handsomely enameled. Looks neat. Can be rotated and swept under. Fastens to doorstep or any handy place. Get one and save useless work. Price $1.00. If your dealer will not supply you, don't take substitute, but send your order direct to us. Illustrated booklet FREE. AGENTS WANTED.

PARAGON TAILORING CO., Dept. 1144 CHICAGO

the three pupils holding the highest number of credits in each class are awarded prizes by the school board.

"This scheme proved successful from the beginning. Nearly all of the pupils entered the contest at once and the rest entered a little later. Not one dropped out.

"One farmer told Mr. Antholz: 'Before you started the credit system I couldn't get my boy out of bed in the morning to do any chores. Since then he is in the barn before I am.' More than one mother declared that she could now dispense with the hired girl, for there was nothing left for her to do by the ambitious daughters of the house."

DRESSING FOR WINTER

THE dress which can be worn right through the winter is the one that interests us just now, and the one-piece dress is decidedly in the lead. There is plenty of choice in this, but simplicity is the rule. Models 6216, 6104 and 6219 are all excellent. They all have the low neck which can be worn with a chemisette and all have the straight skirt with front closing. They are suitable for almost any of the materials now in vogue and can be made of velvet or of something in woolien goods.

Stripes are very much liked for all materials and figured fabrics are more in favor than plain ones, at least for certain classes of dresses. For dressy afternoon frocks it is often well to use a plain material for the skirt and something with a figure for the blouse, selecting a style which is more or less on the coat order.

The low neck finish is used on the dress, but nearly always there is a small chemisette with a high standing collar added to it. The frill around the neck will not be as comfortable when one must wear a coat, but without any wrap it is dainty and effective.

Sleeves are either long or short as preferred by each wearer. With a coat they are almost always long, while those that are worn without a coat are usually finished with some sort of fancy cuff just below the elbow. When the shorter sleeve is used with a coat a long sleeve of net is generally added to it.

Styles for children follow those of women now as always. The dresses for little girls open in front and many of them have a peplum arrangement such as is shown in No. 6396. Others are plain like the design in No. 6221.

There is also one novelty to observe in the suits of little boys. These are now showing the open knee, and while the bloomer finish is still employed, this other style is newer and well liked.

What is Now the Fashion

6221. GIRLS' DRESS.—This neat little frock is closed in front and has a three-piece skirt, attached beneath a belt to the blouse, which has inset sleeves, seamed on the outside, and a round-cut neck finished with a band. Cut in sizes 4, 6, 8, 10 and 12 years. Medium size requires 2¼ yards of 36-inch material.

6292. LADIES' SKIRT.—This skirt may have two gores or three, according as a seam is placed down the center of the back or not. The raised waist line is used and the skirt is gathered across the back. Sizes 22 to 30 inches waist measure. Medium size requires four yards of 27-inch material.

6306. BOYS' SUIT.—In this design we have one of the utility suits for little boys. The blouse opens down the front and has a large sailor collar at the neck. The trousers are made with the straight open leg at the knee. Sizes 6, 8, 10 and 12 years. Medium size requires 2¾ yards of 36-inch material, with three-eighths yard of 27-inch contrasting goods.

6216. LADIES' DRESS.—Serge, cheviot or broadcloth can be used to make this dress. The skirt is cut in four gores. The high or regulation waist line may be used. The pattern provides for either long or short sleeves. Sizes 34 to 42 inches bust measure. Medium size requires four yards of 44-inch material, 3⅜ yards of braid.

6396. GIRLS' DRESS.—Linen or serge can be used to make this dress. It closes at the back and is made with a three-gored skirt. The peplum can be used or not as preferred. Long or short sleeves can be used. Sizes 6, 8, 10 and 12 years. Size 8 years requires as represented 2½ yards of 36-inch figured goods, seven-eighth yard of 27-inch plain goods. If made of one material 2⅞ yards of 36-inch goods will be required.

6104. LADIES' DRESS.—Any of the woolen materials can be used to make this dress with the collar, cuffs and belt of contrasting material. The dress closes at the front and can be made with either the long or short sleeves. The skirt is cut in three gores and can be made with the empire or regulation waist line. Sizes 34 to 42 inches bust measure. Medium size requires five yards of 36-inch material.

6219. SMART ONE-PIECE DRESS.—The most fashionable of all gowns this season is the one-piece model. Our design shows a simple bodice, with ornamental closing, the neck finished with a low collar, the plain sleeves ending in a cuff. The four-gored skirt has a seam in the center of the front and also of the back. Sizes 34 to 42 inches bust measure. Medium size requires four yards of 44-inch material.

FASHION DEPARTMENT
Up-to-Date Farming Indianapolis, Ind.

"In One Hour I Learned to Play the Piano at Home"

Without Lessons or Knowledge of Music You Can Play the Piano or Organ in One Hour.

Wonderful New System That Even a Child Can Use.

"Just Think, I Never Touched a Piano Before."

Impossible, you say? Let us prove it at our expense. We will teach you to play the piano or organ and will not ask one cent until you can play.

A musical genius from Chicago has invented a wonderful system whereby anyone can learn to play the Piano or Organ in one hour. With this new method you don't have to know one note from another, yet in an hour of practice you can be playing your favorite music with all the fingers of both hands and playing it well.

The invention is so simple that even a child can now master music without costly instruction. Anyone can have this new method on a free trial merely by asking. Simply write saying, "Send me the Easy Form Music Method as announced in Up-to-Date Farming.

FREE TRIAL

The complete system together with 100 pieces of music will then be sent to you Free, all charges prepaid and absolutely not one cent to pay. You keep it seven days to thoroughly prove it is all that is claimed for it, then if you are satisfied, send us $1.50 and one dollar a month until $6.50 in all is paid. If you are not delighted with it, send it back in seven days and you will have risked nothing and will be under no obligations to us.

Be sure to state number of white keys on your piano or organ, also post office and express office. Address Easy Method Music Company 426 Clarkson Building, Chicago, Ill. Canadian office, Toronto, Canada.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

ALL TIMES of the year are good times for obtaining subscriptions and making renewals, but when autumn begins to tint the leaves and tell again of the long winter evenings seems to be the special season for doing that. This appeals to the general reader as well as to the Cadet of Equity. We invite all to read the letters on this page. They show how the paper is appreciated, and give an idea of the good work it is doing. We are reaching out after still better and greater things, for we are determined that UP-TO-DATE FARMING shall not only be different from all other papers, but that it shall be better and more useful. We don't want to lose a single name from our list, but we want to add thousands of new names to it. It fills a place no other paper does. It honestly seeks the truth and then fearlessly tells it.

DEAR CADETS: Perhaps you would like to hear from a Nebraska girl. I am 14 years old and have two sisters and two brothers. I live on a farm of 160 acres, about a quarter of a mile from a small town, but it has no railroad. It is very sandy and hilly here, and we have great fun coasting in the winter. I love to be outdoors, and to ride horseback. My father takes UP-TO-DATE and we think it is a fine paper. I like to read the Cadet letters and would be glad for the Cadet boys and girls to exchange post cards and letters with me.—Bernice Norris, Brewster, Neb.

DEAR CADETS: Here comes a sweet sixteener from Florida. I live in the little town of Yalaha and we have a 30-acre orange and grapefruit grove. We live near a large and beautiful lake and we have a large launch. Come and visit me and we'll have some lovely moonlight boat rides. This is a great country for fruit and vegetables. I have taken UP-TO-DATE for some time and like it fine. All the Cadet boys and girls please write. I will answer all.—Mary Wiley, Yalaha, Fla.

DEAR CADETS: I am a girl of 16 and have been reading your letters in UP-TO-DATE for over a year, and find it great pleasure to read letters from the different states. I live in the country on a farm of 160 acres and like farm life fine. I would like to exchange cards and letters with all the Cadet boys and girls near my age—will answer all I receive.—Alice Lott, Trade, Ala.

DEAR CADETS: I am a very much interested reader of UP-TO-DATE FARMING and enjoy reading the Cadet letters. I am 18 years old and live in a small town. Though I do not live on a farm, I am glad to get there a few months during my vacation. I would like to hear from the Cadets, and will answer all I hear from.—Alice Wagner, Arthur, N. D.

DEAR CADETS: I am an Ohio boy 21 years of age and live on a farm of 160 acres. We take UP-TO-DATE FARNING and I think it is the finest paper a farmer can take. No farmer is properly equipped without it. I own a 50-horse power auto, and find such a machine a real help to a farmer. I will answer all cards and letters and photos I receive from the Cadet boys and girls.—Frank M. Starr, Quaker City, O.

DEAR CADETS: I am 18 years of age and live on a farm of 175 acres. Our crops are wheat, oats and corn. I would be glad to hear from the Cadet girls and boys, and will answer all postals and letters I receive.—Charles Moritz, Gettysburg, Pa.

DEAR CADETS: I am a country boy, 16 years old, and live on a 160-acre farm. We raise corn, wheat, oats and alfalfa. It has been very dry here this year and the crops are short. I would like to hear from all the Cadets and would be glad to exchange cards.—Bruce Smith, Oak Hill, O.

DEAR CADETS: I am 19 years of age and live on a farm of 75 acres. I have lived in the city for two years, but this year I am living in the country. I can truly say I enjoy country life much better than the city. We mostly raise corn, cotton and oats. I love to read letters from far away, for I don't know anything about other parts of the country, having always lived in Texas. I will ask every Cadet to send me a letter or card. All will be appreciated.—Meta Miller, Sequin, Tex.

DEAR CADETS: I am 19 years old and live with my parents on a farm of 80 acres, where we raise nearly all kinds of fruits and vegetables. We have been taking the dear old UP-TO-DATE FARMING for nearly five years and hope to continue. I would like to hear from all the Cadets.—Ezra Woodward, Bee Branch, Ark.

DEAR CADETS: Will you please allow a California girl to become a Cadet? I have been reading the paper for some time and think it very interesting, especially the Cadet letters. I am 18 years old and have lived in the city, but at present am working on a farm. Hoping to hear from all Cadet boys and girls, and promising to answer all cards and letters.—Lulu Pritchard, Santa Cruz, Cal.

DEAR CADETS: I enjoy reading your letters in UP-TO-DATE FARMING. I live on an 83-acre farm in the northeast part of the Lone Star state. We raise corn, cotton, oats and wheat and can raise most all kinds of vegetables and fruits. Land sells here all the way from $20 to $125 an acre. Bettie Travis, I would like to hear from you. G. W. Easler, your letter was O. K. Also Fannie E. Calvin of Holden, Mo. In fact, all the letters are very good. My age is 22 and I would like to exchange letters and cards with all the boys and girls. Would like to hear from every state, and will answer all who write.—W. H. McCombs, Commerce, Tex.

DEAR CADETS: I am a farmer boy, 18 years old, and live with my aunt on a farm of 200 acres. Our principal crops are corn and oats. I am going to work the farm myself next year and can scarcely wait for the time to come. My aunt takes UP-TO-DATE and we like it very much. We have a large lake near us and I have a small launch, and I wish I could take all the Cadets out for a ride. I would like to exchange cards and letters with all the boys and girls.—Harvey Bell, Union City, Mich.

DEAR CADETS: I live with my parents and a younger brother on a farm of 80 acres. I will be 20 Oct. 22 and would be very much pleased with a card shower. My father has been a subscriber for UP-TO-DATE FARMING for the past three years, and he says he could not farm without it. We all agree with him and consider it an ideal farm paper. The Cadet letters are very interesting to me. I think they afford splendid opportunities for young folks to express their opinions on farm life. I enjoy the enthusiasm that is stirring the hearts and minds of the young people toward the splendid advantages the country affords. What is there that is filled with more real pleasure and enjoyment than a life on the farm? I would like to hear from all the Cadets and will answer all cards or letters I receive.—Edna Tifield, Hastings, Mich., R. R. 9.

DEAR CADETS:
Here comes a girl of just nineteen
Whom none of you have ever seen;
My hair is dark, my eyes are blue,
And I would like a word with you.
I teach a little school, they say,
And it has just begun today;
I also like a post card shower,
So let them come in, hour by hour.
—Teckl Barger, Eddyville, Ill.

DEAR CADETS: I am a Pennsylvania girl. My father is a carpenter, but we live on a 13-acre farm. I have lived here all my life. Brownfield is a small coke town at the foot of the Allegheny plateau and the Blue Ridge mountains. Just above Brownfield are three reservoirs which supply the city of Uniontown, three miles from here, with water. Four miles from here is Jumonville, where Gen. Braddock was killed and buried. Also near here is the National pike, the road Washington and his soldiers traveled during the revolutionary war. I am a member of the Grit Golden Rule Club and will be 15 Nov. 25. I would like to exchange letters and post cards with the boys and girls and will answer all I receive. I would like to get a card from every state in the Union.—Freda P. Schnatterly, Brownfield, Pa.

DEAR CADETS: I am a New Jersey boy and live in the heart of the fruit region. I am 20 years old and live in a small village. I am a lover of music and outdoor sports. I have a camera and will exchange pictures with Cadet boys and girls. I love to correspond.—Harry Elliott, Ewan, N. J.

DEAR CADETS: I am a boy 16 years old and live on a 110-acre farm in eastern Pennsylvania. Our principal crops are potatoes, corn, fruit and vegetables. We have taken UP-TO-DATE about a year and highly recommend it to all. I will gladly answer all letters and cards from the Cadet boys and girls.—Virgil H. Kachline, Flicksville, Pa.

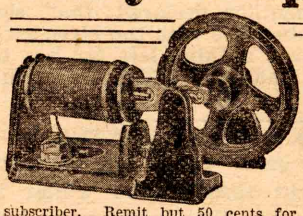
DEAR CADETS: I am a West Virginia school teacher and I enjoy reading UP-TO-DATE. I think it is one of the best farm papers published. My school began Sept. 8 and I have forty pupils, all grades. I would be pleased to hear from the Cadet boys and girls and will answer all.—Louise Bouen, Rosedale, W. Va.

DEAR CADETS: I am a girl of 17 years and live about five miles north of Reading, in the dear old Keystone state. We do not live on a farm, but we have a garden in which we raise our own vegetables, and

When Writing to Advertisers Please Mention Up-to-Date Farming

Old Coins WANTED. $1 to $600 paid for hundreds of coins dated before 1884. Send 10 cents for our illustrated coin value book, it may mean your fortune. OLD COIN CO., 302 EAST 51st ST., CHICAGO

Make Your Boy Happy



In order to introduce **The Boys' Magazine** to thousands of new readers we will give away one of these splendid Electric Engines to each new 4-months' subscriber. What 15c Will Do

The little matter of 15c in stamps will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the nation; now in its 21st year of increasing in success. The paper fills the bill without emptying the purse; it costs but $1 year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the PATHFINDER is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends.

Or send $1 for full year; money back any time if not satisfied. Address Pathfinder, Box 7, Washington, D. C.

a small lot on which we raise wheat. I love flowers and had a long row half sweet peas and half nasturtiums. We have had UP-TO-DATE FARMING for more than a year and think it an excellent, helpful paper. I enjoy the Cadet page very much. I like to write letters and much more to receive them. I wish I could start a large correspondence. I will gladly exchange cards and photos, and will answer all letters I receive.—Catherine H. Schmeck, Reading, Pa., Rt. 2.

DEAR CADETS:
A farmer's daughter of 18 years
Would join the Cadets with many cheers.
I'm a native of the Sunflower state
And an earnest reader of UP-TO-DATE.
We make our living by honest toil
On 300 acres of Kansas soil.
Though always busy, early and late,
We find time to read good UP-TO-DATE.
Anna M. Akins, Fulton, Kas.

DEAR CADETS: I am 19 years old and have lived on a farm for the last eleven years. But I like the city as well as the country. We have taken UP-TO-DATE for the last two years and always read this page first. The State Fair was held here this week. Some days as many as 23,000 people were in attendance. I would like to receive cards and letters from all the Cadets, especially from the west, as I have a sister living in Washington. But I will be pleased to hear from Cadets no matter where they live; will answer all.—Augusta Boehlke, Chippewa Falls, Wis., Rt. 1.

DEAR CADETS: I live on a farm of 160 acres, am 17 years old, and would like to become a Cadet of Equity. My father takes UP-TO-DATE FARMING and likes it fine. I enjoy reading the Cadet page. There are so many good letters in it. I want all the boys and girls to write to me. I wil answer all cards or letters I receive. —Cora Killian, Lorenzo, Idaho.

DEAR CADETS: I live in the country and am happy. My home is about a mile and a half from North Mountain. I am 15 years old and like to read the Cadet letters. I will answer all cards and letters I receive.—John N. Barrick, Newville, Pa.

DEAR CADETS: I am a farmer, and think there is nothing like the dear old farm. I can't see why every one don't enjoy farm life like I do. Now, girls and boys, here is your chance to get up an interesting correspondence.—Harvey A. Boone, Harrison, O.

DEAR CADETS: I am a boy of 16 years and live on a farm. I have tried several different kinds of work, among them that of blacksmith, depot agent, R. F. D. carrier and postoffice work. I am still doing office and farm work and like them fine. I am president of the Boys' Corn Club in Calleton County, and that shows I am very much interested in farming. We have a very good farming country and raise most anything, among them corn, cotton, potatoes and sugar cane. I enjoy getting long, lively letters and pretty post cards, and will positively answer all I receive.—McKinley Crosby, Ruffin, S. C.

DEAR CADETS: I am a farmer boy of 22 years and am farming over 22 acres and have been farming for myself six years. I have nine head of work horses and two colts. I live in the western part of North Dakota and we can raise most any kind of grain out here, such as oats, wheat, rye, flax, barley and some corn. I have been taking UP-TO-DATE FARMING for over a year and think it is fine. I just love to read the Cadet page. We are having a snow storm today (Sept. 23). I would like to exchange cards and letters with all the Cadet girls and boys, and will sure answer all I receive.—John F. Miller, Underwood, N. D.

DEAR CADETS: I am 19 years old and live in western Washington, where lumbering in the chief business. I live in the country and haul logs near Tacoma, and would like to exchange letters or cards with the girls and boys. Will answer all.—Orvil L. Cuyler, Spanaway, Wash.

DEAR CADETS: I am 21 years old and live on a farm where we grow corn, sweet potatoes and vegetables. I am a reader of UP-TO-DATE FARMING and like it very much, especially the Cadet page. I would like to hear from all the girls and boys, and will answer all letters received.—Artemas Bankester, Robertsdale, Ala.

DEAR CADETS: I am 15 years old and enjoy farm life. We have taken UP-TO-DATE FARMING over a year and think it a grand paper. I keep house for my father, my mother having died when I was 7 years old. I have a sister, but she does not stay at home. I am fond of music. I will gladly answer all letters and cards I receive.—Theresa Ruffer, Atkins, Ark.

DEAR CADETS: I have lived on a farm all my life and enjoy the work right well. I live with my parents on a farm of a little more than 300 acres. Our principal crops are corn and cotton, but we don't raise very much cotton, and I don't have to work very hard, only from the first of March to the last of June. Then I take in the big meetings, visit the girls and read UP-TO-DATE FARMING, which I think is one of the grandest farm papers ever published. I think everybody ought to read it and learn more about farming and marketing. I own a small farm of 120 acres that has on it a fine spring and two beautiful weeping willow trees. I am just past 22 years of age and would be real proud to get a card or letter from every one of the Cadets.—A. C. Carpenter, Battles, Ark.

DEAR CADETS: We enjoy reading your letters. We are "cow punchers," 21 and 22 years old, and we don't see much of town, as we are sixty miles from any town. But we read UP-TO-DATE FARMING and like it fine. We would like to exchange photos and cards and letters with all the Cadets, the girls especially, as girls are scarce in this part of Dakota.—Melvin O. Olson and Charles Newcomb, Oakdale, N. D.

DEAR CADETS: I live on a farm of 160 acres, about a mile from the Columbia river. We have five horses, five cows, twenty-five hogs and about 150 chickens. We raise all kinds of grain. Land in Washington is good for grain. We receive UP-TO-DATE FARMING and think it a nice paper. I am glad to become a Cadet of Equity.—Ruth Moser, Gerome, Wash.

DEAR CADETS: Can you make room for a Cadet from a large city? Most of you are farmers, and that is a great life, and though I am not a farmer I have my name on the subscription list of UP-TO-DATE FARMING until October, 1915. I love to read the Cadet letters so well that I wanted to make sure I wouldn't miss any. I am 21 years of age and will exchange photos with any of the Cadet girls and boys. I would like to hear from any Cadet who has a camera, as I have one and take great interest in making pictures. Don't let your subscriptions expire, any of you Cadets, as I want to write to all of you.—Charles Streb, 731 Glenside avenue, Pittsburgh, Pa.

DEAR CADETS: I am a farmer girl and live on a farm of ninety acres. Crops are poor on account of the dry weather last summer. I am 14 years old and a reader of UP-TO-DATE, which I think is a fine paper. I would like to correspond with some of the Cadet boys and girls of other states and would like to exchange views in different states.—Lillian O'Neil, Camden, N. Y.

DEAR CADETS: I live with my father on a farm of 200 acres and will be 20 years old in January. Crops are very short here this year on account of so much dry weather. We have 175 acres of cotton and will make twelve bales. I like farming very well when we can make a good crop. This is a good country if we could have more rain. It is also a healthy country. I have lived here five years and like it fine. We take UP-TO-DATE and think it a good paper. I will be glad to hear from all the Cadet girls and boys and will answer all I can.—Herman Lirdle, Miles, Tex.

DEAR CADETS: I am a farmer's son, 20 years old, and have lived on the farm all my life. So, you see, I am a genuine "hay seed." We have taken UP-TO-DATE for about a year and like it very much. This is a great agricultural country, wheat, corn and alfalfa being the main crops. Corn was a failure this year and a big acreage of wheat is being put out this fall. I live on a farm of 320 acres. The evenings are long now, and I have plenty of time to write. So all you Cadets drop me a card or letter. I promise to answer all.—John Holechek, Humboldt, Neb.

DEAR CADETS: I am a farmer's daughter and own 110 acres of land, though we live on a farm of ninety acres. My brother takes UP-TO-DATE and we are certainly proud of the Cadet page, and I wish to become a Cadet of Equity. I will exchange photos, letters and cards with all the boys and girls. My age is 18 years.—Dorothy Goord, Tiawash, Okla.

DEAR CADETS: I am a girl 14 years old and live on a farm of 400 acres. We have an automobile and have lots of fun. I have been reading the Cadet letters for a year. We keep UP-TO-DATE and think it a very nice paper. I would like to hear from all the boys and girls.—Lila H. Jensen, Weston, Idaho.

DEAR CADETS: I will be 18 Oct. 30 and then I would be pleased to hear from all the Cadets, old and young. I am very fond of reading and writing. I have been taking UP-TO-DATE for about eighteen months and I think it is a fine paper. Now don't you girls and boys forget Oct. 30.—Vada Melton, McClanahan, W. Va.

DEAR CADETS: I am a Kansas girl and have lived on a farm with my parents all my life. UP-TO-DATE has been coming to our home for about three years, and I always enjoy the Cadet page. I am 17 years old and we live five miles from our nearest town, but I get my mail every day. I will be glad to hear from all the Cadet boys and girls. Will answer all.—Minnie Pegorsch, Herington, Kas.

DEAR CADETS: In this good old state of Missouri we raise corn, wheat, oats, potatoes and vegetables, but the crops are short this year on account of the long drouth. We have taken UP-TO-DATE for quite a while and think it a fine paper. I would like to exchange letters or cards with all the girls and boys near my age, which is 16, my birthday being Nov. 4.—Adolph Stiers, Bluffton, Mo.

Hunting and Trapping

For Pleasure and Profit

NOTICE TO SPORTSMEN

This department is open to contributions from readers. Accounts of actual experience, and practical methods of hunting and trapping, either as a pastime or as a business, are solicited. Photographs, if good and clear, are especially desirable, and will be paid for at regular rates. Prizes are awarded to all whose letters are published, and at the end of the season a grand prize of considerable value will be awarded to the best contribution received during the entire season. Write one side of paper only and address all communications to TIM, THE TRAPPER, Sporting Editor, UP-TO-DATE FARMING, Indianapolis, Ind.

UNCLE SAM PROTECTS THE BIRDS

THE Department of Agriculture has set in motion machinery to make effective in every state on Nov. 1 regulations which put under Federal protection, for the first time, a large number of migratory game and insectivorous birds, and thus places Federal restrictions on the five million hunters of the United States.

Among the birds protected by the regulations are the brant, wild duck, goose, swan, cranes of various species, rail, several kinds of shore birds, pigeon, dove, wild pigeon, bobolink, catbird, chickadee, cuckoo, flicker, flycatcher, grosbeak, humming bird, kinglet, martin, meadow lark, night hawk, nuthatch, oriole, robin, shrike, swallow, swift, thrush, warbler, whippoorwill, woodpecker and wren.

A closed season has been established on the catbird, chickadee, grosbeak, humming bird, martin, meadow lark, bullbat, robin, swallow, thrush, whippoorwill and woodpecker. The regulations contain a prohibition abolishing the hunting of all migratory game and insectivorous birds from sunset to sunrise.

A closed season has been likewise put in force on all migratory birds passing over or at rest on any of the waters of the main streams of the Mississippi river between Minneapolis and Memphis and on the Missouri river between Bismarck and Nebraska City. The killing or capture of any such birds on the shores or from any boat or floating object along these streams is prohibited.

MY METHOD OF MINK TRAPPING

Mink are most suspicious of animals, yet are easily attracted if the attempt is properly made. I began trapping four years ago, with twenty-four traps. Early in the fall, before trapping begins, I go along the bluffs and near the water's edge I dig holes about eight inches in diameter, running about three feet back in the bluff. I throw driftwood around the hole to give it as naturally wild look as possible and do not go near again for two weeks or so. When I set my traps I go in a boat and always fasten the chain in the water, as when caught the mink will go directly into the water and soon drowns. I use fish or birds and a few drops of "mink bait" and have met with fairly good success. —John Krueger, Northland, Wis.

MY FIRST BEAR

Dear Tim: I live on a farm of 160 acres in Mariposa County, which contains the far-famed Yosemite valley. My home is situated a few miles west of that valley and within three miles of the Yosemite Valley Railroad. I hunt and trap a great deal during the fall and winter.

Late in September of this year I killed my first bear, killed it without the aid of traps, and this is how it happened: One morning, accompanied by a friend, I started for a place known as Little Grizzly. We reached our destination about noon. We unpacked our horses, hobbled them and arranged things in camp order. After eating our lunch we lay in the shade until 4 o'clock. Taking our rifles, we started for a canyon well known to us. We found deer signs in plenty, especially around the watering places. We finally jumped a large buck. Both of us fired at about the same time. The deer made a few long jumps and went down. Both bullets had struck him behind the shoulder. He was fat and had four points on each side. After dressing him we hung him on a sapling and started on. We had walked about an hour when looking across the canyon I saw a dark object moving along a hillside. I pointed it out to my friend and we finally agreed it was a large bear. It was dusk by this time and poor light for shooting, but I took a crack at him for luck, at about 300 yards. The bear seemed to roll up in a knot and started rolling down the mountain. He was soon lost to view. It was a poor time of day to hunt for a crippled bear, so we headed for camp. By daylight the next morning we were at the place where the bear had been seen the evening before. Blood was seen on rocks he had rolled over. We followed the trail down the hill for fifty yards, where, to our joy and surprise, there lay bruin, dead. He was a large black bear and the bullet had struck him between the ribs. His hide was hardly worth the taking, but we took it off and carried it to camp. We then saddled a horse and went after the deer we had killed the evening before. I led the horse on the way back, while my friend went around by some springs on the opposite side of the ridge. I heard three shots before he had been gone long and upon reaching camp found him there saddling a horse to go after a buck he had killed. We decided we had game enough and started for home happy and proud of our trophies.—John Jeffery Jr., Kinsley, Cal.

HAS TROUBLE WITH TRAP RUST

Dear Tim: My father takes UP-TO-DATE FARMING and I like to read it as well as father. I am glad to see the hunting and trapping department in again. I just began trapping last winter and like it. I have no trouble with trapping, only I can't keep my traps from rusting. Could you please tell me how to keep traps from rusting?

The fur bearers around here are as follows: Skunk, civet cat, weasel, mink, marten, muskrat and coon. I find the skunk and coon the easiest to catch. My way is to set a trap near their dens or stake down a piece of meat and set traps around it, but be careful to leave things as natural as possible. I use the jump traps, as I find them the best all around. I use sizes 1½ and 2 for all animals here found. I will write more about my experience in trapping when I get to work.—Rudolph Mullendorff, Boring, Ore.

(New traps, Rudolph, are usually cheaper than any rust preventatives you could use. If any trappers have found an economical way to prevent rust, that is not detrimental to the catch, we shall be glad to hear from them.—Tim.)

CATCHING THE BADGER

There are many sets for badgers, but I have two that usually get the animals. Here is a good one: I shoot a couple of rabbits or prairie dogs, tie a string to them and drag them across the fields until I come to a fence. I put a small piece of the bait on the wire of the fence and under it I set my trap, covering it well with grass. The badger follows the trail of the fresh-killed animal to the fence and in nosing around to reach the bait is caught by the trap.

My best plan is to go into a field where there is an old straw stack. I dig two holes in the stack, down on the ground, running back about twenty inches, and put the bait at the back of this hole. I set the trap at the mouth of the hole, covering with straw. This is a sure catch. Badgers are very strong and a No. 2 or a No. 4 trap should always be used, and securely fastened.—Herb Williams, Grinnell, Kas.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

The purpose of this department is to direct farmers to a better way of marketing and price making. This is stated in the heading above.

—o—

More broadly speaking, it is to establish a better system of marketing which will eventually carry with it pricing of farm products by the producers themselves.

—o—

To this end we have for many months appended a blank to be filled out and to be sent in by any person who is dissatisfied with prices of farm products in his community, or the system of marketing them. Prices may be high enough to give a profit to the producer, yet the producer may chafe under the lack of freedom and independence in marketing, which is every man's right, and which all producers but the farmers have striven for and attained.

—o—

Thousands of the blanks have been sent in, and from them the force of organizers of the Farmers' Society of Equity, now numbering several hundred, has been recruited. These organizers are the power that is working the revolution in marketing methods, whether they confine their operations to a community, a county or a district.

—o—

In a movement like this every little helps toward the whole, and the one and only thing that is now necessary to accomplish a speedy consummation of our, and all farmers' hopes, is enough more organizers. One should be working in each community. The blank affords the opportunity to secure a commission and the co-operation of headquarters to organize.

—o—

So, if no person is organizing in your community send the coupon and engage in a work that should win the plaudits of your neighbors for all future time. We want to commission a thousand more such community organizers before the end of this year. It is not necessary to give full time to this work. The time that any farmer can spare at this season of the year will be enough to get members for a strong local union. After organizing it should follow that new members will be taken in at every meeting.

—o—

We get a great many letters in which the writer says: "I wish there was a local union here." Well, it is entirely possible under the F. S. E. plan and with the help headquarters will give. There is hardly a farmer in the whole land but who will connect himself with this movement as soon as he thoroughly understands and realizes that it contains all the essentials for the permanent organization for agriculture that all have waited for, and besides starts members in successful and profitable co-operative business immediately when a local organization is former.

—o—

If you want a co-operative community just write your name and address in the coupon and the names and addresses of about a dozen of your neighbors who want to market better in the blank and send it as directed. In this way we ought to be able to establish a thousand more local unions before next spring and in a short time saturate the whole country with them.

—o—

We can not do anything without a local man to help. But—

When men of thought,
Who can't be bought,
See there's a work to do
And fix a plan—
Work man to man—
I b'lieve they'll win, don't you?

—o—

In all walks of life some men have more influence than others. These are the men among the farmers that we seek as organizers, and our organizers should first seek such out in the community and convert them and enroll them. After they are enrolled the rest of the work is easy.

—o—

Now let us see how many new organizers will be commissioned before our next paper closes.

* * *

In the issue preceding this we attempted to confute the claim made in one of our exchanges that the farmers of a county, or larger district, could not co-operate in marketing, but that, as was stated, "the real co-operative association is the comparatively small group of men whose interests are identical." If any of our readers and organizers failed to read the "Personal" department in October 15th number carefully, we wish they would turn to it now and read it.

—o—

Now comes another editor with another absurd proposition, although seriously announced. We refer to these things because they confuse the farmers and often prevent them from organizing and co-operating when the conditions are really ideal. Following is what he said:

—o—

To succeed in a co-operative association the members must have a common interest. That is the reason co-operation has been more successful in the past in sections that produced special crops, such as vegetables, fruits, tobacco, etc., than it has been in sections where general or mixed farming has been followed.

There is another fundamental factor of successful co-operation to be recognized. The farming population must be stable. Successful co-operation can not be built up on a shifting tenant class such as prevails, to the detriment of our agriculture, in many sections.

Successful co-operation must be built on uniformity of conditions and congeniality of members. People of different nationalities, particularly when they do not like each other, seldom are able to maintain co-operative associations. People of different classes, where any class distinction exists, are not adapted to co-operative efforts. Co-operation is simply the extension of the principles of brotherhood and people who are not inclined to be friendly in other relations can not expect to succeed in co-operation.

—o—

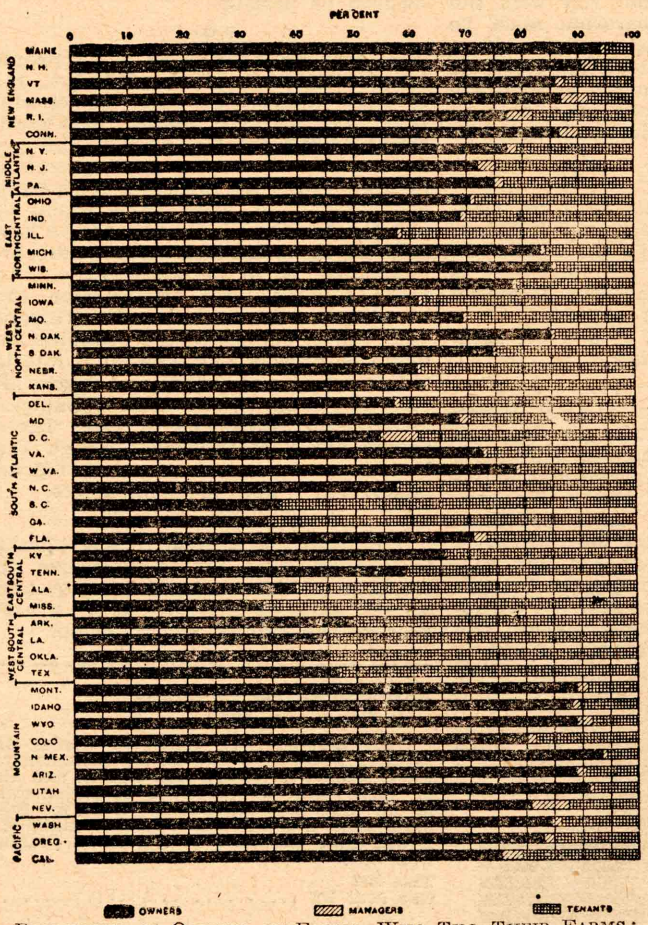
The first paragraph is very similar to the proposition considered two weeks ago. We claim that the producers of crops as far apart as tobacco and fruit have a common interest to be served through co-operation, if it is only recognized. For instance, there are localities where both tobacco and fruit can be successfully grown. Now let us suppose that the two classes of producers would organize in separate organizations, or one class would organize and the other not organize. The success of the one in marketing at good prices would mean its ultimate defeat if the other class of producers could not get equally profitable prices. The unprofitable crop would be neglected and the profitable one would soon be overproduced. So we say the Equity plan of one association for all the crops, in which a balance of values and production are maintained, is the sound one.

—o—

But it is the second and third paragraphs that are dangerous. If the propositions advanced by the writer are true, then the hope of successful co-operation by farmers in this country is a vain one, because the tenant class is almost everywhere, and they produce so much of the crops that to leave them out of any plan of co-operative marketing would surely defeat it. The accompanying chart is a vivid illustration of the part played by the tenant farmers in producing crops.

—o—

We believe that the right kind of an organization, and the right business system, that must be adopted by farmers, can ignore all these matters of whether the producer is a farm



PROPORTION OF OWNERS OF FARMS, WHO TILL THEIR FARMS; MANAGERS AND TENANTS (1910 CENSUS).

This chart should effectively explode the idea that any movement to control production of crops and marketing can be successful if the tenant farmer is ignored. Any plan and system of marketing that will meet the requirements in the United States must include the farms and products of the tenants.

SUN LIGHT CO., 1450 Market St., Canton, O.

owner or a renter, a native or a foreigner, a white man, a black man or a yellow man. Co-operation such as the American farmers need is not simply the extension of the principles of brotherhood, but the institution of cold-blooded business rules and system. Don't let any one fool you with the idea that farm co-operation must be run on brotherhood rules alone. Farmers have got to look out for their money interests as opposed to organizations that have always been able to make their interests first and the farmers' subordinate.

—o—

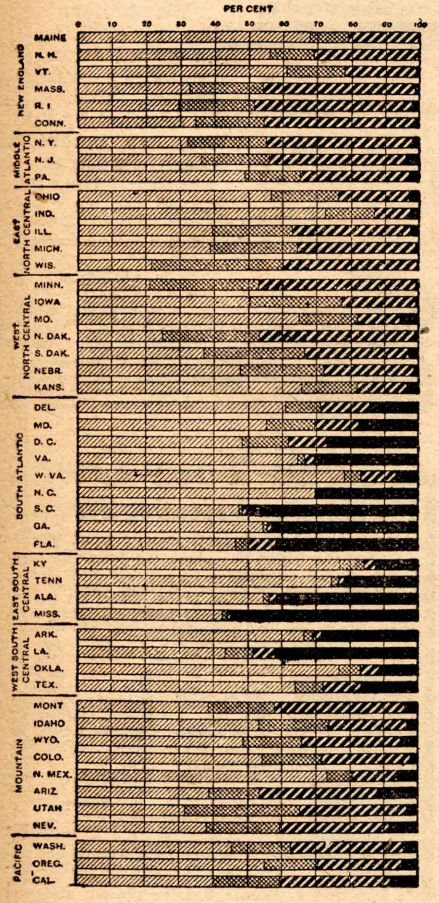
Organized along the F. S. E. plan, it is the crop and the money it brings that is always kept to the front. In the Farmers' Society of Equity it is not asked whether the crop is grown by a farm owner of a renter, by a native or a foreigner, by a white man, a negro or a Mongolian.

—o—

In the F. S. E. plan of co-operation all crops of a community are reported to the business agent, who sells them and collects the money and distributes it, or he reports the crops to the county union to be sold. After organization the farmers don't need to come together often if they are not congenial. They can co-operate in selling, which is the chief activity, by reporting to the business agent. In places where race prejudice is strong it is provided that the different races organize in different unions.

—o—

No plan of co-operation can solve our marketing problems that ignores the negro farmer or the foreign farmers within our borders or the tenant farmers. And the element of shifting, as with the tenant class, makes no difference when the plan is right. The F. S. E. plan provides that a member, as long as he is in good standing, can do business through any local union in the land. Thus a member in Indiana, if he moves to Texas, can, by demit, be joined to the local in his new community.



PROPORTION OF NATIVE, FOREIGN, NEGRO AND OTHER FARMERS (SEE KEY UNDER THE CHART, 1910 CENSUS).

This chart will serve to show what the movement for co-operation that ignores the foreign farmers and the negroes would have to contend with. In fact, such farmers produce such a large proportion of our total products that to leave them out would be fatal to its success.

The trouble is that the writer from whom we quoted evidently thinks that the kind of co-operation farmers need is more than half of the social kind. The kind of co-operation we teach is business first, then the social amenities can be added or not as may be desired or possible.

—o—

At this time, when so many people are trying to help the farmers, the farmers themselves must be careful that they are not helped backward. Probably the greatest need of the day is that each farmer gets an education on true, sound organization and practical co-operation. That is the reason we ask for the names of some of the best farmers in each community where organization is to be undertaken. To make a good local organization the members must be made conversant with the principles of the organization and the objects and how the objects are to be accomplished, and above all else they must be shown how financial benefits will be realized at once. These things are accomplished through the literature of the society and its official paper, which goes to all members.

—o—

Let there be a flood of the blanks to headquarters for commissions to organize and literature to educate, and we will surprise ourselves at the greatness of the results accomplished.

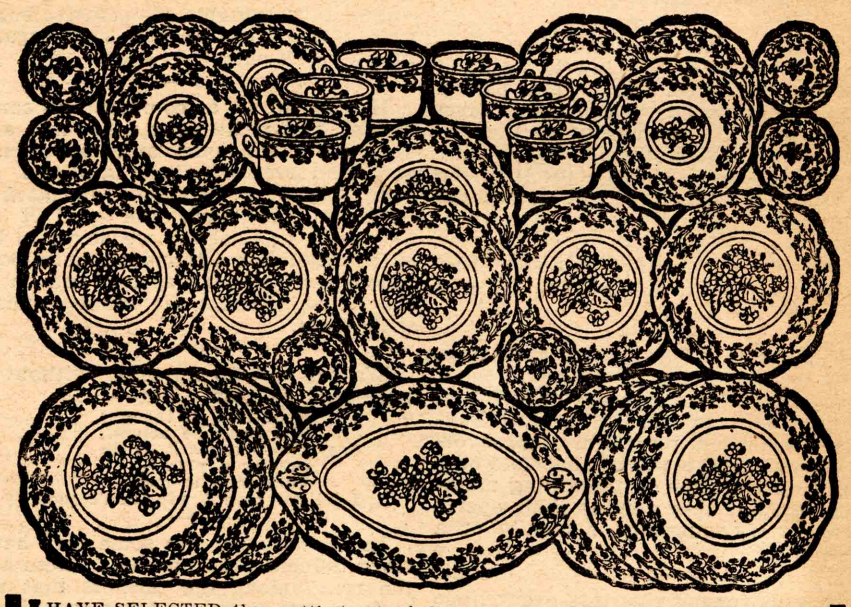
DISHES GIVEN TO ALL



I HAVE SELECTED the prettiest set of dishes I could find to give to my friends. The above picture does not show all the dishes, but gives a faint idea of the beautiful rich Rose design and the size of each piece. As soon as you send in the coupon below I will mail you a large picture of the entire set with each piece in all the pretty colors of red, white, green and gold, showing just exactly how the set will look when you take it out of the box in your own home.

In the center of each plate or dish there is a beautiful cluster of bright roses, surrounded by green foliage, all in perfectly natural colors. Around the edge of each piece there is a very heavy and artistic design in gold. The combination of gold, green, white and red, makes the most popular design yet produced in tableware. Fashionable, stylish, artistic and serviceable. The ware itself is pure white and dainty enough to delight the most fastidious housekeeper. When you get these dishes on your table you will have something to be proud of indeed. And we don't want you to pay us a cent of your money for them. What we ask you to do is so easy you will never miss the spare time it will take, and the pleasure these beautiful dishes give will be with you for years.

In addition to the lovely 33-piece American Beauty Dinner set I will also give 41 extra gifts. These 41 extra gifts are also free. I pack them in the crate with your dishes. Counting the 33-piece dinner set and the 41 other articles make 74 articles you will get by giving me a little of your spare time.

Fill out the coupon below and I will send you prepaid a big sample needle case, containing 115 Sharp's best needles, darners and bodkins, all fitted in a handy and convenient needle case. The darners are for cotton, wool, lace, gloves, carpet, etc. When you have received them show the needlecases to your friends and also show them the sample copy of the Journal of Agriculture and Star Farmer, which I will send you, and ask them for 25c each in connection with a special offer I will authorize you to make. When you have collected only $4.00 for us in this way the lovely dinner set will be yours. Put your name on the coupon and send it at once. It costs you nothing to sign the coupon—I take all the risk.

— — — — — — — —

SEND NO MONEY

Journal of Agriculture and Star Farmer, St. Louis, Mo.:

Please send me free and postpaid the Big Needlecase of 115 best grade needles, together with large illustration in colors of the 33-piece dinner set and tell me about the 41 extra gifts. If I take orders for sixteen needlecases in connection with your special offer you are to ship me the complete dinner set, and 41 extra articles—total 74 articles.

CAUTION!

The great popularity of *the clean, pure, healthful*

WRIGLEY'S SPEARMINT

is causing unscrupulous persons to wrap rank imitations that are not even real chewing gum so they resemble genuine WRIGLEY'S SPEARMINT. The better class of stores will not try to fool you with these imitations. They will be offered to you principally by street fakirs, peddlers and the candy departments of some 5 and 10 cent stores. These rank imitations cost dealers one cent a package or even less and are sold to careless people for almost any price.

If you want *Wrigley's* look before you buy. *Get what you pay for.*

Be sure it's WRIGLEY'S

We are inserting this advertisement solely to protect our customers, who are continually writing us that they have been deceived by imitations which they purchased thinking they were WRIGLEY'S.

SHALL THE TERMS FOR JOINING THE F. S. E. BE CHANGED?

The membership fee is $2. In some states this fee is made larger to meet the cost of organizing and to support the local, county and state unions. Such authority is given subordinate unions by the National Union.

One of the difficulties encountered by organizers, and which tends to make organization slow and expensive, is to get each farmer to pay the membership fee. Frequently so many of the farmers hold out as to seriously handicap the co-operative work in the community. Members and organizers have often remarked how the benefits to each member, and to the whole community, could be multiplied if all the farmers were enrolled as members and co-operators. This certainly is a condition very much to be desired. Can it be brought about?

The minimum number of members that can organize a local union is ten. These, at $2 each, pay $20, and $2 extra for the charter and supplies, making the total $22.

We have thought that a flat charge of $25 might be charged for a minimum local union up to twenty-five members and $50 for a local union of any size. These sums to pay the organizer and for charter and supplies. and the official paper to a limited number. Then provide for dues to be paid promptly, which can be realized from the small commission charged on crops sold and supplies bought, which would make the support of the society automatic as long as the farmer is doing business throught it. When he can not do business to advantage through the society he has no use for it and it does not need him.

We have not tried to present a plan that will meet every requirement, but rather to throw out a few hints, and we hope organizers, officers and members will write us their recommendations.

The Farmers' Society of Equity is a business organization. Its chief business is to direct the marketing of crops. The greater the membership, the greater the crops represented and controlled and marketed. If a plan can be devised that will admit all the farmers of a community at a nominal fee, or no fee at all for many of them, but the agreement to do business through the society, the small commission charged on the business, say 5 per cent, will soon amount to a great deal more than the membership fee if all could be induced to pay it. In a letter from Organizer A. B. Stryker of Montana he said:

> The question that is before the society is to impress a large per cent of the members, as well as the nonmembers, with the fact that we must work for control of the crops rather than a market. When we control the supply we can bring the market to us.

That is true. We must get members. They will represent crops. And thus, if we have a blanket organizing plan, we may bring enough crops under control to compel the market to seek the supply in a very short time.

If the next convention decides to embark in federating independent local associations on a large scale, the flat-charge plan may be the best for such.

Let's discuss this matter. Write your opinion to the Farmers' Society of Equity, Indianapolis, Ind.

SHALL THERE BE FEDERATION?

We have said before that there is more organization by farmers being effected now than probably ever before. Most of this organization takes the form of local associations and the benefits that can be secured for the members through them are very limited. Such local associations do not control enough of any crop in marketing to have any appreciable effect on the price, but they must continue to take the prices made in the speculative markets. Also they do not and can not prevent glutted markets, because of lack of co-operation with each other.

These independent local associations, once established in a community, make it difficult or impossible to establish a local of the national Farmers' Society of Equity or of any other national association. Because of this, and the further fact that there are now in this country five or more national associations, no one of which can hope to complete a national system of co-operative marketing in a short time, while competing with each other in organizing and business, does it not seem that some plan of federation should be adopted to bring all the organizations together for unity in one thing—marketing?

Such a plan of federation must leave the government of the now independent associations in their own hands and leave to them the enjoyment of all prized features that they now possess. But such associations will get from the federation the advantage of a national system of marketing, which they do not have and which they can not have while standing alone.

The Farmers' Society of Equity has affiliated with it a number of associations on this plan this year. Also this society already has entered nearly every state in the country and has a marketing system in successful operation that can be extended as the movement grows, through organizing new units or federating old ones, until every crop and every farmer comes under the central directing head for marketing. In view of all these things, and many others not necessary to mention now, should the Farmers' Society of Equity at its next annual meeting decide to enlarge its scope of work and bring about a real federation of all farmers' associations for the business of marketing? And if it does embark broadly in this larger field, should the name of the society be changed, perhaps to The Federation of American Farmers?

These are matters that the board of directors have under consideration now. Section 10 of Article IX of the constitution and by-laws of the society is as follows:

This constitution and by-laws may be altered or amended at any annual meeting of the National Union by a two-thirds vote unless any part is provided to the contrary. Previous to the annual meeting it is desirable that every member will express himself on this important matter, either directly or through his local union. As a matter of convenience, a blank is appended, which may be accompanied by a letter giving the person's reasons for or against.

Initiatory Vote

On the question of broadening the plans and scope of the Farmers' Society of Equity to include federating present independent local associations of farmers, as well as continuing as an organizing society, to bring about complete unity of marketing, I vote

(yes or no).....

On the question of a change in the name of the Farmers' Society of Equity, if it is decided in the 1913 annual convention to include federating of independent associations as one of the chief activities of our organization in the future, I vote

(yes or no).....

The name I recommend (if the vote is affirmative) is

.....

Address .....

THE GOOD ROAD PROBLEM

Good roads will not down. More and more is being done, and more will be done. Because of the pressure being brought to bear upon Congress, legislation for national aid for road building will probably be enacted this winter.

President Everitt, of the Farmers' Society of Equity, is interested in this matter to the extent that no unwise or impractical plans may be adopted. The farmers must help pay for the roads that may be constructed, and should have a say in the matter. Mr. Everitt will attend the Good Roads Convention and Exposition to be held in St. Louis on Thursday, Nov. 13, which will be "Farmers' Day." He has issued a formal invitation to all members of the society to be present on that day, or send delegates. This convention is being held to decide upon some plan for Federal aid in road construction, and its findings will be urged upon Congress. It is therefore important that the farmers' interests in the matter be taken care of. This can be accomplished only by their being represented at the convention. Every rural community concerned in good roads, either for or against Federal appropriations for their construction, should send a representative to confer with Mr. Everitt and the organized farmers, at the time and place where they can make their influence felt—St. Louis, Thursday, Nov. 13, 1913.

We Want You to Know

Don't blame your razor. It is maybe the fault of the strop. V. A. Shortt, Dept. 30, Peru, Ind., sells "The Metallic Razor Strop Renewer," which makes dead strops come to life. Your money will be returned if you are not satisfied.

Agents should investigate the new novel watch-shaped lighter put on the market by the D. E. Brandt Lighter Co., 148 Daune street, New York, N. Y. It is a quick seller.

Ellis engines are economical. They run on gasoline, kerosene, distillate or any cheap fuel oil. A guarantee of ten years goes with them. Write the Ellis Engine Co., 115 Mullett street, Detroit, Mich., for particulars.

Why have old bags lying around when you can get cash for them? Good or bad, whole or torn, the Iroquois Bag Co., 441 Howard street, Buffalo, N. Y., will buy them. Write them what you have. They pay the freight.

No concrete or special tools are needed to set Carbo Flexible Steel Posts. Write the Carbo Steel Post Co., 149 Tenth street, Chicago Heights, Ill., for free booklet telling all about them.

You hunters and trappers should write for the free bulletin of the National Fur and Wool Co., Dept. 247, St. Louis. It quotes cash prices on coon, skunk, mink and other furs.

If you are thinking of buying a stove write the Kalamazoo Stove Co., Kalamazoo, Mich., and ask for catalog 290. It will be sent postpaid to those interested in good stoves. The Kalamazoo Stove Book describes and illustrates over 400 stoves in every style and size. It also gives the prices, freight paid to your station. Tell them you saw the announcement in this paper.

Harris Bros., Dept. BN 135, Chicago, are making a special offer on galvanized steel roofing. Write them for freight prepaid prices and free samples.

The American Separator Co., Box 1149, Bainbridge, N. Y., does not ask you to take its word for the quality of its separator. It is willing to give you a free trial of the American Separator and let you see for yourself. Send for their handsome free catalog.

A nonintoxicating, nonalcoholic drink can be made at home with little trouble by the use of Lundin's Extract for Perfection Brew and Mal-ta-Brew. A sweater coat is given with each order for the two extracts. Lundin & Co. are located at 117 N. Elizabeth street, Chicago.

Agents A BRAND NEW LIGHTER

Novel watch-shaped Lighter. Operated with one hand; gives an instantaneous light every time. No electricity, no battery, no wires, non-explosive; does away with matches. Lights your pipe, cigar, cigarette, gas jet, etc. Dandy thing for the end of your chain. Tremendous seller. Write quick for wholesale terms and prices.
D. E. Brandt Lighter Co.
148 Daune St., New York, N. Y.

with rig in every County to introduce and sell Family and Veterinary Remedies, Extracts and Spices. Fine pay. One man made $90 one week. We mean business and want a man in your County. Write us.
Shores-Mueller Co., Dept. 20, Cedar Rapids, Iowa

Here's a Regular Weekly Salary For You

Now don't go wrong on this—I'm the man who pays my agents big cash profits on every sale besides regular weekly salaries. Not like other offers that promise a whole lot but won't stand investigation. I've built up a big business by taking big chances. I believe that every man who will let me pay him a weekly salary—to help him over the "getting started" period—will find the work so easy and make so much money that he will never quit. For I've got the sassiest line of sight-selling soaps and necessary household products ever put out. But it's the low prices that first astonish, fascinate and then clinch orders right and left. It's a winner—a pushing, shoving, pulling winner—you need no special experience or ability to get away with it big. How does $25 per week sound to you—$50 per week later. Start in spare time if you want. Thousands of my best agents began that way. Why not try it? I'm ready and willing—and remember, **I'm the one who takes the risk.** Now how about you—wouldn't this money come in handy this winter? Don't dodge the question—**wouldn't it?** Then get busy right away and let me know where you are. Send no money—just your name and address to me—"DAVIS."

E. M. Davis Soap Company
DAVIS BUILDING M. 91 CHICAGO, ILL.

The Rejuvenation of Poorland Farm

(Concluded From Page 7)

only by the limestone and phosphate, but also by the previous increased growth of clover on the well-treated land, especially where this is pastured or plowed under.

Poorland Farm is in no sense an experiment station, and neither is it a "show" farm. It is operated solely from the economic standpoint and with the full understanding from the beginning that general farming is not a highly profitable business and that it is highly unprofitable on poor land. On the other hand, it is equally well known that intelligent permanent soil improvement on land that must be or will be farmed is both the safest and the most profitable investment open to the farmer and land owner.

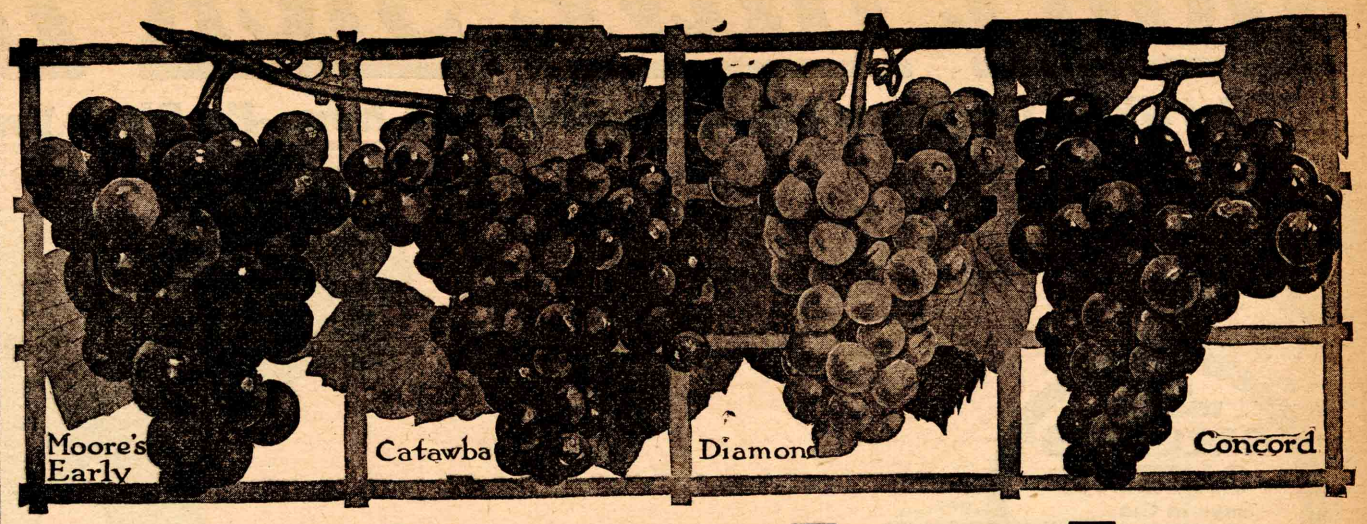
Poorland Farm is usually inspected each year by students in soil fertility. It is for the benefit of those who desire to know the truth regarding economic systems of permanent soil improvement that this brief account is given. The farm is purely a private enterprise. There is no desire to advertise it or its accomplishments, but any light it may shed need not be hidden.

Business Opportunities

are what the little advertisements classified under the "Business Exchange" may be termed.
Read them carefully.

Poultry Paper 44-124 page periodical, up to date; tells all you want to know about care and management of poultry for pleasure or profit; four months for 10 cents.
Poultry Advocate, Dept. 97, Syracuse, N. Y.

Bracelet 25c It's all the rage. Girls, wear it to school and all the others will envy you. Handsome gold finish, heart shape design, set with stone. Adjustable to any wrist. Not more than two to one person at the introductory price of 25c.
S. E. FERRY, Irvington, Ind.



Grape Vines on Every Farm

WHY NOT? READ EVERY WORD OF THIS

WE WERE surprised when we read in the report of the 1910 census that there were grape vines on only 14.5 per cent. of the farms in the country. Grape vines are inexpensive to start with. They can be planted fall or spring; they are sure to grow. They are almost proof against injurious insects and diseases. They are attractive in almost any situation and can serve a good purpose in covering unsightly places or furnishing needed shade. No permanent vine grows quicker and lasts longer. And in addition to all these things, grapes bear fruit practically every year and the fruit is valuable and desirable almost second to none that grows.

Considering the sum of these advantages for the grapes, when we received the census report we were in doubt as to its correctness. We thought nearly every farm had some, so we wrote to the Director of the Census and received this reply:

Up-to-Date Farming:

Your letter requesting information regarding the number of farmers reporting grape vines in our recent report on the "Production of Grapes," received. As you probably know, the census reports on agriculture are based on a farm to farm canvass, and if a farmer grew but one grape vine, he would be reported. The intention is to get a report of every farmer who grew a grape vine in 1909.

Very respectfully,
E. D. DURAND, Per W. J. B.

The fact is that only one out of seven farms has a grape vine. Then there are hundreds of thousands of town homes that have until this time neglected this handsome vine and universally desirable fruit. There is no yard or garden that does not have room for a few grape vines, so we have set ourselves the task to place

ONE-HALF DOZEN GRAPE VINES ON EVERY FARM

and in tens of thousands of other smaller places, and at the same time employ the vines as a means to greatly increase the circulation of UP-TO-DATE FARMING.

This is Our Offer

Send 75 cents and you will get UP-TO-DATE FARMING a full year and will also receive by mail or express, all charges paid, one-half dozen (6) strong two-year-old grape vines with full directions for planting. The varieties are Niagara, Moores Early, Concord, Diamond, Worden and Catawaba. This collection covers extra early to late varieties and the three colors, black, white and red. No better sort can be planted.

All vines will be sent at proper season for planting, no matter where you live.

Yours Free Send a club of four at 75c—$3, and we will send you the paper one year and the collection of six vines free. That is, five for the price of four, or we will send you the paper five years delivered. Paper and vines will be sent to separate addresses if requested. Up-to-Date Farming, Indianapolis, Ind.

Idaho Members Are Busy

We shipped several car loads of potatoes from this local last spring, and returns were prompt and about 10 cents per hundred pounds more than local buyers would pay. Things are looking even better here at the present time. I have had offers for potatoes at 20 cents per hundred pounds above what our local men are offering; oats, 10 cents higher. I have billed out seven cars of potatoes this week and three or four cars of oats. Members are now ordering potato bags through the society, and business will liven up from now on.—J. W. Eames, Local Secretary, Idaho.

Gets More for Poultry

Lewis W. Myers, a member of Local 7103, Nebraska, shipped his live poultry through the Equity System and the returns netted him 5 cents per pound more than local buyers' prices.

Up-to-Date Makes Him Money

I have been a constant reader of UP-TO-DATE FARMING for more than ten years, and I can cheerfully state that I believe that I have got more benefit in marketing my crops from it than from all other sources combined. I take it as a guide in selling or holding for a better price, and its advice in doing so has always been honest and reliable.

An instance may not be amiss. A few years back, our section had a wonderful apple crop and the price at picking time was very low. The buyers would pick out about half the best ones and throw the balance away, and 15 to 20 cents a bushel was all they would bring for the best hand-picked apples, and nothing for windfalls and culls. I thought I would experiment a little. I left my apples in piles in the orchard until freezing weather, then I sorted them and placed them in rail bins ten feet long by four feet wide, lined and covered with straw, and put about eight inches of dirt on top of the straw covering. Although we had a cold winter, those apples went through without freezing, and by the middle of February I sold the sound apples, windfalls, culls and No. 1's all together at 35 cents per bushel.

I consider that I doubled by money by holding them, and got more out of the culls than I could get from the best apples the previous fall.—C. F. S., Illinois.

Believes Federation Most Important

TO UP-TO-DATE FARMING: The cartoon on page 3 in your issue of October 1 fits the situation in this country exactly, and I only wish every farmer in all this country could see it grasp its importance. The Society of Equity is getting started out here, but did not get organized early enough in the season to handle the situation as well as it can handle it next year.

We had to depend on the old haphazard cut-throat way of marketing our earlier products, and as a result a good portion of it was lost. I joined the Grange about two years ago, thinking I might find some relief there, but that organization seems to concentrate all its energies on buying a few things a few cents cheaper that can be bought of regular dealers. If the farmers do not get what they want through systematic organization and using their collective power in political affairs, they will never get what they want. That's how Big Business got theirs, and that's what we will have to do to get ours.

I think your most important work in your valuable paper is the effort you are making for an amalgamation of all the big farmers' unions and societies. Any society or union that does not cover the entire country is more or less local, and in its operations must necessarily create competition. All of them have the same object in view, but they never can attain the desired ends completely until there is just one organization in all the country. Out here we have the "Idaho-Oregon Fruit Growers' Association," which embraces only these states, but they have greatly improved the conditions over what they were before it came, but still they are a competitor in the market with the Society of Equity and every other farmers' organization. I have already noted some of the "crossing of the wires" in their operations. This should not be. Organization, to be effective, must be complete, and I earnestly hope your efforts in trying to merge all the big and little organizations into one compact, powerful unit may be successful.—J. W. C. Springsteen, Idaho.

Gets Higher Prices for Wheat

We have forty-six members, and I have a list of new ones to send in soon, and more coming. Please send me more circulars and copies of the booklet, "Crop-Rich, Money-Poor Farmers." We have shipped two cars of wheat to Chicago, receiving 7 and 8 cents above local market. Will ship another car this week.—H. L. Click, secretary, Chadron, Neb.

Turns to F. S. E.

You are on the right road to bring the farmers to success. We have a lodge of the ———— here, but it gives us no help in either buying or selling. We do not use it for anything except payment of dues. We will have this county organized in the F. S. E. soon. I will see to that. We have to pay $1.20 per bale to sell our cotton here.—C. D. Harper, Georgia.

FREE 5 to 10-mile Sight Range

TELESCOPE 3½ FEET LONG

If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects miles away just like they were close—write today. Enjoy it day and night. Needed on every farm. Telescopes this size have sold for $5 to $8. It is brass bound; protected with brass caps on ends. 5 sections; opens out over 3½ feet long; closed, 12 inches long. Entertain your friends with the "Wonder." Up-to-Date Farming helps farmers to market crops, is published twice a month. Departments for all the family. 24 numbers a year. **Free Offer** Send $1.00 for a 2-years subscription (or 2 one year subscriptions) and we will send a "Wonder" telescope free. Send 10c extra for ordinary delivery, or 20c for insured delivery and we guarantee safe arrival

It is far beyond expectations. If I couldn't get another I wouldn't take $5 for it.—O. F. Folk, Elk Lick, Pa.

Worth $10.00 to me. I can see cattle at 15 miles and a nickel at 60 yards.—Tervis S. Sepeda, Morgan Hill, Calf.

It's a dandy; all you claim and then some. I trained it on the Buttes 28 miles away, they looked like 2 or 3 miles instead. I can count stock in farmer's yard 4 miles away.—Chas. A. Story, Ft. Robinson, Neb.

Every boy and man on farm needs one.—Chester Housen, Minden, Ga.

Our farm is on a hill and we can see 10 miles away. Count windows in houses which cannot be seen with the eye.—Henry Conner, Manor, Tex.

Can see children playing at school six miles away.—P. H. Herrington, McDade, Tex.

Can see court-house clock 2 miles away and tell exact minute.—Jennie Beers, Columbus, Ind.

Best investment for the money I ever made.—Mathias Brown, Batavia, Ill.

A Cart Load of Fun

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in "A Cart Load of Fun" are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. "A Cart Load of Fun" is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.

For 10 Cts

COONER & FORTUNE, Indianapolis, Ind.

A 50-CENT POULTRY Book

ABSOLUTELY FREE, for the next 30 days ONLY, we shall give one of our latest poultry books by Henry Trafford,

"Poultry Keeping in a Nutshell"

which we have been selling regularly for 50 cents, free to any one sending us the names and addresses of ten poultry raisers and 15 cents to pay for mailing the book.

"POULTRY KEEPING IN A NUTSHELL" is a modern, practical and up-to-date book on the care and management of poultry. It describes and illustrates almost all standard varieties, and gives timely articles on natural and artificial hatching, methods of feeding, and the construction of convenient low cost poultry houses. This book covers the main points of the chicken business in all branches in a thorough but condensed style.

Take advantage of this exceptional offer. Only one book to a person.

Poultry Success, Room 43, Springfield, Ohio

Don't Have Sick Hogs!

Get Rid of the Disease-Breeding WORMS Now—I'll Show You How or No Pay

I'll Feed Your Stock 60 Days Before You Pay

Read What the **BREEDERS GAZETTE** Says in the Aug. 27th Issue About

Wormy Pigs and CHOLERA

"Hog mortality is seldom so rampant at this season as now. Usually sick pigs begin to show up at market when new corn is available, but for weeks the stock yards have been full of the invalid and dying while reports from all sections of the country are alarming. It is called cholera, of course, but post-mortem results do not confirm this theory, as carcasses dress white and condemnations are few. Still they die, both mature hogs and pigs, and mortality in the country materially swells the marketward movement with refugees from the diseased areas, every pig thus sacrificed spelling further depletion of the food supply. A man "who never had a sick hog on his place" argues that low vitality is responsible for much of this trouble, and that low vitality in turn is caused by internal parasites, worms, to use the vernacular. This worm theory is not a fool one by any means, and internal parasites undoubtedly entail heavy loss on growers of both hogs and sheep. They practically ruin the bulk of the native lamb crop every year, and a pig toting around a colony of worms in his internal economy has no pretension to thrift. Perhaps less complaint would be heard regarding "cholera" if the porcine and ovine babies were treated effectively for worms."

Look For This Label on all SAL-VET Packages. Don't be deceived by imitations: Don't buy "Sal" this or "Sal" that. Get the original genuine SAL-VET.

Let Me Stop Your Losses—

from worms—Let me help you save your hogs from the deadly plague that is now sweeping over your state threatening YOUR own neighborhood and carrying off millions of dollars worth of animals. The only hope lies in PREVENTION and the first step is to get rid of the deadly stomach and intestinal WORMS—the real cause of 90% of all live stock diseases. There is no known cure for the terrible plague, cholera, when once it settles down on your herd. But there is a SURE, SAFE, EASY way to destroy WORMS with SAL-VET. I'll prove it on your own farm 60 days BEFORE YOU PAY. I'll rid your hogs of these pests that breed disease—the thieves that steal your animals' food—suck their blood—sap their vitality and rob you of your profits. But if you want help don't wait until it is too late. Act now. Read my offer below.

The Great WORM Destroyer

TRADE MARK

SAL-VET

REG. U.S. PAT. OFF.

The Great LIVE STOCK Conditioner

is a wonderful disease-preventing, worm destroying, medicated salt. A tonic, digestive and conditioner. It requires no dosing, no drenching, no starving—no bother at all. You simply place it where all your farm animals can run to it freely and THEY WILL DOCTOR THEMSELVES. I want to place SAL-VET before YOUR stock for the next 60 days—I want to prove to you what I have proved to thousands of other farmers. I'll take all the risk—I'll furnish the "Sal-Vet"—as much as you need—all you have to do is to feed it according to directions and report results. Then at the end of 60 days report results and pay if pleased. The cost is trifling—if it does everything I claim—and absolutely nothing if it fails. You can't afford not to accept my offer. Drive out the worms—head off disease—Save your Hogs—Save your Feed—FILL OUT THE COUPON *NOW.*

SIDNEY R. FEIL, Pres.
THE S. R. FEIL COMPANY
Dept UPF11-1-13 Cleveland, O.

Ship me enough "Sal-Vet" to last my stock 60 days. I will pay the freight charges when it arrives, agree to report results promptly in 60 days, and at that time pay for it if it does what you claim. If it does not, you are to cancel the charge.

*Name*_____

P. O. _____

*Shipping Sta.*_____ *State*_____

*No. of Sheep*_____ *Hogs*_____ *Cattle*_____ *Horses*_____

Send No Money—Just the Coupon

I don't want you to send me a cent of money in advance. I don't ask you to pay me anything on delivery. I send you nothing to sign—no papers to fill out. All I ask from you is the coupon. Fill it out—tell me how many head of stock you have and I'll ship you enough SAL-VET to last them 60 days. At the end of this time report results. If SAL-VET don't do what I claim—if it don't rid your stock of the disease-breeding, profit-eating, stomach and free intestinal worms, I'll cancel the charge. I'll pocket the loss. You won't owe me a penny. You have everything to gain and nothing to lose by accepting my offer. But for the sake of your own profits don't wait another minute. A single week's delay may cost you hundreds of dollars. Disease may suddenly break out in your herd—then no one can help you. Send the coupon NOW.

How SAL-VET Saves Hogs

"The cholera has been killing hogs all around my home, but I have not lost a single one. I have never used so effective a remedy."—Sanford Gerst, South Boston, Va.

"I found 'Sal-Vet' to do just what you said it would; it is sure death to worms. Moreover, although the cholera has reached throughout this neighborhood, I have not had a single loss since feeding 'Sal-Vet.' "—Joe Gahimer, Alexandria, Ind.

"The hog cholera is all around us in this neighborhood, but so far there is not a single case among the hogs belonging to the men who are feeding 'Sal-Vet.' "—Thomas Cannedy, Roodhouse, Ill.

"Hogs all over our county are dying in large numbers, and many right here in my town have lost hogs from some cause, but I could not wish mine to do better than they have since feeding 'Sal-Vet.' "—D. E. Knight, Honeah Path, S. C.

"Before getting your 'Sal Vet' I had lost thirteen of my best hogs, but since feeding 'Sal Vet' I did not lose a single one, and every animal is in fine condition."—(Signed) Geo. Moren, R. No. 1, Pittsburg, Kans.

"Before I started to feed 'Sal Vet' my hogs were sick, and I had lost six of them; since feeding 'Sal Vet' I have lost none, although some of them were pretty sick before they had access to 'Sal Vet' and had lost their hair. However, they pulled through all right and now have good appetites and are thriving."—Ernest Triebel, Rt. No. 2, Clearwater, Minn.

"'Sal-Vet' freed my hogs from worms by the wholesale. I'll not be without it."—(Signed) Henry Iverson, Wagner, S. D.

"My hogs are doing finely; have kept 'Sal-Vet' before them for two months and while there has been lots of disease amongst hogs in this section, none of mine have been sick."—Geo. A. Eline, Rt. No. 20, St. Matthews, Ky

"I have kept 'Sal-Vet' before my hogs all the time, and I never saw them do so well. A lot of hogs died all over this part of the country, but mine have remained perfectly healthy."—Thomas V. Smith, Ellington, Mo.

PRICES 40 lbs., $2.25; 100 lbs., $5; 200 lbs., $9; 300 lbs., $13; 500 lbs., $21.12. No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk; only in Trade-Marked "Sal-Vet" packages. Shipments for 60 days' trial are based on 1 lb. of "Sal-Vet" for each sheep or hog, and 4 lb. for each horse or head of cattle, as near as we can come without breaking regular sized packages.

Now Let Us Talk Matters Over

A Few Words on Particular Things Concerning both Editors and Readers

WE HAVE much to be thankful for, and we are glad of this opportunity of making a public acknowledgment at this season of the year, when we are having our many blessings called to mind by the good, old-fashioned practice of preparing to celebrate our having so much that is good for us by coming together with all our kinfolk under the roof of the old homestead, and eat and drink and be merry, for on the morrow we do not expect to die, but to become more alive to the duties before us—to get a new grip on things, and with greater energy and enthusiasm build plans for greater things to come, in order that we may be duly thankful next year when Thanksgiving day comes around. Yes, we have much for which thanks are due, and to you, reader, we offer thanks for the opportunity you have given us of bringing you each little while our messages of hope and good cheer, of information and inspiration. Our work is not easy, nor are our paths strewn with roses. We meet with disappointments, discouragements, obstacles which at times it seems can not be removed or surmounted. Yet we have been happy in our work and on looking back over the long road we have come since a year ago we find we have made great progress and have accomplished much.

The Farmers' Society of Equity and Its Future

Our organization, which we have supported for many years, is thriving. From many sections come reports that are most encouraging. There is a new mind being created in the world of agriculture. The vision and understanding of our people is broadening. The doctrine of co-operation is heard throughout the land, and we see men coming out of the fog of doubt and indifference and paying heed to these principles which are to create a new mode of living—a higher standard of life. The spirit of co-operative progress is possessing the souls of men, and from it has been and is being created, here and there, new institutions and organizations which are helpful and which bring added comforts to those connected with them. We are thankful indeed for all this, and especially glad to see that some of these results are partially the fruits of our own endeavors. We are thankful for the co-operation of those with whom we have been permitted to labor in this great cause; thankful for every good word that has been said to us, or about us, in behalf of our paper and its cause; thankful for the many suggestions and kindly criticisms we have received from our readers and coworkers in all parts of the country, without which we should have fallen far behind our present position in the onward march of progressive agriculture. Every little thing of this kind has helped us, encouraged us, inspired us. May every helper be rewarded a thousandfold.

The Advertisers Play a Part in Progress

We think we should miss an opportunity if we neglected to express our thankfulness to those of our readers who have patronized our advertisers and let those business men know that UP-TO-DATE FARMING is a regular and valued visitor in your homes. But we want you to understand fully why we are thankful for such favors. Without such patronage no farm paper could carry its usefulness to the homes of the farmers. The price you pay for this or other papers is not enough to pay for the cost of its production. If it were not for advertising and its useful work the price of every paper would be more than doubled. The money we receive from our subscribers for subscriptions pays but a small part of the expenses. The money paid us by those who advertise their wares in our paper alone enables us to send it to you at as low a price as we do. Advertising money helps to put this paper into new homes; helps secure the news and information we print, which is valuable to you; helps to carry on the campaign for better living on the farm. We are, therefore, thankful for the patronage you have given our advertisers and to make a return to you we are most careful to keep frfom our advertising columns anything not up to the highest standard of honesty and fair dealing.

Past and Present Give Way to the Future

Last, but not least, we are thankful we are here, engaged in this work, and for the glorious opportunities that show immediately ahead. It is when we look into the future we feel most thankful. Every day ahead is an open opportunity for more and better work than we have ever done. The trend of the times shows many new forces coming to aid us all. The future is glorious. Let us make the most of it.

Balanced Rations

Thanksgiving! Pumpkin pie! Turkey!

It takes good soil and good farming to raise a mortgage.

Our fortunes are greater than our misfortunes, every time.

Remember that it always takes a hole to help make a doughnut.

To co-operate we must first operate. Operation is the most important function of co-operation.

It will do you men a lot of good to read the woman's pages in this paper. Ask the wife about it.

Good crops and good prices make good times for everybody. We are boosters for all three.

The "fat of the land" comes in very handy now that the time for frying doughnuts is at hand.

Of all the bugs that pester the farmer, the humbug is the worst, for we are not allowed to kill him.

We are thankful for and to every subscriber we've got, and we'll be showing it all the year to come.

Friend farmer, has your good wife more to be thankful for this year than last? If not, can't you fix it right, somehow?

Aunt Sophia has given our women readers some excellent things in the woman's department this time, but then she always does.

The boys and girls who join our Cadet army are growing deeply interested in our work for better things for farmers. They will know how to get them and will get them if they read this paper.

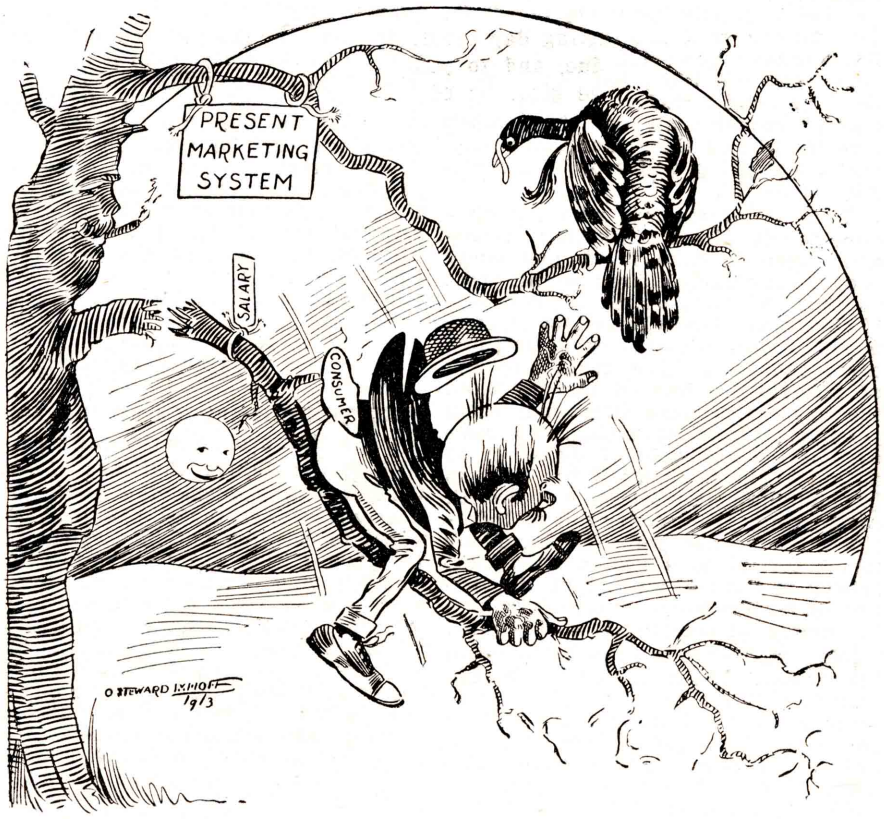
A Kansas banker makes farmers agree to plant ten acres of kafir corn before he will loan them money. This corn is mostly valuable for feeding stock, and the banker takes this method for inducing farmers to grow live stock.

Rats will continue to multiply, thrive and destroy until farmers build rat-proof barns and cribs and remove their hiding places. Rats consume millions of dollars of grain, which, fed to chickens, would produce millions of dollars' worth of eggs and meat.

Now that we think of it, we want to suggest to you, Mr. Farmer, to call your better half's attention to the fact that UP-TO-DATE FARMING is engaged in a work that means better things for the home, and our home department is full of fine ideas that will help the wife to do more with what she has, and to have more to do with.

How much interest do you take in the affairs which make the conditions under which you live, and practically rule your chances for better living? Come, now, who are your senators and the congressman from your district, and how did they vote on the tariff? Who represents you in the state legislature, and what has he done for you? How much of your tax money goes to pay legitimate expenses and how much is stolen or wasted? Until we wake up and learn the facts we will pay the price.

So Near and Yet So Far



The present marketing system puts a turkey dinner out of the reach of many a poor consumer, whose salary is too small to permit him to obtain it.

The Producer, the Consumer and Prices

(Third Article)

IN THE FIRST ARTICLE we laid down the proposition that great forces are now at work to impel farmers to produce crops and live stock in greater quantities so the cost of living in cities can be reduced, which means those behind the movement expect that this greater production will result in lower prices. We pointed out in the second article that some change is sure to result from all the agitation and the pressure being brought to bear to lower the cost of living. We made the statement, which we want to repeat and emphasize, that while there have been marked increases in the prices charged the consumer for many food products, the increase is entirely out of proportion to the increases in prices received by farmers for the raw material, and in many products—most of them, in fact—the farmer receives little more than before the high cost of living became such a great matter of public concern. We have undertaken to show that when the change in conditions comes it must not result in lower prices to farmers for their products, or it will discourage the greater production desired, for good prices and fair profits for farmers are a necessity if farming is to be made more productive. Reduction in price has always tended toward reduction of production, and always will. It is a natural economic law of certain operation.

On the other hand, increase in the cost of any article tends to reduce the consumption, unless the possible consumers of the article have increased means with which to purchase. A greater production will require a greater consumption. The meat of the high cost of living problem, then, is just this: Farmers must be paid a price that makes greater production possible and profitable, and consumers must obtain the products of the farmers at as small an advance over the farmer's price as possible. This means that the "change" which can relieve the situation and add to the general prosperity of both classes must bring about a more efficient and economical system of distribution. Unless the change results in just that, the high cost of living will not be reduced, nor will the greater production desired be accomplished.

Whatever the steps taken to bring about a change, it means dollars and cents to the farmers. Moreover, without the intelligent understanding and co-operation of farmers in effecting the change, no real success will be met. Upon the wisdom and knowledge of the farmers as a class depends the outcome, and their own welfare, because in the manner and methods of both production and marketing lies the solution of the problem.

Thorough investigations have shown conclusively that the producer gets less than half of the consumer's dollar, but does not show what actually becomes of the other and larger portion. It is known in a general way that the country buyer, the transportation companies, the commission men, wholesalers and retailers get it amongst them. This high cost of handling is undoubtedly too high, and right here is where the reductions must be made. In some cases the transportation charges are too much. In some the commission men add too heavy a toll. The retailers, as a rule, add a heavy tax on the consumers' pocketbook, and yet the average corner groceryman only makes a comfortable living. He must meet the prices of the larger retail groceries and the hucksters who peddle fruits and vegetables from wagons. He must lose bills now and then if he does a credit business. So long as the present methods of marketing, distributing and retailing are kept up, no change can be effected, and the heavy tolls will continue, causing losses to both producers and consumers.

There are innumerable instances that could be given to show how some commission men take from the profits of the farmers and add to the expenses of the consumers. Three examples will suffice to make the point. In the fall of 1911 potatoes were being sold to Indianapolis grocers by commission men at $1.40 per bushel wholesale. The mayor of the city, a man of the people, found that potatoes could be secured from farmers in Michigan at a price that would enable them to be shipped to Indianapolis and sold at 75 cents per bushel, and he put the city's funds at work, buying potatoes from Michigan farmers and selling them to Indianapolis consumers. Commission men immediately dropped their prices, even below those charged by the city. The mayor, thinking he had "broken" the price, left the field.

In the late summer and fall of 1913 ordinary "cooking" apples were selling at the groceries in Indianapolis at 30 cents a peck. Eating apples were much higher. Within twenty miles of the suburbs of the city hundreds of bushels of fine fall apples were left to rot under the trees. The owner could not obtain enough for them from commission firms to pay him to pick them up and haul them to the railroad station. Later in the fall, farmers in one Indiana county reported no market for good winter apples. At the same time apples of equal value were selling at $4 and $5 a barrel in this city. Thousands of consumers, unable to afford apples at such prices, did without them.

A third instance: A Baltimore commission man received a shipment of green peas (in the pod) packed in hampers from a Florida farmer. The hampers were emptied, refilled loosely and out of a dozen hampers received the commission man made fifteen, which he sold at the current market price. It is perfectly safe to say he only paid the grower for twelve. It is also safe to say the consumer who bought the peas received less for his money than he would had the merchant from whom he bought them bought a full-packed hamper from the commission man. The merchant, getting short measure, must protect himself by selling short measure, which in the case of peas in the pod could be easily accomplished.

These instances show how the present method operates to the disadvantage of both producer and consumer, and who is in part to blame for much of the high cost of living. Were the producers overpaid? Hardly. They were unable to dispose of their supplies at a profit. The consumer who paid the dollar got but little for it, while thousands were deprived of supplies because the cost was more than they could pay.

(To be Continued)

Misplaced Enthusiasm Wins No Victories

GREAT REFORMS can come only after the necessity for them is keenly felt. Not only must a reform establish its necessity, but it must demonstrate the fitness and efficiency of its proposed methods and plans. Then, too, it must contend with all sorts of new ideas that are constantly coming in from all directions to distract and divide the attention and enthusiasm of those interested in reform. This is true of all great reforms, and it is particularly true of the great reform problem of the marketing and distribution of farm products which is taking such a strong hold upon the thought and action of the producing and consuming masses. There has been no end of so-called "remedies" proposed, and practically all of them are wholly insufficient. Some are very good, so far as they can go, but are incapable of becoming more than a minor factor in bringing about better methods that will be beneficial to the great body of people in greatest need of such assistance.

One such idea has been played up by several enterprising publications whose enthusiasm is evidently much greater than their knowledge of the requirements. This idea is for farmers to market their products at home—sell cabbage, butter, eggs, chickens, milk, fruit etc., at the front yard gate to the passerby. This is no new idea by any means, as fruit and vegetables, even bread, cakes, pies and doughnuts, have been sold in this way, and to the advantage of both producer and consumer. But this is no remedy for the great marketing evil that places its burden upon millions of both classes, who can neither sell nor buy in this manner. The great supplies of farm crops can never be disposed of by such methods, and until these supplies can be sold for a price satisfactory to the farmer and distributed by a system that will enable the consumers to obtain their needs at a reasonable advance in those prices, the burdensome marketing evil must remain, taking its unearned and unjust toll.

No matter how much we may theorize on this subject, the fact will always remain that the great bulk of farm crops will be marketed through the hands of middlemen. There are now, and will continue to be, exceptions to this rule. In country towns, nearby farmers (a few of them) will peddle eggs, butter, vegetables and fruits to private residences. In large towns and cities, nearby poultrymen, dairymen, market gardeners and fruit growers will sell their products direct to the consumers, either by delivery at houses, or by means of stalls or stands on a public market. But in both city and town by far the greater number of consumers obtain their supplies from grocers and hucksters, middlemen. This will go on in this manner for as long, at least, as the people of this generation will have anything to do with it. It is only time wasted trying to evolve a plan whereby any considerable amount of farm products will be marketed direct, and there is being considerable time wasted in just this way.

There are farmers located near cities and towns who can build up a profitable business in direct marketing. Many are doing so. Many more could do so if they would. As before stated, the great majority of consumers in town buy all their country produce from grocers. And the great majority of farmers near those towns sell their produce to dealers, preferring to do this to building up a private trade. These conditions will continue.

It requires a definite plan of work for a farmer to follow if he thinks of building up a direct trade with consumers. In order to succeed he must be able to supply his trade regularly. The farmer who happens to have a few potatoes, or apples, or turnips, or eggs, now and then, can not hope to build up such a trade. He must have regular supplies all the time. Few farmers will do this. For this reason direct marketing will ever be a negligible quantity.

Even if all farmers who are situated where direct marketing is possible were to take it up and carry it out successfully, there are still great volumes of crops of all kinds which either do not lend themselves to such marketing, as wheat, cotton, peanuts, corn, oats, etc. The great majority of farmers are located too far from the markets to make direct marketing possible. Direct marketing, as a remedy for the high cost of living, or as an aid to the majority of the farmers in obtaining better prices, is not worth considering. The sooner this is understood the sooner we shall have our minds turned to a genuine, practical reform in the marketing and distribution of farm products that will be able to accomplish something worth while.

We must always have middlemen. The greater portion of our urban population will continue to obtain their supplies of vegetables, fruits, dairy and poultry products from the groceries. Nevertheless, the system has many glaring faults that should be and can be corrected. As long as they go unchanged both producers and consumers will suffer needless losses. Farmers, as individuals, can do little or nothing to correct them. Only by organizing into business associations can it be done. Summed up in a few words, the one sensible, practical and only possible way to reform the system of marketing so farmers will receive the worth of the products, and consumers need not pay more than they should, is for farmers to form business organizations and make some needed changes in the system. Every unnecessary toll gate must be removed from the commercial highway, and the field of production must reach out a friendly hand to the home of consumption, and thus supply and demand meet each other on equitable terms and so mutually serve each other. We know this is practical, because we have seen it done, not only on the roadsides, but in many of the great market areas. The Equity System does it by the most direct action possible or practical from one to the other.

Packers, Tariff and Meat Supply

THE TRUST COMBINATIONS and the monopolists understand the new tariff better than the farmers do; or the consumers either, for that matter. Under the old tariff no one could ship into the United States, from any other country, fresh beef, veal, mutton, lamb, pork or prepared meats without paying into the United States treasury 25 cents for every dollar's worth so shipped in. The farmers regarded this 25 per cent tariff as a protection to them, as it held, as they thought, the American market for the products of their own stock. The consumers thought the removal of this tariff tax would admit the meat supply of the world to the markets of this country and give them cheaper meat, and at the same time deal a crushing blow to the packing trust that had forced meat prices so high. The new law removes this tax entirely and admits all these commodities free, no matter from what country they come. The general public thought this would sure give the people of the United States cheaper meat, and everybody was surprised that the packers did not oppose the measure more strenuously than they did.

But it now develops that the packers understood their business better than the public knew. They have established large packing houses in Argentina, where immense areas are devoted to grazing, and where vast herds of stock are being raised as cheaply as they ever were ever raised on the open plains of the American west. A document just received from the Department of Agriculture at Washington says the cattle slaughtered for export (to be sent to the United States or elsewhere) in Argentina are fed no grain whatever; they are raised and fattened entirely on alfalfa pastures. And, says the same department authority, alfalfa is not being grown nearly so extensively as it could be. The tendency now is, he says, to convert the grain lands into alfalfa pastures, as cattle raising is much more certain than grain growing. Hence the number of cattle and other meat-producing animals that can be produced there, and made ready for slaughter and export without a particle of grain feed, is, we may estimate, practically unlimited.

It is much cheaper and more convenient to ship meat than it is to ship live stock, and packing houses can be operated at much less cost in Argentina than in the United States, and the stock can be obtained in great droves from the pastures. Though butchered and packed in Argentina, the meat is just as much under the packers' control as if butchered in Chicago, St. Louis, Omaha or Kansas City, and the packers have the same power to make the price that they had before, because they control the avenues of distribution. The Department at Washington has recently adopted regulations that place foreign meats after entry into the United States on the same basis as domestic meats. Such meats, therefore, not only have free entrance to our markets, but they are sold to our people on the same basis as meat from the stock grown by American farmers. This gives the packers another distinct advantage. It enables them to plead foreign supplies to beat down the prices offered for the home stock, while the same argument of short American supply may be used to keep up the price of meat. Our lawmakers are trust breakers and monopoly crushers with a vengeance! But the loads all fall upon the masses of the American people, mostly upon the farmers and the consumers of farm products.

We admit that UP-TO-DATE FARMING treats these matters different from the way other papers treat them, but we have no ax to grind and can afford to tell the truth. Our mission is to help the masses, particularly the farmers, and we propose to accomplish that mission. But it is necessary for the farmers to support this paper and to organize and help us. If they are not situated so they can do that, we appeal to them to read and learn the facts.

The Things that are Caesar's

RENDER unto Caesar the things that are Caesar's, and to God the things that are God's." The Thanksgiving custom for nearly three centuries has been devoted to carrying out in part the latter part of this scriptural injunction. Thanksgiving day comes each year at a time when we can count our blessings in the way of material prosperity which the year has brought us. The grain in the bin, the hay in the mow, the corn in the crib, the sustenance in the cellar, all are the products of God's goodness and our energy. It is fitting, then that the portion which God asks for and expects should be given Him, which is praise, honor, trust, faith and thankfulness. Let us truly give Him these and employ the day set apart for the purpose in setting forth our thanksgiving. In doing this let us not forget that real thankfulness means more than a sense of gladness that we possess. We are admonished that as we have freely received, so should we freely give. God wants the thanksgiving of all His children. Let us not forget nor neglect the unfortunate or the destitute. There are homes amongst us where there may be found privation and want and suffering. Out of our store let us in His name give of our substance to those who have little to be thankful for. A basket of provisions, a chicken or a turkey, a barrel of apples or a sack of potatoes, a part of the surplus we have in plenty, is needed by some other children of men. Let us give it. By so doing we are giving in double measure to the Heavenly Father, "rendering unto God the things that are God's."

But how about Caesar? We are to render unto Caesar his own, sayeth the scripture, and we take this occasion to put a new and a different meaning into the admonition. Does it not mean to render justice and equity to man? Not only to our fellow men near us, but to all mankind? We think so, and surely it is not amiss or out of place to here, at this time, dedicate ourselves anew to the tasks to which we long ago set ourselves—the rendering unto our fellow farmers the things which belong to them—their rightful share of the great wealth that is produced by their toil. We believe it as much a duty, as great a privilege, as glorious an undertaking, to do what we can to reform the great system of feeding the world so that the producers of the foodstuffs may obtain their just reward as it is to give praise and thanks to the Creator for His goodness. The laborer is worthy of his hire, said the Savior of men, who, in directing us to be mindful of our duty to God, placed first our duty to our fellow men.

The Boy and the Downward Path

SOME ONE has said, and with a great deal of truth, that the training of a child should begin 200 years before its birth. If, however, training has been neglected after birth, there are still a thousand chances for a child to be led the downward way.

The jails and penitentiaries are filled with men who were once boys with a chance for better things, but that chance rested, not with the boy himself so much as with society. A boy's mind is an active agent, with inclinations both bad and good, and occupied all the time with either the bad or the good. And as the mind is led so is the body. Boys are busybodies. They must be occupied. It is the boy who never became interested in some work, who never learned a trade, that drifts from the schoolroom into wrongdoing, because he sees little else to do. He has outgrown the work of a boy, but is not trained for the work of a man, so he takes up the work of a desperado. Our hardened criminals became such in just this way.

Not long ago a man and his wife were "held up" by two youths. One had a loaded revolver, which he used to compel the victims to hold up their hands, while the other boy relieved the man of a gold watch and $7 in money. So little did they appear to be criminals that the woman, in a motherly spirit, warned them against such a life and its almost certain consequences, with so good effect the boys returned the watch and the money and explained that for want of work they had become highwaymen and potential murderers

Those who are unthinkingly opposed to vocational education should think deeply on this incident. It is one of thousands. The youth of our land are turned out of school unfitted for any special task. They may know their text-books, but they do not know what is far more important—how to do something and do it well. Hence out of the graduates of the schoolroom an ever increasing percentage is started on the downward path because no other path that will occupy their minds and bodies is placed before them.

THE AWAKENING

WE ALL have experienced the sensation of waking up suddenly in a strange room, and for a few moments we are wholly unable to account for the surroundings. We are lost, so to speak, and it startles us. It produces much the same feeling as when going upstairs in the dark. We go up one step higher than the steps go. The step that isn't there is the one that gives us a shock and a surprise. We depended on it and it failed us.

There are two little lessons we should be able to take to heart and profit by them, which are suggested by the little experiences just given. We farmers are waking up in strange surroundings. We are waking up, surely, to the desire for the betterment of country conditions. But we are likely to be mystified by the strange things we see and hear about us. We see great business interests that have heretofore seemingly ignored us now standing about with outstretched hands and ingratiating smiles, and behold! there is money in the hands offered us. What can it mean? Are not those the same hands we have seen take money from us, and often unfairly, as we thought? Are we mistaken, or are we fairly awake? (We refer, of course, to the funds offered by banks, commercial houses, grain exchanges and others to aid in enabling the farmers to do better farming.) We are not mistaken. The hand and the money is there. But many are not fully awake to the significance of the fact. It means merely this: With abundant production price manipulation is easy for the speculator. He can buy low and sell at a greater margin of profit than if he is compelled to bid high for the articles desired. The fact that all the supplies bought are eventually used, the consumer paying a good price, is sufficient proof that even with abundant crops the farmers could have good prices if they were to stand together on a reformed system of marketing.

The other lesson is suggested by the stair step that is not there. Farmers are urged to increase their production in order to increase their incomes. But unless farmers also increase their power and facilities for controlling their marketing, and adjusting it to the demand, they will be walking upstairs in the dark and their profits will be like the step above the top— they expect it, depend upon it and try to take it, but they are suddenly jolted by the knowledge that it isn't there.

Let there be a genuine awakening, thoroughly arousing the farming class of the entire country. Changes are being made in methods everywhere, in every line of business activity. The marketing system must change also, or those who depend upon it will some day awake to the fact that their failure to make the change has shackled them to poverty. What chance today would a farmer have if he used the tools and methods of farmers fifty years ago? What chance, then, will the farmer of tomorrow have if he continues to sell his crops by the same method he uses today, when all other lines of business have outgrown that method? If farming in the future is to be as prosperous as it should be, the farmers' methods of marketing must be reformed. This is a true saying and worthy of the serious consideration of every farmer.

A Promise

Here is a pledge: We shall never publish in UP-TO-DATE FARMING anything, either in our news or advertising columns, that may not be read by you or your children without a blush.

We shall never knowingly publish an advertisement that is not truthful.

We shall never knowingly accept any advertising from an unreliable concern. You will be perfectly safe in buying (either direct or through your dealer) any article advertised in this publication.

A. H. Ludwig

In the Advertising Department

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

Agriculture in the Schools

SCHOOL TEACHERS must know something about apples as well as arithmetic, beans as well as biology, grass as well as geography. Nineteen states now require the applicant for a teacher's certificate to pass satisfactorily an examination in agriculture, in order that school children shall learn the uses and values of the plants and animals which are necessary for the well-being of mankind, and the rudiments of how they grow. Normal schools in the nineteen states requiring agriculture to be taught are giving teachers the necessary training. Agricultural colleges are also instituting courses designed to enable those who are to teach the "young idea how to shoot" to also teach the young mind how corn and other plants "shoot" and grow. The United States Department of Agriculture has prepared a series of "reading courses" for those teachers who may not be able to attend either normal schools or agricultural colleges, thus enabling them to obtain the necessary knowledge at home. No charge is made by the Department for these courses, of which eight are offered, as follows:

1. Agronomy, the study of plants and plant life.
2. Animal husbandry.
3. Horticulture.
4. Forestry.
5. Agricultural engineering.
6. Agricultural technology.
7. Agricultural economics.
8. Agricultural education.

(Several of these courses could be taken by every farmer to his own great advantage, especially the following numbers: 1, 2, 3, 5 and 7.)

The early training of children in the great work of agriculture, awakening in their minds an interest in the study of how things grow, will put a new phase on farming. The youthful students will become interested in learning how to produce great crops and fine animals, and do these things to the best advantage. They will be more interested because they will be taught the things which make good or bad crops, and good or worthless animals. Knowing these principles, they will become real students of agriculture and farming will appear to them full of greater possibilities. The agricultural educational movement should be pushed forward everywhere.

The Editors Word to the Women

TO THE FARM WOMAN: If UP-TO-DATE FARMING has a purpose, and it has, that purpose is to make the lives of those who live and work in the country as comfortable, happy, useful and progressive as our efforts can make them. The plans we propose, with your aid, to carry out will give you the opportunity to obtain and maintain a better standard of living. There are many, of course, who live in comfort or even luxury. There are many who do not, and can not, through no fault of their own, but because of great injustices in the world of business. We want to see every boy and girl on the farm brought up with sufficient means of acquiring a healthy body, a well-stored and trained mind; to dress well and to satisfy their souls with the good things of life they covet. This will make them better citizens and better able to live a moral, happy and successful life. We want to see farm homes made beautiful inside and out. People who have beautiful things about them are happier and better, as a rule, than those who have little that is pleasing. We want to see farm folks recognized anywhere and everywhere on the same plane as the man and woman of the city, and they will be so recognized when they recognize themselves as being a people of affairs. There is no class of people on earth who as a class are more wholesome, intelligent, honest, capable and worthy of the best of life than the people who live on the farms. They have not had the opportunities that others have had to equip themselves for the life they should be able to live. They have fewer facilities for keeping in touch with the affairs of the country that affect all of us. UP-TO-DATE FARMING has engaged in the endeavor to supply the things that are lacking. We are building up communities in social, educational and business affairs that will give them what they need most. We appeal, therefore, to the woman of the home, the wife and the mother, to co-operate with us in this great work. Read each issue of this paper and every page of it, for the inspiration and helps it always carries. Talk over the matters discussed with the husband and the children; study your own community in the light of what others have done and are doing, and take a hand with us in bringing new life, new hopes, higher ambitions and greater opportunities into your own neighborhood. Help us spread the gospel of greater good, and greater good will come.

Smile Awhile

The Meat Problem

Waiter in Hotel—How did you find your steak?
Boarder—I used a magnifying glass.

It Depends

"My friend, what sort of crops do the farmers grow around here?"
"That depends on the kind of seed they plant and the weather, stranger."

A Load Somewhere

"You say that man pointed a gun at you. Was the gun loaded?"
"I don't know about the gun, but I know he was loaded."

Not That Kind

"Are you sure these eggs have no chickens in them?" asked the suspicious customer.
"Yes, ma'am, them's duck eggs," replied the clerk.

Hadn't Time

"Do you tell your husband everything, Mary?"
"No, I just can't. We are bound to sleep some."

It Depends on Where

"So you don't consider Sharp a coming man, eh?"
"If I had charge of the penitentiary I would."

A Waste of Air

"Why did that poor old miser kill himself?"
"So he could keep from spending his breath."

All of It

"Did Kate's husband leave her very much when he died?"
"Of course he did. He left her all the time."

Natural Result

"Isn't it remarkable to see a husband as tender as Mr. Jones is after having been married nearly twenty years?"
"Not at all. It would certainly be a tough one that wouldn't be tender after being kept in hot water that long."

It Was There

"Your husband certainly gets lots of sentiment out of his pipe."
"If you were to see him clean it once you would think he did!"

Small Enough as It Is

"It is suggested that the government coin half-cents as well as cents, but it is meeting considerable opposition."
"Who are opposing it?"
"Preachers and Sunday school people. They think cents are small enough."

Where the Gold Came From

Dentist—I thought you said this tooth had never been worked on, but I see gold on the instrument I was using on it."
Patient—Yes, that came from my back collar button. I was sure you had gone clear through.

Had a Better Way

Mother—Mabel, why did you take two pieces of cake? That was very rude.
Mabel—Why, mother, you told me I mustn't take cake but once.

Still Going

Gab—Yes, I think my candidate is all right. He claims to have descended from a great family.
Blab—Well, then, he has certainly descended a great distance, and is still descending."

Accumulated a Fortune

"When Peters commenced business here twenty years ago a dime was every cent he had in the world. Now he is worth $100,000."
"Good for Peters! How did he make it?"
"He had good habits, worked hard, saved everything he made, and last week his uncle died and left him $99,999.90."

A Leak Somewhere

"I don't see where all this water comes from," said the father during a continuous rain.
"Maybe it leaks out of the dipper," said little Jimmy, who had been told something about the stars.

The Danger of It

"Willie, why don't you go and wash your face?"
"Mama, do you want me to look like Aunt Susan? You know we are made out of dirt, and she has washed herself nearly all away!"

OUR MARKET REVIEW

Semi-Monthly Review of Crops, Markets and Trade

A GENERAL REVIEW of business conditions in the country is given by Bradstreet's, under date of November 8, as follows:

Distributive trade good. Retail trade leads. Jobbing seasonably active. Wholesale lines slowing down. Industry irregular. Iron and steel slow. Furnaces shut down. Less quietude in other industries. Corn and cotton crop estimates increased. Wheat shipments large. Canadian wheat has call. Commodity price movements without significance. Cereals and cotton lower. Securities dull and narrow. Collections better. Crop money in evidence."

It is worthy of note that the best trade conditions exist in sections where the crops were good. The northwest sends the best reports, but reports are quite good also from the south, where vegetables, fruits and cotton have been selling at good prices.

The wheat acreage is the largest ever sown and is a bear factor in the price of the 1913 crop. The reason for this large acreage is found in the failure of some summer crops because of the drought. The wheat visible added nearly two million bushels. Notwithstanding this, the price is higher than two weeks before by 2 cents. The exports of wheat have been heavy and is a sustaining factor in the price. As wheat is now on a world's basis for price, duty removed, holders should take comfort from the fact that the world demand is good. We still contend that if a large number of farmers hold back a large qumantity for higher prices the world's demand must have it at the holders' prices. Feeding wheat this year is also to be reckoned with in future supplies and prices.

The November government report will probably mark the corn yield up a little, but the fact must remain that the crop is about 700,000,000 bushels under last year and this means many cents a bushel on the price. The visible of corn decreased slightly and prices advanced about 2c since our last report. Whether for sale direct or to make meat, every bushel of corn will bring a high price if marketed conservatively.

Oats have been sick all through the season. Enough has been dumped to keep constantly in the "dumps." The crop was not a bumper one and with the high prices of all feed every bushel of oats marketed in this crop year the grower has thrown away 10 cents that he might just as well have had. Last year the visible supply decreased over 8,000,000 bushels in this two-weeks period compared to an increase of 154,000 bushels this year. and is now over 23,000,000 bushels larger than last year, notwithstanding that was the largest crop the country ever grew. What's the matter with oats that the growers have such contempt for them?

Cotton crop estimates are larger and the price is lower. Potato crop estimates will probably be larger in the November government report. Receipts have been ample for the season and prices well maintained. High prices will probably follow the advent of winter. While the duty has been removed from potatoes, no exports except from a few Canadian provinces need be expected on account of a prohibition against other countries to keep out disease.

ADVICE: Wheat—Hold it for more money or feed it. Corn—Market gradually at 55c or better from the field, if you must sell. Don't market if central market price breaks below 75c. Oats—Hold. Cotton—Market gradually, but if price goes below 14c basis New York, all marketing should stop. Hay—Market gradually. Broom Corn—We expect prices to be higher. Beans—They will be higher. Apples—Ask a good price for good stock. For down-to-the-minute advice about marketing address Farmers' Society of Equity, Indianapolis, Ind.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on Nov. 1, 1913, with comparisons, are shown in the following table. (The sign — before figures means decrease, X means increase.)

	Nov. 1, '13. Bushels	Change from 2 wks. before Bushels
WHEAT	62,566,000	X 1,987,000
CORN	7,644,000	— 989,000
OATS	37,048,000	X 754,000
BARLEY	7,052,000	— 193,000

The visible supply of wheat in Canada on the same date was 41, 969,000 bushels. This is 2,813,000 bushels more than two weeks before and 6,622,000 bushels more than a year before. The visible supply of oats was 8,179,000 bushels on the same date, which is 1,022,000 bushels more than two weeks before and is 5,424,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Nov. 7, two weeks before and a year before as follows:

	WHEAT, No. 2 RED		
	Nov. 7	Two weeks before	A year before
Chicago	94¼ @95¼	92 @92½	1.06
St. Louis	93 @94	93 @94	1.05
Kans. City	89½ @90½	88½ @90	97
Cincinnati	95 @96	93½ @94	1.08
New York	97 @98	95	1.06

Minneapolis—Spring wheat—No. 1 hard, 85¾c; No. 1 northern, 83¾ @85¼c. A year before, 86⅜c and 84½ @86½c respectively.

	CORN, No. 2	WHITE		
Chicago	72¼ @72½	70	@70½	58½
St. Louis	74½		72	60
Kansas City	75½		72½	....
Cincinnati	77 @77⅛	72	@72½	64
New York	80		78¼	56¼
	OATS, No. 2	WHITE		
Chicago	41½		41¾	34
St. Louis	42	41¾	@42	36¼
Kansas City	41	39¼	@40	33½
Cincinnati	41 @42½	40	@40½	36
New York	.....	.....		39½

Future Grain Prices

Chicago grain futures closed on Nov. 7, 1913, and two weeks before, as follows:

Wheat—December, 85⅛c; May, 90¼c; July, 87¾c. Two weeks before, 84c and 88⅝c respectively.

Corn—December, 69½c; May, 70¼c; July, 69⅞c. Two weeks before, 68⅞c, 69⅞c and 68⅝c respectively.

OATS—December, 38⅜c; May, 32¼c; July, 41¾c. Two weeks before, 39⅛c, 42⅞c and 42⅝c respectively.

Winnipeg, Canada—Wheat futures closed: November, 81⅞c; December, 82⅛c; May, 87¼c.

Cotton

New York, Nov. 5.—Cash cotton closed as follows: Middling uplands, 14.00c; middling gulf, 14.50c. Two weeks before the close was 14.50c and 14.75c respectively. A year before, 11.90c and 12.15c respectively.

Chicago Produce Market

Chicago, Nov. 6, 1913

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets address the Farmers' Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week.	Last week.	Last year.
Monday	100	100	50
Tuesday	45	60	65
Wednesday	80	70	60
Thursday	35	65	45
Total, 4 days	260	295	220

Market was quiet and steady at former prices. Receipts were small and not all of them were brought down from outside yards. The demand was not urgent, however, and values were not improved.

Sales reported were: Per bushel—Wisconsin round white in bulk, 2 cars frosted at 68c, 3 cars at 70c, 1 car at 71c, 2 cars at 72c, 1 car at 73c.

Per bushel, Minnesota and Dakota Ohios, bulk or sacked, frozen to fancy sound .....60@73c

Wisconsin round white, bulk.....65@73c

Fancy sacked bring a premium.

Michigan .....65@73c

Sacked bring a premium.

The price is 2c to 3c a bushel higher for Wisconsin and Minnesota to 2c a bushel lower for Michigan than two weeks before. The price a year before was from 40c to 50c a bushel.

SWEET POTATOES—Of Jerseys the supply has been reduced. It has become small. It is not expected that there will be many coming. Stock remaining back is said to be in the kilns. Other kinds are now selling fairly. There is a steady market.

Barrels, Virginia, common to good .....$1.35@1.60

Jerseys, depending on quality... 2.60@2.85

Hampers, Jerseys..... 75@ 85

Delaware, uneven and poorly packed to good..... 50@ 75

Alabama, Southern and Western slow and low. Hampers quoted around 50c to 75c.

HAY—Oct. 4—Receipts, 1,615 tons. Timothy hay in lighter supply and firm. Demand good. Offerings of prairie hay liberal and demand fair. Market steady.

Choice timothy hay.....$18.00@19.00

No. 1 timothy..... 16.50@17.50

No. 2 timothy..... 15.00@16.00

Iowa and Nebraska prairie....14.50@16.00

Illinois and Wisconsin prairie. 8.50@10.00

All qualities are the same as two weeks before. Also a year before the prices were the same.

Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
X 4,884,000	X 13,984,000	X 705,000
— 826,000	— 904,000	X 4,898,000
— 823,000	X 23,144,000	X 9,720,000
X 1,611,000	X 1,526,000	X 2,041,000

STRAW—Rye straw quotable at $8@9. Oat straw at $6@6.50. Wheat straw at $6@6.50.

Wheat straw is 50c a ton lower than two weeks before; other kinds unchanged.

BEANS—Pea beans in ample supply, but of other kinds the offerings are small.

Pea Beans—

Hand picked, choice.....$2.15@2.20

Common ..... 1.50@1.75

Mediums nominally about same as pea beans.

Red Kidneys, choice..... 3.00@3.10

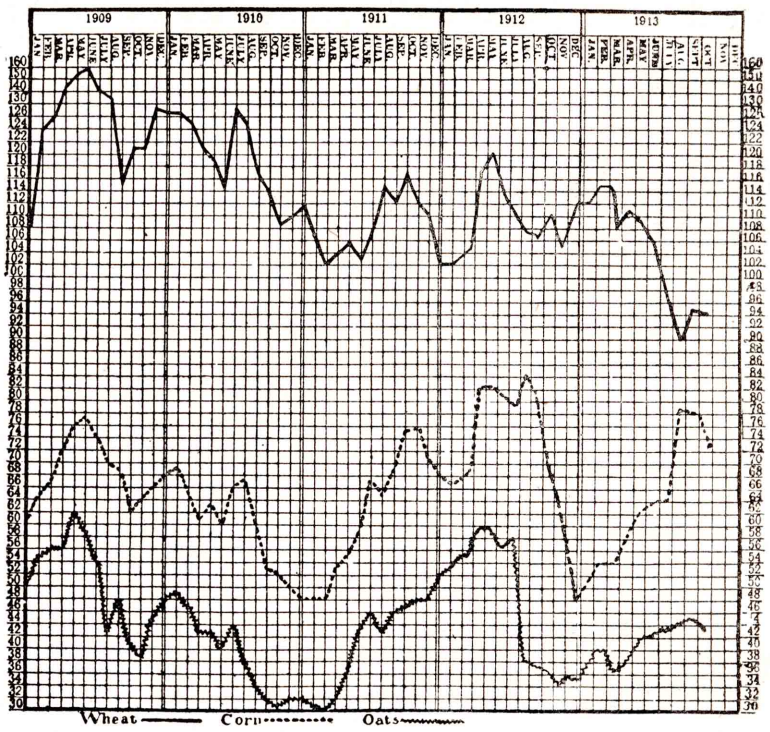
White Kidney nominal..... 3.00

Brown Swedish, long..... 1.75@2.00

Round ..... 2.00@2.25

The prices are the same as two weeks before. A year before choice hand-picked pea beans were quoted at $2.80@2.90.

BROOM CORN—Sales moderate and market firm.



This chart shows the highest monthly cash prices for the three varieties of grain at Chicago for the period 1909 to September, 1913, inclusive. The prices are indicated on the right and left margins. The lowest figures in October, 1913, were: Wheat, 91c on October 16; Corn, 67¾c on October 17, and Oats, 38½c on October 22.

Per ton, Illinois corn.....$150@160

Oklahoma ..... 110@160

The prices are the same as two weeks before. A year before Illinois was $30 a ton lower and Oklahoma $50@60 a ton lower.

EGGS—A firm tone prevails at the current quotations. There are no new developments in this market, which is reported in good condition and doing well.

Ordinary Firsts quotable at 26@28c.

Firsts quotably 30@31c. To bring quoted prices eggs must run mostly to new-laid eggs, with not over 24 eggs loss to the case.

Refrigerator eggs in fair demand. April Firsts salable at 25@25½c and Extras at 26@26¼c.

The price is about 3c a dozen higher than two weeks before and 5c a dozen higher than a year before.

APPLES—The market is ruling steady. A good business is being done. Market moderately active, and dealers seem to be satisfied with the way barrels are selling. Bulk apples are good sale and firm. Prices depend on the quality and the contents. Cars vary and prices for the same grade of fruit will vary in proportion to the loading. Box apple trade is very fair. Supply is good.

To Bring Seller and Buyer Together

This department is exclusively for producers and handlers of farm produce, grain, live stock, cotton, vegetables, fruit, hay, poultry, etc: :: :: ::

This department is instituted to enable farmers to sell at the right time and place, and to reliable customers; to help you get the real worth of your crops, your rightful share of the consumer's dollar—therefore do not do any marketing without first consulting with our market experts. If you want to obtain the highest prices your available market affords, report your crops on the blank provided and get the benefit of our advice and service.

The Triumphant Yeomanry of Lakefield

Practical Agricultural Uplift in Minnesota

M. F. FINCH
Manager of
Elevator

By C. Hayes Taylor

CIVILIZATION stands today at the threshold of a new era. This new era is the era of co-operation. The affairs of men were not always as they are now, and will not long remain so. The people of the enlightened world are progressive. They do not stand still, for they can not. In their industry they create new conditions that force them forward toward new methods, new adjustments, and thus they find themselves outgrowing their old practices, so they must establish new ones. Mankind has been developing greater industries, and as these have developed greater personal liberties, privileges and opportunities have been created for the individual. This has led to the organization of new forms of government and new ways of transacting business. As the population increases in numbers, in intellect and in experience, these new ways are made both possible and necessary. We are now passing through the last stage of the competitive era, where every man is for himself. Even now the leaders in business enterprises have renounced the principle of competition for the principle of co-operation. Corporations, the foundation of "big business," are more co-operative than competitive. They employ the principle of co-operation. They compel the capital of many individuals to co-operate in one great system.

So, I say, we are standing at the gateway of a new era. Through that gate lies the era of co-operation. We look into this field, half hoping, half doubting. We believe in the principle, but we are fearful of the practice. Just so came every step forward, every change from the old to the new.

Ever and anon a few, more courageous than the rest, pass through the gate and grapple with the new problems. Co-operative enterprises have sprung up here and there. Many failed, as was natural and to be expected. But some succeeded, and those successes are so gratifying, so beneficial, that the proof that the principle is the right one is convincing and undeniable. The increasing difficulties that confront those who remain in the field of competition are proof that the new era is a necessity. More and more of us are passing through the gate. More and more are all classes coming to view co-operation as a new order of greater prosperity.

Out on the wind-swept prairies of Minnesota stands the little city of Lakefield, in Jackson County. In and surrounding this town live members of a community organization that has passed boldly from the old era into the new. The fame of what these plain, every-day farmers have accomplished has spread far and wide, and not long ago one of them, a farmer-banker, was called by a southern state to come and speak to their people on how the Minnesota farmers have used co-operation as a vehicle to convey to them a greater prosperity. The following story is practically in Mr. Caldwell's own words:

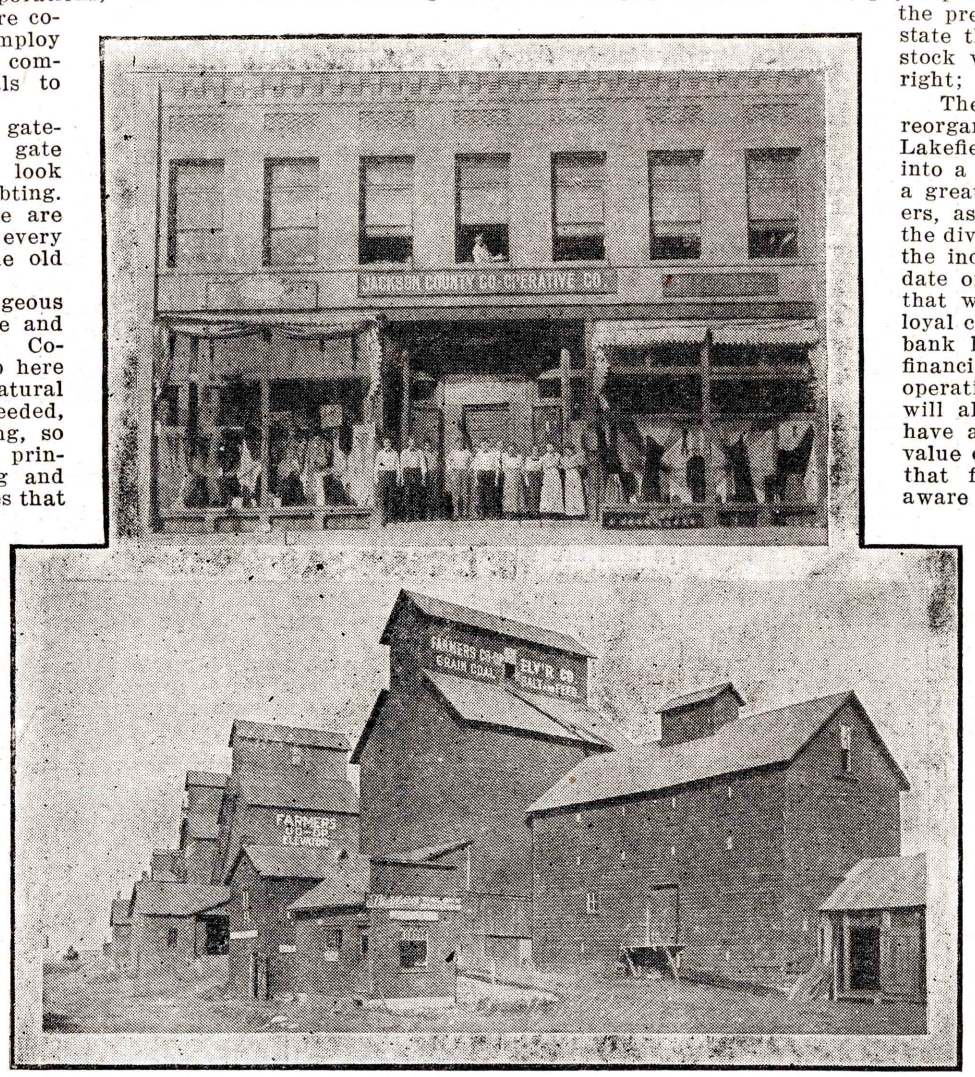
Long ago the public weal demanded that forms of government be democratized. Today public weal demands that methods of business be also democratized. The remedy appears to be in the application of the principles of true co-operation. Herein lie great possibilities. We have all had part in making business what it is today, wherein it has great opportunities for the amalgamation and centralization of wealth. Now we seem to have reached a point where our future self-protection demands that we take steps to insure a proper and just distribution of wealth, and the co-operative theory meets the situation exactly.

For years I have been engaged in practical co-operative business enterprises. I have seen co-operative principles successfully applied to almost every phase of agriculture, including finance.

My first experience with the application of the principles of true co-operation in relation to the selling of farm products and purchase of supplies dates back to the fall of 1905. Up until that year the farmers sold their grain to line elevator companies. I at times would attempt to ship my grain. I would order a car and with my own teams draw the grain direct from my farm to the car and fill it on the side track. An agent would come to the car, ask for a sample of grain, take down the number of the car and tell me when he left that I would not get as good a price for my grain when it arrived at the central market as he had offered me. I think he was right in this at that time.

I tell you this condition aroused my indignation. I would not stand for it. I do not believe that any farmer with a drop of the red blood of manhood in him will stand for such indignities. Our farmers did not long stand for it. We set to work and organized a farmers' company, called Lakefield Farmers' Co-operative Elevator Company. It was decided that we would incorporate a company with a paid-up capital stock of $5,000 and equip an elevator with the capacity of about 25,000 bushels of grain.

The farmers were very busy at that time and the work of soliciting subscribers largely devolved upon myself. I might say here that at this time I had sold my farm near Lakefield and bought a section of cultivated land in Marshall County, South Dakota. I intended to move on this farm in South Dakota as soon as the tenant's lease expired, which would be the following spring. In the meantime I was living in Lakefield and for this reason had more time to canvass than did the busy farmer. **I did not anticipate such a struggle. The line** elevator companies, when they found out what I was about, became very active and raised the price of grain in order to discourage the farmers from subscribing for stock. They rumored every evil thing they could think of that would retard my success. For a time it seemed as though they would succeed, but I was determined about the matter and for four months I fought like a Trojan.



Farmers' Co-operative Store and Elevators at Lakefield, Minn.

As winter set in the farmers were not so busy and some of them began to lend a helping hand and did heroic work. This was in the fall of 1905. We purchased one of the elevators for $5,000. We started business the second day of January, 1906. The day we opened up the farmers came in with loads of grain for a demonstration—a sign of victory. Forty of them were lined up in procession, each with a large load. It certainly was a sight to behold!

J. C. CALDWELL
President Lakefield
National Bank

A few years later we increased the capital stock and bought one of the other elevators owned by a line company. In addition to these two elevators we have corn cribs, coal sheds and a large warehouse.

The manager we have at present, Mr. W. F. Finch, has been with us in this capacity since the date of beginning business, January 2, 1906. We pay him a salary of $1,500 a year. We also have a bookkeeper and other employes. We handle grain, flour, feed, farm machinery and coal. All net profits are paid out on the basis of patronage and not on the basis of capital stock. We, however, pay capital stock first, out of the net profits, the prevailing rate of interest. I wish to state that we have entrenched our capital stock with a nice, large surplus. That is right; it is good, safe business.

The first week of January, 1905, I reorganized the First National Bank of Lakefield, Jackson County, Minnesota, into a farmers' bank. Our bank has been a great success in the hands of the farmers, as indicated by our deposits, also by the dividends we have distributed annually, the increase of the capital stock since the date of organization and the nice surplus that we have; but its greatest value, the loyal co-operative farmers say, is what our bank has been able to do in organizing, financing and supporting all of the co-operative activities in our village. You will all agree that it is a great thing to have a bank back of any enterprise. Its value can hardly be measured. You know that finances are basic. You are also aware that bankers in general are not inclined to favor co-operative enterprises. They do not take the initiative in reforms of this character. Our farmers' bank did.

We have in our village the Jackson County Co-operative Company. It is a general merchandise store. Our present paid-up capital stock is $22,600. Our surplus is $8500, which makes a total of capital stock and surplus of $31,100. With this amount of money we can easily handle a $40,000 stock of goods and discount every bill. We organized the store company with a membership of 130. The shares are of the sum of $100. No one is permitted to own more than one share, so we started with a paid-up capital of $13,000. We bought out one of the merchants of our village (there were four merchants in the village). We think it is better to buy out a merchant, as you have one less competing concern. The goods, before taking them over, were invoiced by an expert invoicer from Minneapolis. We hired an honest, efficient manager. The first year we paid him $100 per month; we now pay him a salary of $1,800 a year.

What is the economic value, the value in dollars and cents?

First—The elevator, 600,000 bushels handled annually, with the net profits over and above what they received under the old line elevator combination, 5 cents a bushel, gives an annual net profit to the farmers of Lakefield, Minn., in the sum of $30,000. Adding to this $960 annually as dividends on capital stock, which is practically $1,000 a year, making a total net profit of $31,000 a year. Seven years makes a total net profit of $217,000.

The Farmers' Bank, owned by seventy farmers,

Our Country Contributors

Semi-Monthly Prize Letter Competition:

Subject: My Most Profitable Crop:

First Prize $3.00 Second Prize $2.00 Third Prize $1.00

Notice to Subscribers

This department is designed to induce subscribers to contribute accounts of their most profitable crops. For the three best letters received each issue, the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Tell the story of what you consider your most profitable crop in your own words. Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

A HOME VINEGAR FACTORY

(First Prize)

Vinegar is the most profitable crop of a farmer's wife I know. For some time she has been making and selling vinegar during pickling time from a formula of her own. Her customers have so increased in number that she finds her venture a steady source of income. She makes the vinegar as follows: To four gallons of water she adds one quart of sour dried apples and two quarts of sorghum molasses. This she covers with cheesecloth and sets in a warm place, where it soon becomes the best of vinegar for pickling purposes. Finding the sorghum molasses not always easy to get, she experimented with sugar and found that she could make as good vinegar by using six cupfuls of granulated sugar in place of the molasses. This vinegar she sells readily at 30 cents a gallon, but in most places 5 cents a pint would be reasonable. In addition to this she keeps on hand a vinegar strong enough for general purposes that sells at 5 cents a quart. She makes it as follows: To two pounds of brown sugar she adds nine gallons of water and a couple of pieces of "vinegar mother" the size of a plate. She keeps this in a warm place until it turns to vinegar, occasionally adding a dish of fermented apple sauce or apple butter to strengthen it. By keeping the two grades on hand she is always prepared to supply her customers. The work does not interfere with her regular household duties, and she finds herself well paid for the time and small expense required.—Mrs. Ella Patterson, Ohio.

SHETLAND PONIES

(Second Prize)

I consider Shetland ponies my best-paying crop. Although I have not been in the business long, I know they are a paying proposition. They are very hardy little fellows and an open shed is the only protection needed to winter them in. Six of them can be kept for what it costs to keep an ordinary horse. They do all right without grain, but as the writer is a good feeder they are given a pint of oats daily during the coldest weather in winter. For myself I think jet black ponies are the prettiest. I prefer solid colors rather than spots. Pony colts bring all the way from $60 to $100 at weaning time and some even higher, and as for the demand we will always have that as long as there are any children. When I purchased a pony for my little girl some years ago I thought that they were good for nothing but playthings, but before we had the pony a month I was driving her as much as any other member of the family. On a long drive they will endure more than a big horse. This summer on a camping trip we drove one of our teams sixty miles in a day and the next morning they were as fresh as ever, ready for the trip again. I would not consider any trip too long for them to make, as I know what they can do. Our ponies are all registered ones, as that is the only way to know you have the real Shetland. I expect, like Mr. Timmons in the Oct. 15th issue, to keep some of my ponies as long as they live. In fact, I'm afraid that will be the trouble. We shall hate to even sell the colts.—B. H. Slagle, Forest, O.

PRAIRIE DOGS FOR PIN MONEY

(Third Prize)

Miss Mattie Coleman, a Georgia girl, was given a pair of prairie dogs when she was quite young and by learning their habits and natures she has been able to raise them successfully, and has found a market for them as pets, like white rabbits, squirrels, guinea pigs, rats and white mice. She has little difficulty in disposing of these little "dogs" at $5 each, and has made many a dollar in this way.

Prairie dogs are prolific and increase rapidly. In the wild state on their native prairies they subsist on grass, roots, seeds, etc. They will eat vegetables, nuts, peanuts and grain and are inexpensive to keep. They are very "cunning" in their appearappearance; golden brown in color, and resemble squirrels very much in size and appearance. They make very interesting pets and have a queer little "bark" and yelp most vociferously when a stranger approaches, which makes them most amusing. Their movements are so rapid at times the eye can scarcely follow them as they dive into their burrows.

Miss Coleman, who is fatherless, is paying her way through high school with the aid obtained from the sale of her surplus pets.—Ruth E. Hodges, Georgia.

THE PLYMOUTH ROCK MAKES GOOD

When I was married I was presented with two dozen hens and two roosters. This was in April. I fed them a few table scraps and the rest they had to scratch for. We had eggs to use for cooking and each morning for breakfast and would sell four or five dozen per week all summer, and I raised eighty young chickens to be grown, then I culled them out, keeping only the best Plymouth Rocks, of which there were three dozen hens and three roosters. The rest were sold at 7 and 9 cents per pound and averaged 45 cents each, or $30.15 for the sixty-seven that were sold. The next spring I had only the Plymouth Rock hens and they were certainly a pretty sight. We had all the eggs we wanted to use and I kept the table for four and bought my own and baby's clothes and raised 100 chicks that when sold brought $6.60 per dozen for the hens and $1 each for the roosters. Most of their feed was gathered from the barnyard and around where the stock was fed.

As soon as they were large as quails I would stop feeding them, except in the morning, when a few table scraps with a little shorts was fed. This I consider a very profitable crop.—N. W., 8 T 8, Arkansas.

A LITTLE GIRL'S CHICKENS

I am a little girl 10 years old, but I will tell you about my chickens, and as they are the only crop that I ever raised, of course they were the most profitable. Last spring mama gave me a hen and told me that I could have all that I could make off of her. So I set her on sixteen eggs and she hatched fourteen of them. When she hatched I made her a nice little coop under a grape vine away from where mama's biddies were, so the other hens wouldn't be fighting her and trampling the little ones to death. I placed them in this coop and gave them some grain and cabbage and went to a little pond in the pasture and caught some small fish for them. I kept them shut up in the coop for a few days till the little ones were able to follow the hen, and then I turned them out and you ought to have seen them grow. I only fed them twice a day after turning them out, but they were busy all the time hunting for food and they grew faster than mama's did that she hatched with the incubator. In ten weeks they were ready for sale, but a hawk caught three of them and I only had eleven to sell. I got 25 cents for them, which made me $2.75 in all. If the hen will set again I am going to try to raise some fall chickens, too.—Ruby Henderson, Florida.

SOUTHERN-GROWN CUCUMBERS

On Dec. 24, 1912, we arrived in Citronelle, Ala., from Carthage, Ill., moving to our new home three miles west from Citronelle. I had several acres of timber land, and to add a few more acres to cultivate I proceeded to get a stump puller. I cleared a scant acre. My friends told me it was an ideal place for cucumbers and they were a sure money maker when they sold right. Of course I was anxious to make money. I went to work with might and main to turning the soil and planting the seed. On this scant acre I shipped 632 hampers of cucumbers. They sold for $496.63. My total expenses were $318.14. My net receipts were $178.49.—John A. Stephan, Alabama.

THERE IS MONEY IN WATERMELONS

A few years ago I had two acres of sandy land which would raise only rye, watermelons and cowpeas. The rye yielded only a few bushels per acre and was not profitable. At that time I did not know that cowpeas were a profitable crop, so I put the land in melons.

I plowed and thoroughly harrowed the land the last of April, then took a sled with runners 7½ feet apart and marked off the field two ways.

At each intersection I made a hill. In each hill five or six seeds were planted. When the plants were two inches high I cut all the weeds around the hill and loosened the dirt with a hoe. With a double shovel plow I went four times between each row and repeated this work at the end of each two weeks.

At the fourth plowing the vines were three or four feet long and had to be turned with the way they were plowed. After plowing the vines were replaced, as much like they had formerly been as possible. The weeds were cut again (as they had been after each plowing) and the crop was "laid by."

The melons began to ripen about the middle of August. As enough ripened to make a wagon load they were pulled, packed in a wagon, hauled to the neighboring towns and sold.

An account was kept and the money received for the melons, less the expenses of the trips, was $104. Time required, twelve days. Thus for my time I received about $8.50 per day.—E. Harvey, Indiana.

MONEY IN SORGHUM AND SWEET POTATFOES

This year I had about one-half an acre in cane. I stripped it and had 109 large bundles of fodder. I then made the cane up into sorghum, making about twenty-eight gallons of very fine sorghum, which I could easily sell for 50 cents per gallon, and the seed will be worth $10. It took me about four days to strip the cane and make the sorghum, my wife helping two days. The way wages are here the labor cost about $5.

Counting seed at $10, sorghum at $14 and fodder at $1, we find we have cleared about $20 on the half-acre.

Last year I had about one-sixth acre planted to sweet potatoes. I sold about three bushels in the fall and gave to my neighbors through the winter, besides using all a family of seven wanted.

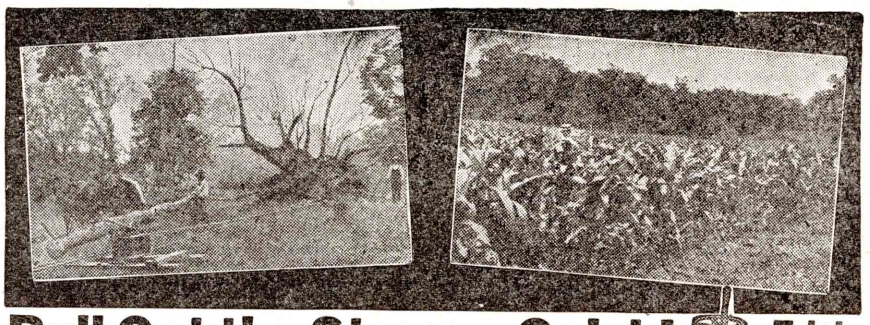
In the spring I bedded three-fourths of a bushel and sold eight bushels at $1.25 per bushel. I consider sweet potatoes a paying crop.—M. M. H., Tennessee.

THE LITTLE LEGHORN HEN

In going over my records, which I keep on all crops grown on my farm, I find the Leghorn chicken pays me the highest percentage of profit. On a general farm the expense of raising them is very little.

I began with seventy-five hens, and during four months of last year I cleared $15 on eggs, which was not very much, but I raised 103 hens for this year and this flock cleared me over $40 in fourteen weeks, a record I think hard to surpass for farm flocks running at large with no especial care.

It may please you to know that what I have read in the poultry department of UP-TO-DATE FARMING induced me to build up my flock of Leghorns and keep a record—"take their number," so to speak.—Ranze Hayes, Decatur, Tenn.



Pull Out the Stumps Quick! Plant on Virgin Soil

Triple Power All Steel

ONE year makes a difference of from *no profit* to $1,281 on 40 acres. Pull out the stumps, double the land value, raise a bumper crop on virgin soil! Thousands are doing it! Why not you? Get a Hercules All Steel Triple Power Stump Puller! Clear your land once for all. Pull any stump in five minutes—an acre or more a day—three acres without moving machine. The

Hercules Stump Puller

is 400% stronger and 60% lighter than others. *Genuine Steel* means strength. Triple power means *more pull than a locomotive.* Double ratchets mean *safety.* Accurate work means *light* draft. Send name in now for fine free book and special price offer! Don't wait! Write a postal NOW! Address

HERCULES MANUFACTURING CO.

260 22nd St. CENTERVILLE, IOWA

CAROLINA CORN

In growing corn, my most profitable crop, I break my ground deeply with a two-horse plow early in March. The first of May I broadcast about 200 pounds each of kainit and acid phosphate, harrowing it in immediately with a cutaway harrow, and rebreak the ground the middle of May with a "round shovel," going fifteen inches deep. This is followed by harrowing with a smoothing harrow, after which I lay off rows five feet apart and "bed" the land. I then use a commercial fertilizer of the 8-2-2 grade, drilled in the row at the rate of 200 pounds to the acre, and plant with a one-row corn planter, grains twelve inches apart in the drill. By the first of June I harrow, and as soon as corn is large enough I begin cultivation and put another application of the 8-2-2 fertilizer, 200 pounds to the acre, to the sides of the rows. I keep up this cultivation until the corn is waist high, and in July I apply (in two applications about two weeks apart) about 150 pounds of nitrate of soda.

The total cost of fertilizer per acre is $10, using a total of 950 pounds to the acre. The fertilizer, as will be noticed, is mostly acid phosphate, which is not expensive.

A field treated in this way last year produced a yield of seventy-three bushels, forty-seven pounds to the acre, which was sold for $1 per bushel. I also obtained 600 pounds of first-class fodder to the acre, worth at least $10. The cost of cultivation was $10.15 per acre. Total value of the crop, $83.90. Total expense, $20.15. Net profit per acre, $63.75. Cost raising corn, per bushel, 27 cents. No stable manure was used.

With best wishes to UP-TO-DATE FARMING.—R. M. McPhail, Jonesboro, N. C.

GEESE IN THE GRASS LOT

I consider geese a profitable crop as an adjunct to general farming. Last spring we began the season with four geese mated with one gander. We sold two dozen eggs for hatching at 50 cents per dozen and have raised twenty goslings now worth 75 cents each, and have plucked twenty pounds of feathers, which are worth 50 cents per pound, making a total of $26, which is nearly all clear profit, as we have the original stock left and they have required but little feed. We set the eggs under the goose in March. As soon as hatched (twenty-eight days) we fed a little sweet milk. When the young goslings were a week old the mother goose would take them to a stream of water near the poultry yard and they were very little more trouble—just a free run in the pasture. What grass they ate was practically worthless. Will also add that the raising of geese does not require a running stream of water. Geese are easier raised with plenty of water, but one can raise them with just enough for drinking purposes. The whole art of raising geese is to have plenty of range and keep them out of sight of the old sow, who is a natural lover of goslings and should never be allowed to see them until fully fledged.—Noah P. Greer, Tennessee.

THE TURKEY A PAYMASTER

We moved on a ranch twelve years ago. Mother and I decided to raise poultry. We got nine turkey eggs from a neighbor and put them under a chicken hen to hatch. We got five turkeys, which were saved for breeders. Our poultry conveniences were very poor at first, being three-sided boxes nailed to a barn to make the other side. Last year we sold ninety-eight turkeys. They brought $198.69. It cost $22 to feed them, buying corn and wheat. A turkey will find most of its own feed if allowed to run in the fields.—Deane E. Webb, Utah.

Very Likely

"Why has dad such a long face?"
"I expect it's because he is short."

Practical and Successful Organization and Co-operation by Farmers in the Distribution of Farm Products

Excerpts From Address by J. A. Everitt Before the United States Good Roads Association, St. Louis, Mo., November 13, 1913

(Want of space forbids printing the entire address. It can be obtained complete by sending ten cents, stamps or coin.)

Mr. Chairman, Ladies and Gentlemen:

First, I congratulate the officers of the United States Good Roads Association on the success of this convention from the point of attendance. Delegates are here from every state of the Union. These delegates have come together for a good object, and I hope wisdom will guide their deliberations and be displayed in their conclusions and that the cause of good roads will be greatly promoted because of this meeting.

The subject that has been assigned to me is Practical and Successful Organization and Co-operation by Farmers in the Distribution of Farm Products. To handle this subject in a way that I hope it will be really edifying and thus justify you in listening to my address will require all of the time allotted to me, so I will not attempt to give my particular views on how to provide for building good roads or how to build them. I will say, though, that improvements in our roads is a very important factor in agriculture, and the farmers will undoubtedly bear an important part of the expense, no matter what plan to obtain them is followed. So I feel that I will have done my part in the program if I point out a clear and simple and practical plan for farmers to follow to sell their crops always to get enough money. If this desirable thing is brought about farmers will be better able to meet their share of the expense. Also, we will feel much more like contributing to good roads if we are in a position to protect ourselves in the matter of prices our crops bring us, if we set the prices on them ourselves, and if we can compel the other peopie to pay our prices, instead of finding that, no matter how much cheaper we can deliver the crops to market over good roads, that saving, which we want to put into our own pockets, is taken away from us by the men "down there" who tell us what they will give.

It is more important that we shall first get in a position to protect ourselves in the matter of price at all times and under all conditions, than to pay out our money to produce cheaper and market cheaper only to find that we get no more profit. Such a program will not appeal to the thinking farmer, and nearly all farmers are thinking today. So must we not conclude, since, as I said, farmers will bear an important part of the expense, that the most important one thing that can come before this convention is a plan or system of marketing farm crops to always guarantee the farmers' expenses of production and a reasonable profit besides? For instance, if, as the production and marketing of crops is cheapened, the prices are always lowered in a greater ratio, which has been the case in the past, witness the large crops and low prices of 1912 and the small crops and high prices of 1913, farmers will not willingly contribute to building good roads. But if this matter can be put on the basis of an investment, that is, the farmers contribute toward building good roads which will positively pay them dividends every year, it will be quite a different proposition. With these remarks as introductory I will proceed with my address.

My address will consist of five parts, or I will attempt to cover the subject under these heads:

First—What is wrong with agriculture, or a statement of the case.

Second—The system of marketing that is practical and successful.

Third—Some losses by the old system compared with some benefits by the new system; or farming must be a money-making business.

Fourth—What it means, or what must be done to build and maintain and operate a satisfactory marketing system for agriculture.

Fifth — Conclusions. Competitive marketing and wasteful duplication of effort must end.

Why this difference between our selling and the other man's selling? Between our buying and the other man's buying?

This is the difference:

The man we sell to and buy from is in an organization. Down the line somewhere the prices are agreed upon and he finds it necessary, or at least he finds it good policy, to buy and sell at such prices. For instance, when we sold grain the prices were decided by the Chicago Board of Trade; or, if the country was exporting, then the price was largely decided at Liverpool. If we sold live stock the prices were decided by the Chicago Stock Yards, or the stock yards of some other big market, or all of them co-operating. If it was butter or eggs the prices were made by some butter and egg board in the city where the local buyer shipped. When we sold anything the local buyer would wait each day for word from "the markets" and when he got the word from the markets each morning he would tell us the price.

And it was the same way when we went to buy. There are manufacturers' associations, merchants' associations, retail implement dealers' associations, jobbers' associations, boards of trade's associations or federations, bankers' associations, etc. So everybody we deal with—the merchants, the manufacturers, the bankers and even the hired men—tell us the price, the interest or the wages, and we pay it.

When we produced the crop we considered our work done, except to haul it to market to be turned over to other people at their prices. But it is different with other people. The manufacturer does not consider his work done with the completion of a machine or piece of goods. He does not dump his products blindly on the market to be the chips for gambling games played by a set of people who do not produce anything. But he learns where the demand is and he sends just enough of what he makes there to supply the demand. He can do this because he has a business system at the selling end—a selling organization.

So the difference lies in the fact that farm crops are not marketed like other things. Instead of them being controlled when they are produced, they are dumped on the market much faster than the people can consume them. The surplus then goes into the hands of other people who are not competitors in the matter of producing crops, but become competitors of the farmers in the matter of marketing them and making the prices.

And who is to blame? Everybody knows that if farmers would control their crops and set a price on each crop, and this price would be known by all the farmers who produce the crop, and then if they would sit down and wait, the price set would be the market price in a few days' time and the people would pay it. Nothing is more certain.

So what farmers need is an organization, a business system of their own, at the distributing, or marketing, end of farming. That organization and its system must be able to control the

"PITTSBURGH PERFECT" FENCE

Open Hearth Steel Wire — THE WELD THAT HELD — Pure Zinc Galvanizing

Welded by Electricity

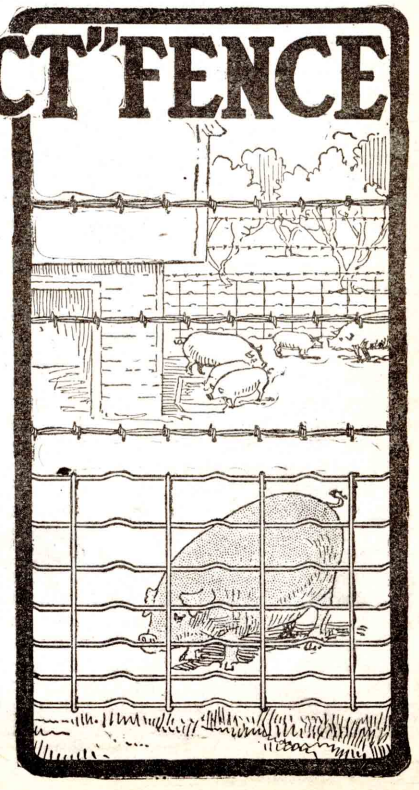
These are the reasons why "Pittsburgh Perfect" Fence **saves your money**. The wire, the galvanizing, the method of construction, make "Pittsburgh Perfect" the strongest, best looking, most lasting, effective and satisfactory line of fencing produced anywhere. It is the easiest to string, because it is a **one-piece** fence, the electric weld joining the wires **permanently** at every contact point. Hogs can't spread the stays, nor can they lift the fabric, and stock can't break it down for all strains and shocks are resisted by its whole surface.

The great popularity of "Pittsburgh Perfect" Fence surely prompts you to thoroughly **investigate it.** We **want you to**; so **write today** for our latest catalogue (sent free), which tells how to **test wire for yourself,** and shows the many "Pittsburgh Perfect" Fences for every FIELD, FARM, RANCH, LAWN, CHICKEN, POULTRY and RABBIT YARD and GARDEN.

Sold by Leading Dealers Everywhere

PITTSBURGH STEEL CO.
PITTSBURGH, PA.

Makers of "Pittsburgh Perfect" Brands of Barbed Wire; Bright, Annealed and Galvanized Wire; Hard Spring Coil Wire; Twisted Cable Wire; Galvanized Telephone Wire; Bale Ties; Fence Staples; Poultry Netting Staples; Regular Wire Nails, Galvanized Wire Nails; Large Head Roofing Nails; "Pittsburgh Perfect" Fencing.



Pastoral Paragraphs

The original back-to-the-farm-er is the candidate going out to cultivate a crop of votes.

If you want the boy to take an interest in farming, why not try giving him an interest in it?

Put the dirt roads in repair with the split-log road drag before winter settles down. Good roads are worth while.

Making money on the farm is merely a matter of knowing how and then doing it.

Sam Saxon says it takes a level-headed farmer to keep up a hilly farm successfully.

We invite contributions from our readers on any and all topics of general interest to our readers.

The farmer who lets no grass grow under his feet has plenty of grass growing notwithstanding.

One heavily loaded wagon with narrow tires will do more damage to the road than eighty automobiles.

When one man succeeds where the other man fails it shows that there is a difference in methods. Get the best method.

There should be music in every home. The phonograph will supply it if none of the home folks are talented in music.

Truckers near large cities are finding it more difficult to get barnyard manure from the city stables. The automobile is the cause of it.

Encourage the boy and the girl to read farm papers, especially the Cadets' department in this paper. It will do much to encourage them.

Nearly every farmer can add a hundred dollars or more to his next year's income by learning some things he doesn't now understand. Reading UP-TO-DATE is great for the understanding.

Washington crossing the Delaware is a notable event in history, but the boy of today is not without great opportunities. Some day some one will cross two strains of corn that will nearly double the yield.

Hiring a little extra help now and then in rush seasons will pay better than overworking yourself and the boys. A little leisure is a great thing to keep up the spirits. To get behind with your work, though, is disastrous.

The Bureau of Plant Industry has received additional funds for extending its investigations and experiments in growing ginseng. There are a large number of ginseng growers in Michigan, New York, Ohio, Pennsylvania and Wisconsin. The Bureau will lend its aid to all interested in this curious plant.

The home is about the most important part of the farm. Our home department is dedicated to better homes and those things which make us enjoy life and each other. Don't destroy this paper before your wife reads the home page. If you will read it yourself you will understand why we make the suggestion.

"Now, John," said Farmer Hardman to his 16-year-old son, "I've got to go to the institute today to make a speech. I want you to haul out the manure, get up a few loads of wood from the wood lot, take a load of fodder to the cattle, fill the feed rack with hay and straw, go over to Johnson's and get his wire stretcher and fix the fence, and tonight be sure to feed and slop the hogs, milk the cows, clean up the cream separator, bed down the horses, teach the new calf to drink, cut some stove wood and split plenty of kindling, build a fire in the tank heater and shell enough corn so I can take a grist to mill tomorrow. If I'm not back by 10 o'clock wait up for me so you can put the horse away while I eat." And Mr. Hardman set out to deliver an address on "How to Keep the Boy on the Farm."

DANGER IN CORNSTALKS

Farmers in the corn belt, especially in the middle and upper Mississippi valley, have at various periods experienced loss of cattle pastured on standing cornstalks after the corn has been harvested in the autumn.

An element of mystery has surrounded the death of cattle in these instances; in fact, very commonly there are no premonitory symptoms, and it is not unusual for the owner upon visiting the field in the morning to find one or more fat cattle dead which one the previous evening were in excellent health.

Another peculiarity of the disease is that losses may occur on one farm or in one field while cattle on an adjoining farm or in an adjacent field may be free from the affection. Thus far the cause of the disease has not been established. As death is generally sudden, and there is little opportunity for treatment, animals should not be turned turned into a field with standing stalks. The disease may be actually prevented by cutting the stalks and feeding them after they have been carefully cured and removed from the field. Losses from feeding on standing cornstalks emphasize the economic value of cutting the corn for silage or feeding the stalks in the barnyard or corral, or, better still, shredding the fodder, under which condition it may be fed with the least possible waste. The so-called cornstalk disease should not be confused with poisoning by prussic acid from eating frosted sorghum. Sorghum under certain conditions of growth has been found to contain these fatal poisons.

The clock goes on a strike every hour, yet it keeps working every minute.

What we don't do on our farms sometimes stacks up higher and is more noticeable than what we do.

One part of being a good farmer is being a good neighbor. Let your good influence go farther than your own line fence.

Shorty's Shortcuts

(By Himself)

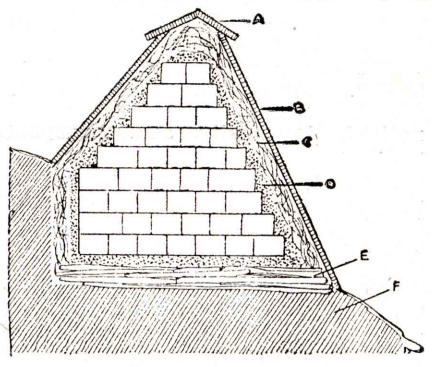
THERE is nothing like being ready, except to do the thing well when we are ready. One thing is as sure as Adam ate the apple, and that is if we are not ready the thing, whatever it may be, will not be done well. The coming days are coming right along, bringing us our future duties, and we should be prepared for them.

A few days ago I woke up one morning to find ice half an inch thick in the watering trough. That meant business in several directions. First I put in my tank heater. Of course there is going to be lots of weather when it will not be needed, but I want it in place when it is needed. Ice water on the inside of cows and horses is an expense I can not afford. Of course the stock will warm the water after they drink it—I know that—but I also know that it takes corn and oats and hay to warm it, just the same as it takes coal and wood and kerosene to make a fire in the kitchen range. I burn corncobs in the tank heater, which is cheaper than corn kernels in the cows when it comes to heating water. Then the corn fed is used to a more profitable purpose than heating water.

That ice made me think of the icehouse. Every farmer ought to have an icehouse if he lives in a country where such a thing is possible. Ice is a great thing in the summer time. In the winter it is good for nothing except the youngsters to skate upon, but in summer a supply of ice is a boon. My icehouse has been in use for ten years and I think as much of my ice crop as of any other crop I harvest. So with the first intimation of freezing weather I put my icehouse in order. I may not need it until after Christmas. I seldom do, but I always have it ready before I need it. Save time that-a-way.

Once I had no icehouse. That was eleven years ago. My wife said she wanted ice the next summer. I said we couldn't have it, for we had no house and no money or time to build one. I said this just to spar for time, for I knew I had to get ice one way or another or the next summer would be made so hot for me I would not be able to eat or sleep in peace. But an icehouse was out of the question for me then, so I made what is known as an "ice stack." On the north slope of a rather steep hill I dug an excavation into the hillside sixteen feet square. The floor was sloped slightly with the hill. Rails were laid on this floor parallel with the slope, the spaces between them furnishing drainage. Then I hauled to the site a large supply of sawdust and coarse swale hay.

When the first good freeze came I hauled ice from a neighboring mill pond and built up a "stack" like the illustration, first putting eight inches of sawdust and twelve inches of swale



Shorty's Ice Stack
A and B—Boards; C—Straw; D—Sawdust; E—Rails; F—Earth.

hay upon the rail floor. I covered this ice with sawdust, then with hay, then with the earth I had thrown out of the excavation, and put rough board covering over the top and leaned boards against the sides to turn the rain. A double door was fixed on the north side, permitting access to the ice.

This ice stack was an eye opener. We could not before have realized how great a comfort and a pleasure in summer ice—all the ice we wanted—could be. We fairly reveled in it, and, as an ice stack is not a thoroughly satisfactory way of keeping ice, we ran out on August 10, and by the first of September I had materials on the ground for a first-class icehouse, and wife was poring over refrigerator catalogs. A first-rate, good icehouse was built and filled and never since that winter ten years ago have we failed to put up sufficient ice to supply us liberally throughout the summer except when the weather generator wouldn't freeze it for us.

Get your icehouse ready if you have one. If you have no house, nor time or means to construct one, take a shortcut by getting ready to put up an ice stack. If you do the work thoroughly you will have plenty of summer comfort next year.

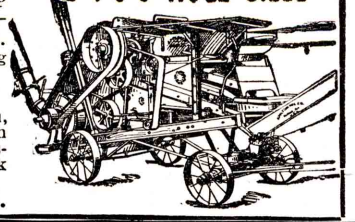
The folks who print this paper have a real desire to help things along out on the farms. That's why we print it.

The gist of co-operation is this: Have a common cause, and work the other fellow's way when he won't work yours.—Elizabeth Towne.

Suspicion is a rock that has wrecked many a promising enterprise, but ignorance is a reef that has wrecked more.

The grain exchanges are doing their utmost to get on the good side of the farmer. That means the side where he keeps his pocketbook, so they may see to it that too much does not get into it.

The Board of Food and Drug Inspection, operating under the pure food and drugs law, have issued notice to oyster canners that a certain weight of oyster meat must go in every can. A No. 1 can must contain at least five ounces of oyster meat after the lighter contents are drained off. A No. 2 can is required to have ten ounces of meat. Now will oysters go up in price, we wonder?

CORN HUSKERS APPLETON
Harvest a 160 acre crop from 120 acres. This simple, reliable machine does it. Cuts or shreds the stalk while husking the ears.
2-4-6-8 ROLL SIZES


GUARANTEED
size for size, under equal conditions of operation, to do more and better work with less power than any other machine husker in existence and to be easier and safer to feed and to operate. Our Husker Book tells all about it. Send for free copy today.
APPLETON MFG. CO. 564 Fargo St., Batavia, Ill.

LUMBER
I Can Save You Money
We sell direct from the mills and save you all dealers' and middlemen's profits.
Dimension stock, all sizes, 2x4 to 2x12, strictly No. 1.....$17.50 per M
Timbers, all sizes, 4x4 to 10x10, No. 1..... 17.50 per M
No. 1 Fencing.....$20.00; No. 2, 15.50 per M
No. 1 Flooring, dressed and matched, 1x4..... 20.50; No. 2, 14.50 per M
No. 1 Flooring, dressed and matched, 1x6..... 20.50; No. 2, 16.50 per M
No. 1 Boards up to 1x10, 10 to 20 ft. lengths..... 18.50; No. 2, 16.50 per M
(If boards are shiplapped, 50c per M extra.)
No. 1 Drop Siding, 1x6, $20.00; clear and free from all defects, 23.00 per M
Extra Clear Red Cedar Shingles, $3.50; Star A Star..... 3.15 per M
Barn Boards, 1x12, surfaced on one side, selected..... 23.00 per M
Send list of requirements and will name prices, freight paid to your own city. All our lumber is new, bright, clean—no wreckage. We positively guarantee satisfaction, safe delivery and grades to the highest standard. I can also save you money on all kinds of millwork, doors, windows, storm sash, paint, hardware, roofing, plumbing, heating, etc.

FACTS ABOUT LIME AND ITS USE

Limestone soils are always more fertile than freestone soils.

Continuous cropping will eventually greatly reduce the quantity of lime in even the strongest limestone soils.

An application of lime is nearly always beneficial to any soil, even those of limestone character.

The quality of lime depends upon the quality of the limestone rock from which it is burned.

To determine the quality of the lime used have it analyzed by your state experiment station. When buying lime buy it on a guaranteed percentage of pure lime.

Very fertile soils must have an abundance of humus. To obtain humus liberal quantities of vegetable matter must be returned to the soil to decay. Decaying vegetble matter often produces soil acids which make the soil sour. A sour soil is not highly productive for some crops because the acid prevents the plant food in the soil from becoming in available condition for certain plant roots to take up. Lime counteracts the acids and by the action of the lime upon the acid plant food in greater abundance is made available.

There are many farm crops that can use the plant food in acid soils. But those plants that play the most important part in building up a fertile soil do not thrive in acid soils. Such plants are the clovers, alfalfa, peas, beans, etc., which thrive best in soils containing an abundance of lime.

The quantity of lime that should be applied depends upon the condition and character of the soil. It will vary from 500 pounds to one ton per acre.

The action of lime on the soil is always downward. An application should not be plowed under, but applied after plowing and immediately harrowed in.

The fall of the year is the best season to apply lime, as it has time to permeate the soil and be thoroughly distributed for the crop the next summer.

On soils that are in need of lime an application of about 600 pounds per acre every four years will ordinarily prove satisfactory.

The following plants have shown very marked beneficial results from an application of lime to the soil: Wheat, corn, tomatoes, potatoes (in acid soils), beans, clover (red, mammoth, white, crimson and alsike), alfalfa, peanuts, garden peas, cabbages, peach trees, tobacco, asparagus, lettuce, cauliflower, eggplant, rhubarb and pumpkins.

To test a soil for acids, take half a cup of soil from the field, add water until it is a thick mud. Take a small strip of blue litmus paper (which you can buy at a drug store for a few cents for a number of strips) and be careful not to touch the end introduced into the soil with your fingers, and insert the paper in the soil. After an hour or two remove the paper carefully, rinse the end that was in the soil. If it is very red the soil is very sour. If slightly pink in color it indicates the presence of vegetable acids. If unchanged in color no acids are present.

A GOOD WORD FOR THE CROW

The crow, condemned a decade or more ago as a destructive bird in agricultural fields, has been investigated by the Department of Agriculture and a more favorable verdict reached. The investigation shows the crow to be of great value to farmers.

After a careful study of the habits and the examination of a large number of stomachs, the Department experts have reached the conclusion that the crow consumes enough grasshoppers, cut worms, white grubs and other injurious insects to make him highly valuable to farmers. There is, however, one bad habit which the crow has, and that is the destruction of young birds and bird eggs, but this trait is believed to be outweighed by the good the bird is doing for the farmer in the destruction of worms and insects.

The one danger from the crow, according to Department experts, lies in large numbers. If the number can be kept down there is every reason why farmers should encourage the bird to remain about their farms. Not long ago an agent of the Department was watching a crow feeding in a corn field. It seemed that the bird was pulling up young corn and carrying it to a nearby nest to feed its young. After the crow had left the nest the agent climbed the tree and secured the young birds. An examination showed that instead of young corn or the kernel of the corn the older bird had been feeding the young ones with cut worms gathered from around the corn plants.

Crows are notoriously clannish birds and except during a few weeks at nesting time are usually seen in flocks. Moreover, even while nesting they are more or less gregarious, for, although two nests are seldom built in the same tree, yet half a dozen pairs often build within easy hearing distance of each other, and if one is disturbed all are likely to unite for common protection or protest. When the young are able to fly the parents accompany them, forming little family parties of six or eight, and these soon associate with similar parties. They commonly travel in flocks and often congregate in large numbers, but only during winter do they unite to roost in immense communities. Many roosts are known where not less than 100,000 crows spend the night during this season of the year, and most of these roosting places have been used year after year.

THE APPLE CROP, THE MARKET AND THE SUPPLY

REPORTS of the apple crop are various. From the buying side come reports of immense yields; from the orchards are reports not so glowing, and from the users who are not producers there are reports of scarcity. The following editorial, which we copy from a leading St. Louis paper, explains how this is and gives an idea of the present marketing system that is seldom found in the public press:

Apples are coming to the St. Louis levee at a lively rate. They come in closed barrels, which are not opened, save when an occasional individual has a barrel head removed so that he can form an estimate as to the quality of "a lot." Everything, it should be explained, goes by "lots" when apples come to the levee in the fall.

After the qualities of different lots are ascertained, the barrels are loaded upon wagons and trucks and whisked away. There isn't much in the way of a picture of plenty in the sight of these closed barrels being hauled away to their mysterious places. Where do they go? No citizen can tell, unless he happens to know the way to the cold storages, or to the places of business of those who buy in "lots."

The truth is that the rank and file of citizens in St. Louis derive no benefit at all from the fact that great quantities of apples come to the levee in the fall. It is impossible to buy one barrel. Such a thing as one barrel does not exist in the field of apple commerce—down on the levee. There are only lots.

The river used to be one of the assets of the town. It is, theoretically, an advantage to a city to be builded on a waterway. A waterway means, in theory, that transportation is cheap and that the people will reap a benefit from that kind of economy.

But under the prevailing methods of trade the river is useful only to those bodies of men who buy in lots—who grab the bounties of the harvest and begin immediately to manipulate them to the end that they may make big profits.

We are glad a leading daily of a great city is brave enough to thus tell the truth about the present marketing methods of the country, for this method does not prevail only in St. Louis. It is practically the same in all the cities, and it applies to all crops that are used as they come from the orchards, gardens or fields. These commodities are gathered up by local buyers, are shipped in "lots" to the market centers, often going defiantly through points of imperative demand, and are then and there hoarded by the storers, to be doled out in meager supplies at "high cost of living" prices. It is so with all of the storable fruits, with eggs, poultry, dairy products, potatoes and all storable vegetables. Much of the demand is not supplied at all because the supply is taken entirely beyond it, and local supplies are so absorbed and shut off, sometimes even bought and destroyed, so there can be no such supply to compete with the storage trade.

This latter condition explains why the Agricultural Department, the schools and the press see nothing but a scarcity of these needed commodities, and why they can see nothing to do but to urge a consistent and unlimited increase of production. The lawmakers want the farmers to mortgage their homes to enable them to produce more; and the colleges plead for appropriations to help them teach how to raise greater crops. The educating world is thus bent on inducing the farmers to raise more stuff. Why? Because thousands are in need of it and are unsupplied. Would larger yields of apples supply the crying need in St. Louis? Or in any other city where that system of marketing prevails? Would more eggs make them any cheaper to the consumers? Would increased yields of anything supply the demands that are beyond the reach of the market centers, even though those points of demand may have been passed by the supply on its way to the market centers?

Why can not statesmen, philosophers, ministers, teachers, writers, understand these conditions and realize that the lack of supply is not the result of underproduction, but of monopolistic control of the markets and bad distribution, a gathering in of the supply to force the payment for it of prices that make the high cost of living and if workers for greater crops would direct some of their powers to the overthrow of this indefensible marketing system?

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

BROWN FENCE
WE PAY FREIGHT
13 Cents Per Rod Up
Strongest, heaviest wire, Double galvanized. Outlasts others nearly 2 to 1. Low prices direct from factory. Over 150 styles for every purpose—hog, sheep, poultry, rabbit, horse, cattle. Also lawn fence and gates of all styles. Mail postal for catalog and sample to test and compare with others. Address

Detroit Kerosene Engine
Saves Time, Trouble, Expense
The Detroit Kerosene Engine is the simplest and most powerful engine you ever saw or heard of. Direct transmission of power with 3 moving parts only—no useless cams, gears or valves to take up power or get out of order. No trouble—no extra expense. Starts without cranking.
Runs on Cheap Kerosene
Will run on distillate and gasoline; but kerosene costs less than half as much as gasoline. Besides, kerosene contains more heat units than gasoline. Result—more power—steadier power—at one-half the expense of fuel. Comes to you all ready to run feed grinders, separators, pumps, saws, electric light plants, etc. All sizes in stock ready to ship.
GUARANTEED 5 YEARS—Sent on trial direct from our factory at lowest factory prices. Don't buy an engine until you have seen the "Detroit." Write today for catalog and agent's special introductory price on first order from your territory. (188)
Detroit Engine Works, 396 Bellevue Ave., Detroit, Mich.

AMERICAN ORIGINAL AND GENUINE FENCE
More Big Fence News!
More Farm Profits!
American Steel Fence Posts Cheaper than Wood and More Durable. Get Catalog.
Better and better! Best news is, heavier galvanizing. Positively does not chip nor crack. More years of fence life. *No extra cost to you.* More farm profits.
More good news is, perfectly uniform fabric. Improved automatic machinery, the reason. *No extra cost to you.* Larger business enables us to keep down prices.
Your choice of Bessemer or Open Hearth Steel. You get equally big value in either case. Get catalog.
Dealers everywhere. See them.

Live Stock and Dairy

Hogs enjoy comfort, and will pay for it.

Now is the time to breed the sows for early pigs.

Sam Saxon says that free dogs do more damage to the sheep industry than free wool.

In the race of life the men who do things best are the men who win the best prizes.

Market prices for all classes of live stock are holding up well. Consumers complain that they are also being "held up."

Argentina is no doubt a great cattle country, but we have plenty of room right here at home to grow all the cattle needed.

It takes a few brains and some work to make money raising sheep. No kind of stock will take care of themselves and pay a profit.

A good stomach is a very necessary organ in a beef animal. Do not get them out of order if you want the stock to make you a good profit on their feed.

Keep the corncobs raked up and burned in the hog lot. The charcoal will be eaten by the hogs to their great good. It is these little things which count most for success.

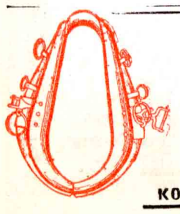
The man who stays in the sheep business year after year, building up a permanent business in both wool or mutton, will find sheep always profitable, and highly so when conditions are most favorable.

Cows kept for quantity of milk alone will produce more if given no exercise. Where quality, or content of fats and solids are desired, as in butter or cheese making, exercise is beneficial, as it increases the solid contents of the milk.

SURE CURE FOR BALKY HORSES

"If everything else fails, take your horse out of the wagon and strip off all his horness," says David Buffum, a noted authority on horses. "Put on a halter in place of the bridle. Tie the hair of his tail into a hard knot. Run the halter rope through the hair of his tail above the knot, draw it until his head is pulled well around to his tail and fasten with a half loop that can be untied by a single jerk. Now touch him up behind with your whip and he will begin to turn around in a circle. Continue this treatment until he is dizzy, but do not, if you can prevent it, allow him to fall down and hurt himself. Now, while he is still dizzy and dazed, harness him as quickly as you possibly can, get into the wagon and start him off. You may use your whip if you wish when ordering him to march on, but do not strike him more than once. In nine cases out of ten the horse will start after this treatment. If he does not, take him out of harness at once and repeat the treatment, turning him this time the other way. The two points to remember are, first, that the horse must be made thoroughly dizzy and, second, that you must use the greatest expedition in harnessing him and starting him up before he recovers from his dizziness. The treatment will cure the worst balker if only applied with the judgment."

Sam Saxon says the reason some stores (and saloons) keep open on Sunday is for the accommodation of patrons on their way home from church.



Best Ever
"Howell" Steel
Horse Collar

never changes shape. Pull is distributed evenly. Outwears all other collars. Reasonable in price. Heals sore shoulders. Light in weight. No hames. Pads can be had.

Write for circular and prices.
KOEHLER BROS. Saginaw, Mich.

THE INVISIBLE LIVE STOCK

The scientists, with their wonderful discoveries made by use of powerful microscopes and chemicals, are learning things we should know—facts which are very valuable knowledge to us, as they account for certain conditions we should never understand if it were not for the scientists and their discoveries. We know some few ways of putting fertility back in the soil, but there are other ways we do not know which have been discovered by scientists, and when we know and understand them we can do things we would not otherwise do, and be the gainers by it.

For instance, it has been discovered that the farmer has, or can have in his soil, a species of "live stock" called bacteria that if given proper conditions will greatly increase the fertility of the soil they inhabit by absorbing nitrogen (which many farmers buy in commercial fertilizers at the rate of $75 to $80 per ton) from the air and "fixing" it in the soil. This "live stock" is called bacteria. They feed in part upon air and the nitrogen in the air is so changed that it remains in the soil. Now these bacteria will thrive only under certain conditions—a mellow, well-drained soil, porous so the air can penetrate it—and as they live only in vegetable matter, a soil filled with it is best for them.

In the current issue of Farm and Fireside appears an amusing piece describing an imaginary convention of bacteria. Some of the delegates came as far as three-quarters of an inch, and one delegation was blown by the wind from across the road—an incredible distance. The description of the convention goes on as follows:

"The convention hall was the shell of a nodule of a crimson clover root, but as there were only twenty-seven billion delegates there was no lack of room.

"The report of the committee on nitrogen fixation was read and debated. 'This report shows a very unpromising condition,' said the chairman. 'This whole region for inches on every side of us is losing nitrogen. We have done our best, but, try as we may, we can't deposit a bit of anything in the way of a nitrate to a depth of over six inches. Something has happened to us. The whole community is going to the dogs. As soon as we get down over six inches we can get no air. And if we can't get air we can't fix nitrogen. We must get our nitrogen from air, unless other source of supply can be suggested. For my part I am very pessimistic. I shall be glad to hear the ideas of the convention and I hope the debate will be general.'

" 'This problem has been solved very nicely on the other side of the road,' said one of the strange bacteria. 'Or rather it solved itself in quite a wonderful way. There came a great roaring over our heads one day and a heavy rain of stained straw covered the earth. Just as we were getting used to this a great upheaval lifted up nearly a foot of the earth and stood us on our heads. Everything crumbled up and the air at once began to circulate away down deep. We who were near the top were almost a foot down when this great earthquake was over, but it was so loose and warm there that we set to work and fixed more nitrogen in that field in one season than you can fix here in two. The stained straw and the deep plowing gave us the air we needed. I should advise you to pass a resolution—'

"But just then a Rothamstead amoeba sneaked in through the door and ate the chairman and eight billion delegates and the meeting adjourned in great confusion."

FINE BUTTER MAKING A SCIENCE
No. 4

The care of the cream is our lesson for this issue. We are going to take it for granted that the milking was properly done, the milk properly cared for and the cream starts in perfect condition. If these things are not as they should be little can be done to correct the wrongs and remedy matters at this stage. Eternal vigilance is the price of purity in the butter business.

Just as soon as the cream comes from the separator it must be quickly cooled, either by using a "cooler" with ice or by placing the cans in cold water. In this case use small cans so cream will cool quickly, later mixing the cream in a larger can if desired. Where the cream is raised by the gravity system and skimmed by hand from cans set in cool water, the cream will be cool and only requires being kept so. Warm cream should never be mixed with cold. The cream should, if possible, be kept at a temperature slightly under 50 degrees. A dairy thermometer is a necessity to all makers of extra quality butter.

Twenty-four hours before churning time the cream should be started to "ripen." The old-fashioned way was to set it back of the stove in a warm place to "sour." But if it becomes too sour, or not sour enough, it will not produce butter of that fine flavor so much desired, so we must keep it under control. First raise the temperature by setting the can in warm water and stirring it frequently so it will all be of an even temperature. This is highly important. Add a little "starter" when you begin the ripening process by introducing a small quantity of sour cream or milk. Bring the temperature up to 140 degrees and then let cool down to 60 degrees. Two hours before churning bring the temperature down to 55 degrees. The cream is "ripe" when it takes on a slightly glossy appearance and becomes thicker. During the ripening process the cream should be stirred frequently and thoroughly. "Streaked" butter without grain is due often to neglect to keep the cream well stirred. Stir several different times during the ripening process, at least five times during the twenty-four hours.

Just before churning be sure that the cream is not above 60 degrees in temperature, and run the ripened cream through wire strainers to cut the curd.

Next issue—Churning.

I'll Stop Your LOSSES
FROM WORMS

"There is no doubt that Sal-Vet saved my entire herd of hogs. On all sides of my farm other farmers lost nearly every hog they had. I shall always aim to keep "Sal-Vet" or no hogs."
PETER V. CAREY,
Route No. 5
Fairfield,
Ill.

I'll Feed Your Stock
60 Days Before You Pay

I'll SAVE Your Sheep and Hogs

Don't let worms breed contagious diseases among your hogs this year. Don't let them kill off the young pigs and lambs and rob you of your season's profits. You can prevent it if you will just take "a stitch in time." Now is the time when worms get in their deadly work. Now they are breeding—multiplying by the millions in the stomach and intestines and if you don't get the best of them they will surely get the best of you. I'll rid all your stock of these destructive pests. I'll prove it before you pay.

More Proof
"Before I started to feed "Sal-Vet" my hogs were sick and I had lost 6 of them; since feeding "Sal-Vet" I have lost none, altho' some of them were pretty sick before they had access to it. They now have good appetites and are thriving."
ERNEST TRIEBEL,
Route No. 2
Clearwater, Minn.

PRICES: 40 lbs., $2.25; 100 lbs. $5; 200 lbs. $9; 300 lbs. $13; 600 lbs. $21.12. No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk, only in Trade-Marked Sal-Vet packages. Shipments for 60 days' trial are based on 1 lb of Sal-Vet for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular size packages.

The Great Worm Destroyer
SAL-VET
The Great Live Stock Conditioner

is a wonder working medicated salt to which your hogs, sheep and other farm animals can run freely and *doctor themselves*. It requires no dosing, starving or drenching. Costs only 1-12 of a cent a day for a sheep or hog and a trifle more for larger animals.

Send No Money—Just The Coupon

Just fill out the coupon at right—tell me how many head of stock you have and I'll ship you enough "Sal-Vet" to last all of them 60 days. You simply pay the freight charge when it arrives and when the 60 days are up report results. If it fails to do what I claim, I'll cancel the charge—you won't owe me a penny. Send the coupon now. Poultry Pickings

The turkey is king.

Overfat fowls are never good layers.

Don't feed the fowls all sorts of table scraps unless you want eggs "to taste."

Plenty of dry, clean litter on the floor of the poultry house is most desirable.

Make the evening meal a good one. Do not let the chickens go to roost hungry.

Sprouted oats, being a great aid to digestion, is a valuable feed for egg production.

No one has yet found a better food for poultry than fresh, green bone, finely ground.

A handful of millet seed in the litter of the scratching shed will keep a small flock busy for a day.

Hens, if kept busy, will not overeat. The hen, like the rest of us, should work for her living.

Feed mashes in the morning, vegetables at noon and whole grain at night, an hour before roosting time.

Those who can't have turkeys will still have cause for thanksgiving. They will not be robbed by the turkey trust.

Fifty per cent of the pullets should now be laying quite regularly if some form of animal food, steamed clover or alfalfa and other good feed is supplied.

Once again, shut out drafts from poultry houses. Fowls need plenty of air, and it should be fresh, but it should never pour in streams through cracks. Cover the cracks, fit windows and doors closely, then use muslin windows or curtains to supply fresh air.

WHY HENS NEED EXERCISE

If the hen be kept quiet when her crop is filled the process of grinding is much slower than when given a suitable amount of exercise, and when the grinding is slowly done nearly all the animal fats are carried off in the tissues of the body. These fats are absorbed in the tissues and the hen fattens. On the other hand, when the hen has to work for her food the crop performs its work rapidly and the tissues are not able to consume more than a small portion of the fats, while the larger portion goes to the production of eggs.—E. A. Stearns, Syracuse, N. Y.

POULTRY SHOWS THAT SHOW RESULTS

Farm folks keep chickens principally for eggs. They raise some to sell (mostly cockerels), but the real object of keeping a flock of fowls on the farm is for the eggs they produce. The farm woman wants eggs to cook and eggs to sell to help pay the bills at the store. So the farm flock is expected to be and should be a flock of egg producers. The farm woman will be well satisfied with any hen or pullet that lays eggs.

For some years poultrymen were greatly interested in the poultry "shows," from the world's greatest, at Madison Square Garden, New York city, to the poultry corner of the county fair exhibit. At these shows the best bird was the one that "scored" the highest number of "points," and eggs laid was not included. Consequently the farm folks cared very little about such poultry shows.

In the past few years a new kind of a poultry "show" has come into existence. Egg-laying contests are being engaged in by some of the foremost poultrymen in this and other countries. In these shows, where biddy shows what she can do in filling the egg basket, the egg is the point, the only point that counts—one point for one egg—and to score the most points biddy must lay the most eggs. Simple, sensible and valuable system of scoring is that. And as it has to do with that very object for which we farm women feed and care for our fowls, we are, of course, greatly interested in such "shows."

The largest one now in existence is being held at Columbia, Mo., where a year's contest is nearing completion. This is the second annual contest conducted by the Missouri Agricultural Experiment Station. Pens of hens are there from many foreign countries, and they are making egg records by the score. Each "pen" of fowls contains the same number, one breed to the pen, and nearly all breeds are represented. A pen of White Leghorns from England are pretty nearly sure to win the contest, laying the highest average number of eggs per fowl.

The best hen in the entire contest, at the date this is written, is a Buff Wyandotte from the state of Vermont. She has laid 249 eggs in 319 days. Last year a Plymouth Rock hen, by name of Lady Showyou, carried off first honors, and it is doubtful if the Buff Wyandotte equals her wonderful production. The best pen record made in September was earned by a pen of Missouri birds, Buff Wyandottes.

As soon as this contest is closed, another will be begun. New Zealand, England, Germany, Vancouver Island, South Africa, Canada and the United States will all be represented. Orpingtons, Plymouth Rocks, Wyandottes, Rhode Island Reds, Rhinelanders, Anconas, Leghorns, Campines and Minorcas are to compete.

I expect the results of all such contests will be in the future what they have been in the past, viz: Egg production depends more on breeding and feeding than upon breeds or varieties. And the farm woman who wants a flock of good layers need not worry over the problem of the best breed, but should obtain a start in fowls, any breed she may fancy, from a strain that has been bred to lay, and then follow up this kind of breeding herself. This is the sure road to satisfaction and success.—Mrs. C. H. Taylor.

THE CAUSE OF SOFT-SHELLED EGGS

What causes soft-shelled eggs? It depends. Any one of a number of conditions can produce eggs with soft shells, or rather without hard ones. Sometimes keeping fowls in confinement, without exercise, tends to produce soft-shelled eggs. Again, fowls that are overfat quite frequently lay soft-shelled eggs, because the kind of food that produces a surplus of fat has a deficiency of shell material. If it had plenty of shell material it would not have too large a proportion of fat-making elements. The lack of mineral elements in the food is the most common cause for soft shells. Feed bone meal, green cut bone, meat meal, steamed clover or alfalfa, grit, lime, charcoal—oh, give them a little of everything, and they will case their eggs in three-ply guaranteed full strength shells of the highest quality.

HOW TO WINTER FALL-HATCHED CHICKENS

In the "poultry raising" department of the current issue of Farm and Fireside appears a report of how a New Hampshire poultryman raised, without artificial heat, twelve chicks that were hatched last fall. Following is an extract from the report:

"He constructed what he called a 'hen brooder,' which was nothing more than a long, rectangular box on legs. There are no partitions inside, but in one end a nest of hay was made, and the rest of the floor was covered with sawdust to the depth of one inch. October last year in New Hampshire was marked by cold nights and sunny days. The chicks were kept in their box the first ten days and after that were allowed to run at large with the hen, which was a careful mother.

"They were fed hard-boiled eggs when young, then Graham crackers, then chick feed and later the feed given other poultry.

"For results—every one of the twelve chicks lived through the winter. Six of them proved to be pullets. Two began laying the middle of April, and the first of May all were laying. Their age was thus six and one-half to seven months when they laid their first eggs. The hen brooder was kept in the henhouse and no special care was given the hen or the chicks except to place burlap over the wire netting on cold nights when the chicks were young.

Neither Had It

"Dear, the doctor says I need change."

"I expect you do, for it's awful scarce with me!"

Didn't Know It

"I've noticed something funny about you lately, Cissy."

"What is it, brother?"

"I don't know, but it smokes cigarettes and carries a cane."

Big Ben

Built of Good Implement Steel So He Lasts for Years

He wears an inner vest of steel which also serves as his bell. You can't wear him out. Give him a drop of oil a year, and he's good for a lifetime of handy service.

For your accommodation he rings TWO WAYS—set him either way you wish—to give one long five-minute ring, or ten short rings at one-half minute intervals, until you're wide awake.

More than 3,000,000 families have found him a reliable time-keeper. 20,000 jewelers have so many calls for him that they have to keep him within easy reach in their stores. You'll see him on almost every jeweler's shelves, and in his windows.

Think what it means for people to pay more than $8,000,000 to get this one clock in their homes. Don't you want Big Ben, the Eight-Million-Dollar alarm, since he only costs you $2.50?

He stands 7 inches tall, is triple-nickle plated, the handsomest clock of his kind living, has big bold numerals and hands that show the time plainly on dark mornings, large keys that anyone can wind without frowning, and such a pleasant tone that you are glad to get up when he calls.

There never was another clock that fitted in so well with farm work—getting the hands up on time, and acting as a good house-clock all day.

A community of clockmakers stands back of him. Their imprint, "*Made in La Salle, Illinois, by Westclox*," is the best alarm-clock insurance anyone can carry.

Woman's Work and Welfare

Helpful Hints for Homefolks

The thing that goes the farthest toward
making life worth while,
That costs the least and does the most, is
just a pleasant smile.
The smile that bubbles from a heart that
loves its fellow men
Will drive away the cloud of gloom and
coax the sun again.
It's full of worth and goodness, too, with
manly kinaness blent;
It's worth a million dollars and it doesn't
cost a cent.

FIRESIDE SOCIAL CHATS

By Aunt Sophia

THANKSGIVING is almost upon us again. Gracious, how the weeks and months and years roll by! A dear old lady I know, in commenting on the swiftly flying seasons, remarked quaintly that life is just one Thanksgiving after another. Bless her cheerful old soul! She makes it that—not only for herself, but for all her family and household. And let me give you a confidence: If the whole community in which she lives were to voice their thoughts they would all give thanks for Aunt Jane.

* * *

The small boy who said that the four seasons were Christmas, April Fool, Fourth of July and Thanksgiving was not so badly mistaken after all. Such holidays are the seasoning of life. It takes just such stimulus to put spice and pepper and ginger into our spirits and give us new strength, hope and courage to face the vexations and disappointments that beset our days. These holidays give us visions, not only of the silver lining on the clouds, but of the golden days gone by, which we should hold as faithful promises of better things to come. After all, haven't we much to be thankful for?

* * *

At our home the old-fashioned Thanksgiving will be observed in the good, old-fashioned way. It is a mistake to live so much in the present and the future that we ignore or neglect the past. And the holidays, especially Thanksgiving, seem to bring us face to face with those memories we cherish most. It makes us better, truer, sweeter, and the influences give both young and old a greater regard and respect for the good and the beautiful.

* * *

So at our house the old-fashioned dinner is being planned. Doughnuts and twist cakes, pumpkin pie, turkey, candy, nuts and all the other things that go with the principal features. Pantry shelves will groan with their load the day before, and little Willie may groan the night after. Frederick, the oldest son, a Milwaukee physician, his wife and three kidlets will be on hand. Isabel, teaching in the graded school in town, is going to bring with her a little waif, one of her pupils and an orphan. Jack, who has been learning how to feed pigs and milk cows scientifically at the agricultural college, will come to air his new knowledge, tell great tales of his intellect and valor on the football team and get into an argument with Arthur, who is farming for himself on a nearby farm. Children and grandchildren, from five weeks old to forty years of age, will make the old house a merry one for a few hours. And then they will all go away and only echoes and shadows will remain. They can take themselves away, these dear ones, but they can never take away the memories of the day, memories that nestle in the hearts of two old gray-headed people, who not very long ago were dreaming of the future, but now sit dreaming of the past. And even the dreams are sources of true thanksgiving.

MRS. BUSYHAND'S DIARY

By a Country Woman

I ONCE heard a good woman say—one of these calm, moderate, slow kind of workers—after hearing a neighbor woman tell of the many things she had done in one day in the line of housework: "I don't believe it. I don't believe any woman could do all those things in one day." But it is possible to accomplish a whole lot of things if one keeps moving fast.

Some people also say that to see life one must live in the city. But we protest that it is in the country that one sees and knows what real living is. The city is only superficial life, only an imitation of real life—it is only a caricature of the grand, pure, sweet life found in God's country. The above explains the purpose of this diary—to show life as it is lived in the country.

There are many, many women all over our land, in our farm homes, who work continually from morning till night. Sometimes this seems necessary, but it has been our rule, through twenty-three years of rearing and training of eight children, to always have an hour or two every afternoon to rest, to read or to call or entertain company.

This week has been an extra busy one. On Monday morning we "got up" at 4 o'clock and my daughter Mary and I had the washing out by 9:30. It seems as if the work is so much easier this year. So many people say: "What is Mary going to make of herself since she graduated?" "She is helping mother," I answer. What better work can a girl do than to learn the craft of housework—how to cook, how to wash and iron, how to sweep, dust, make a bed right, how to bake pies, bread, cake, biscuits, etc.? On Monday morning the little girls get ready for school without much assistance from mother. Minerva combs Emma's hair, Emma combs Minerva's hair—dividing their hair in two big braids, rolling them up and tying with two big bows of wide ribbon on the back of the head. Then Emma combs little Ann's hair, the same way, while Minerva puts up their lunches. Often the two little girls wash the breakfast dishes, while Mary washes the cream separator. Every child knows how to work in this household. How much better it is for the girl, when she enters a home of her own, to know how to do things.

After the washing was on the line I started to churn. How I love to churn! And I'll tell you why: For so many years we bought our butter—

How Would You Like to Have a Bed of Gorgeous Tulips at My Expense?

I WISH EVERY READER would turn to my offer to give two hundred fine tulip bulbs, three giant hyacinths and a floral magazine as on page —. I want every reader of UP-TO-DATE to get these bulbs and plant them this fall and enjoy the beautiful blooms early next spring before other flowers come. The conditions can be easily met, as, if the whole club I ask for can not be obtained, any smaller number of trial subscribers can be sent and the club raiser will be rewarded proportionately.

During the next two months probably three-fourths of the people will select the papers they will read in 1914. We want somebody to visit each farm home in the interest of UP-TO-DATE FARMING before the selection is made. But regardless of this, this paper is so different that it ought to be taken even if an extra one. But see the offer. You will see that it is a very liberal one.

J. A. EVERITT, Editor.

sometimes at the store, sometimes creamery butter, sometimes oleomargarine—but nearly always it was poor butter. We shipped all our cream to the city. But one day my husband said: "If you want to churn you can have all the butter you want." I jumped at this chance and now it is a delight to churn on account of the good, golden rolls of butter I get.

I use a barrel churn. I can sit down and churn, which is so much easier than the old dash churn. Having the fresh, pure cream, I always have good butter, which we certainly enjoy. I sell three pounds a week and we eat a pound and a half a day, so I churn twice a week.

The churning done, butter put down in the cellar and a pitcher of buttermilk also set away to cool, for the men to drink, I emptied the buttermilk into buckets for the pigs and washed the churn. The next business on hand was pie baking.

We expected the silo men on Tuesday, so a dozen or more pies would be needed. I made some luscious apple pies and also some pumpkin pies, having had the pumpkin cooking since early morning. While I was making the pies Mary made the cake. Ever since our girls were 12 years old they have baked cakes. When they were small, and I baked, they would stand on chairs beside me and tease to bake little cakes. Of course this bothered me tremendously! But their indomitable pertinacity finally resulted in my allowing them to bake little cakes, and they soon wanted to know how to bake a big cake. And I have been glad ever since that I allowed them to bother me, for they have baked all our cakes for years. All who have ever tasted their cakes have judged them delicious, and always wanted two pieces.

Cake Recipe—Two cups of brown sugar, one-half cup butter, two eggs, one-half cup of sour milk; dissolve one teaspoon of soda in three-fourths cup of boiling water; two cups flour; flavoring. Filling: One cup each of brown sugar and granulated, one cup milk, flavoring; boil. When it makes a soft ball by dropping some in cup of water, it is cooked enough.

We afterward scrubbed the kitchen and porches, swept the sitting room and dining room and dusted. That night we were all tired, but we knew we would be more tired the next night.

(Continued next issue)

What is Now the Fashion

6356. GIRLS' DRESS.—An excellent model for a little school girl. It has a plain blouse with front closing, an ornamental collar and plain sleeves, long or short. There is also a removable chemisette. The skirt is plaited except in front and is joined to the waist beneath a wide, flat belt. Duck, linen or serge will be good materials. No. 6356 is cut in sizes 4, 6, 8, 10 and 12 years. Medium size requires 4 yards of 27-inch material or 2⅝ yards of 44-inch, with three-fourths yard of 27-inch contrasting goods to trim.

6400. DOLL'S ONE-PIECE DRESS.—A very dainty little dress with kimono shoulder, square neck and a few gathers in back and front. Skirt and waist are in one piece and the entire dress can be made in less than an hour. No. 6400 is cut in sizes for dolls from 14 to 26 inches in length; 22-inch size requires 1 yard of material 27 or 36 inches wide.

6336. GIRLS' DRESS.—Nothing could be plainer or more stylish. It has a small collar at the round neck and closes diagonally in front; a four-gore skirt, to hang in straight, close lines. Duck, linen, poplin, moire, velveteen, cheviot or serge will make up well in this style. No. 6336 is cut in sizes 6, 8, 10 and 12 years. Medium size requires 2 yards of 4-inch material.

6327. LADIES' TWO-PIECE SKIRT.—This stylish skirt is in tailor style, with a suggestion of drapery about half way down the side front seam. The closing is also placed in this seam. The back is plain. High or regulation waist line may be used in making. This mode is suitable for serge, cheviot, plaids, broadcloth, corduroy and other serviceable fabrics. No. 6327 is cut in sizes 22 to 30 inches waist measure. Medium size requires 2⅞ yards of 44-inch material.

4741. LADIES' APRON.—This apron can really take the place of a dress. The elbow sleeves join front and back by means of diagonal seams extending to the neck edge and the closing is in the back. Gingham, calico and brilliantine are used for aprons.

No. 4741 is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 4¼ yards of 36-inch material.

5274. LADIES' KIMONO.—This kimono offers a combination of styles, for the seamless shoulder is used with a little empire waist, while the lower portion is entirely plaint. Figured crepe, wash silk, cashmere and similar materials are used for these garments. No. 5274 is cut in sizes 32 to 44 inches bust measure. Medium size requires 6⅞ yards of 36-inch material.

6323. LADIES' WAIST.—This serviceable design shows a modern shirtwaist with fronts tucked and a box pleat for the closing, but with the back plain. The neck may be finished with a band for a high collar or it may have the more ornamental turnover collar. The plain shirt sleeve ends in a regulation cuff at the wrist. French or Scotch flannel, cashmere, silk or crepe can be used for this waist. No. 6323 is cut in sizes 34 to 42 inches bust measure. Medium size requires 3 yards of 36-inch material.

10-10-25. COLLAR BAG.—This is an article which will be nice for a present to a man and it can also serve other purposes than the housing of collars. It has a stiff circular bottom, with stiffened sides and a soft top, with a drawing string. The sides can be embroidered in French and eyelet stitch and in white or colors. To be really serviceable this bag should be made of tan or gray linen and so fashioned that the outside can be removed for laundering.

Price of Patterns, 10 Cents Each

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

Latest Fashion Book

2 CENTS POSTPAID

Very Latest Fashion Book Only 2c

READ THIS VERY SPECIAL OFFER

FOR the benefit of our readers who use patterns, we publish four times a year the well-known fashion book, "EVERY WOMAN HER OWN DRESSMAKER."

The **Spring** Fashion Number is ready **February 1.**
The **Summer** Fashion Number is ready **May 1.**
The **Fall** Fashion Number is ready **August 1.**
The **Winter** Fashion Number is ready **November 1.**

"EVERY WOMAN HER OWN DRESSMAKER" tells how to make Coats, Waists, Skirts, Costumes, Aprons, Dressing Sacques, Underwear, Baby Clothes, Clothes for Boys and Girls, etc., etc. Every woman who uses patterns or does sewing at home should buy "EVERY WOMAN HER OWN DRESSMAKER" four times a year. Besides telling how to make clothes, it illustrates and describes hundreds of the newest styles for Ladies, Misses and Children.

OUR SPECIAL OFFER—If you order any pattern shown in this or any other issue of Up-to-Date Farming we will send you the very latest issue of "EVERY WOMAN HER OWN DRESSMAKER" for 2c. Just send 2c for postage when ordering a pattern. Address FASHION DEPARTMENT, UP-to-Date Farming, Indianapolis, Ind.

The Mystery

"'Tain't me," says the farmer,
"Who's getting the stuff."
"'Tain't me," says the packer;
"I just get enough
To pay a small profit,
As fair as can be."
And all of them chorus
Together: "'Tain't me."

"'Tain't me," says the tanner,
"Who gets the high price
For high shoes and low ones,
For slippers and ties."
"'Tain't me, says the rancher;
"I live and that's all."
"'Tain't me," says the dealer;
"My profits are small."

"'Tain't me," says the canner;
"My margin's the same."
"'Tain't me," says the huckster,
Who's bracin' the game."
"'Tain't me," says the gardener;
"I'm poor all the time."
"'Tain't me," says the grocer;
"I ain't seen a dime."

It's surely a puzzle
To know where it goes;
No maker or seller
Or any of those
Partake of high prices,
So they all agree;
And I'm the consumer—
I'm certain "'Tain't me."
—New York Times.

You're not quite ready to start, you say!
Well, the time to be starting is now—today;
If you're going to win,
Don't delay—begin!
No man has ever been ready yet,
Nor ever will be.
You may fail if you wait till your plans are set;
You are never quite sure that success will be met—
But try it and see.

What 15c Will Do

The little matter of 15c in stamps will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the nation; now in its 21st year of increasing in success. The paper fills the bill without emptying the purse; it costs but $1 year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the PATHFINDER is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. Or send $1 for full year; money back any time if not satisfied. Address Pathfinder, Box 7, Washington, D. C.

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

NOT THE LEAST amongst our blessings for which we are thankful are the wonderful letters we are getting from our young folks. We scarcely know how to express our appreciation of the great interest our youthful friends are taking in UP-TO-DATE FARMING and its teaching. It is only to be compared in degree to our regret that we can not put in print every letter received. More than 100 letters received from writers who never wrote us before is the record since the last issue was made up. Their intelligence, optimism, enthusiasm, the interest they show in each other and in the work this paper is doing, combined with their manifest high standing in their respective communities, all make us very proud of them.

We are now nearing the Thanksgiving holiday. Isn't it great? Turkey, pumpkin pie, doughnuts and all the good things to eat! Then comes the greater pleasure of being with our relatives and friends. Greater still, however, are the things that feed the soul with the highest and noblest impulses. Being truly thankful for what we have and making others thankful also is not only a duty—it is a great privilege. What we have depends much on what we are and what we do. For that reason, and because the editors of UP-TO-DATE FARMING believe our farm folks can and should have more, we want to encourage every young man and young woman to study these things that will teach you how to get them. Read all of this paper every issue, and particularly read the editorial in this issue entitled "The Things That Are Caesar's."

After Thanksgiving we want to hear from all of you, telling what the day meant to you, how you enjoyed it and what you did to make it mean something fine to some other person. We can't print every letter received, perhaps, but we will print all we can, and then we enjoy your letters ourselves—every one of them. They do us good, another thing for which we are truly thankful.

I will now introduce a rhymester from away out west—

DEAR CADETS: I am a girl from Idaho,
Thirteen years old, and have no beau;
We live in a country of lots of snow,
In a valley where winds forever blow;
Of ranching there's little I do not know.
Wheat, barley and oats we freely sow,
But melons and tomatoes never grow—
Whatever is tender out here don't go.
My head is large, but my feet are small;
I'm I sight to see, but that ain't all;
My eyes are blue, my hair is brown,
And I'm a dry farm girl without a frown;
I can ride a horse and run a race
And have brown spots all over my face.
I will answer every letter I get
From any reader or other Cadet.
—Adella Daniels, Poplar, Idaho.

They like this paper in Texas—

DEAR CADETS: I have been taking UP-TO-DATE almost a year, and we think is a grand paper My brother also takes it. I will be 20 years old in December and would like to hear from Cadet girls and boys.—Alice Lovelace, Lampasas, Tex.

They know what UP-TO-DATE is worth to them in Arkansas—

DEAR CADETS: I am 15 years old and we live on a 100-acre farm three miles south of Calion. We raise corn, cotton and ribbon cane. We have been taking UP-TO-DATE FARMING for about three years and could not do without it. Any farmer who wants to raise the best crops and get the most for them should read this paper. It is not what a farmer raises that counts; it is what he gets for it, and that is what this paper teaches. I will answer all letters or cards I receive from Cadet boys and girls.—George Stephens, Calion, Ark.

They have fertile land in Oregon—

DEAR CADETS: I live on a wheat ranch in eastern Oregon, near Pendleton, the famous roundup city. The land is very fertile and the principal crops are wheat, barley and rye. The country is rolling hills, covered with sage brush and sand. horseback riding are the principal ones. I am 17 years old and would like to receive cards and letters from the other Cadets.—Adeline McCormick, Echo, Ore.

An Illinois girl reads the paper for her father, who is well pleased with it—

DEAR CADETS: I am 16 years old and live in the country. My father takes UP-TO-DATE FARMING and he thinks it is a fine paper. He likes to hear me read the Cadet letters. I wish to receive cards and letters from all the Cadets. I will answer all I get.—Sadie Prichard, Mattoon, Ill.

A Virginia girl who lives in the midst of the most beautiful scenery thinks it a great privilege to have the Cadet letters to read—

DEAR CADETS: I certainly consider it a great privilege to become acquainted with girls and boys of the different states. I live on a farm of 75 acres. Near my home is what is called the High Knob, which is about 250 feet above all the surrounding mountains. People go there in summer for picnics, and to enjoy the fine scenery. With a spyglass, on a clear day, one may see many miles away. People also go there in October to gather chestnuts and to hunt wild game. There are about 3,000 acres of land covered with chestnut trees. I am 14 years old and would like to exchange cards and letters with all Cadet boys and girls—will answer all.—Nannie Collier, Big Stone Gap, Va.

Persons that once lived in the country never forget it, and they still like to read UP-TO-DATE FARMING. The following letters give the proof—

DEAR CADETS: I am a city girl, almost 17 years of age. I have lived in the country most of my life, but I moved in town two years ago. I keep house for my father. I would like to receive letters, cards and photos from all of the Cadets.—Lena Thayer, 2411 Seventh avenue, Council Bluffs, Ia.

DEAR CADETS: I am a Missouri girl of 18 years. We used to live on a farm, but we have been living in town about six years. I get tired of town life sometimes and wish I was back on the farm. We have been taking UP-TO-DATE for about three years. I would like to hear from all the Cadet boys and girls.—Amba Horton, Belgrade, Mo.

DEAR CADETS: I am 18 years old and do not live on a farm at present. My father is a miller and a blacksmith. We have taken UP-TO-DATE for about a year and think it is great. I always like to read the Cadet letters and would be pleased to hear from all the boys and girls. Will answer all letters and cards received.—Pearl Wallace, Texas City, Ill.

A New York boy becomes poetic. He says he thinks UP-TO-DATE "is

It is brass bound; protected with brass caps on ends. 5 sections; opens out over 3½ feet long; closed, 12 inches long. Entertain your friends with the "Wonder." Up-to-Date Farming helps farmers to market crops, is published twice a month. Departments for all the family. 24 numbers a year. **Free Offer** Send $1.00 for a 2-years subscription (or 2 one year subscriptions) and we will send a "Wonder" telescope free. Send 10c extra for ordinary delivery, or 20c for insured delivery and we guarantee safe arrival

5 to 10-mile Sight Range

It is far beyond expectations. If I couldn't get another I wouldn't take $5 for it.—O. F. Folk, Elk Lick, Pa. Worth $10.00 to me. I can see cattle at 15 miles and a nickel at 60 yards—Tervis S. Sepeda, Morgan Hill, Calif. It's a dandy; all you claim and then some. I trained it on the Buttes 28 miles away, they looked like 2 or 3 miles instead. I can count stock in farmer's yard 4 miles away—Chas. A. Story, Ft. Robinson, Neb. Every boy and man on farm needs one—Chester Housen, Minden, Ga. Our farm is on a hill and we can see 10 miles away. Count windows in houses which cannot be seen with the eye.—Henry Conner, Manor, Tex. Can see children playing at school six miles away.—P. H. Herrington, McDade, Tex. Can see court-house clock 2 miles away and tell exact minute.—Jennie Beers, Columbus, Ind. Best investment for the money I ever made.—Mathias Brown, Batavia, Ill.

If not a great bargain and you are not well pleased, money will be refunded.

UP-TO-DATE FARMING Dept. 98 Indianapolis, Ind.

doing more for farmers than all other papers in America"—

DEAR CADETS:

Here comes a boy from N. Y. state
Who loves to read dear UP-TO-DATE,
But 'specially the Cadet page,
As I am 17 years or age.
I think each farmer ought to read it
For I am sure they all do need it
To show them how to raise enough
And get more money for their stuff.
Good-by, Cadets, write to me—
You'll get an answer, I'll guarantee.
—Eugene F. McCarthy, Fillmore, N. Y.

DEAR CADETS: I have been a reader of UP-TO-DATE FARMING for some time, and I like it fine. Hence I would like to become a Cadet. I do not live on a farm, though I live in the country. My father is a lumberman I am 17 years old and would live very much to receive letters and cards from all the Cadets. Will try to answer all.—Pauline Miller, Kitanning, Pa.

Our paper is even read and approved in Chicago—

DEAR CADETS: I am 21 years old and live in the city of Chicago. I like city life the best, but I think UP-TO-DATE is the best and cleanest paper of all. I would like to correspond with all the Cadet boys and girls and will answer all who write.—James Valach, 3245 West Twenty-third street, Chicago, Ill.

Kind words from the south seem to bring warmth with them these chilly days—

DEAR CADETS: I come from the Pelican state to join your circle of young folks. We have been taking UP-TO-DATE FARMING for several years and all think it is a grand paper. I enjoy reading the Cadet letters very much. I live in the country, on a large farm, and our crops are corn, potatoes and cotton. I will be glad to hear from all the Cadets and will try to answer all.—Nellie A. Wells, Alexandria, La.

DEAR CADETS: I live on a farm of 300 acres and am 15 years of age. I would like to exchange cards with some of the Cadet boys and girls. I would also like to exchange post card views with some in the far west or the extreme south. I am also very fond of painting, and am interested in birds, and would like to form a club for their protection. New York is the state I like best. It has a delightful climate. Our farm is located at the foot of a hill and we have a large white house with wide verandas. From the north side is a lovely view, such as artists delight to paint. I am a reader of UP-TO-DATE FARMING and think it a lovely paper. Mama has taken it four years and is also very fond of it.—Ethel O'Neil, Camden, N. Y.

DEAR CADETS: Ohio is a fine state. I have lived in the country all my life and think it fine. I am now living on a 500-acre farm near the center of Ohio, about twenty-eight miles from the capital. Our main crops are corn, wheat, oats and hay. UP-TO-DATE FARMING has been coming to our home for a year and we have subscribed for it for five years. We think it is fine. I never fail to read the Cadet letters. I am a graduate of high school and a member of the L. T. L. and wish all the Cadets were members. I am past 18 and will try to answer all letters and cards sent me, and will also exchange photos.—Florence A. Liston, Mt. Sterling, O.

DEAR CADETS: I am a Connecticut girl and will be 19 years old Oct. 7. I have been reading UP-TO-DATE about two years and think it is a very interesting paper. I will gladly answer all letters and cards received from the Cadet boys and girls.—Margaret E. McConiston, Talcottville, Conn.

DEAR CADETS: I am a farmer's daughter and live on a farm of 250 acres. I enjoy farm life very much. I read UP-TO-DATE FARMING, but I enjoy the Cadet page most. I am 12 years old and would like to hear from all the boys and girls.—Ida I. Allen, Florence, N. Y.

DEAR CADETS: I am a Pennsylvania girl, 12 years of age, and live on a farm of 116 acres. I like farm life very much, and I like flowers and music. I would be very glad to exchange letters or post cards with any of the Cadets; will answer all I possibly can.—Mabel Wilhelm, New Bethlehem, Pa.

DEAR CADETS: I am a farmer girl, 14 years of age, and am fond of taking pleasure trips. I have been around to a great many places. I would like to hear from all the Cadets and will try to answer all I receive.—Cecil Taylor, Eden, Md.

A Cadet Report

I feel it my duty to report what the Cadet department has been to me. I have had letters from many good people, refined and educated. This morning I received a letter from Mexico that contained a highly prized souvenir—three violets that had been pressed in a book in 1861! I have also received from the same writer twelve pieces of Mexican hand-painted pottery. They are rare and beautiful and range from three-sixteenths of an inch to two inches in height. I also have a beautiful collection of scenery cards from Dallas, Ore. All this and more I owe to UP-TO-DATE FARMING and the Cadets of Equity.

I must also express an opinion on that splendid editorial in a recent number, "The Farmers' Burden." Every word of it meant a great deal. UP-TO-DATE FARMING should find its way into every farm home, and every city home as well. If all the farmers could read that paper farm life would be very different. So many toil day after day only to give the results of their labor to a wealthy city buyer, receiving often no profits at all. If the farmers knew a little more of the buyers' plans they certainly would unite for more profitable prices.—Margaret Takala, 4988 Water Works street, Calumet, Mich.

The farmers in the Ozarks are wide awake—

DEAR CADETS: I am a farmer boy, 19 years old, and live on a farm of 123 acres in the Ozark mountains of Missouri. The Ozarks are noted for fine fruits. My father takes UP-TO-DATE FARMING and I think it is a grand paper. We get so much valuable information from it. If farmers would do as it teaches we would have better crops, and we would get more for them, and thus have better times. I would like to exchange cards and letters with the Cadets.—Solomon Crouch, Gladden, Mo.

DEAR CADETS: I am 16 years of age and have lived on a farm all my life. I like to live on a farm, but I am now trying to get work in town. I worked out all summer and made $114. We have two quarters of land, but our crops were poor this year. I wish to be a Cadet and exchange pictures with the other Cadets.—Hilda Jussero, Rolla, N. D.

The following North Dakotan sends in his subscription—

DEAR CADETS: I am 21 years of age and have lived on a farm all my life. I would be more than pleased to correspond with some of the Cadet boys and girls near my age. I promise to answer all cards and letters I may receive.—Otto Behernd, Hebron, N. D.

DEAR CADETS: I am 13 years old and live on a 385-acre farm in the southeastern part of Iowa. My father takes UP-TO-DATE and we all think it a fine paper. I certainly enjoy the Cadet letters and hope all the girls and boys will write to me, and I will answer all I receive.—Mae Watson, Fairfield, Ia.

DEAR CADETS: I am a farmer girl, 17 years old, and live on a farm of about 200 acres. We think UP-TO-DATE is a fine paper and I would like to join the Cadets and exchange cards and letters with the boys and girls; will answer all I receive.—Sylvia Farris, Carning, Ia.

Wouldn't do without UP-TO-DATE in Minnesota—

DEAR CADETS: I am a farmer boy, 16 years old, and live on a farm of 160 acres, about three miles from town. We raise lots of grain here and had a good crop this year. I have read UP-TO-DATE FARMING over a year and I enjoy it very much; in fact, I would not be without it. I would be glad to exchange letters and postals with the Cadet boys and girls. I promise to answer all.—Walter F. A. Hensch, Sanborn, Minn.

DEAR CADETS: I am a farmer girl, 18 years old, and we think UP-TO-DATE a fine paper. I enjoy reading the letters and would be glad to hear from the boys and girls—will answer all who write.—Osceola Morrow, Talucah, Ala.

DEAR CADETS: I am an Ohio girl, 16 years old, and was born on a farm of 212 acres. I like farm life very much. Father likes UP-TO-DATE FARMING very much and I enjoy reading the Cadet page. I am a lover of music and flowers, and would like to hear from all the Cadets—will answer all letters and cards received.—H. Irma Tucker, Wellston, O.

This Illinois boy renews his subscription—

DEAR CADETS: I am 18 years old and live on a farm, and like it fine. I would not like to live in a city. I can't afford to miss UP-TO-DATE and so I send in my renewal. I will answer all letters and cards I receive.—Louie Bosse, Bluff, Ill.

DEAR CADETS: I am a Michigan girl, age 17 years, and am very much interested in UP-TO-DATE. We live in a small town, but we have a small piece of land where we raise potatoes, the chief crop, and vegetables. I hope some day to live on a farm. I enjoy outdoor life very much and am fond of hunting, for there is a great deal of hunting done here. I would like to exchange letters or cards with all the Cadet boys and girls, and will answer all I receive. My older sister, Bertha, age 18, would also like to exchange cards or letters with the Cadets.—Mildred and Bertha Isaacson, Gay, Mich.

Like the paper in Oregon—

DEAR CADETS: We have taken UP-TO-DATE for four years, and think it the best paper we ever received. I have lived on a farm all my life, which is 16 years. I would like to hear from all the Cadet girls and boys and will answer all I receive.—Joe Haynes, Boyd, Ore.

We yet have nearly a hundred letters that are not printed. All we can do is to thank the writers and wish them success.

Not Long

"I never tell all I know. I can't afford to lose the time."

"Why, dear, you couldn't lose more than a minute."

Getting and Giving

"Do you ever get the last word when you argue with your wife?"

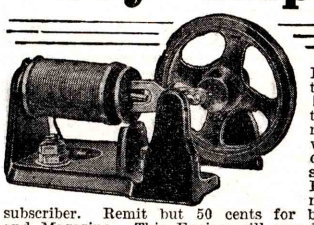
"I always do, but she gives it."

LEARN EXPERT WRESTLING

"Farmer" Burns, the greatest of all wrestlers, the trainer and manager of the mighty world's champion, FRANK GOTCH will teach you *by mail*, all the wonderful holds and defenses known to the art. Greatest opportunity ever offered for those who want to be expert wrestlers, or to be great athletes. Investigate! Write *today*—NOW for full particulars—sent FREE.

BURNS SCHOOL OF WRESTLING, 4058 Ramge Bldg., Omaha

Make Your Boy Happy



In order to introduce The Boys' Magazine to thousands of new readers we will give away one of these splendid Electric Engines to each new 4-months' subscriber. Remit but 50 cents for both the Engine and Magazine. This Engine will run 1,000 revolutions a minute on one dry battery. Safe; easy to operate. A marvel of scientific and mechanical ingenuity. (Engine is much larger than illustration.)

The Boys' Magazine is the finest boys' publication in the world. Clean, fascinating stories—beautiful illustrations—handsome covers in colors. Departments devoted to Electricity, Mechanics, Athletics, Photography, Carpentry, Stamps and Coins. Edited by Walter Camp.

Order today. We'll refund your money immediately if you are not more than pleased with both the Magazine and Engine. (We prepay transportation charges.)

The Boys' Magazine is on sale at all news-stands

PONY GIVEN

Who Wants Me—Quick?

Boys and Girls! Do you want this beautiful Shetland Pony all for your own? Then send me your name and address today—quick. Some one is going to get him—you can have him—*but hurry!*

My Name is "Major"

Well Broken Gentle Kind

42 Inches High

I Am Now 42-in. High and 3 yrs. Old. I am a Pet, Too.

My color is black. I am considered a very handsome pony. I am well trained. You can either ride me or drive me and I am just as kind and gentle as a kitten. I can go almost as fast as a big horse and can haul my carriage with my little owner mile after mile without getting tired or lazy. I do not scare because I know better—have been taught better. I want a kind little boy or girl as my owner. I'll go anywhere to find them. I am just waiting to come to someone. I'll make some boy or girl happy, because that's what I was made for. That's what I was intended for and it's what I like to do. If you want me, and I know you do, just send me your name and address on the coupon below (or a postal,) and I'll do my best to come to you in a hurry—I must go somewhere, so be quick. Send your name this very day.

Wagon and Harness, Too, Come With Me

This is one of the most beautiful ponies, that I have ever given to any boy or girl in all my life, and I have given away more than 25 Shetland Ponies. This one, "Major" is a beauty. He will make the heart of any boy or girl leap with joy. I wish you could see him. I just hate to let him go, but go he must, free of all cost to some boy or girl friend of mine who is willing to do me a small favor.

I am going to send a beautiful carriage along with him, and harness too, and I expect a saddle also. Might as well. I want to please and that's the way to do it. I want the boy or girl who gets this elegant Shetland Pony and outfit to be just the happiest person in all the world. I want them to remember me as long as they live, and they will, too. I have dozens of little boy and girl friends to whom I have given ponies and presents, all over the United States and I get letters from them every now and then. They send me pictures of the ponies I gave them, and tell me how pleased they are and that I always do as I say—Now my friend, if you want "Major", just send me your name and do it quick. I have a gift for you. A postal card or the coupon in the corner, will do. Hurry! I'll send you the present, pony pictures and letters from boys and girls to prove what I say, so hurry!

Uncle Billy, Pony Man, 142 W. Ohio St., Chicago

I Want This Pony

Uncle Billy, 142 W. Ohio St., Chicago, Ill.

I want "Major" and I want you to send me the pony pictures, your free gift, and tell me how to get this pony. Below is my full name and address. Send quick.

How to get the most money out of your furs

Your Corry Fur List is ready. Have you sent for it yet? If not, don't turn this page till you sit down and write for it. To turn this page is to forget, maybe to lose all this advantage and profit.

For this pricelist will convince you and prove to you that Corry can and will pay you more money for fur than any other house anywhere. In this pricelist shippers from every State and Canada testify to the truth of this. One of them may be your next neighbor.

Better Returns and Sooner

For 15 years Corry has been preaching this doctrine. And every year our business has grown. Our methods must be right; we must treat shippers fair, else they wouldn't return in increasing numbers every season. This is our 15th Anniversary. We want to make it a red letter year. We have put out prices this season that lose sight of all profits for us. We want to make this a big year to get acquainted with lots of new shippers. So send for our pricelist today. We'll pay you well for your trouble. We'll keep you posted all season free of charge. No matter how well you're doing now you can do better with us. Write us.

CORRY HIDE & FUR CO., Box 2777, Corry, Pa.

Hunting and Trapping

For Pleasure and Profit

NOTICE TO SPORTSMEN

This department is open to contributions from readers. Accounts of actual experience, and practical methods of hunting and trapping, either as a pastime or as a business, are solicited. Photographs, if good and clear, are especially desirable, and will be paid for at regular rates. Prizes are awarded to all whose letters are published, and at the end of the season a grand prize of considerable value will be awarded to the best contribution received during the entire season. Write one side of paper only and address all communications to TIM, THE TRAPPER, Sporting Editor, UP-TO-DATE FARMING, Indianapolis, Ind.

RESPECT THE GAME LAWS

FARMERS living in the Little Miami valley of Ohio organized a protective association to suppress illegal hunting, but unfortunately all they have done was to organize. They go no farther with it. For instance, a fellow went out the other day and killed ten squirrels. The law says no hunter may kill more than five squirrels in one day. Then what did the members of the "protective (?) association" do? Nothing. And the next day the same man went out and killed eight more. The "protective" association does not protect, it seems. A $50 fine would have been in order, but nothing was done. So it seems to be up to the true sportsmen to protect the game. We have sportsmen as well as game hogs who will not disregard the laws. A true sportsmen is an honorable man and stops when he reaches the limit.—R. E. Hewes, Loveland, O.

HOW I TAKE THE MUSKRAT

Muskrats are easy to catch if a little care is taken in setting your traps. First find the path where the muskrats follow and follow this path until you find a place where they slide. At the foot of this slide is the place for your trap. Take a hatchet or a knife and dig a place for your trap to sit level with the ground. Spread soaked forest leaves over the trap. Too many leaves will prevent the jaws from acting properly. The first muskrat that comes along will be sure to slide in your trap.

I prefer No. 0 or No. 1 traps for muskrats. Nothing larger than a No. 1 should be used. A larger trap would break the leg of the animal and enable him to liberate himself.

After skinning the muskrat the skin should be cast flesh side out. To dry skins by a fire will lessen the value of the pelt.

Another good set is to set the trap in the water close by a sandbar or bank. Sink the trap frame in the mud and spread leaves over the trap. First put some cotton under the pan so mud will not get under the pan and prevent the trap from springing. Put a small stick close by the trap and put a sweet apple or a piece of fish on the stick. When the animal is trying to get the bait he will, nine times out of ten, step in the trap.—Cecil C. Wilcox, Correctionville, Ia.

SWAMP WOLVES IN ARKANSAS

Dear Tim: I am fond of reading UP-TO-DATE FARMING, especially the page on hunting and trapping. I follow trapping every winter, and trap mostly for the big timber wolf. There are many of them here in the swamps.

One way to catch the wolf is to obtain a number of chicken or rabbit bones, fresh (save them when a fowl or rabbit is killed for the table). Make a small brush pile of dry brush, place the bones on it and burn all to ashes. As soon as cool, set the trap in the ashes. As soon as it grows dark the wolf will come to the place and begin to dig in the ashes and you will have him safe.

Last winter I set a line of 135 traps. I use the No. 2 and No. 4 for wolves and No. 11 and No. 14 for bear.

Another successful method for catching the wolf is as follows: Catch a rooster, put him in a crate or cage, take him to the woods and put him up in a bush or tree just higher than your head. Set three or four traps underneath the fowl, covering them well with leaves. Before daybreak the next morning Mr. Chicken will send forth his clarion call (in other words crow) and Mr. Wolf will immediately prick up his ears and trot stealthily toward the sound of what he fondly hopes is a call to breakfast. He does not get his breakfast, but you do get the wolf if your set is carefully made. —Will Maples, Lincoln, Montgomery County, Arkansas.

SUGGESTIONS FROM NEW HAMPSHIRE

Dear Tim: As a subscriber to UP-TO-DATE FARMING I enjoy very much the page of hunting and trapping. I have a few suggestions to offer trappers which may aid some of the boys to secure better results in catching the fox and skunk.

In this section more foxes are trapped by what is called the "water set" than by any other method. Skunks are readily caught by the same set. I will describe my way of making the set. In August or September I go where there are springs, or running water, and dig an excavation about four feet in diameter and six inches deep, which fills with water from the spring or stream. I place a small stone or a sod in the center, making a little island. I always take care to approach the site in water, leaving by the same route, leaving no scent. When trapping time comes I take trap and bait, go to the stream several rods from the pool where the set is to be made and walk in the water to the pool, taking the utmost precaution to touch no part of the bank. I place the bait on the stone or sod in the center of the pool and set the trap half way between the bait and the bank of the pool. With a small stick I pry loose a tuft of sod and place on the pan of the trap, setting it all under water at a safe distance from the surface that will leave the top of the small sod above water. When the fox or skunk comes for the bait they step on this half-way bit of sod in order to reach the center piece with the bait, and thus step directly on the pan of the trap and are caught.

I use a common fox trap with a grapple hook in place of a stake. The hook is sure to catch on something a short distance from the spring, and the fox is not so likely to pull loose if he can get a short distance from where he was caught.

Now, a few words of caution. Be very careful not to leave any scent near the trap. Wear rubber boots and keep in the water when setting the trap. Do not touch the bait with the hands, but use a wire hook. When going to examine the trap, do not go only near enough to see that the set is all right, and when going away do not retrace your steps, but go right on past. Make everything about the set look natural to disarm suspicion. This is the favorite New England way to catch the wily fox, and it is very successful.—W. E. Gay, New London, N. H.

TRAPPERS WE BUY FOR CASH

And pay highest prices for Coon, Mink, Skunk, Possum, Muskrat, and all other Furs, Hides and Ginseng. Best facilities in America. Send for Free Price List and Shipping Tags. No commission charged.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

By the President of the F. S. E.

Dr. T. N. Carver is director of the rural organization service, Department of Agriculture, Washington, D. C.

—o—

Naturally farmers should expect much assistance in their work of organizing when a department of the government, with practically unlimited means—men and money—at its command, undertakes to help them.

—o—

But we are forced to ask, what do men and money count for unless they are used in a way that can get the results desired?

—o—

Ask any farmer, what is the most important or first thing to be accomplished through rural organization, and he will say, marketing. We have often said in these columns that marketing the crops to make and maintain steady, profitable prices is the most important problem pressing for a solution, and that all the other farm problems must positively wait for a solution of this one.

—o—

If we are right, then we may well begin to take an inventory of the ability and capacity of the man who has been placed at the head of the rural organization service department of the government, and begin to speculate on what may be expected.

—o—

"By their works ye shall know them." But as Professor Carver has done no work that we know of by which to judge him, we may say that by his words we may know him. Here are some of his words, recently uttered:

They who can not or will not work together are the natural and, one might almost say, the legitimate prey of those who can. Whether we like it or not, it is a law of life, a part of the economy of nature. There is no use kicking aginst it; the only thing to do is to conform to it. Unless we can manage to work together with our fellows we must expect to be preyed upon, governed or exploited by those who can.

No people ever succeeded in governing themselves until they were able to work together. Until they learn that, they will be governed by some one else, either an outside power or a ruling class within their own members. So long as they quarrel among themselves, or work at cross purposes, others who have learned the art of working together will rule and exploit them.

It is as true in business as in government that the people who work together will rule or exploit those who work at cross purposes. That is one thing which ails the farmer at the present time. It is not necessarily true that farmers are more cantankerous than other people, though it sometimes seems so. But there are so many of them, they are so widely scattered, and they are so much more expert in dealing with the forces of nature than with the forces of society that it is physically more difficult for them to work together than it is for other classes. However, these natural obstacles in the way of united effort must be overcome by a greater wisdom and moral discipline than other classes possess, otherwise the farmer will always be at a disadvantage. That is what wisdom and moral qualities are for—to overcome difficulties.

Now we need not waste any sympathy on those who will not or can not work together. They get what they deserve. Of course, we all have our own opinions as to what a good man or a bad man is like. Looked at broadly and impersonally, the essential difference between good men and bad men is that the former are very careful of their own obligations and other people's rights, whereas the latter are very particular about their own rights and other people's obligations. Every great moral teacher has tried to make good men by telling them of their obligations and not of their rights. We are naturally so much inclined the other way that this is necessary in order to restore a proper equilibrium.

Now it is rather obvious, is it not, that people who are careful of their own obligations and other people's rights are easy to get along with. A community made up of such people can always work together. On the other hand, people who are very particular about their own rights and other people's obligations are hard to get along with. *A community made up of such people can't work together at all.* We might almost say that such people have no rights and deserve to be exploited. However, the question becomes complicated when we have a community made up in part of people who would like to work with their neighbors and in part of people who will not.

The foregoing is written to show how closely the problem of organizing rural interests is bound up with the question of religion and morals. *Unless the right moral influences are at work creating the spirit of working together and mutual helpfulness, no effective organization will be possible.* The church, the school, the religious press and every other moral agency must begin at the bottom by teaching people to be careful of their own obligations and of the rights of others, and overcome the tendency to be insistent upon our own rights and other people's obligations.

—o—

If what the professor says is true then we are forced to say again that farmers might as well abandon all hope of better things through co-operation. But is it true? Is there a single precedent in all the history of organization and co-operation by other classes that might be pleaded as proof of these conclusions? Think of all the present-day organizations in business that have brought about co-operation, and were the church, the school, the religious press and every other moral agency invoked to teach the would-be co-operators their own obligations and the rights of others before they could organize?

Other classes found a point of common interest—one common ground on which all could stand—one common object for which all could work. To the advancement of the common interest, the occupying of the common ground, the accomplishment of the common object, all bent their efforts regardless of whether the man was a good man or a bad man, or how they regarded their extraneous obligations and the rights of others, and regardless of religion, school, race, color, politics and everything else except the business in hand.

—o—

And this is the way farmers must look at the matter of co-operation. They have a common ground on which they can stand and an object that all can work for. In organizing for business the elements of religion, politics, race, color, financial status and largely the question of morality must be tabooed and the only question to consider is, does he produce crops to sell?

—o—

Our purpose in printing Dr. Carver's conclusions is to emphasize what we have often said before, that farmers must not expect much help in organizing, along really helpful and beneficial lines, from other classes or from the government. If they put their trust in the Department of Agriculture to organize them for marketing they will be trusting twenty years from now and marketing in the same old way—"the natural and legitimate prey" of those who have organized and do co-operate.

—o—

But you must organize yourselves. If you refuse to do this, conditions will grow worse every year. There are many people in the country constantly working to more firmly rivet the fetters of the present abominable marketing system on you.

—o—

It will do no good to grumble and do nothing more. The situation demands ACTION by every farmer who is dissatisfied with present marketing.

—o—

Much has been accomplished already, but much more is needed. So the call is for every farmer who has embraced the Equity plan, which is a sound plan and will sooner or later bring farmers complete emancipation from bad marketing conditions, to remain firm and work for its completion.

—o—

And to others who have not already enrolled as workers we urge them as much as we can to send the blank the minute they read this and before they lay this paper down.

— — — — THE BLANK — — — —

Farmers Society of Equity,
Indianapolis, Ind.

GENTLEMEN: I send the names of farmers below who live in my community. These people all raise crops to sell, and all of them will be glad for improvements in our system of marketing. Send me full particulars and instructions for organizing. I will take the lead or get some person who will.

This list was sent by .....

Three Years for $1
OR A CLUB OF 3
One Year Each $1
Up-to-Date Farming, Indianapolis, Ind

How would you like to have a large assortment of Holiday Cards, Seals, Stamps, etc., at My Expense?

I HAVE been giving beautiful post cards for years and many families wait for them as the holiday season approaches. I am now ready to make my 1913 holiday distribution just ahead of Santa Claus, because what I send will save you from buying post cards and you will probably save the expense of some presents by using my beautiful Christmas cards. There are 30 Christmas, New Year and other post cards and many Christmas cards, seals, tags, stamps, etc., in the collection

This, my annua. gift, with my compliments and good wishes, will be sent to every old or new subscriber who sends now 50 cents or more on subscription. It is time for many thousands to renew. You will be pleased if you accept this offer.

Subscription—One year, 50c; three years, $1.

Yours sincerely,

J. A. EVERITT, Editor,
Indianapolis, Ind.

PRACTICAL AND SUCCESSFUL ORGANIZATION AND CO-OPERATION BY FARMERS IN THE DISTRIBUTION OF FARM PRODUCTS.

(Continued From Page 9)

crops when produced, and to decide equitable prices and enforce the demand for their payment. It is no use for us deceiving ourselves any longer that conditions will adjust themselves. Conditions are growing worse each year and will continue to grow worse and the fetters of the bad system will be more firmly riveted on the producers if we do not take immediate steps to cast them off. It is no wonder that so many farmers are disgusted with the uncertainty in their business and that they are crying out for reforms. But it will do no good to grumble about the matter and do nothing more. The situation is one that demands action and it must be wise action. We can well afford to look to business men and see how they solved their marketing problems. If the solution of the farmers' business problems can be brought about in the same way, then isn't it folly to continue the old system longer?

* * *

So the call is for the establishment of a sound organization of farmers, with a system of marketing that will bring the direction of all crops to the market under one head or central control, to the end that all unnecessary expense of passing farm crops to the ultimate consumers may be eliminated.

In other words, the problem for farmers is to organize and adopt a business system that will be as definite in operation to insure stability of prices and guarantee fair profits as are the organizations and systems of the steel makers, coal mine operators, tobacco manufacturers, oil producers, etc.

* * *

Individualism in society, in politics or in business is a condition of the past. The only people who count now are organized people. The only power that is felt now is organized power. The farmers organized will present such a numerical and industrial power as the world never knew before. Give us the farmers organized, with the ability to speak through one head, and to throw their combined power on one spot, or to the accomplishment of a good object, and we will accomplish every desired reform, whether industrial, social or governmental, in a short time. All that is necessary is for farmers to get together once more, but this time on a sound plan so it will be enduring.

* * *

I claim that the lack of business system in marketing farm crops is responsible for every serious problem that confronts rural America today. Also, it is responsible for that other distressing American problem—the high cost of living. It is a fact that the crops since the beginning of the twentieth century have been greater than were ever raised in the country before, yet we are confronted with the fact, as was revealed by the 1910 census, that between 1900 and 1910 mortgaged farms have greatly increased and that rural population has steadily and rapidly decreased.

* * *

The weak point in the farmer's whole program is his marketing system. It is true that farmers are organized to a very great extent now, but their organizations do not bring them in unison in anything. There are thousands of associations in which the members co-operate as community units, but these units have no power to co-operate with each other.

Farmers must organize—they must co-operate to report crops to a national center, and the national center co-operating with the local centers of organization will exercise the necessary control of the crops and can direct them by the shortest and cheapest routes to the actual demand.

* * *

It is the habit of Americans to boast of freedom and independence. But who are free and independent in this country today? Are farmers free and independent?

That man is not free and independent who has not the power to place the value on his own product, the result of his own investment, skill and toil. The possession of this right has been the contention all down the ages by every people and class. Laborers contended for the power and won; manufacturers contended for it and won; merchants contended for it and won. Every class has now complete or partial industrial freedom but the farmers. Yet the farmers have worked harder and longer hours than any others and have produced more desirable and valuable goods than any of them. They are admittedly the backbone of the country and of all its industries. But, shame to say, when it comes to putting a price on their own products, thus setting the wages for their toil, that backbone is so weak and farmers are so wobbly that they represent no power at all, while other people make the price, set their wages and take the goods.

Does this not amount almost, or quite, to industrial slavery? In times before the civil war the black slaves worked all the time, and all they produced was taken by their masters, who gave a living in return. I want to ask if the average farmer is not doing practically the same thing as those slaves did then, who could not help themselves, while the farmers can?

I believe I do not overdraw this picture. I have in mind the average farmer. He represents the great mass. In a movement such as this we must consider the average man. We should aim to produce conditions that will make the average farmer prosperous—the one who lives on the average farm and produces average crops. The average farmer has not been as prosperous as he should be. There is something wrong with agriculture that is responsible for this. Nearly everybody knows that something is wrong, but very few people know that there is a remedy, and fewer know how to apply the remedy. What the remedy is and how to apply it is the object of this address.

* * *

We have seen many illustrations to prove that competition is the law of industrial death and co-operation is the law of industrial life. Yet they say "Farmers can't organize," "Farmers can't co-operate" and "Farmers won't stick."

We may well stand appalled at the spectacle of every other class and industry in the country being organized while the farmers, our greatest class, numbering millions, are at the mercy of other organizations.

* * *

There are only 3,048 counties in the whole United States. Some of them are not agricultural counties and many of them produce such crops as can be reported once for a whole year. (When crops are once reported and registered they must not be included in subsequent reports.) I believe a conservative estimate of the largest number of counties reporting any day will be two thousand. Assuming that this is correct, then the maximum work of the machine, as far as receiving and recording a national crop report is concerned, will be two thousand reports a day.

That is, at a cost of about $1,000 a daily report of all farm crops in the whole country can be sent to the national clearing house for registration and marketing.

* * *

There are two things that enter into every complete effort in farming—the raising of crops and the marketing of them. Each of these are of the most vital importance. Of course, if the crop is not raised a market is not needed. But when the crop is raised, if it is not marketed to bring a satisfactory, profitable price, it might as well, as far as the farmer is concerned, not have been grown. Notwithstanding that these two things are vital in nearly every complete farm operation, nearly all of farmers' teachers and leaders pretend to see only one of the things—that is, the producing of the crops. They have been willing to leave the other thing to the expensive and unreliable system of marketing operated by the modern produce exchanges and gambling boards of trade.

The time has come when farmers must have their own organization and their own system, and they must have an exact knowledge of their own business as other people have who are successful. For instance, to sell crops at profitable prices there must be markets that will pay profitable prices and we must know where they are. Individual producers could not know this, and this fact has caused many of them to organize in local or district bodies. When the crops are moderate these organizations are able to help very much, but when the crops are large, such competing organizations have very little more power to get profitable prices than the individual had. Notwithstanding that there are several thousand such organizations, representing nearly every heavy producing section of the country, the problem of marketing is not solved.

Three things are absolutely necessary in a marketing scheme for farm crops that will solve the problem:

The first is to know where the supply is and how much it is.

The second is to know where the demand is and how much it is.

The third is to control the supply and compel the demand to go to it.

Instead of the supply being available in every producing community in the country, it must be reported to one central place, as a clearing house, and that be authorized to sell all of the supplies. When this is done—that is, when all of the supply is reported to the clearing house, or enough of it to control the situation—then the demand will express itself at the same place and it will be an easy matter to direct the supply to the place where the demand for consumption exists.

We will now state, as a self-evident proposition, that when the supply of farm crops, the necessaries of life, are reported by this plan to be sold at a central clearing house, when they are no longer blindly started out to find a market, but are controlled at one central place known to every handler and consumer, then the demand will seek them.

The demand will go to the supply just as soon as the supply quits chasing after the demand, or, if it does not, people must starve.

But, do you ask, will formers use such a system?

The very fact that farmers have organized thousands of local marketing associations all over the country to be relieved of individual marketing is the answer. When the plan of organization and marketing is extended to a national scope and made so definite in results that no crop will ever need to sell at unsatisfactory prices again, which partial co-operation does not and can not insure, and when every such organized body can use this system at an inconsiderable cost, every farmer will be glad to embrace it. A central clearing house is the only way to conserve scattered individual energy and

$35.00 A WEEK

START in business for yourself and make $35.00 to $50.00 a week handling our big, modern Line of Sanitary Medicines, Spices, Extracts, Stock Remedies, etc.

No Capital Needed—No Experience Necessary

Here's a Regular Weekly Salary For You

Now don't go wrong on this—I'm the man who pays my agents big cash profits on every sale besides regular weekly salaries. Not like other offers that promise a whole lot but won't stand investigation. I've built up a **big** business by taking **big chances.** I believe that every man who will let me pay him a weekly salary—to help him over the "getting started" period—will find the work so easy and make so much money that he will never quit. For I've got the sassiest line of sight-selling soaps and necessary household products ever put out. But it's the low prices that first astonish, fascinate and then clinch orders right and left. It's a winner—a pushing, shoving, pulling winner—you need no special experience or ability to get away with it **big.** How does $25 per week sound to you—$50 per week later. Start in spare time if you want. Thousands of my best agents began that way. Why not try it? I'm ready and willing—and remember, **I'm the one who takes the risk.** Now how about you—wouldn't this money come in handy this winter? Don't dodge the question—**wouldn't it?** Then get busy right away and let me know where you are. Send no money—just your name and address to me—"DAVIS."

E. M. Davis Soap Company
DAVIS BUILDING N 91 CHICAGO, ILL.

expense, prevent glutted markets, obviate waste of food products and insure against exorbitant prices to consumers.

When the organization such as I have described is completed, and when the machine is operated as I have recommended, it will work nearly automatically. For instance: As soon as the principal producers in a community market their crops through the clearing house, buyers will no longer go out to such country community, because there will be comparatively little produce for sale there. But, for a greater reason, it will be cheaper for the buyers to place their orders at the central clearing house, where the great volume of supply is represented. So when the buyers discontinue going to the country points, the remaining producers, who first stood aloof, will see that they must join the organization too.

* * *

The very fact that we are dealing with the absolute necessities of life makes the farmers' marketing problems much simpler than the marketing of any other commodity that is produced by any other class of people anywhere. This is a statement that may be questioned by some, but I invite investigation and discussion. The plan is partly carried out already and the system of marketing is already in operation. True, not with perfect results, but farmers are getting wonderful results in hundreds of districts, even in its partially completed state.

* * *

Money, and not large crops alone, must be the measure of success in farming.

* * *

The chief thing for a farmer, whether a landlord or renter, whether well-to-do or poor, is to get enough money. After a farmer has done all of the hard work of producing he can not fail to be interested in the matter of marketing and the prices the crops sell for. But I have shown that the farmers have had little to say about prices. When they completed the hard work of producing, they virtually hired a set of soft-handed, sleek-clothed gentlemen to do the easy work of marketing.

The day of real independence, of freedom and safety for the business of the country, will come when the power to price the products of the soil has passed from the few who have usurped it to the many who produce the crops.

* * *

Farmers, don't be afraid to organize and federate. Five or six millions of you, with as many wives, and four times as many sons and daughters, are working from sunrise to sunset that the balance of the world may live on terms of their own making. It is evident that all the farmers of the United States, producing all they can and employing another class of people to do the easy work of marketing, can not change the system that gives the average farmer and his helpers only 6 to 10 cents an hour, while a fifth of that number, federated and acting co-operatively in marketing, as a unit, through one clearing house that handles no produce, but only the reports of it, acting as a recording depository for the whole agricultural interests, collecting the reports of supply and demand by telegraph from every producing section and from every consuming center, and flashing the direction for marketing back to the three thousand counties in the country and then to the individual members in every community, will revolutionize the greatest industry of the country at its distributing end and secure for farmers every reasonable demand.

Organize and federate now, and thus have a head, be equipped and ready for business. Do not shring from this step because there may be a few troublesome (to you) details. If the organization is completed you will be ready to meet everything as it appears.

Federate and organize and mark every commodity that you produce on an equitable basis. Put such a price and margin of profit on every item you produce to sell that will put life and spirit in the business of farming, and then invite the world to come and put down for what it wants.

Cease complaining; organize and go to work setting things right.

We owe it to ourselves, we owe it to our children, we owe it to our country, to grasp the opportunity that is now presented and thus put the business of agriculture upon its feet and save the next generation from the trials and troubles and problems that have so long beset us in this generation. The Farmers' Society of Equity, of which I am the founder and president, presents a substantial framework and superstructure around which and on which the national organization and federation may be built. It has struck the keynote; it has the correct plan; we are headed in the right direction; farmers are at last on the right track.

But remember, our troubles will never end and the benefits will never be realized unless we each do our part. Results will not come through promulgation of a plan. We must build the machine, following the plan as a guide. We will not be saved by what we want done, but by what we do. Prayer and trusting in Providence will never build the American Farmers' Federation. While we watch and pray we must also work and wait; work for the completion of our society and wait with all patience, upheld by the certainty that this good movement, once started, will never down, but will go on to full fruition. Great movements are not accomplished in a day. But more has, I believe, been accomplished in a few years by the Farmers' Society of Equity than was ever before accomplished in the same time in any movement, for th emancipation of the masses from bad conditions as deeply rooted as are those than encompass agriculture at this time. I don't want you to get away from the fact that all depends on the farmers. Others can help and will help. But farmers must look ahead to the fact that this movement is to dignify their business by making it certain and profitable. They must lift it out of the miasmatic atmosphere that has surrounded it. They are now called upon to take their position on higher and more exalted ground, from where they can constantly see the promised land. Build this machine, then use it, and it will send the pure and healthy blood of co-operation through all the veins and arteries of agriculture and similarly stimulate every other business.

* * *

Let's organize a local clearing house in each market place and a county clearing house in each county. Thus our machine will soon be built and our good ship "Agriculture" will soon reach the harbor forever safe from the shifting winds and changing currents that have tossed and imperilled it in the past.

* * *

The law of God and the universe is co-operation; the law of government is co-operation; the law of production of the fruits of the field is co-operation; the law of the perpetuation of the human race is co-operation; the true law of business is co-operation. "God helps those who help themselves" and "the stars sang together." All speak of co-operation. If the sun and moon and stars and earth would not co-operate, dire results would follow. Or if the sunshine and rain would not co-operate with the seed and the farmer to produce the fine grain and fruit, how vain would be our labors!

* * *

We now see competition only in the case of farmers and weeds. The latter compete with the crops and give a great deal of trouble. The former compete with each other and have carried on a guerilla warfare resulting in immeasurable disappointments and inconceivable misery. Surely God ordained the law of co-operation while the law of competition was hell-born.

God is love, equity, co-operation. He is always ready to help us and co-operate with us if we will help ourselves. He has promised many places in His Word, and He never goes into competition with us. On the contrary the devil established competition, and through this instrument he breeds hatred, envy, jealousies, suspicions and physical and industrial murders. The devil of competition I warn you against.

* * *

I predict just ahead of us is going to be the grandest age of the world. There are greater and better movements in progress now for the reform of the world and the uplifting of humanity than ever before. People in the hearing of my voice will be glad they lived in this age rather than in any other because it will be the age of equity in business brought about by the farmers' organization.

The dawn of equity has now appeared, the sun of equity is rising and its bright beams will drive away the dark clouds of ignorance, selfishness and suspicion. Understanding is coming to the minds of the misguided. Soon, very soon, the rays of equity's sun will break in its full glory and flood the earth.

I may say in the words of Whittieh as we contemplate the transformation that is sure to come:

"The air of heaven blows o'er me;
A glory shines before me,
Of what mankind shall be—
Pure, generous, brave and free."

I thank you.

1913 Annual Convention of the Farmers' Society of Equity

Indianapolis, December 16, 1913

The 1913 Annual Convention of the Farmers' Society of Equity will be held at headquarters, Indianapolis, Ind., beginning Tuesday, December 16, 1913.

At the convention officers of the National Union will be elected and every other thing for the good of the organization and agriculture that comes before the convention will be considered and acted upon. Several matters of extraordinary importance, as affecting the society and the future of agriculture in America, will come before the convention. This fact makes it important that there should be a complete representation of subordinate Union by-laws as follows:

For the guidance of members and unions we quote from the National Union by-laws as follows,

ARTICLE VIII

Officers

Sec. 3. The officers of the National Union shall be a President, a Vice-President, a Secretary, a Treasrer, a National Organizer and seven directors.

Election—Representation—Term

Sec. 4. The officers and directors of the National Union, with the exception of the Secretary, shall be elected by a popular vote of the members on blanks furnished by the National Union, or printed in the official paper and forwarded to the National Secretary by mail, or brought by delegate representing such Union or Unions, to be voted in the National Annual Meeting of the Society.

Sec. 5. The Annual Meeting of the Farmers' Society of Equity is to be composed of representatives of subordinate Unions as follows: Each Local Union is entitled to one representative. If it is impossible for a Local Union to send a delegate, it may join with another Local Union, or more than one, to send a delegate. In this event that delegate will be allowed as many votes in the convention as he carries credentials from organized Local Unions. Each County Union shall have one representative. Each State Union shall have one representative-at-large and one for each two thousand members in the state or major fraction thereof.

Board of Directors

Sec. 7. The Board of Directors shall consist of the President and Vice-President (ex-officio) and seven elected Directors.

The following nominations have been made and they are now submitted to the membership:

For President

J. A. EVERITT, Indianapolis, Ind.—Mr. Everitt is the present president.

For Vice-President

W. H. MITCHELL, Hutchinson, Kas.—Mr. Mitchell is the present vice-president. He was one of the incorporators of the society in 1908. He is one of central Kansas's progressive farmers, but has retired from active work on the farm and lives in the city of Hutchinson.

HARVEY JORDAN, Atlanta, Ga.—Was one of the founders of the Southern Cotton Association and its president from 1905 to 1911. He was a member of the committee to study agricultural conditions and co-operation in Europe this year. Mr. Jordan, in a letter to the F. S. E., said: "Your society is thoroughly correct in its conclutions that the needs of the hour for farmers is to organize them on a sound business basis for better marketing. This has been my contention, and toward which my efforts for years have been directed. We need some specific, clear-cut method to pursue.

For Treasurer

C. HAYES TAYLOR, Indanapolis, Ind.—Mr. Taylor is a director of the society at present and actively at work at national headquarters and is associate editor of the official paper. His work during the past year has brought him more or less in touch with all members, therefore a more extended introduction is probably unnecessary.

For National Organizer

H. F. CUTTING, Portland, Ore.—Mr. Cutting is present national organizer. He has to his credit, largely, organizing the state of Oregon in 1913. At present he is organizing in Washington.

A. Y. SATTERFIELD, Sterling, Idaho.—Mr. Saterfield was one of the leaders in organizing Idaho in 1913, also the northern part of Utah, which is working with Idaho as a unit. He is president of the Idaho State Union, F. S. E.

For Directors

W. GREISENTHWAIT, Oregon City, Ore.—Mr. Greisenthwait is president of the Oregon State Union, F. S. E., and vice-president and a director of the Equity Warehouse Company of Portland, Ore.

ROBERT STEVENSON, Lebanon, Ind.—Mr. Stevenson is a director now.

JACOB BRETZ, Bretzville, Ind.—Mr. Bretz is a present director.

S. W. MORRIS, Rochester, Minn.—Mr. Morris has been a director from the time of the incorporation of the society. He has always been prompt in attending the meetings of the directors and the conventions of the Society.

FRED N. PARKINSON, Idaho.—Mr. Parkinson is a director at present and an active organizer in the field.

T. C. WILSON, Columbia, Mo.—Mr. Wilson is secretary of the State Board of Agriculture of Missouri and secretary of the American Apple Growers' Association.

ALBERT E. JACK, Chicago, Ill.—Mr. Jack is secretary of the Milk Producers' Association of the Chicago district.

J. A. HARMON, Shawnee, Okla.—A director at the present time.

C. B. LOZIER, Robertsdale, Ala.—Mr. Lozier is secretary of the Baldwin County Union, F. S. E., and business manager of the Gulf Coast district in marketing.

A. E. WEBER, Geneva, Neb.—Mr. Weber is a member of Geneva Local Union, F. S. E. In putting him in nomination the local said it would like to have Nebraska represented on the board of directors.

T. A. HARPER, Dundee, Ore.—Is a member of Oregon City Local Union, F. S. E.

W. S. SHURE, Summerdale, Ala.—Mr. Shure is a director at present.

J. H. ADAMS, Minneapolis, Minn.—Mr. Adams is editor of "Co-operator and Farmer," which is a magazine devoted to farmers' elevators and the grain growers particularly and "the interests of managers of farmers' co-operative companies" in general.

Vote for one candidate for each office of President, Vice-President, Treasurer and National Organizer. Vote for seven directors.

Each member is entitled to vote. Members-at-large will send their votes direct to headquarters, Farmers' Society of Equity, Indianapolis. The ballots will be counted when the national convention meets, December 16th, and the candidates having the greatest number of votes will be declared elected.

It is important that every member should vote for National Officers and Directors, and that every local, county and state union should be represented by delegate in the convention.

Report to headquarters as fast as delegates are selected, giving names and addresses.

"Delegates' Credentials" blanks are in the book of blanks sent to every local union. Let the delegates hold the credentials, and report in a letter.

The Triumphant Yeomanry of Lakefield

(Concluded From Page 7)

has received annually a net cash dividend of $4,500 during the six years of business, which makes the total distributed as earnings from the bank $27,000. We may add to this the surplus of $7,000 and we have a total of $34,000.

The Co-operative Store Company has contributed annually an average of $9,100 cash refund to the patrons. During the five years of business a total cash refund of $45,000.

The three institutions, during the few years we have been operating, have distributed a grand total of nearly $300,000. You see, my friends, the economic value to a community that has adopted the co-operative plan of business can hardly be measured.

I wish to urge upon all the importance of the practical application of the true co-operative principles to co-operative enterprises.

First—One man, one vote. Do not permit capital stock to vote. Men and women vote, not money.

Second—Pay to capital stock out of the net earnings the prevailing rate of interest of the community. In our case it is 6 per cent. The balance of the net profits pay on the basis of patronage given the store by the stockholders.

Third—Be sure and pay nonmembers half the dividends that you pay the members. You must remember that nonmembers, while they have no money invested in the capital stock, have been the means of creating profits for the store through patronage. They are entitled to some of the profits. In our case we give them half the profits that we pay to members.

* * *

The seeds of co-operation must be sown in every community. Farmers must incorporate co-operatively, not on one phase of their industry alone, but in every business in connection with their avocation. In this way only can we have a full, complete, organized and united rural population.

Deafness

Perfect hearing is now being restored in every condition of deafness or defective hearing from causes such as Catarrhal Deafness, Relaxed or Sunken Drums, Thickened Drums, Roaring and Hissing Sounds, Perforated, Wholly or Partially Destroyed Drums, Discharge from Ears, etc.

Let Me Give You Two Hundred Fine Tulip Bulbs and Three Giant Hyacinths and a Floral Magazine for a Club of Trial Subscribers

MY FLORAL FRIENDS: There ought to be many thousand readers of UP-TO-DATE FARMING who dearly love the beautiful early spring flowers. Also there are probably many thousand readers who each fall buy tulips and other bulbs for planting. To all these, and all others who have not in the past indulged in the delightful pastime of raising these beautiful flowers, I make this most liberal offer. I want to say for the benefit of the inexperienced that there need be no failure. To plant the bulbs is as simple as sticking potatoes in the ground, and they never fail to grow and bloom. They can be planted up into December, whenever the ground is not frozen.

My Very Liberal Offer

See twenty friends and neighbors and get them to give you 25 cents each for a SIX MONTHS TRIAL SUBSCRIPTION to UP-TO-DATE FARMING ($5.00). Send the money and the names to me and I will send you at once by parcel post 200 SPLENDID SINGLE AND DOUBLE TULIPS, made up from the finest named varieties; also THREE GIANT NAMED HYACINTHS, red, white and blue. Besides this I will also send to each member of your club TEN SPLENDID MIXED TULIPS and a FLORAL MAGAZINE, monthly, for a full year. The bulbs are all of good size and all are guaranteed to bloom next spring. Cultural directions with each package.

I want a big club of subscribers wherever there is now one or more subscribers to UP-TO-DATE. This is the time I want the help and co-operation of my friends, and this is the time when you can earn the greatest reward for a little help. Let me repeat: I want you to get twenty trial subscribers, if you can, for six months each at 25 cents. I will also send ten splendid tulips, guaranteed to bloom, to each subscriber and a year's subscription to a Floral Magazine. And to YOU I will send 200 splendid tulips and three Giant Named Hyacinths and the Floral Magazine one year. I believe every one you ask will subscribe, but if you can not get twenty subscribers send what you can and I will send you ten tulips against each trial subscription, and to the subscribers all that I mention.

The person in your neighborhood who has the big bed of 200 tulips blooming next spring will be the envy of all. I guarantee satisfaction. Any subscriber or club raiser not satisfied can have his money back. This is a good time to plant, so you should do this at once. J. A. EVERITT, Editor, Indianapolis, Ind.

Louise is as big as a real baby and nearly as large as the little girl.
(From a photograph.)

Life Size Doll and her Brother and Sister Given Away

This family consists of Louise, over two feet tall; her brother Jimmie, a husky fellow, and sister Susie, each nine inches tall. If you get them you can name them to please yourself. Louise is a big, plump baby, very like a real live youngster, and can wear baby's clothes. Her hair is brown. She has bright eyes and rosy lips. Her legs and arms bend and she will sit or stand, as you want her to. Every little girl will love to have a dolly like this to dress and undress, and play with. Brother and sister dolls are just too cute for anything.

No Christmas Present for a Little Girl Could be Better

This big doll is delighting thousands of girls in all parts of the country. There was never a finer plaything for the little folks. No matter how many dolls the girls have, they always want another. Louise and her brother and sister will be given away to little girls or any one who sends a subscriber.

Our Offer

We will send this whole doll family—Louise, over two feet tall, and the two other dolls, nine inches each in height. All you need to do is to send us one six-months subscription to Up-to-Date Farming (new or renewal) for 25 cents, or let us extend your present subscription six months. Address DOLL DEPT. 98, UP-TO-DATE FARMING. INDIANAPOLIS, IND.

This little girl is showing Louise he picture book. She plays with this big doll for hours every day.
(From a photograph.)

IDAHO FARMERS AFTER THE GRAIN TRUST

A Warning and an Appeal

I have just returned from Pocatello, where we have just concluded a most interesting meeting of the state board of directors. Our board is composed of one member from each county, selected by the members in that county, and the president and vice-president of the state union. We had an almost complete representation. The state union secretary-treasurer made a complete and highly satisfactory report. Through our Pocatello offices we have shipped a total of 206 cars of potatoes and about 100 cars of grain. Many of the potatoes netted the farmers from 15 cents to 25 cents per hundredweight above what the local buyers were paying.

We voted unanimously to maintain our offices at Pocatello, making this point the clearing house for the intermountain district, including Idaho and northern Utah, and we have extended the invitation to western Montana and Wyoming to join with us. We voted to incorporate the clearing house under the new corporation law of Idaho, PAYING NO DIVIDENDS, and any profits accruing over and above the good prices each member will obtain will go to increase the strength of the organization increase the strength of the organization.

Our State Union in convention last May instructed the board to appoint two delegates to the National Union Annual Meeting at Indianapolis in December. This was done, Charles H. DeCamp, the vice-president, and myself being selected. In addition to the National Union meeting, we are to visit eastern manufacturers of farm machinery and investigate eastern markets for our field peas. The eastern trip will require extra money, which the members could well make up by voluntary subscriptions of just a few cents per member. If each local in Idaho will subscribe at least $6 it can be used to our great mutual benefit in the endeavors of your delegates to the east in December. I recommend, in official capacity, that all Idaho locals take action upon this matter at once, and send whatever may be subscribed to the state secretary-treasurer, O. E. Scott, Pocatello.

I desire to sound a note of warning to the membership. We are now engaged in fierce conflict with the grain trust (the Mullen interests), the hardest fight ever engaging the farmers of the northwest against unnecessary middlemen and their extortionate tolls. What we must give now is loyalty, LOYALTY, LOYALTY. WE MUST WIN, and we can win. Standing together in united support of our organization, bringing others to our side of the fence, will give us the victory, and the sooner 'tis done the more we shall be benefited. Every farmer in the intermountain country should come to our support.—A. Y. Satterfield, President Idaho State Union, Sterling, Idaho.

NOTICE OF MEETING

Northumberland County (Pa.) Locals to Organize a County Union

The local unions of Northumberland County, Pennsylvania, will hold a county convention at Sunbury on the 22d of November for the purpose of organizing the county union. Each local should send its full quota of delegates. The meeting will convene in the Courthouse.—W. S. Kerstetter, Secretary Sunbury Local No. 7086.

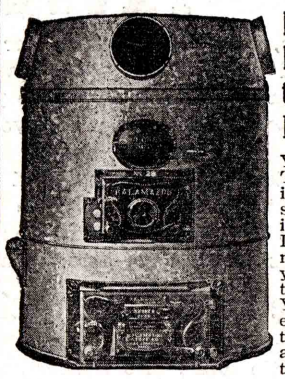
Kalamazoo
Radiant Base Burner

HAVE the whole family study your Kalamazoo stove. Follow the plan of 250,000 other stove buyers all over the country who have been their own salesmen. They didn't ask anybody else to help them make up their minds. They sent for a KALAMAZOO catalog, picked out the stove they liked and tried it—found that it did everything they expected and more. They bought direct from the factory and pocketed the dealer's profits.

Sell Yourself a Kalamazoo Stove—

Take the Dealer's Commission

Why pay the dealer to sell you a stove? Why not be your own salesman? The dealer shows you eight or ten stoves and helps you pick out one. You have to pay him well for this service. The Kalamazoo catalog shows you 400 stoves. We'll pay *you* the dealer's commission if you'll make your own choice.



How Would You Like to Save $25 to $75 on That New Furnace?

You can. We'll prove it. The Kalamazoo Furnace is built as perfectly as the stoves. You can install it yourself if you wish. It's very simple. We furnish everything. We tell you how. So you save on the cost of the furnace. You save on installation expense. If you want the furnace catalog put a cross in the square on the coupon.

Get the Factory Price

We Pay the Freight

What happens when you buy direct from the Kalamazoo factory? At one move you save for yourself all the commissions of the dealer, salesmen and jobbers. You pay no one to choose a stove for you. You are independent. You get the reward that independence always brings. You save anywhere from $5 up to $25, $35 or $40. These are not mere assertions. These are facts. The proof is in letters from our customers. Read these letters. You'll find them in the big book of stoves.

Dealers Don't Give Free Trials Backed By Bank Bond Guarantee

Your dealer doesn't give you a free trial. He says his word is good. Probably it is. So is the word of the Kalamazoo Stove Company. We've sold over 250,000 stoves. Our customers are satisfied. We believe this a wonderful record. And yet—we don't say "buy the stove because we claim it's O. K." We say "make the stove the stove *prove* its worth to you—for 30 days—in your home." And we back that offer with a legally binding bank bond guarantee of $100,000.

Pay Us As Convenient

You say your dealer wants to trust you—give you time. So do we. Pay cash if you like or pay a little at a time. Our terms are what you would arrange. They are planned for your convenience. You will approve of them.

We Ship the Same Day

your order comes in. That means quick arrival of your stove or range. Our stock is large. Our manufacturing facilities are immense. No matter how fast the orders come, we're never out of the style you want. Kalamazoo stoves are made in 400 styles and sizes. The fact that we are always well stocked in all of them shows the magnitude of our business.

Look Over These 400 Styles of Stoves

that we show in the big Kalamazoo Stove Book. Even if you're determined to buy elsewhere it will do no harm to find out how stoves are made. You'll learn the good points and bad points of stove making. This text book of stoves is free. You are under no obligations in sending for it. We want everybody to know stoves. Because the more people know about stoves the more Kalamazoos are bought. If you don't buy a Kalamazoo now you will in the future.

Kalamazoo
Queen Range

FREE

Here's a chance to save many dollars on a stove purchase. Send a postal if you wish. Or the coupon is convenient to use—and saves time. Mail it. Get the big Kalamazoo book. Study our plan. Read our offer. What does 360 days' approval test mean? We will tell you. What is the Kalamazoo $100,000 Bank Bond Guarantee? We'll explain that too. And you'll see the pictures showing every detail of the Kalamazoo Stoves. Write to us—mail a letter today. Ask for Catalog No. 710.

Kalamazoo Stove Co., Mfrs., Kalamazoo, Mich.

We make a full line of Stoves, Ranges, Gas Stoves and Furnaces. We have three catalogs. Please ask for the one you want.

You Are Able to Choose for Yourself

It doesn't take a clever salesman to show you the good points of a stove. You can make your decision without him if you want to. The Kalamazoo Book will tell you more about stoves than any salesman knows.

Remember that the salesman must be paid. The dealer has rent, his interest on investment, his hundred and one expenses. You must help pay them. What does the dealer do for you? Nothing that Kalamazoo Stove Company doesn't do for you, except this: the dealer helps you make up your mind, and he generally knows how to make you pick the stove *he wants to sell.*

Kalamazoo Stove Co., Mfrs. Kalamazoo, Mich.

Please send me free, postage paid, your big catalog No. **710**, with full particulars of the 30 days' trial, 360 days' approval test, easy payment plan.

Things in Store for Our Readers

Being a Few Words on Particular Matters From the Editors to the Readers

What Corn Grades Mean to the Farmer

IN THE October 15th issue we printed the tentative "grades" established by the United States government on corn, and gave a resume of how these grades are looked upon by the grain trade. We invited our readers to write us their opinions on how the establishment of the new grades would affect them, but there has been very little interest shown in the matter. This is the common failing amongst farmers—they let others establish conditions which rule and regulate their profits, giving no thought to matters which vitally affect their welfare, and look with indifference upon what is being done. We must get out of this state of lethargy and take notice of all matters which concern us, or suffer in consequence. Neglecting this, we shall suffer losses in many instances and, as usual, lay the blame on some one else. It is the purpose of the government to effectually put a stop to the marketing of corn which is out of condition, or which is not properly graded. To protect yourself against trouble, learn the corn grades. If they are formulated so they impose a hardship upon you, remember that yodur failure to evince a keen interest in their establishment permitted the proposed grades to be "fixed" as they are. Government grades for oats and wheat will be next considered. Will you leave those also entirely to others?

Helping Out the Poultry Raisers

Do you folks out on the farms realize, when you take a basket and go out to gather eggs, what those eggs mean to us who are cooped up in city homes? We are now asked to pay 36 cents a dozen for eggs—3 cents for each one—and the same ones your hens laid last April and May. This in Indianapolis, located right out in a magnificent country where farms are fertile. In one hour we can walk from the front doors of our office to the front-yard gates of farms.

In other cities, like New York, Chicago, Baltimore and Washington, not so conveniently situated, prices are much higher than here. These prices go to show what city people must pay for eggs.

A few days ago a dealer in storage eggs in New York sold 140,000 cases at a net profit of $75,000. The wholesale merchant to whom the eggs were sold held them a few days only and disposed of them at a profit of $185,000. These eggs were bought from you folks on the farms during the spring months for a few cents per dozen, and you come to the conclusion there is little money in eggs. As a matter of fact, there is big money in eggs, but you do not get it, and IT IS ALL YOUR OWN FAULT. We are preparing now for our poultry number, which will be the issue of January 15th. In this number we will show how eggs can yield the farmer a larger profit, and how he can obtain more of them. Not one subscriber should miss this coming poultry special.

More Special Numbers Coming

Speaking of the poultry special calls up other special numbers we are planning, each one to be as valuable as human skill can make them. There is the spraying number for January 1, the home garden number for February 15, the dairy number for March 15 and the farm building number for April 15. To miss any of these will be to miss a great fund of useful information, real revenue-producing information, that you can use to your own great advantage. Don't miss them.

Getting into the Heart of Things

Sometimes we believe things which are not true, or disbelieve what is true. Our belief does not make things true or untrue. The facts remain facts, no matter what we may believe. Now, when we tell you that the problem of marketing is the most important problem you yourself, as a farmer, have to solve, you may say you don't believe it. That doesn't change the FACTS, however. Would it not be well for you to take a little thought and learn the facts as they are? The facts are that those who are studying deep into the causes of success and failure in farming are agreed that the marketing problem IS the great problem. Read and ponder these statements: "Successful marketing is the magic word in the whole farming world today;" "The most skilful grower in the world is helpless unless he finds the right market at the right time, and then uses shrewd business judgment in disposing of his wares;" "After producing something to sell there still remains the vitally important question of how to market it;" "The farmer can well put thought into the marketing of his products;" "The man who helps his neighbors by fighting for better market conditions is assisting in the greatest movement ever inaugurated for agriculture." You may not believe these things, but THEY ARE TRUE. Has not the government established a department to help improve marketing? Have not several great trunk railways created divisions for the study of marketing methods for farm crops? Has not a great express company seriously undertaken to help the work along? Has not nearly every farmer who is a big, broad leader in agricultural welfare investigated and pronounced the farmers'

CANADA'S OFFERING
To The Settler
The American Rush to Western Canada is Increasing

Free Homesteads In the new Districts of Manitoba, Saskatchewan and Alberta, there are thousands of Free Homesteads left, which to the man making entry in 3 years' time will be worth from $20 to $25 per acre. These lands are well adapted to grain growing and cattle raising.

Excellent Railway Facilities
In many cases the railways in Canada have been built in advance of settlement, and in a short time there will not be a settler who need be more than ten or twelve miles from a line of railway. Railway Rates are regulated by Government Commission.

SOCIAL CONDITIONS. The American Settler is at home in Western Canada. He is not a stranger in a strange land, having nearly a million of his own people already settled there. If you desire to know why the condition of the Canadian Settler is so prosperous write to any of the Canadian Government Agents and send for literature, rates, &c., to

G. W. Aird
215 Traction Terminal Bldg.
Indianapolis, Ind.
or address Supt. of Immigration, Ottawa, Canada.

UP-TO-DATE FARMING

SUBSCRIPTION PRICE

One year, 50 cents; three years, $1, if paid in advance. If not paid in advance, 60 cents a year.

Canadian subscription, double rate.

In changing your address always give old as well as new address. Old subscribers should always send the address label clipped from the paper with renewal, if possible.

Published the 1st and 15th of Each Month by The Equity Pub. Co. Inc.

J. A. Everitt, Editor

Balanced Rations

Head work counts for as much as hand work on the farm these days.

Aunt Sophia is tackling the pie problem. We prefer to tackle the pie.

If you know you are right you don't have to prove it. Keep still and time will tell.

Agricultural Uplift—The farmer who lifts himself over the fence by his boot straps.

Sam Saxon says that a woman who roasts her husband is not necessarily a good cook.

As biscuits without soda, or bread without yeast, so is a house without good reading.

Paying as you go is a good idea. It is also well to provide for paying your way back.

The cattle feeder is playing a game of blind man's buff that keeps him "it" pretty much all the time.

No matter how you drive your horses, you can not drive your work successfully with a loose rein.

The discussion on the disposal of the corn crop in this issue will be enlightening to many a puzzled farmer.

It requires hard work to make money on the farm, but it takes hard sense to invest it in the city at a profit.

Newaygo County, Michigan, built 93 silos the past year. Western Michigan has built 1,000 silos since one year ago.

A lot of these professional fellows who are trying to get close to the farmer only want near enough to get their hands in his pockets.

An Illinois widow woman who manages a farm recently husked sixty bushels of corn in ten hours. Another example of the efficiency of the widow's might.

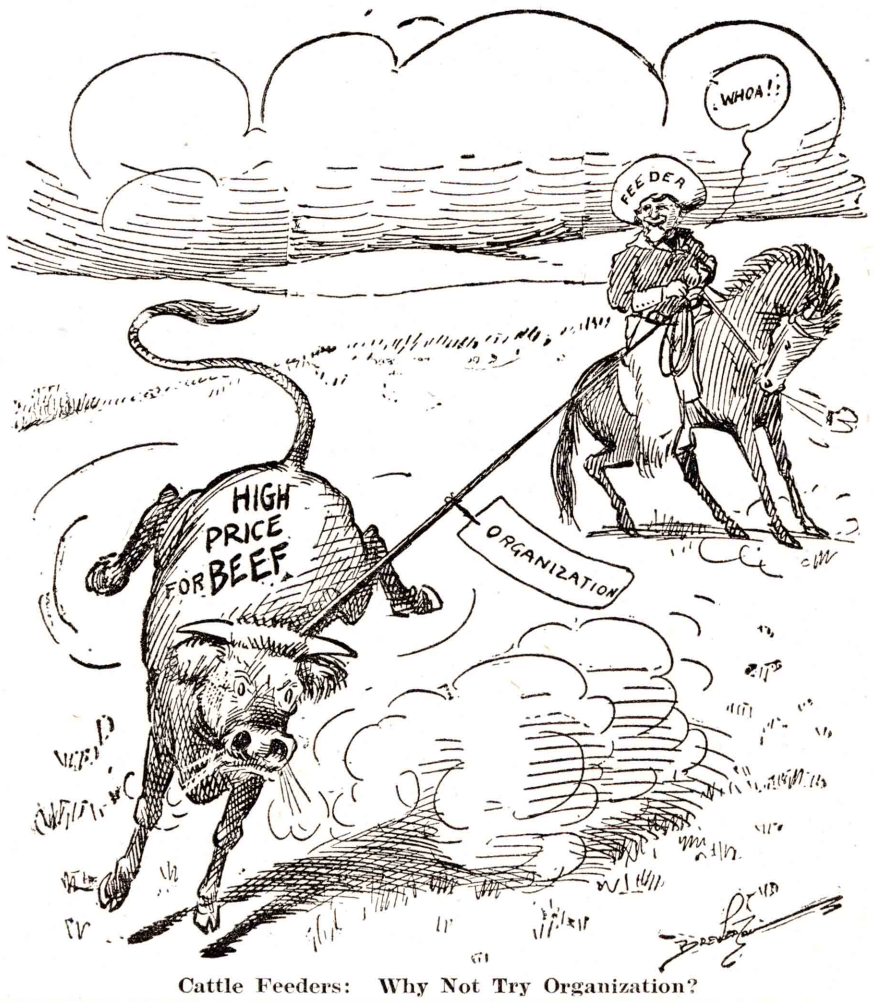
Mr. Dooley, speaking of Thanksgiving, shows how the middlemen's market system "gobbles" the profits, and shows how to use the ax on the neck of the system as well as on the turkey.

Shorty gives the reader the key to success with "book education" when he says that the best books don't tell how to do things, but show us how to learn, and make our experiences count.

Nearly any one can succeed in failing, but as a rule not many can take failure and build a success on it. "South Missourian," who writes to the Contributors' Department, is an exception to the rule.

"High-priced meat is now in the public's eye," says an exchange. The size of a good steak the average "public" can afford would go in 1 is eye, no doubt, so it must be there, as we are earnestly informed by aforesaid public that he has none in his stomach.

The United States Department of Agriculture is far from being foremost in many good works. This paper has eliminated fraudulent medical advertising long since. We not only warned our readers, but we gave them no opportunity to become the victims of fakirs and quacks. Now comes the Department with its belated warnings. UP-TO-DATE FARMING keeps right in the fore in the work of promoting the world's welfare.



Cattle Feeders: Why Not Try Organization?

The Producer, the Consumer, and Prices

(Last Article)

WE STARTED OUT with this series of articles to show, first, that farmers are not to be blamed for the high cost of living that so chafes the man of the town; neither are they the cause of the trouble. Farmers, as a rule, work more effectively than ever before, and are producing more per man than ever before in the history of this or any other country. There is no need to quote figures or accredited statistics in proof of this statement. The statistics are available to those who doubt the accuracy of the statement, but no well-informed person is going to doubt them.

As this paper goes to farmers, there's no need to bring out figures to prove that farmers are not laying up excess riches. In but few instances are they receiving more than a meager profit on crops produced in addition to fair pay for their labor. In a great number of instances they do not make any profit, and in many instances they lose heavily. If, then, it is true that farmers are producing more per man than ever before, and that no great profits are being made, it is clear that, so far as the farmer is concerned, there need not be an increase in the cost of living. Where, then, is the high cost of living?

The writer has just made a careful, thorough and exhaustive investigation of prices charged by retail grocerymen for meats, fruits and vegetables now and ten years ago. With the exception of meats, dairy products and eggs prices are no higher than they have been during some period of each year in ten years. Potatoes, cabbage, apples, beans, rice, sugar, flour and nearly all the staple articles of diet have been as high or higher nearly every year and the average price runs about the same. The writer can take $1, and his market basket, and go to the corner grocery or the city market and, outside of meats, fill his basket as full of solid, substantial foods, fresh, dried or canned, as he could ten years ago, or any year since. There is very little reason to complain about the high cost of living, always excepting the meat products, so far as eatables and clothing are concerned, if we are willing to be as economical and thrifty as we were before we began to hear so much of the high cost of living. But those of us who actually feel an increased cost in stocking up our larders find that we are demanding a better living. We buy the highest grade of patent flour, the best of creamery butter, the freshest of fresh eggs, the choicest cuts of meats, for we feel that as live American citizens the best is none too good for us. We want the earliest of fruits and vegetables, when they are out of season and very high in price. We dress better, have better furniture in our homes, enjoy more pleasures, take in the "movies" and the theaters and do a thousand things we did not do a decade ago. We have created a costlier standard of living and are just paying the price. Those who are willing to go back to the standards of the past can live on the same expenditure, so far as food costs are concerned. But we do not want to go. We are a progressive people, going forward. We are getting better prices for our labor than we did formerly, so, take it all in all, we are as well off now as we ever were before, and in some instances better off. The thing that is burdening our country, both producers and consumers, is in our execrable system of distributing the products of the farmers to the consumers. The producers often suffer heavy losses and vast quantities of food supplies are wasted. The effort entailed in their production was wasted. Eliminate these losses and wastes and producers will be better paid than they now are paid, and consumers will have as good and better a living, at less cost. Give us, then, the co-operative endeavor of both producers and consumers to create a new system of distribution and we shall have a prosperity unparallelled even in Utopian dreams.

What Others Say and What We Think of It

It is said that 90,000,000 broom handles are used annually in the United States, one for every man, woman and child. Have you had yours?—The Farm Journal. Yes, we had ours yesterday when we walked across the new carpet with muddy feet.

The farmer can not afford to be careless, remarks an exchange. Yes, we know, but people of all kinds keep on doing many things they can not afford.

The new tariff isn't going to kill you, Mr. Farmer, so don't get "skeered."—Farm and Home. Neither will the sting of a bumblebee kill us, but it sort o' gives us an uncomfortable feeling. We'd rather not be stung.

Sam Saxon says the high cost of living is brought about partly by those who live on credit and don't pay their bills. True for you, Sam. The consumers who pay stand the loss.

Railroad employes belonging to labor organizations have placed the interests of the company secondary to that of the organization.—Railway Age Gazette. Well, don't the railway companies usually place the interests of the employes secondary to that of the company? Why "kick against the pricks?"

We believe the Farmers' Club is one of the most important agencies in bringing about better conditions in the country. Only by united effort can much improvement be brought about. Farming is done by individuals, whose output is exceedingly small in comparison with the total business done. By community effort in producing standard products co-operatively, products may be sold in a much more economical and satisfactory manner.—The Farmer, St. Paul, Minn. Every one believes it, but faith without works is dead. What is needed most is for all co-workers for agriculture to get together, build a new system in which the farmers can have perfect confidence, and then they will form such clubs in every community.

Money Legislation

THE CONGRESS of the United States and the administration are now wrestling with legislation that proposes considerable change in the monetary system of the country. We concede that change is not always reform, and we must leave this legislation to be formed and adopted by those whose official duty it is to do so, and upon whom must rest the responsibility of the effect the change may have upon the people. The pending bill has friends and foes. That there is need for legislation that will bring the control of the money and currency of the country nearer to the government, the people, there can be no question. All business and industries depend upon money, and whatever power controls the money controls all else that has a money value. That the present methods of issuing currency afford an opportunity for the combination of a few financiers or corporations and thus practically control not only the issue, but the circulation of the country's money, the medium of exchange, is undeniable, and that such a combination has been made and is in effective operation there is also no doubt. That the members of this combination and all who are subservient to them would oppose any change that would even in the smallest degree weaken their control is to be expected and must be met by the interests that suffer from that control.

Without attempting to consider the details of the bill, we note that one of the leading arguments made by the money power against the pending bill is that its effect will be to inaugurate a system of "fiat money." Fiat money is money created by law, by the fiat or command of the nation legally expressed, and so far as that is concerned all legal tender money is fiat money. The material of which it is made has nothing to do with it as money. A lump of gold is not money until the stamp of the government makes it so, according to law. Neither is a lump of silver, of nickel or of copper. And these materials thus stamped are no more money than is a piece of paper so stamped, provided the law of the nation makes it a legal tender in the payment of debts. Hence, as we have said, all legal tender money is a creation of law and is, therefore, fiat money. On the other hand, currency, though it may be used as a medium of exchange, though not a legal tender, is not money at all.

We are aware that different theories of money have been taught and are quite commonly believed, but unprejudiced thought and reasoning from cause to effect must demonstrate that money is nothing else but law created, and since the only legal power for the making of money in this country is the constitutional provision that Congress shall have power "to coin money and regulate the value thereof," it is clear that the government alone can make or create it, and that it is not restricted to any particular material of which to make it. In its greatest financial trial, when in the great struggle to save itself from the fierce assaults of rebellion, the money power or monopoly got possession of the recognized money metals and exacted destructive tolls for their use as money, the nation very nearly exercised the power thus conferred upon Congress in the stamping of paper as money. We said nearly. Only two exceptions were made—duties on imports and interest on the public debt. With these single exceptions a $10 "greenback" was as complete money as was a $10 gold piece, and it was so recognized and freely circulated as such.

But the greenback depreciated in value, says some one. No, it only appeared to do so. The money power of that day, that had obtained possession of the gold before the greenbacks were issued, ceased to allow it to circulate as money, but put it on the market as a commodity, and, since the government and importers had to have gold with which to meet the two unfortunate exceptions in the law that created the greenbacks, they, the importers and the government, had to buy the gold at the monopolists' price. The fact is, therefore, that the greenback did not depreciate, but the gold advanced in price, and even that was no fault of the greenback, but of the two legal tender exceptions in the law that created it. There never was a time when a $10 greenback would not pay as much debt as a $10 gold piece.

But it was not our purpose to thus go into history; yet it is well to know history in order to understand the workings of the money power. That power would have ruined the government by its exacting charges for the use of gold had not paper money been made a legal tender, and every cent the money power acquired by advancing the price of gold to meet the two exceptions was drawn from the people. The importers added it to the price of the goods, which enabled a higher price to be charged even for home manufactures, goods not imported, and the government added what it had to pay to national expenses, and the people had to pay it all.

That power is just as merciless and as exacting today as it was then, and it is making the same fight on the present currency bill that it did on the legal tender bill of 1862. The pending bill, however, does not create money. The reserve notes provided for are not to be a legal tender in the payment of private debts, but they are to be receivable for all public dues, and the bill provides that they "should be redeemed in gold or lawful money on demand at the treasury department of the United States, in the city of Washington, District of Columbia, or at any federal reserve bank." But they are government issues and not private bank issues, and the government controls the amount to be issued instead of the money power. We are not arguing for the bill nor against it. There are many important details that the Congress and the President must decide. But the principal opponent of the bill is the money power, and in their opposition they are appealing to old-time prejudices, and they are perverting the truth even in that. Our purpose in writing thus is that our readers may understand these things, and, without prejudice, reach their conclusions as to the pending measure.

Farmers Can Stand It

FARMERS have demonstrated their ability to live in spite of unfavorable conditions or actual misfortunes. The closing year has been one of unprecedented reverses. The Department at Washington has done its best to minimize the failure or shortness of crops, but its own reports show that a more disastrous year seldom came to the farms of the United States. In certain localities 1881 is referred to as equally bad, but it was not. That year was bad in places, and possibly as great local failures in some crops as this year, but in 1913 the good crops are decidedly local and exceptional, while the reduced yields and failures extend all over the country. Taking the country over, the wheat crop was fair, but everything else is away below normal. Such a scarcity of seasonable garden products was never known, and there are places in the corn belt where good and ordinarily successful farmers must buy their corn supply where such a thing as that was never known before. And many other things farmers are accustomed to have in abundance they must buy or do without.

Yet in all these reverses the farmers are confident and cheerful, and are ready, as wood choppers say, to "spit on their hands and try it again." A large acreage of winter wheat has been sown, and as a rule it was put in in good condition and is looking well. Also in many of the best hay-producing sections large areas of grass have been sown, and so far that, too, promises well. Farmers may be knocked down, but they won't stay there. They are accustomed to overcoming difficulties and they have learned to be always ready for them.

But there are those who will suffer more because of the calamities of this year than the farmers will. Trade will be light. It is not necessary to enumerate the classes of business that will suffer from that condition. And freight traffic will be reduced from both ends of the line and that will seriously affect the carrying trade. We scarcely know whether to mention the consumers of farm products, though it would seem that class would be the first to name as sufferers. But under the present monstrosity of a marketing system we do not know. These supplies are so absolutely controlled by profit grabbers that, whether crops are good or bad, the supply is only what the speculating storers choose to make it, and there is perhaps enough now to supply the demand as they usually supply it. It depends upon them.

Some things, however, are proved by the year's crop of failures. One is that farmers can stand much and yet live. This ought to have been known before. Otherwise they could not stand the present marketing system that is entirely against them from a business standpoint. Another is that business generally depends upon the farmers. When their resources are crippled trade is crippled. We need not specialize further. Everybody is interested in a prosperous agriculture, and everybody should aid the farmers in any movement that is calculated to bring them what belongs to them and thus add to their prosperity.

Others Co-operate

IN AN INTERIOR CITY of southern Illinois, located in a productive agricultural section, we notice the announcement of a lecture by a Chicago member of the retail merchants' association of the state on "the necessity of co-operation among retail merchants in all branches of trade."

There is nothing unusual in such an announcement or in such a lecture, but there may be a lesson in it for farmers. The retail merchants of that city co-operate. They are aided in doing so by the retail merchants' co-operative association of the state. Their organized co-operation does not include one or two commodities, or one or two lines of trade, but it extends to "all branches of trade."

The farmers surrounding that city live upon the products of their farms. If they have any profits or obtain money to meet their expenses, or to buy things they must have but that they do not produce, it must come in the price received for what they have for sale. This stuff they must sell largely to these same retail merchants, and what they buy they must almost necessarily buy from them. These retail merchants co-operate with each other in the city, so located in the midst of the farmers, and with the other retail merchants of the entire state, including those of the great city of Chicago. When the farmers buy or sell, these merchants, so co-operating with each other, make prices—the prices at which the farmers must sell their own stuff and the prices the farmers must pay for what they buy.

In the midst of this strangely one-sided condition what are the farmers doing? With whom are they co-operating? As a rule each farmer "paddles his own canoe." He does not co-operate with aybody. He hauls or drives from his home things that are absolutely his own, and, without the least regard for what others are doing, he sells them at whatever price is offered him. Once in a while the producers of a certain commodity in a special locality make a rather indefinite arrangement for the selling of that certain commodity. Such arrangement, imperfect as it is, is always beneficial, but that is not the way the merchants do. They co-operate in the whole town or city, with those of all the other towns and cities, and not in one only, but in all branches of trade.

In the name of common sense, why will not the farmers learn the lesson? As it is, the whole business of trade, of buying and selling, is absolutely one-sided so far as the farmers are concerned. And yet the farmers COULD unite, and COULD co-operate all over the country, in the handling of not one commodity only, but in the handling of all marketing commodities the farms produce. This would make them complete masters of the situation and enable them to establish a system of marketing that would cut out graft, concentration and delay, and benefit the whole world. The speediest way to do it, and the most sensible way, is for all the present farm organizations to federate on these great special purposes, and put them in operation at once.

Land and Bonds

PROPOSITIONS are often made in government affairs of the effect of which the people need to be warned. The most deceptive one that has been presented for many years is variously discussed as "rural credits," "farm loan banks," "mortgage bonds," etc. Whatever form this takes it ends with a scheme for the issue of marketable bonds on land, the farms and homes of the people. We are sorry to say this scheme is advocated by papers otherwise devoted to the welfare and progress of agriculture. We quote the following from a prominent November magazine:

> But to complete the job of financial reform is needed an adequate method of farm finance. The new law required to provide this need may be the first important act of Congress at its regular session, which begins with December. It must enable farm bonds to vie with government bonds, so as to insure safety to investors and reasonable rates to borrowers.

As we have said, this is a most seductive proposition. Most people would like to have more money, and proposals to make it easy for them to get money on long time at a low rate of interest are attractive, and were it possibe to do so many farmers would contract such debts that would otherwise remain free from debt and yet be just about as prosperous.

But that is not the worst feature of this proposition. There never before was anything proposed so dangerous to the independent homes of the people of the United States as the issuing of marketable bonds based on those homes. Every bond is a lien upon that on which it is issued, and the owners of those bonds would have liens upon the lands and homes upon which they were issued. The bonds, being marketable, would be bought up by the financiers and financial institutions of the country that now control almost everything but the farms, and soon the farms would be thus owned as the railroads, manufacturing concerns and other industrial institutions are now owned. Make the land bonds "vie with government bonds," and soon such a thing as an independent home owned by its occupant, a free and independent American citizen, would be a thing unknown. The American people would not surrender their independence. They would fight through rivers of blood first. But they may be induced to sell it for money borrowed at a low rate of interest.

We All Can Help

PARTLY our condition of life depends upon our own effort as individuals and partly upon the conditions under which we live. There are many things we can do alone that will be to our advantage, but the degree of success we win must be governed more or less by conditions which are the result of what others do. For instance, we may use the split-log road drag on the road passing our own farms, yet if all our neighbors on the way to town neglect the roadway as it passes their farms we must travel bad roads, in spite of our own efforts. There are general conditions which wield a telling influence over our lives and efforts which we alone can not change, but can only help. Some of these conditions are bad for us. They can be made better only by our doing something to make them better, and as they are the result of neglect on the part of the people the obvious thing for us to do is to help arouse our neighbors to their opportunities and duties.

Every reader of UP-TO-DATE FARMING can help in this work of bettering general conditions. For one thing, attend the farmers' institute. If you get just one new idea it will be worth while, but that is not the important thing. You should lend your support by your presence to every movement calculated to bring about a better condition. Be on the ground. It will help.

Read your papers, for another thing, and when you come across an article of particular interest remember that it should also be of particular interest to your neighbors, who may not take the paper, or may not notice the article particularly. If it contains an idea or a suggestion to better any condition by which you are affected, make it a point to talk it over with a neighbor or two. If farmers would but get the habit of talking things over with each other many a bad condition would be made better.

Last, but not least (and this is something every one of you can do), whenever you see in any of your papers a request by the publisher for information of any character, take time to give it, and do it at once. When you are asked for an experience or an opinion, give it. There is a big purpose behind those requests—a purpose which will result in making some condition, somewhere, better for YOU.

Little things these may be, but only by doing the little things can great rewards be won.

More Production Education

DISPATCHES from Washington tell us that plans are under way for the establishment of practical demonstration farms on each government reclamation project. The plan is to secure the services of experienced irrigation farmers and locate them on the several government projects with a view to having them instruct settlers as to the use of irrigation water, the kind of crops to put out and how to cultivate the soil. Two of the government departments are to co-operate in this matter, and the details are to be worked out as soon as possible.

The thing that strikes us most forcibly in this scheme is that nothing is said of the existing supply or of an unsatisfied demand. It is a notorious fact that last year in this western region millions of bushels of potatoes and millions of boxes of apples went to waste in the orchards and fields because they could not be gathered and marketed at the prices offered. How can this scheme of increasing production work a benefit to either producers or consumers unless there is a better marketing system? Yet we have not a word in all this plan about demand, or marketing, or price. It is but a repetition of these schemes all over the country. All is for production, with not a word on the main element of successful farming—marketing and price.

Truth in Advertising

In looking forward to the future we must do our utmost to establish truth in the advertising in UP-TO-DATE FARMING.

To constantly increase the advertising in UP-TO-DATE FARMING, advertisers must find it profitable.

To make it pay the advertiser we must have your confidence.

To obtain your confidence the publisher of UP-TO-DATE FARMING must prove that there is truth in the advertisements in its columns.

That there is truth in the advertising in the columns is proven to you by our guarantee below.

By responding to the advertising in UP-TO-DATE FARMING the reader, the advertiser and the publisher will be benefited by the improvements that are made possible and the paper will become a greater power for truth and co-operation.

The proof of the pudding is in the eating of it.

Try it, reader, and buy your needs from UP-TO-DATE FARMING advertisers.

A. H. Ludwig.

In the Advertising Department

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

Canadian Government Builds Grain Elevators

THE GRAIN GROWERS of Canada have long been dissatisfied with the service given them by the great terminal and storage elevators of the Dominion. As far back as 1895 the government of Canada took an active interest in the matter, building a federal elevator at St. John, Nova Scotia, in that year and completed another at Halifax, Newfoundland, three years later.

Beginning in 1910, the Canadian farmers brought their government face to face with the proposition to buy or lease and take over all the terminal elevators then in operation in western Canada, and construct additional ones when and where needed. The grain growers' organizations associated themselves together to present the matter to the parliament at Ottawa and in this they were supported by the Dominion Millers' Association, representing about 300 flouring mills. A grain bill with such a provision was introduced in the parliament and found favor with both parties, but for political reasons failed of passage. In 1912, however, the government contracted for an elevator at Port Arthur to cost $1,179,500, and by the first of this month (December) it is expected that the three great railway companies—the Canadian Pacific, the Canadian Northern and the Grand Trunk Pacific—will be delivering wheat by the train load to the first government elevator at the head of navigation.

The combined power of the farmers, when properly organized and directed, is invincible. One object lesson after another must show results in time. Our own farmers have opportunities greater than any others, and should give heed to them.

Mr. Dooley and Thanksgiving

"Mr. Dooley, have yez a thankful harrt?"

"I have that, Hinnissy. Me harrt is in th' roight place, avin if me fate don't track. Th' grattytood comes wellin' oop in me manly chist whin I see th' poonkin pie an' th' cranberry sauce an' th' smashed petaytes an' th' proud burrd uv our Pilgrim forefathers shtandin' on th' Thanksgivin' tayble."

"Pilgrim forefathers on th' tayble?"

"No, ye doomy, th' royal burrd iv Parrydise with a gobble in his neck! Th' only thing th' Pilgrim forefathers ivir shtood on wus th' deck whin they stayed opp all night playin' sollytaire. Hinnissy, yer flinty harrt would a bin milted loike molasses candy if ye could a seen th' widdy Donovan a-settin' in her neat little dinin' room a-trimmin' th' droomshticks uv th' royal burrd, an' th' roses a-bloomin' on her cheeks."

"Mr. Dooley, ye're paintin' a hivinly pickchoor. Did ye see it with yer own eyes?"

"I did that, Hinnissy, an' th' widdy took me into her confidence an' told me that iv'rything on her tayble that wus worth atin' come frum her little fahrm. Hinnissy, I've come to th' conclushun that th' mon that can bring th' fahrm to his back door is th' one that gets th' shquare male. Th' trooble is, Hinnissy, whiniver th' av'rage sittyzin shtudies th' markit quotashuns an' th' rivvylooshuns in Toorkey an' thin counts his pinnies, what does he do, Hinnissy? Instead uv askin' fer a piece uv th' dark mate an' dressin' he buys himsilf a chew uv black tobaccy an' lets it go at that.

"That's th' condishun at th' prisint toime in Amerryca, an' it's all because th' projoocer is shortsighted an' don't ahrganize to git his full share uv th' profits. Th' consoomer in th' city shtands around loike a blockhead an' can't think fer himsilf. Th' man with th' hoe an' th' pertayte digger ought to make frinds with th' man with th' appytite an' th' markit baskit, but they nivir git within gunshot uv wan anither."

"What's th' rimidy, Mister Dooley?"

"Co-operashun."

"An' if that fails?"

"But it can't fail, Hinnissy, if ye have a widdy on th' shtring an' a toorkey on th' tayble."

Things In Store For Our Readers

(Continued From Page 2)

greatest need is a marketing reform? The quotations given came from men who know the facts, men of great intelligence and broad experience. Can you, then, in face of all ths, and in the face of the facts you do know to be facts, say the marketing problem is not an important problem? You can not.

The question is, will you help in the solution? You can do this, as surely as you can improve your farm or your stock. You can do it only by working with those who are striving to establish reforms in the marketing system.

Probably the greatest force today engaged in this work is the Farmers' Society of Equity. It holds its annual convention on the 16th of this month. At this convention plans will be constructed for pushing the work forward in every agricultural community, and men will be chosen to carry those plans to successful completion. This convention is probably the most important event in agriculture of this year. You will want to know all about it, for it is important to you that you should know. The report will be given in the issue of January 1st.

* * *

Farmers, great things are in store for you as soon as you put yourselves in position to make use of them. UP-TO-DATE FARMING will bring them to you. THE EDITORS.

Smile Awhile

Rather Reserved

"Sis, your new company does not seem to be much of a conversationalist."

"No, he differs from most of you young men. He won't talk on any subject unless he knows something about it."

Too Quick for That

Doctor—You seem to be quite run down.

Patient—Not a bit of it, doctor. I never yet saw an auto that I couldn't dodge.

No Results

Traveler (waiting for train)—This is a rather slow road, isn't it?

Station Loafer—I should say it is. There has been nobody killed on it for ten years.

More Than That

"I believe everybody should own his home, don't you?"

"Yes, and as many other people's as possible."

Didn't Have To

"Must I take this train to Boston?"

"Oh, no, sir. If you wish to go to Boston all you have to do is to get in a car. The engineer will take the train."

Never Enough

"Yes, they've knocked the saloons out of this town. But I don't care. I can get all I want by shippin' it in."

"Then what are you kicking about?"

"Because when I gets all I wants then I wants some more."

No Need of It

"The officers say your dog license has expired and you refuse to renew it."

"That's a fact, judge; I——"

"Then I must fine you according to law. Your license expired October 1."

"Yes, judge, and so did my dog."

What He Learned

"I understand your son is back from college. What is he doing?"

"Nothing. And he's learned more ways to do it than you ever heard of."

Successful in That

"Is this Miss Agelike really trying to reduce weight?"

"No, but she is reducing her age."

"How can she do that?"

"By lying."

Made Himself

"Yes," said the candidate in the midst of a flow of oratory, "I am a self-made man. My father was a farmer and raised hogs, and there was a large family of us." He is wondering yet what the crowd was laughing at.

OUR MARKET REVIEW

Semi-Monthly Review of Crops Markets and Trade

BRADSTREET'S review of trade generally, on November 22, was as follows:

Quieter. Warm weather checks retail trade. Jobbing trade fair to good. Reorder and quick delivery buying features. Holiday business expanding. Wholesale trade quiet. Conservatism evident. Industry irregular. Metal trades quieter. Textile lines, except woolens, active. Latter wait for free wool. Winter wheat prospects excellent. Wheat and corn exports large. Securities stagnant. Clearings large outside of New York. Failures numerous.

The November government crop estimates, compared with the final estimates of last year, follow:

Corn, 2,463,017,000 bushels, compared with 1912, 3,124,746,000 bushels. Wheat, 753,233,000 bushels; 1912, 730,267,000 bushels. Oats, 1,122,139,000 bushels; 1912, 1,418,337,000 bushels. Rye, 34,789,000 bushels; 1912, 35,664,000 bushels. Buckwheat, 14,455,000 bushels; 1912, 19,249,000 bushels. Flax seed, 19,234,000 bushels; 1912, 28,073,000 bushels. Barley, 113,300,000 bushels; 1913, 233,824,000 bushels. Tobacco, 903,875,000 pounds; 1912, 962,855,000 pounds. Hay, 63,460,000 tons; 1912, 72,691,000 tons.

The winter wheat acreage is reported by the government to be 36,000,000, against 32,387,000 acres last year and 33,215,000 the year before. The condition is excellent. The visible supply of wheat shows a further large increase. Price is generally a little higher than two weeks before, the sustaining factors being the good foreign demand and damage reports to the growing Argentine crop.

Corn is in an exceedingly strong position, which is justified by the short crop and is possible to maintain as long as the visible

supply is kept small as at present. The quality is excellent, being reported at 95.5 per cent average for the country.

Oats—The great visible supply and the low price speak for themselves. This case is respectfully referred to the greater crop doctors, for oats are very sick.

Cotton—Ginning reports seem to raise the estimate of this year's crop. Prices are working lower.

Potatoes—Receipts are ample to meet demands. Some people say they would be larger if cars were available. Eastern ports have received considerable quantities of foreign potatoes, chiefly from the Netherlands. This was unexpected by us, as the disease embargo we understood barred all European potatoes. Some foreign eggs are reported received, and butter from Russia and Austria. The agricultural business will surely work to a world's basis, when the American farmer will be a competitor with cheap foreign labor, living oftentimes under excessively cheap conditions, with only our superior machines and, we hope, superior intelligence to fall back on, and as the only way to keep from going on a par for living with farmers in Argentina and Russia.

Advice

Wheat—Hold for higher prices or feed it in preference to corn. Corn—Market gradually at 55c or better from the field. A good crib price to hold for is 75c. Oats—Hold or feed to live stock. Cotton—Hold for 14c basis Middling, New York. Hay—Market gradually. Broom Corn—Market gradually. We look for higher prices. Beans—In view of short food crops, beans should go higher. Apples—Ask a good price for good stock.

For further advice about marketing address Market Director, Farmers' Society of Equity, Indianapolis, Ind.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on Nov. 15, 1913, with comparisons, are shown in the following table. (The sign — before figures means decrease, X means increase.)

	Nov. 15, 1913 Bushels	Change from 2 wks. before Bushels	Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
WHEAT	67,813,000	X 5,247,000	X 6,344,000	X 9,496,000	— 6,852,000
CORN	4,953,000	—2,691,000	— 807,000	X 2,300,000	X 2,499,000
OATS	37,116,000	X 68,000	X 3,981,000	X 344,000	X 11,105,000
BARLEY	7,118,000	X 66,000	X 350,000	X 808,000	X 2,095,000

The visible supply of wheat in Canada on the same date was 49,188,000 bushels. This is 7,219,000 bushels more than two weeks before and 10,545,000 bushels more than a year before. The visible supply of oats was 9,266,000 bushels on the same date, which is 1,087,000 bushels more than two weeks before and is 5,719,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Nov. 22, two weeks before and a year before as follows:

WHEAT, No. 2 RED	Nov. 22	Two weeks before	A year before
Chicago	91 @96	94¼@95¼	1.02
St. Louis	90 @94	93 @94	1.03
Kansas City	86½@87½	89½@90½	.98
Cincinnati	95½@97	95 @96	1.06
New York	97½@99	97 @98	1.06

Minneapolis—Spring wheat—No. 1 hard, 86c; No. 1 northern, 84@85½c. Two weeks before, 85¼c and 83¾@85¼c respectively. A year before, 83¾c and 81¾@83¾c respectively.

CORN, No. 2 WHITE			
Chicago	74½@75	72¼@72½	54
St. Louis	76	74½	54
Kansas City	71 @75	75½	46
Cincinnati	75½@76	77 @77⅞	55
New York	*82½	80	53½

*Yellow corn.

OATS, No. 2 WHITE			
Chicago	39½@39¾	41½	32½
St. Louis	42½	42	33½
Kansas City	40½	41	33½
Cincinnati	41¾	41 @42½	36½
New York	.....	.....	....

Future Grain Prices

Chicago grain futures closed on Nov. 22, 1913, and two weeks before, as follows:

WHEAT—December, 86¼c; May, 90½c. Two weeks before, 85⅛c and 90⅛c respectively.

CORN—December, 70¼c; May, 70⅜c. Two weeks before, 69½c and 70½c respectively.

OATS—December, 38c; May, 41⅞c. Two weeks before, 38⅜c and 39¼c respectively.

Winnipeg, Canada—Spring wheat closed: December, 82⅜c; May, 89c.

Cotton

New York, Nov. 22.—Cash cotton closed as follows: Middling uplands, 13.50c; middling gulf, 13.75c. Two weeks before the close was 50c a cwt. higher. A year before, 12.55c and 12.88c respectively.

Chicago Produce Market

Chicago, Nov. 21, 1913.

Chicago quotations are used in report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets and all late markets and advice about marketing address the Farmers' Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week.	Last week.	Last year.
Monday	65	70	115
Tuesday	55	30	40
Wednesday	60	45	45
Thursday	50	35	40
Friday	45	55	50
Total, 5 days	275	235	290

The market was quiet and steady at Thursday's decline. The demand continued of small volume and indifferent character. Receipts were moderate, but there appeared to be plenty around, and the market was not cleaning up satisfactorily.

Sales reported were: Per bushel, Wisconsin round white in bulk, 4 cars at 65c, 2 cars at 67c, 2 cars at 68c, 1 car fancy at 70c. In sacks, 3 cars at 65c, 2 cars at 66c, 2 cars at 67c, 2 cars at 68c.

Per bushel, Wisconsin round white, bulk or sacked	$ .60@ .68
Fancy a shade over.	
Michigan	.60@ .68
Frosted stock, from any place, depending on condition	.55@ .60
Idaho Russets, fancy	1.25
Oregon Pearls, choice to fancy	.90@1.00

The price is 5c a bushel lower than two weeks before. A year before the price was 20c a bushel lower. Attention is called to the high prices paid for fancy Idaho and Oregon potatoes.

SWEET POTATOES—Rule steady to firm for choice stock. Buyers are taking the choice, but common, and there are some of that kind, are slow. Some Illinois show rot. Retailers can use only nice appearing stock.

Barrels, Illinois, common, rough, showing rot to good stock	$1.50@3.00
Virginias	1.50@1.60
Hampers, Delaware, good	.85
Kiln dried	1.00@1.10
Jersey, kiln dried	1.15@1.25
Illinois, when good	.75@ .85
No. 2, or showing rot, down to	.25@ .35

Southern sweets, 70@75c a hamper in southwestern markets. Not much call for them in northern markets yet.

BEANS—Market quotably steady. Open market offerings do not amount to anything. Salable as follows:

Pea Beans—	
Hand picked, choice	$2.15
Common	1.75@2.00
Mediums nominally about same as pea beans.	
Red Kidneys, choice	2.80
Brown Swedish, long	1.75@2.00
Round	2.00@2.25

The price of pea beans is a shade lower than two weeks before. Red kidneys 20@30c lower. Others are unchanged. A year before choice pea beans were quoted at $2.55@2.65.

BROOM CORN—There are only small arrivals. Corn in stock is firmly held. Sales continue just moderate.

Per ton, Illinois corn	$150@160
Oklahoma	110@160

The prices are unchanged from two weeks before. A year before Illinois corn was $20 a ton lower and Oklahoma $50@60 a ton lower.

EGGS—The receipts at Chicago (not including through shipment) for the days mentioned were as follows:

	This week. Cases.	Last week. Cases.	Last year. Cases.
Monday	2,732	3,675	2,038
Tuesday	2,939	3,760	3,031
Wednesday	4,167	3,690	2,429
Thursday	2,311	2,627	2,669
Friday	4,340	3,705	2,236
Totals	16,489	17,457	12,403

A steady feeling exists at the current quotations.

Ordinary Firsts quotable at 31@33c.

Firsts quotably 34@35c. To bring quoted prices eggs must run largely to new-laid eggs, with not over 24 eggs loss t othe case.

Checks—In good supply and in good demand. Quotable 21@23c per dozen.

Dirties—In good supply and in fair request. Quotable at 22@25c, depending on qualit.

Refrigerator eggs are quotably easier. Demand f[air] and offerings liberal. April Firsts quotably 27½@27¾c. Extras quotable at 28@28½c.

Fruit

APPLES—Warm weather is having a somewhat unfavorable influence on the apple trade. It has caused the demand to slacken somewhat. Prices are not affected. There are no receipts to speak of and stock is taken from coolers only as wanted for the trade.

PEARS—There is only a light business doing. Offerings confined to Keiffers, and most of these are now, ripe, some soft, not desirable.

Good Roads

Road Advocate—How long does it take you to get your goods to market?

Woods Native—About three days.

R. A.—Now, you see, if we had good roads you could do that in a day.

W. N.—But what could I do then with the other two days?

What's to be Done With the Corn Crop?

(*EDITORS' NOTE*—In our issue of November 1 we called attention to the peculiar situation in regard to corn. The price has been high and prospects are for it to go considerably higher in the spring and early summer. Prices on finished cattle and hogs are below last year's prices at corresponding dates. A change in the tariff on grain and meats brings another new element into consideration. Still another disturbing factor is the proposed new grades of commercial corn. The most profitable disposition of the corn crop is a puzzle. We invited our subscribers to contribute their views and inform the readers of UP-TO-DATE FARMING what course they would pursue in the marketing of their corn. The two prize-winning articles are printed below.—Editors.)

A Missourian Gives His Plan in Detail

(Awarded First Prize of $5)

I noted your request for contributions from your subscribers to help in the solution of the corn crop's disposal. In my opinion there can be no solution that does not take into consideration the local conditions affecting the individual farmer, and the environments in which he finds himself. The individual, of course, can not arrive at a safe conclusion unless he takes into consideration not only all the peculiar factors which only affect him as an individual, but also the determining elements of general market conditions. The only solution I can offer, therefore, is for my own individual problem alone.

I have a farm of 240 acres, and this year had 75 acres in corn, 25 acres in timothy and clover, 40 acres of oats, 30 acres in pasture, 12 acres of alfalfa, 24 acres in wheat and the balance in woodland, house and barn grounds, etc. I have twenty head of milking shorthorns (selling butter fat at a creamery), seventy-five fattening hogs, thirty-four steers, mostly of my own raising (yearlings and two-year-olds), and my work horses. Twenty acres of my corn went into my silos for the milk cows. I am not done husking corn, but can estimate that I will have 2,200 bushels of corn in my cribs when all done. That corn is worth, market price, 56 cents a bushel, or a total of $1,232. By keeping until January I may be able to get a better figure, and still better later on. Giving myself the benefit of the doubt, say 75 cents for it next June. By that time there will have been considerable shrinkage. Insurance will cost something, for I keep my stock and grain insured. Hauling in the busy season would be an expense. Considering all, and taking things one year with another, I would judge 56 cents cash, now, fully equal to 65 cents in March, or 75 cents in June. So with me the problem is, shall I sell now, or feed?

I shall feed.

First, because the general drought and shortage of foodstuffs for cattle has sent in heavy supplies of cattle to market, and prices are already depressed. There is a known shortage in the country, and while packers are stocked up heavily now, in a few months they will be sending prices up to get supplies. Then will be my time to sell. I have the cattle on hand, but if I had none, and could buy feeders of good quality for 6½ or 7 cents, I would buy enough to consume the major part of my corn by May 1.

I will sell twenty-five of my heaviest hogs, including old sows, at once. It does not pay to feed even 40-cent corn to heavy hogs already fairly fat, at present or even higher prices for pork. The gain is not enough to justify. I will have, therefore, about fifty head of young hogs which I will feed. I will put a bunch of them behind the cattle and feed out the rest in the feed lot.

I figure that with corn at 56 cents I will make pork at 5½ cents a pound and by the time I am ready to sell I expect 7 cents for my hogs. The lot fed I will sell in January or February. The lot running with the cattle I will keep until the cattle are sold.

Five hundred bushels will take care of my hogs and if I realize 7 cents I will receive at least 60 cents a bushel for my corn fed to the hogs, in addition to their manure, which is an item in my system of farming.

My eighteen two-year-old steers will consume about thirty bushels of corn each, a little more or less according to time fed. They will receive hay and corn fodder as roughage. The yearlings will receive the same roughage and will consume about twenty-three bushels of corn per head. Altogether I expect to feed 1,200 bushels of corn to my cattle by April 1, and to sell then or soon thereafter. The balance of my corn, with my oats, pasture, alfalfa, silage, wheat bran, etc., will carry my other stock and leave me some old corn. Not much, but I do not want much. Every bushel I feed my two-year-olds ought to make me nine pounds of beef, and if I sell, as I expect to, for 6 cents net, I will net 63 cents for the corn they consume, in addition to the manure. The yearlings I will keep to get the cheap gains on pasturage.

With a long experience in feeding cattle, a careful record of each crop, its price, of steers and their prices and gains, a system of keeping records that tell me first what each crop has done, I am able to know what my steers and hogs can be expected to do with the feed I give them. The market I must take a gamble on, but I do not anticipate low prices for next spring. I am in position to keep my cattle for several weeks longer than I intend, and I will not, if I can help it, ship on a falling market.

The reader can see why I, for one, will feed the 1913 corn crop.—W. O. B., Missouri.

The Man With Stock Should Feed

(Awarded Second Prize of $2.50)

We have had out on our farm for this season about 100 acres of corn. Of this, about 25 acres were planted early on bottom land and averaged 25 bushels to the acre. Another 25 acres averaged 12 bushels to the acre, and the remaining 50 acres, planted latest, made about 5 bushels to the acre. (The drouth caused these low yields.) In all we will get not over 1,200 bushels of corn. In figuring the expense, including feed for teams, rent for the land and all incidental expenses connected therewith to get the corn in the crib, it costs not less than $10 an acre, which makes the corn for this season cost us about 85 cents per hundredweight.

What to do with our corn crop to get back what we have already invested in it is puzzling me, as it must hundreds of other farmers, as nearly all must skimp along to get their stock through the winter and make another crop. As for myself, I shall do as I always have done with my corn crop, though it has looked for several years to be throwing down a dollar and picking up "six bits." I cut up all of my corn and feed it, mostly to cattle and hogs of my own raising. About fifty head of cattle and horses will consume all the cheap roughage that I raise, so I keep about that number, selling the surplus each year as the young stock comes on. I do not veal any calves, but keep them till they get about two years old. Corn-fed cattle is out of the question here. A calf will "eat his head off" the first year of his life if given enough corn to keep him in good growing condition. This is the main cause of the shortage in beef cattle at the present time. Almost everybody has quit the business. The feeder can no longer get stock at 3 and 4 cents a pound when they cost the grower 7 cents a pound to grow them. so the farmers veal calves in preference to raising them at a loss.

But with the dispensing with the live stock comes another problem: The fertility of the soil, which is of more importance to me than the extra profits I might make in selling the corn crop direct instead of feeding it. Whenever the weather is dry I feed my stock in the fields, each feed in a new place, so I get the manure scattered. Following this has improved and enriched my land so I get better crops each year if drouth does not interfere.

I was fortunate to have enough corn to fatten my old hogs and get them off in September. About twenty-five pigs is all I will try to get through the winter. The price of corn will likely be $1 per bushel next spring, so there will not be any money in feeding hogs for less than 10 or 11 cents per pound on foot, and the same may be said of good prime cattle.

Nothing will ever get this country's supply of meat up to the requirements except a better price to the growers of live stock. This matter should immediately be taken up directly with the packers and arrangements made for a scale of prices for a certain period of years. In my opinion this is the only business proposition to prevent further scarcity so far as it concerns live stock.—C. F. Schneider, Walnut Hill, Ill.

Feeds Cattle for the Land's Sake

It is my intention to feed my 1913 corn crop to cattle and hogs. I have been a feeder for twelve years and have obtained from 50 cents to $1.50 per bushel for corn fed. I expect to realize 60 cents for my corn this year. The market is higher, it is true, and I believe if I were to crib my corn, dispose of my stock, spend the winter sitting by the fire reading UP-TO-DATE FARMING and put my corn on the cash market in the spring I would be able to realize a greater net profit on this crop than to feed it. Yet, for "the land's sake," you know, I prefer to feed. Moreover, there should be balance in the distribution. If every one would sell their stock now it would wholly demoralize prices on cattle and hogs. Then, in the spring, when everybody would be marketing corn, the heavy additions to the grain markets would cut down profits on the corn and loss would be sustained on both cattle and corn. By selling part and feeding part the farmers can maintain the equilibrium of both markets.

I raise my hogs, but buy my feeder cattle to consume the corn. I do not feed high-priced hay to cattle, as I have found good corn fodder and oat straw a much cheaper feed and the manurial recompense is as great.

My corn costs me around 35 cents a bushel to produce it. The market price at this time is 50 cents. I shall be well pleased if I obtain 60 cents by feeding, even though I could realize more by selling on the market. In the long run, considering everything, I consider 60 cents from feeding equal to 70 cents on the market.—S. M., Indiana.

Getting the Money for Corn

FARMERS grow corn for money. They may eat some of it, in the form of roasting ears, hominy, mush or corn bread, or more of it indirectly as pork, beef, eggs, milk, butter or chicken. The principal object, however, in raising a corn crop is to get money. It would seem that the farmer with corn in the field or crib would be vitally interested in how to obtain the most money possible for his crop.

Many farmers, of course, feed the corn to stock and sell the stock. This is a very good plan and is advisable wherever possible. Corn has its commercial uses and there will always be a demand for the grain which will preclude its ever being used exclusively for feeding purposes. There will always, therefore, be a very large amount of corn sold on the market.

In order to handle the business of buying and selling corn to best advantage, grain dealers in large central markets had devised certain "grades" for corn. These grades were not altogether satisfactory to all parties, so the government undertook to establish official grades for all kinds of corn, from the very best to the very poorest; name and describe each grade so every one who grows, handles or buys corn can know what class of corn he is dealing in, and its price or value. This creates certain standards that are to rule the corn trade, and therefore regulates the price to a certain extent. Prices for the different grades will vary according to the demand for those grades. The amount of money the corn grower who sells the grain on the market will receive depends upon the grade of corn he offers for sale. His interest in his profits should impel him to learn all about the grades and their comparative values, in order that he may so far as possible produce a grade which will make the crop most profitable. Every reader of this paper should read and reread the following classification of the new government grades—study them until each grade is fixed in the memory.

There are seven grades in all, classified as follows:

No. 1, which must not contain over 14 per cent moisture, 2 per cent damaged, 1 per cent foreign material and 2 per cent broken kernels.

No. 2 corn shall not contain more than 15.5 per cent moisture, 4 per cent damaged, 1 per cent foreign material and 3 per cent broken.

No. 3 corn shall not contain more than 17.5 per cent moisture, 6 per cent damaged, 2 per cent foreign material and 4 per cent broken.

No. 4 corn shall contain not more than 19.5 per cent moisture, 8 per cent damaged, 2 per cent foreign material and 4 per cent broken.

No. 5 is allowed 21.5 per cent moisture, 10 per cent damaged, 3 per cent foreign matter and 5 per cent broken.

No. 6 corn is given 23 per cent moisture, 15 per cent damaged, 5 per cent foreign material and 7 per cent broken.

All corn not described in the six grades shall be known as "sample" grade. All grades of white corn must be 98 per cent white. All grades of yellow corn must be 95 per cent yellow. "Mixed" corn includes all not up to color requirements of white and yellow standards.

The above grades were arranged by Dr. J. W. Duvel, an agent of the government in the Department of Agriculture, who has spent years in making a special study of corn. In formulating the grades Dr. Duvel visited all sections of the country, all the leading grain markets, and conferred with hundreds of farmers, grain dealers, millers and manufacturers of corn products.

The effect of all this preliminary work and the establishment of the grades means that the farmer who sells corn will no longer be paid on the basis of sales heretofore. His corn will be graded differently and paid for ac-

Our Country Contributors

Semi-Monthly Prize Letter Competition:

Subject: My Most Profitable Crop:

First Prize $3.00 Second Prize $2.00 Third Prize $1.00

Notice to Subscribers

This department is designed to induce subscribers to contribute accounts of their ideas and experiences. For the three best letters received each issue the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

COMMENT BY THE EDITOR

We are broadening our scope in this department and open the field to discussion on any subject that is of interest to our readers, whom we hope will vie with each other to make their own department the most interesting feature of this paper. We are not abandoning the most profitable crop feature. That is a topic upon which every farmer can supply us with a letter of interest to all. Every farmer raises crops, and one of them each year is more profitable than the other. We have an unusually good letter on this topic this issue, written by a South Missourian. It brings out the points that are worthy of consideration and record. As has been said before, the size of the crop, the amount of the profit or the weaving of words are not the object sought in these profitable crop letters, but it is to encourage our readers to compare and count costs and learn what others are doing and how they work to make farming pay.

Now, friends, let's to work and build up this department until it fairly exudes interest and enthusiasm and optimism, courage and determination in every line. Take the subject suggested in the heading as a topic and if you have some thoughts on some other subject not mentioned, send them along and they will receive the same consideration as any of the others. If any of you have suggestions for what you believe would be improvements in this department, or in the entire paper, we want them and will appreciate them to the utmost. We want every page of this paper to mean service to each reader.—The Country Contributors' Editor.

THE CROP THAT FAILED

(First Prize)

Strange as it may seem, the most profitable crop we raised while sojourning in the Ozarkian hills of southern Missouri was almost a total failure. Strange, but I think it is true.

At the beginning of Cleveland's second administration we left the drought-stricken prairies of central Nebraska and treked to the far-famed "land of the big red apple," of bountiful streams, of woodland, and also where "crops were never a total failure." Yet this crop I am writing of very narrowly missed being just that. We bought a farm, rather the worse for wear, with an orchard of nondescript character, and began preparing for crops. We were located in Oregon County, sixteen miles from a railroad. The country was fifty years behind the world's progress. It was so primitive that wildcat and panther tracks were occasionally seen in the mud about the spring of water that served the county seat as a town pump. The methods of farming were as primitive as the country and the natives. But there was some "method in their madness," for, on account of the rugged surface of the country, the stony soil, the small fields and the comparatively poor quality of the soil, improved methods of better favored lands were hardly practicable.

We grew corn, oats, wheat, sorghum and razor-backed hogs, which ran in the woods. Peaches, apples and berries were excellent, but lack of markets kept them from being profitable. Blackberries grew wild in greatest abundance—great, mammoth luscious fellows, sweet as honey. The berries and the hogs were the least expensive crops that grew, for they took care of themselves. A lack of a good market kept them from being profitable. Wheat in the county averaged eight bushels to the acre. It was sown by hand and cut with a cradle. Oats were a very poor crop as a rule. Too far south for northern oats, and too far north for winter oats to be a safe crop. Corn averaged about twenty bushels to the acre. Sorghum did better—did quite well indeed on new land. An acre of good cane would make 100 gallons of sorghum molasses and the quality was excellent. It sold at 40 cents per gallon by the barrel. Fertilizers and legumes were not used or their uses and value understood. We merely planted the seed, did the other work as the natives did and took what nature gave us. The climate and the water were fine.

We planted a field in corn. This field was of clay soil, very close and heavy. When ready for the first cultivation a few exceedingly heavy rains followed by hot suns packed and baked the soil until one horse could not pull the double shovel with which the corn was cultivated, if, indeed, the man could compel the shovels to enter the ground. So I hitched two horses to the double shovel, put on long, narrow shovels or "bull tongues," and by fairly riding the handles did a thorough job, loosening the soil as deep or deeper than it had been broken when plowed. That field of corn then grew with incredible rapidity, compared with corn on other farms which did not receive such treatment. It was the talk of the neighborhood and we were elated and vain over our success. Everything went well until the July drought. (It rains in that county every Fourth of July and then does not again rain until too late to do any good.) We soon saw our fine corn stopping in its growth. What did we do? We reasoned that if a good cultivation was medicine for small sick corn it ought to be as good for larger sick corn, so we put on the bull tongues and gave another deep, thorough cultivation. Result—that corn dried up, withered, shriveled and all but blew away. We had successfully amputated nearly every root by which the plant could obtain what little moisture it could have had. That crop was our most profitable crop. IT TAUGHT US WHAT NOT TO DO AND WHY.—South Missourian.

ODDS AND ENDS IN IDEAS

(Second Prize)

Your "profitable crop" idea is a good one. Yet I imagine there are plenty of your readers who, like myself, have other things of as much interest to them as their most profitable crop. At any rate, such is the case with me, and instead of writing about some particular crop I am going to contribute a few ideas concerning this, that and the other. If your rules are so hidebound and rigid these ideas can't break through into the Country Contributors department, then escort them to the waste basket, that cemetery for good intentions and forlorn hopes, and bury them.

Snow will shortly be flying, and then rabbits and mice go after the bark of young apple trees. A 10-cent rabbit can skin up several 50-cent trees in two hours. It is time right now to protect the trees. I make use of two methods, wrapping and painting, doing whichever comes most convenient at the time. Both methods are good. For wrapping I use old newspapers, building paper, window screen, laths or roofing paper. For a wash I use a thick lime whitewash mixed with sulphur and soot. The trees must be protected to a good height, for a hungry rabbit will get up on his hind legs and stand on his toes to reach a bite of bark. I've seen them at it.

Some people complain that they are unable to make fine-flavored butter of good texture, notwithstanding the fact they follow religiously all the laws, rules, regulations and tenets of righteous butter making. In some such cases the trouble may be found in the kind of food given the milking cows. Quality and kind of feed has a great influence over the quality and kind of product turned out, as I have found in my experience. The effect of the feed given shows a marked difference in the butter fat. A change, either in foodstuffs or in proportion of those in use, may correct the trouble. Those who have trouble with butter, either in churning or with the flavor, grain or consistency, may get a solution to their individual problems by sending a description of their trouble, and of their methods and materials in feeding, to the professor of dairy management at their state experiment station.

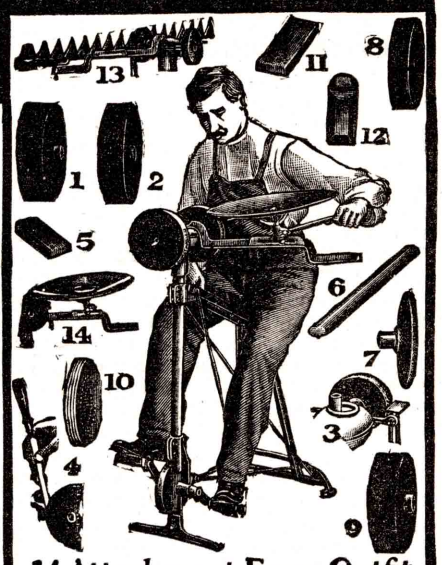
We use caustic potash on the sprouting horns of our calves, thereby nipping them in the bud. It costs but little, takes but little time and if properly done accomplishes the job to the queen's taste. Remove all the hair about the "button," close to the skin. Fasten the calf securely, for the operation causes bossy some pain, and he wouldn't hold still even though it did not. Put on an old pair of gloves to protect your hands. Moisten the end of the potash stick and then rub the prospective horn until the skin is white. Do not wet the potash too much or the water will run down the calf's head and cause unnecessary burns. One application, if done thoroughly, is sufficient, and one stick of potash, if kept tightly bottled when not in use, will pre-dehorn a number of calves.

I have never found anything to equal alfalfa and oats and corn as a fattener for lambs. Rape is good, and really makes cheaper gains. Pea hay is excellent. But for prime fattening qualities give me the alfalfa every time, for it not only puts on the fat, but induces rapid growth at the same time.

Plenty of cabbage in the winter and early spring is a good idea for the farmer's family. We put down a barrel of kraut, and then store a goodly amount of solid heads to have raw cabbage, slaw, boiled beef and cabbage when we so desire. Cabbage keeps best stored in trenches out of doors. Place them in the trenches head downward always.—J. C. B., North Carolina.

The Department of Agriculture crop reports are to be sent out by telegraph. If worth anything at all, these reports should be circulated immediately. That they are worth a great deal is not questioned. It is of great help to farmers everywhere to know all the time just how crops are progressing.—Journal of Agriculture. In just what way does such knowledge help the farmer, brother? To what profitable use does, or can, a farmer put such knowledge? The farmers, and UP-TO-DATE FARMING would like definite information on this point.

Sharpen your tools FREE on artificial diamond wheels



14 Attachment Farm Outfit

Sharpen your bluntest ax in three minutes, shape up your plow point in ten minutes, grind your sickles, ensilage knives, discs and all your tools in a few minutes without hard work—try this fast tool grinder with its wonderful artificial diamond wheels on your own tools for 30 days absolutely free. Send for free book from which you can select the outfit you like best and then, when you make a selection, I will send it on 30 days' free trial. Use it all you please for 30 days, and if you don't want to keep it, return it at my expense. No money needed.

C. J. LUTHER, Pres.

Luther Farm Tool Grinder

The DIMO-GRIT wheels on Luther Grinders are made of artificial diamond crystals made of the same elements as real diamonds, fused in the marvelously hot electrical furnaces that melt fire brick like butter. They cut steel 25 times faster than grindstones—ten times more efficiently than emery—will not draw temper from steel—no need of cooling with water. The Luther Farm Tool Grinder is built all of metal—has enclosed shaft drive like an automobile, dust-proof bearings—patent tool rests and attachments for grinding sickles, discs, etc.—does all farm grinding, plow points, cultivator blades, etc. Extra attachments transform this grinder into jig and rip saw, lathe, drill, forge, etc.

WRITE FOR FREE BOOK which tells an interesting story of this wonderful artificial diamond sharpening substance, gives pointers on tool sharpening and illustrates Luther Farm Tool Grinders. From this book you may choose any outfit on 30 days free trial, without paying any money in advance. Write today.

LUTHER GRINDER MFG. CO., 745 South Water Street, Milwaukee, Wis.

A TOMATO-RAISING PHILOSOPHER
(Third Prize)

We are all very anxious to raise the crop that gives us the greatest profit and costs the least to produce, and this crop varies in different localities. For instance, in some places potatoes are the staple and most profitable crop, while other places corn is the most profitable crop, but to make the most out of any crop there must be a certain amount of co-operation among the farmers of any section.

In this section of the country our farmers have made a grand success by co-operating and raising tomatoes for our canning factory. We got together several years ago and decided on building a cannery to take care of our surplus fruit.

We had a large canning factory erected and each farmer that had an interest in the factory agreed to raise a few acres of tomatoes each year.

The factory is now in its seventh year of successful operation and has each year declared a good dividend as well as paid the growers such good prices for their tomatoes that many of the farmers now depend principally upon the tomato crop for their livelihood and they are making and saving money in the tomato business.

This would have been impossible, though, unless we had co-operated and all worked together. I think when the farmers get the right principle of co-operation clearly before them (as you are trying to put it) they will do much better with their crops and produce, and I am hoping to see the day when you will have farmers' unions established in every county in the United States.—A. C., Kentucky.

HEAD LETTUCE AHEAD

A lady owning about seventeen acres of land made head lettuce her most profitable crop. On glancing over the market reports of a daily paper she noticed head lettuce was quoted at 50 cents per dozen. She then decided to grow and ship lettuce. She had a man do the heavy work, such as fertilizing and preparing the ground. Early in the fall she had it plowed again and made into narrow but rather high beds. In these beds she planted her seeds, using the Big Boston variety. She planted every third row and when the plants had three or four leaves she transplanted the rows left vacant. As soon as the weather began to get cool the plants grew very fast. Lettuce requires a cool, moist atmosphere and light, rich soil. She had these conditions and her lettuce grew rapidly. As soon as the heads began forming she looked around for the best market. After hearing from a number of commission houses she was offered $5.60 per sugar barrel of fourteen dozen heads. She packed and iced each barrel, carefully picking off all the decayed leaves, and shipped to cities where only hothouse lettuce could be grown in winter. Her first shipments netted her $4.20, commission, express, ice and barrels being about $1.40. Seed and labor cost her $3. Hoeing and transplanting she did herself. When her lettuce was sold she realized nearly $80.—Mrs. J. W., East Liverpool, O.

THE BEAUTIFUL, BOUNTIFUL CROP OF THE SOUTHLAND

My most profitable crop has been cotton, the beautiful crop of the sunny south. Many of the northern readers may be surprised to learn that UP-TO-DATE FARMING is a standby in many a home in Dixie, but it is. We will not bother you to read the details of our success with cotton, but we have raised it a number of years and have kept a record of the expense of growing and marketing and the net income per acre has been more than any other crop we have grown.

Cotton is a crop that must be kept free from weeds. It responds very quickly to cultivation. Cotton properly tended yields from one-half to more than a bale per acre.

A bale is about 500 pounds of lint. This amount of lint grows on 1,000 pounds of seed. Fifteen hundred pounds of "seed cotton," as it is called, is a bale. Just now it sells for about 4 cents a pound on the seed, or about $60 a bale. When open it looks like snow. It is a crop the children can help gather and it has been profitable to us.—Robin Gates, Oklahoma.

THE INDIAN RUNNERS COME OUT AHEAD

My most profitable crop has been Indian Runner ducks. About five years ago I purchased a pen of four ducks and one drake. The first year these ducks laid, from the 15th of February to the 10th of July, 225 eggs. I raised 125 ducklings, selling seventy of them at eight weeks of age, averaging four pounds each, some weighing over that, none less than three and one-half pounds. I received 11 cents per pound. Since then I have sold eggs and ducks at much more profit than the first year.—Mrs. Annie E. Kean, Kansas.

DAMPNESS AND DUCKS

I am an ardent reader of the poultry department in UP-TO-DATE FARMING, and with the editor's kind permission will relate an experience with ducks. When first starting to raise ducks, I lost many many ducklings, and in course of time I learned this loss was due to rheumatism and this disease was caused by dampness in the houses in which they were sheltered at night. Moisture is well enough for ducks when it is in the drinking fountain for them to drink, or in a river or pond for them to swim in, but if found in the floor or walls of their shelters even a little of it is dangerous.

Since making the discovery I have seen to it that the duck houses are kept dry, and have not lost a one. I make the coops with floors at least two inches above the ground, and see that the roof is perfectly water tight and will shed rain "like a duck's back."

Nothing is more detrimental to the health of ducks than dampness in the wrong place.—Robert S. Hewes, Loveland, O.

A CATTLEMAN'S PARADISE

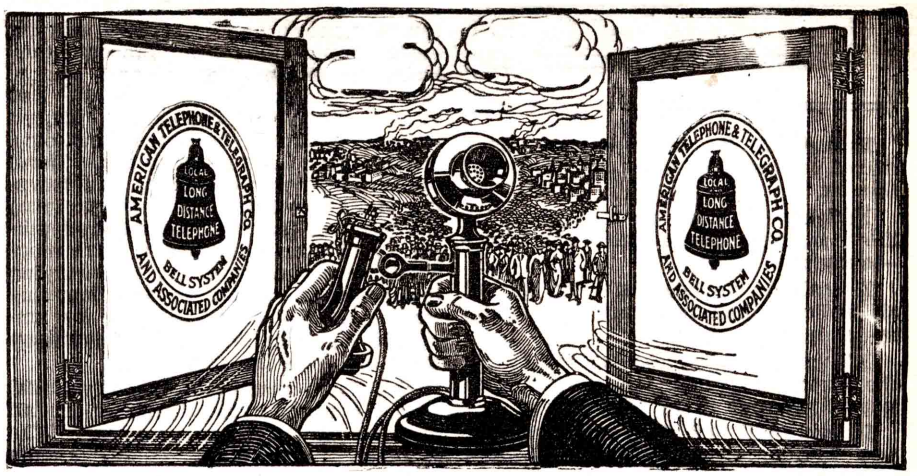
Stock raising is undoubtedly the greatest money-producing agricultural vocation in this corner of God's footstool. Two years ago we had a chance to purchase twenty head of cows, with ten calves, for $20 each for the cows, the calves thrown in to induce us to buy the cows, which we did. We now have sixty cows, worth $35 each, and buyers are offering us $31 for the calves, which will be a year old in the spring. We have been to no expense to feed the cattle, as we have a free, open range the year around, entirely sufficient to maintain them in thrifty condition. The only work necessary is to salt them at proper intervals. We kill our own beef, which would cost us 15 cents a pound if we had to buy it. We have all the milk we can use, and make some butter, which we sell at 40 cents per pound. A fat cow delivered to a local butcher will bring $50.

During the two years we have owned the cattle we have supported a family of three from the sale of the steer calves alone. Verily, where we live cattle raising is profitable.—Mrs. H. P. Barksdale, Fairview, Sierra County, New Mexico.

PROFITABLE CORN

Corn is my most profitable crop, made so by good seed selection. I select seed ears with great care. They must be full, round, cylindrical, perfectly filled at both butt and tip. Ears should be from 8½ to 10 inches long and the circumference three-quarters the length, with not less than sixteen rows. Kernels should measure about six to the inch in the row. Corn for seed should always be well matured, thoroughly dried, and then the germ will have vigor and vitality. Careful selection by this formula will develop a strong yield. Plow deep and thoroughly, keep out weeds, and the Lord and sun and rain will do the rest.

Of all papers I take, UP-TO-DATE FARMING is the most helpful.—L. R. Rust, Kentucky.



The Telephone Doors of the Nation

WHEN you lift the Bell Telephone receiver from the hook, the doors of the nation open for you.

Wherever you may be, a multitude is within reach of your voice. As easily as you talk across the room, you can send your thoughts and words, through the open doors of Bell Service, into near-by and far-off states and communities.

At any hour of the day or night, you can talk instantly, directly with whom you choose, one mile, or a hundred, or two thousand miles away.

This is possible because 7,500,000 telephones, in every part of our country, are connected and work together in the Bell System to promote the interests of the people within the community and beyond its limits.

It is the duty of the Bell System to make its service universal, giving to everyone the same privilege of talking anywhere at any time.

Because as the facilities for direct communication are extended, the people of our country are drawn closer together, and national welfare and contentment are promoted.

GETTING THE MONEY FOR CORN
(Continued From Page 7)

cording to the new system, which is devised to insure that the farmer gets all his corn is worth, and no more. In order to be sure of this the farmer must needs understand the grades, or he can be cheated by an ignorant, careless or dishonest dealer. If the average corn grower is to benefit by the new system, he must be careful in harvesting and grading his corn for market. Corn that is as good for feeding on the farm as the best market grades may be very inferior for shipping purposes because of its moisture content, and its "percentage of acidity." The new grades will make a premium on better corn and insure better care in marketing. The old system, by permitting wide latitude in determining grades, not only permitted shiftless farming, but encouraged it. The new system permits no such latitude and places a premium on careful grading, which, together with the penalty it imposes on careless mixing of grades, will make for better farming and better management all around.

The farmer who is going to receive the most money for his corn is the one who studies the grades and then does his utmost to produce the best corn he can produce, and to exercise care and judgment in grading and marketing.

The Department of Agriculture, according to Dr. Duvel, is to take upon itself the task of educating farmers and dealers in the new grades. Just how this is to be accomplished remains to be seen. It is a stupendous undertaking, yet with the co-operation of the dealers, county agricultural agents, farm institute workers, colleges of agriculture and experiment stations it can be very thoroughly done. At all stations where corn is brought in for shipment descriptions and samples of the grades should be shown, and the manner and method of making the tests and determining the grades should be demonstrated to farmers until the system is fully understood.

It rests wholly with the farmers themselves whether the new system will increase their profits or their troubles. Here again it is seen how much farmers need organization. With a farmers' elevator, operated by a competent manager, who is responsible only to the farmers, the new system could be made at once of great value to every grower of corn for the market.

Pastoral Paragraphs

Everything to its purpose—don't drive the wedge with the back of the ax.

Nothing is quite so important as the thing that needs doing right now—except doing it.

A coal scuttle beats a scoop shovel all hollow when it comes to sacking up grain from the bin.

It's late, but not too late to mulch the strawberry bed. It will be too late if you put it off any longer.

If you did not fix your icehouse, how unfortunate! If you did, take advantage of the first ice harvest.

If nations would only agree to get along without war, our army and navy appropriations would build all the good roads we need.

Does the wind whistle through the cracks in the cow barn? If so, you are throwing money to the winds. Batten the cracks.

"It is not possible to determine the quality of milk by its color," says the Wisconsin Farmer. Nevertheless, we prefer yellow to blue.

Keep the grindstone under shelter. Rain and sun affect even stone. Our clay soils were made by the action of sun and rain on rock.

When off for a trip to the city, or elsewhere, put your name and address on each and every article you carry with you which may become lost.

Corn is an easy crop to carry—provided it is in the crib and not in the bottle. Many a poor fellow has gone into the ditch because he tried to liquidate his corn crop by the wrong method.

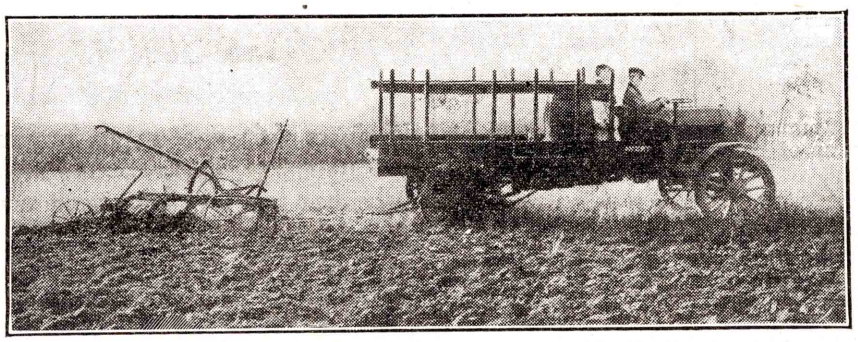
THE MANAGEMENT OF THE FARM

Running a farm successfully is no small undertaking. It requires willingness and ability to do a vast amount of hard physical labor. And that is not all. We know many farmers, one or two in particular, who work early and late—a little earlier and a little later than the average industrious farmer—and yet fail to accumulate as much property as the others who work with less industry, but to a better purpose. The speed with which a man moves, or the power he exerts in his back and arms, can not alone make a farmer prosperous. Management counts—management and muscle must go together.

We find farmers whose outward opportunities are to all purposes equal, yet success or failure attends their efforts in many varying degrees, all according to the management of their work. Each man is apparently doing the best he knows how. Evidently, then, some know of better methods than others, or are better posted in all the conditions that make for success or failure. This demonstrates the fact that every farmer should make an effort to learn as much as possible concerning methods, and to become posted on the facts which are necessary in the exercise of the best judgment. It is just as important that we read and study to learn more about our business in order to store our minds with more money-making ideas as it is to work with our muscles in order to put more hay in the mow, or more corn in the crib. And, as some men have suceeded to a greater degree than others, it must be true that some know better methods than others.

With these self-evident truths in view, the Department of Agriculture has established a bureau of farm management. The purpose of this bureau has been to investigate all the methods of farming that are most successful and carry the knowledge of them to the farmers, who can use them to advantage. Farmers need not be ashamed to admit they don't know all about farming. Thomas A. Edison doesn't know all about electricity, though he has studied it day and night for fifty years, and electricity is a far more simple thing than the combined and complicated forces and factors that enter into the reproduction and growth of plants and animals. Edison is learning profitable things about electricity every day, by studying. Thousands of other electricians are learning more about electricity by studying the work of Edison, Marconi and others. And every farmer can learn more about farm management by studying the methods of others and learning what particular methods can be employed by him to better advantage than the ones he now uses.

The farm management educational work is making rapid strides in all sections of the country, through the schools, the institutes, county agents and station and national demonstration efforts put forth by the Department of Agriculture. When practical methods of better marketing become a part of this great educational movement then we shall begin to make really wonderful progress toward a greater prosperity.



A Serviceable Tractor for the Farm

Shorty's Shortcuts
(By Himself)

I AM THINKING SERIOUSLY of buying a gas traction engine to do a lot of work on my farm—plowing, for one thing. I have a gang plow with two bottoms and a sulky. That calls for nine horses. That means we have to curry and harness nine horses every morning, feed and water nine horses every noon, and water, feed and bed nine horses every night. Now, suppose I had just one engine to pull those three plows. Soon as I eat my breakfast all I do is to go out, turn the crank, toot the horn and away I go, either up or ahead. My wife says the idea of a horn on an automobile plow is ridiculous, but I don't see why. Seems to me it would be all right, kind o' company, like a clock in the kitchen.

I went to the state fair this year and spent most of my time letting an engine agent convince me that I would me a plumb failure as a farmer if I kept on using horses instead of gas. He almost made me believe I ought to go home, get the ax and knock all my horses in the head. Mighty persuasive fellows, those gas engine agents, and I was stuffed full of figures and facts showing what an expensive proposition a team is on a modern farm. Why, according to that man, only a millionaire could afford a horse, and they found automobiles so much cheaper they wouldn't own one any more. He made me admit I owned an automobile myself, and said if I had his engine I would have no more use for my draft horses on the farm than I have for a buggy horse on the road. If I could have talked as convincing as he did I would have traded him my horses for his engine. All we did, though, was to fill my auto with catalogs of gas engines.

A long time ago a few little personal experiences of mine convinced me that quite often the man who writes a catalog is mistaken. The things he says about the things he describes are not always exactly as he seems to think they are. Anyhow, I wanted to know something more about gas engines in general before I bought one, so that I might be able to tell more about any one engine in particular. I wanted to know exactly what principles were essential for a good engine, how large a one I could handle to get the most service per dollar expended and all about it. So I wrote to you, Mr. Editor, for information. Result, I have just finished a careful reading of "The Modern Gas Tractor," by Victor W. Page. I am glad I bought that book. It tells all about every little thing connected with a gas traction engine; how to know a good one from one not so good; how to look an engine over and tell how much work it can stand, how much gasoline it will use per horse power, how well it can travel rough ground and climb hills, how much power it has when pulling in soft dirt, and all about its care and management. The reason so many of us don't know more than we do about matters we ought to know is—we don't know how to learn. I don't believe any book can teach a man how to do much of anything. He has to learn by experience, by doing. The book that teaches a man how to learn is better than the one that tries to teach how to do. This gas engine book of mine does that, and now I believe I can soon learn to run any gas tractor and get every ounce of power out of her. And now I know that gas engine the fellow wanted me to sign a contract for is not the kind of an engine I want. I figure that the knowledge I gained from that book has saved me $200 in cost price and $50 a year in operating expense by showing me the kind of an engine I needed for my work. I have not yet decided what engine I will buy. I must first look them over and ask a lot of questions. But I know what questions to ask, and what the answers will mean. I have a neighbor who thinks he is a great judge of a horse. When he goes to buy a horse he looks him over from one end to the other, feels his bones, picks up his feet, and after done with the examination he asks questions. He knows by the answers whether the owner is telling the whole truth or just part of it. He knows (or says he does) how much work that horse can stand, how long he will last and how much he will eat. But when that man goes to town to buy a plow, or a mower, or a pump, he only asks the price and buys the one he gets for the least money. Now that neighbor of mine has good horses, but a whole barnyard full of poor and broken-down machinery. What he has saved on horses he has lost on machinery ten times over. It is just as profitable to know about the things you buy as the things you sell. The measure of a man's ability is the measure of his knowledge. And don't forget that it is better not to know so much, as to know a lot that ain't so.

It Wasn't Necessary

An ordinary farmer boy was visiting a rich aunt, who had just moved from the city. Noticing some chickens on the place, he asked: "Aunt, do your hens lay well?" She answered: "Oh, yes, dear, they lay beautifully, but in our circumstances they don't have to."

The Business of Farming

This Department Containes the Latest Lessons in Agriculture Gleaned From All Sources

THE COUNTY AGENT must have first-hand knowledge of farm practice, a thorough training in the science of agriculture, tact in meeting men, ability to direct movements, and a sense of obligation to the community he serves. Agriculture needs able leaders, and the county agent must be one.

* * *

"My method of work has been to make a survey of my territory, using the survey card issued by the Bureau of Plant Industry. This card I find to be a most excellent means of enabling the individual farmer to see his own problems, and stimulates in him a desire to know more accurately what his crops are paying him. The card opens a new line of thought to the farmer and he sees his business in a new light, more fully realizing that his farm is a business proposition when methods mean dollars and cents."—H. J. Baker, Assistant State Leader, Massachusetts.

* * *

"The reduction of the cost of lime is one of the greatest things we have done. Farmers had been paying from $4 to $7 per ton for ground limestone. A reduction in cost and freight resulted in thirty cars being disposed of through this source. We are now working with a company grinding limestone at $1.35 a ton."—G. W. Bush, County Agent, Oneida County, N. Y.

* * *

D. C. Bascom, agent in Logan County, Colorado, conducted a party of forty-six upland farmers from one side of the county to another section, where modern methods of dry farming were being practiced, visiting farms where small grain was being grown on summer tilled land. The difference in condition of crops was so marked the trip made a great impression on the men, some of the discouraged ones going home with renewed hope. One farmer declared with emphasis that the trip was worth $1,000 to him.

* * *

Apple growers must pay more attention to improved grading and packing. Neatness, cleanliness and uniformity are essential, and the orchardist is responsible not only for the quality of his fruit, but for its appearance and condition when it reaches the consumer, who chooses his purchases largely by appearances. Much good fruit is wasted because its preparation is too poor to meet capable competition. The market is usually undersupplied with first-class apples. Circular 39, issued by the Purdue University Experiment Station, Lafayette, Ind., gives complete information and instructions for sizing, grading and packing apples to meet the requirements of the best markets.

* * *

Oats can be made a very profitable crop in Alabama, declare two state authorities on the subject. Red rust-proof varieties should be grown and sown in October. One hundred pounds of nitrate of soda and 200 pounds of acid phosphate per acre can be applied with profit as a rule. The phosphate should be applied in the fall, the nitrate of soda in the spring. A good grain drill increases the yield and economizes seed. If smut is prevalent, prevent it by treating the seed with formalin. Write the experiment station for full directions.

* * *

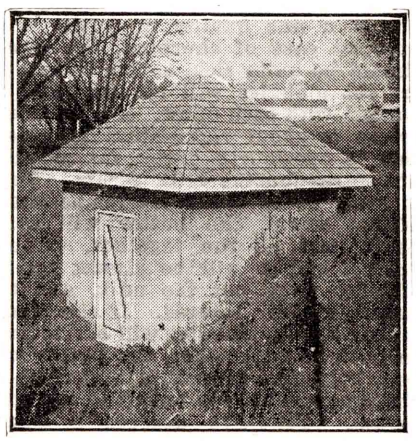
Tennessee warns her agricultural folks to stay in Tennessee and not go wandering away in search of a better land where money is supposed to come easy. In the October bulletin issued by the State Department of Agriculture we find the following: "If the people of Tennessee would realize just what they have in the way of soil and climate (in comparison with other countries) they would not seek to wander, but be content to remain at home. Hundreds of thousands of Americans carry millions of dollars into Canada, where a man of limited means may become possessed of a good farm, but his troubles are not ended. Canada has a nine-months winter. The wheat crop is a failure one time out of three. Chicken raising is impractical. No fruit except a few hardy berries. Life is hard and the food supply limited. Stay right here."

* * *

"Our meat supply can be increased by the use of dual purpose cows. On thousands of farms where only a few cows are kept the cows should produce calves that will make profitable feeders. * * Grain can no longer be fed to meat animals with a lavish hand. * * Corn has increased in value 80 per cent, while steers have increased only a fraction of this amount. * * The farmer must use fodder, silage, straw and roots to develop the frames of his young animals, and withhold full feeding until finishing off time. * * The meat problem can not be solved until the farmer learns how to raise cattle on cheap feed, and not then unless he is supplied with a good market. * * Since co-operation is the best solution it is important to teach the farmer how to co-operate."—The Agricultural Outlook, issued by the Department of Agriculture.

CONCRETE HYDRAULIC RAM HOUSES

Among all the small devices used for hoisting or pumping water, few have been more satisfactory than the hydraulic ram, especially where economy of operation has been a factor. To give the best results a ram should be properly installed. This means rigidity of foundation and absence of everything calculated to obstruct the machine while in operation. "Fixing the ram" is an old-time expression familiar to everybody who has had occasion to use this simple and ingenious device. Sometimes the necessity for "fixing" has been brought about by a dislodged stone in the wall or some obstructing substance in the mechanism.



Concrete affords the best means of protection to the ram, as it is impervious, durable and economical. The accompanying illustration shows a satisfactory type of building. A structure of this character will not rot, even though in constant contact with moisture, which quickly destroys wood. There are no joints, which inveriably become defects in ordinary masonry. Concrete means a clean, sanitary and satisfactory enclosure for the hydraulic ram, and will do much to eliminate bills for repairs due to improper installation or an unstable foundation.

To build a ram house of the type shown would not require great mechanical skill. Having prepared the pit or foundation and erected his forms, the farmer would need to observe the following precautions:

Good cement, clean materials and the former used while absolutely fresh. A mixture of one part Portland cement, two parts sand and four parts stone would make a good concrete. The concrete should be a wet mixture and placed in alternate layers about six inches thick, which would be tamped slightly until water comes to the surface. To obtain a smooth surface the mass should be spaded on the side next to the forms immediately after placing. This is done by working a thin wooden paddle to and fro and up and down between the concrete and the side of the form. A spade will answer where the space between forms is sufficiently wide to permit of its use. The forms should be left in place for at least a week.

The foundation for the ram can be made of the same mixture, and if the work is properly done it will mean a rigid, nonvibrating and everlasting base. Time and moisture will only add to its strength and durability.

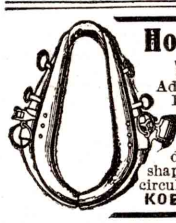
GETTING ALL THE CREAM

Butter fat and profit may be left in the skim milk can where hand separators are used if the separator is not properly adjusted. One Wisconsin creameryman has found by repeated tests that skimmed milk obtained upon farms where hand separators are used oftentimes contains large percentages of butter fat, amounting in some instances to one-fifth of the cream contained in the milk.

Frank Swoboda, agricultural representative of the United States Department of Agriculture for Langlade County, Wisconsin, has found that many farmers in his section are losing money by running cream through the separator with the skimmed milk. His tests made co-operatively with local creamerymen showed loses which led him to carry on a campaign for the more efficient use of farm separators.

C. E. Lee of the University Dairy School has assigned six causes for loss by failing to skim closely. First, the separator may not be standing level upon a firm foundation; second, the bowl may be out of balance and vibrating too much when in operation; third, the bowl may not be operated at full speed (if the speed of the handle should be 48 or 60, as is indicated by the book of instructions, it must be maintained at that rate during the separating); fourth, skimming milk that is too cold (milk should be separated immediately after milking); fifth, the cream outlet may be partially stopped, due to improper cleaning of the separator; sixth, the bowl may be too low or too high. If too low it is due to the parts being partially worn, or in removing the bottom parts for cleaning and not readjusting the height of the bowl to its original position.

Those who have cream separators should study them until they thoroughly understand the principle and practice of their operation. To do good work the machine must run right.



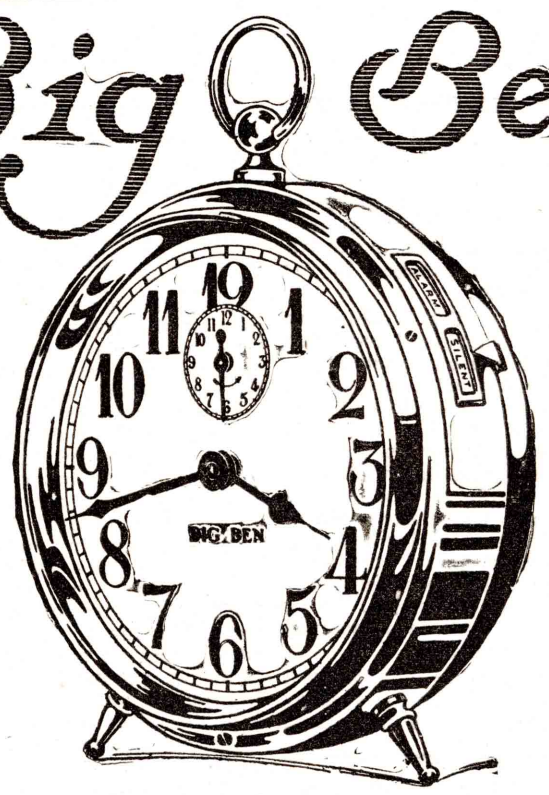
Howell's Steel Collar

Latest Improved

Adjustable for length and width. Draw block raised or lowered. Rolled edge strengthens and improves appearance. Hard or soft. Everlasting. Heals sore shoulders. Regular and half sweeny shapes. Reasonable price. Write for circular and prices.

KOEHLER BROS., Saginaw, Mich.

Big Ben



8,760 Hours on a Drop of Oil

20,000 Jewelers say that Big Ben does *more efficient work* for less pay than any other clock built. He's a regular glutton for good work.

In return for one little drop of oil Big Ben will work for you a full year. From "Boots on" to "Lights out"—365 times—he'll guarantee to tell you the time o' day with on-the-dot accuracy. He has made the same guarantee over 3,000,000 times and made good every time. He'll make good for you. More than $8,000,000 has passed over good jewelers' counters for Big Ben and his brothers.

A Big Ben battalion, over 3,000 strong, leaves LaSalle, Illinois, every day. Every one of them feels proud of his triple nickel-plated coat of implement steel; his dominating seven-inch height; his large, bold figures and hands, and his big, easy-to-wind keys. No other clock can match their looks and ability to serve.

Things move with a will when timed with Big Ben. He'll wake you *gradually* by ringing every other half-minute for ten minutes or rout you out in a hurry with one long musical ring. Suit yourself how he does it. You can shut him off short in the middle of his call, if you wish.

He is built in a live town for live wires. And his best work has been on the farm. Before-breakfast chores are started *right on time* when Big Ben time is set. *He never oversleeps.* He runs on time, rings on time and stays on time.

If your jeweler doesn't sell Big Ben, send a money order for $2.50 to his makers—*Westclox, La Salle, Ill.* He will come to your house by express or by parcel post, all charges prepaid.

Live Stock and Dairy

Dried brewers' grains is an excellent feed for horses.

The dairy cow that begins winter in prime condition is a real money maker.

Forty acres, rightly located, is enough land for a dairy business rightly managed.

Pure air is as essential to stock as to folks, but don't ventilate the barn by means of drafts.

The Berkshire is probably the oldest breed of hogs of the lard type and is one of the best today.

Cut down the grain ration for the work horse when the active work is done, add bran to the ration, and don't forget the exercise.

An 80-acre dairy farm in Minnesota carries sixty head of cattle, twenty-five being milking cows that average $110 per year in cream checks.

Losses from cholera have been exceptionally heavy for the past six months. Minnesota alone has lost $5,000,000 worth of hogs.

The dairy herd should be made to average a 400-pound production per cow of butter fat, with a minimum yield of 300 pounds. It can be done, too.

Cottonseed cake products are valuable feeds to use in conjunction with corn in fattening cattle or sheep. For best results use two and one-half pounds of cake to three pounds of corn.

Wisconsin farms, stocked with pure-bred and high-grade Guernseys and Holsteins, produces half the factory cheese made in the United States, and one-sixth of all the butter.

PROFITABLE PIG PASTURAGE

Cheap pork is easiest produced where plenty of good pasturage is available. Oats and peas, clover, alfalfa, rape, rye and vetch are all good for hog pasturage and should be used on every farm adapted to their growth where hog raising is engaged in for profit by the farmer.

The hog raisers at the Washington State Experiment Station have been making tests with various pasture rations, in comparison with dry grain feed in the feed lot. Four lots of pigs were selected. One lot had oats and peas pasturage and 1 per cent grain, i. e. one pound of grain daily for each hundredweight of pigs. The second lot had the same pasturage with 2 per cent grain. The third lot had oats and peas pasturage and 3 per cent grain. The fourth lot received 3 per cent grain and no pasturage, being fed in the dry lot. All lots received skim milk and buttermilk.

Lot No. 1, consisting of nineteen pigs, consumed 700 pounds (ninety gallons) of buttermilk, 296 pounds of grain, consisting of five parts barley, five parts wheat and one part tankage. Lot No. 2, numbering fourteen pigs, had the same feed except that this lot was fed 1,235 pounds of grain. Lot No. 3, with twelve pigs, consumed 800 pounds of milk and 649 pounds of grain, consisting of two parts barley, two parts wheat, two parts oats, one part bran and one part tankage. Lot No. 4 of fourteen pigs consumed 995 pounds of grain, same mixture as Lots 1 and 2, and 2,370 pounds of milk.

These feeding tests began August 5 and continued to September 3. The gain per pig during the period averaged as follows: Lot No. 1, 19.4 pounds; lot No. 2, 23 pounds; lot No. 3, 28 pounds; lot No. 4, 13.7 pounds. After deducting the cost of the grain and milk fed (grain at $1.50 per hundredweight and milk at 25 cents per hundredweight) and counting the value of the pigs at $8 per hundredweight, the oats and peas pasture yielded a cash return as follows: Lot No. 1, $28.80; lot No. 2, $33.06; lot No. 3, $46.41, while lot No. 4, dry fed, lacked $5 of paying the cost of their feed.

The Washington station has found it a good plan to have alfalfa, rye and vetch or clover pasture for early spring and summer; oats and peas, or barley and peas, for midsummer, then finish by grain feeding in the dry lot.

THE GOVERNMENT WANTS CLEANER DAIRY MANAGEMENT

DOC. WILEY, known to everybody as the great pure food agitator, and erstwhile the chief chemist in the United States Department of Agriculture, has been superceded in office by Dr. Carl L. Alsberg, who bids fair to even surpass Mr. Wiley in efforts to make all food products pure and free from all contaminating things like germs, bacteria, preservative poisons and such like.

In a speech before the American Health Association, Dr. Alsberg recently discussed the need for more action on the part of state legislators and public officials to supply a lack on the part of the National Pure Food Law. The doctor declares that rural communities and small towns suffer more from the effects of impure milk products than the larger cities. The cities, asserts the chief chemist, have laws, a system of regulation and inspection, that practically insures sanitary milk. This leads the people, farmers and dairymen, who are refused the privilege of marketing questionable products in the cities, to sell their milk in towns where no regulation exists. Milk refused by cities because of its unhealthfulness is marketed elsewhere, and no means are provided for inducing producers to clean up, and put out a pure product. He asserts that hereafter the department is going to engage in a campaign to induce state authorities to take up the matter and pass laws and provide means for looking after the purity of food products. "A factory," asserted the doctor, "can be run under the most unsanitary conditions; milking may be done by a man recovering from scarlet fever; or milk may be produced on a farm where a member of the family is suffering from typhoid, and the Federal authorities have no power to act."

We agree with the chief chemist's conclusions. Nevertheless, this inspection business can be overdone. Producers are led to oppose it by the lack of common sense exercised by many of the inspectors, who have neither the technical knowledge nor the necessary judgment and experience to do their work properly. Some are too lax, and some demand the most nonsensical or impractical requirements. If, with all the "red tape," these reform laws would also carry provisions for supplying industry, honesty, and common sense to the officials who may be elected or appointed to execute the provisions of the laws, it would be a God-send. Contamination in officialdom is about as dangerous and undesirable as contamination in food products.

THE PRICE PAID FOR MILK IN THIS COUNTRY

ACCORDING to reports from the Department of Agriculture, the average price paid for milk in twenty-six of the leading cities of the United States during last year was 3.56 cents per quart, a little more than 3½ cents. The highest price in the entire country for the year was 4.43 cents per quart, paid in Washington, D. C. The lowest price in the entire country was 2.9 cents per quart, and it was the price paid in St. Paul. Minneapolis was the next lowest market, the price being 3.04 cents per quart. During the last three months of the year 1912 the price in Washington went to 5.17 cents per quart, the highest paid for that length of time anywhere in the country. These prices indicate the net income per quart at the farmers' shipping stations. Consumers may well compare them with the prices they have to pay.

FINE BUTTER MAKING A SCIENCE
No. 5

Cream is composed of two materials—butter fat and milk serum. The butter fat globules are suspended in the serum. The globules are very close together in 40 per cent cream, not so close together in 20 per cent cream and much farther apart in milk. Temperature affects these globules just as it does butter or lard. Heat softens them, while cold hardens them.

It takes a large number of these minute globules of butter fat to make a grain of butter, separated from the milk serum. This separation is produced by churning, which, if done right, will permit complete separation, which is highly essential if butter of fine and lasting flavor is to be produced. The size of the butter grains or "granules" has much to do with the thoroughness of separation. The granules should not be too large, or too small.

For best results, or, in order to obtain a fine quality of butter with greatest ease of churning, the cream should be quite rich, so the little butter fat globules will readily come in contact with each other. A 25 per cent cream is about right—that is, cream that is one-fourth butter fat globules and three-fourths milk serum. Then it must be of the right temperature. If too warm, the butter will come "soft" and all run together, without grains, and it will be almost impossible to work out the milk, and the flavor is badly injured. If the cream is too cool the globules will be too hard to stick to each other, the butter will be a long time in coming, and much of the fat globules will be left in the milk serum. Fifty-five degrees is about right.

The butter fat globules are shaken together by the "jolting" they get in churning. The churn, if filled too full or not full enough, will not give good jolts and the process will be slow. Or, if turned too fast or too slow, it will not give good results. Use a barrel or a box churn, filled from one-third to one-half full of cream, and turn regularly at a speed to give greatest agitation and concussion. If these few factors are carefully observed and controlled, churning should result successfully in turning out granular butter of the right texture in twenty-five or thirty minutes. The granules should be about the size of a small garden pea, which can be washed, salted and worked to greatest advantage with the least trouble. The size of the granules is controlled by stopping the churn frequently after the butter begins to "come," and when the granules are seen to be of the right size cease altogether.

Next issue—Washing, Salting and Working Butter.

FREE-FARM ACCOUNT BOOK
KNOW HOW MUCH YOU MAKE NEXT YEAR
No one shall pay a cent for Bickmore's Farm Account Book. Mr. Farmer, simply send us your name and address. Business farming puts money in the bank. This book is arranged to keep all accounts in simple form—more simple, and certainly more practical than trying to remember them; shows what to charge against crop production; has a laborer's time record; and section for personal accounts. 64 pages; for ink or pencil. Not a cheap affair. Its quality is in keeping with
BICKMORE'S GALL CURE
A soothing, healing salve, the old-time reliable horse remedy. Horses are now too valuable and too high priced to take chances of losing their services. Get full value out of yours. Bickmore's Gall Cure heals and cures Harness and Saddle Galls, Rope Burn, Cuts, Scratches, Grease Heel, etc. Keeps them sound and in condition for work. You don't have to lay the horse off. Bickmore's Gall Cure cures while the horse works. Great thing for sore teats in cows. Look out for substitutes and cheap imitations. Be sure to ask for Bickmore's Gall Cure at the store. The work-horse trade mark on every box. Farm Account Book is ready. Send today.

BICKMORE GALL CURE CO. Box 94 Old Town, Maine

Poultry Pickings

Feed well, but make the birds exercise.

Sprouted oats give wonderful results at this time.

Now is the time to market the old heavy gobblers you failed to dispose of earlier.

The secret of winter eggs is early-hatched pullets, well grown, well sheltered and well fed.

Are your early-hatched pullets laying? No? There's something wrong, then, either with your care or with the pullets.

Now is the time to cut up that clover hay we kept telling you to save last summer for the purpose, and feed it to your chickens.

A little neighborhood club in the country can supply a little neighborhood club in the city with fresh eggs via parcel post. Get together.

How many of you kept a record of your farm flocks the past year? How much profit did your hens make you? Count it up and send in the report.

Physical culture for the fowls is easy. Hang a cabbage so they must jump to get a bite. Feed corn on the cob. Break an ear in three pieces and let biddy do the shelling.

It is overcrowding, not lack of meat or salt, that causes feather eating amongst fowls. Give them room and this bad habit will not develop. Once started, there's no stopping it. Get the ax, the only sure remedy.

One of the most foolish things in the world is to lose the temper over anything a hen does. It only makes matters worse to tear around and set the whole henhouse in an uproar. We all do more foolish things than any hen ever did.—The Farm Journal. And, what's more, we knew better all the time and the hen didn't.

COAXING BIDDY TO LAY HIGH-PRICED EGGS

"A few years ago many farmers allowed their cows to go dry early in November and then freshen in April. The farm hen sometimes does the same thing—goes dry in October and begins to lay in March. This long dry spell cuts down the possible profits." This is the explanation given by James G. Halpin, poultryman for the Wisconsin College of Agriculture, of the present scarcity of eggs.

Mr. Halpin thinks that many farm flocks are not getting quite the attention that they really deserve and as a consequence are not meeting the demand for freshly laid eggs.

"Right now poultry houses should be deeply bedded with dry straw," declares Mr. Halpin, "and all the grain feed should be worked into this litter so that the hens may get good exercise and amusement hunting for it. If nothing of this kind is done, the flock will huddle in one corner of the poultry house or in or about one of the other farm buildings and will seem to lose all interest in life. If the flock gets into this lazy and indifferent habit at this time of the year, winter eggs will be few and hard to get. It is well to get the hens to exercising and singing as they work for their feed and then sell 50-cent eggs to the city buyers who want the genuine article.

"The flock should be given as great a variety of grain as possible. Some corn, wheat, oats and barley mixed together, or fed alternately makes a satisfactory ration. If all of these grains are not produced on the farm, then feed those that are raised. On real cold nights take some ear corn into the house, thoroughly heat it upon the kitchen stove, then break into small pieces and scatter over the feeding floor an hour or more before dark. Arrange a mash box or trough with a little ground feed where the hens may have access to it. They can then go to the "pantry" and get "a bite" to eat when the grain is gone from the litter. A warm mash of moist, ground feed, table scraps, etc., fed so that all of the flock has access to it and only what they will eat greedily, is good for laying hens.

As insects are no longer available, skim milk should be fed liberally. If this is not obtainable feed some ground green bone or meat, about an ounce to each hen three times a week. If unable to provide any of these, buy commercial meat scrap, for animal feed of some sort helps to fill the egg basket."

GET GREATER PROFIT FROM POULTRY

ANY POULTRY KEEPER, if convinced that he or she could spend one dollar and make it earn two, would do it. They are, of course, interested in whatever brings them more profit, and especially if it can be done at small expense. Farmers have been taught that pure-bred fowls are more profitable than mongrels, and the fact that a flock of pure-bred birds are to be seen on nearly every farm is proof that the farmers have grasped at the idea of greater returns by means of pure-blooded fowls. And the idea was sound. The pure or "standard bred" flocks have in the great majority of cases made more profitable returns. They have produced more eggs, more pounds of meat on the same amount of feed than the mongrel bird. Moreover, the superior quality of the flesh of thoroughbreds has brought higher prices. Raising standard bred fowls has made the farmers money, both on eggs and market birds.

There is now a movement on foot, recently set going by the American Poultry Association, which has for its object the adoption of a standard for market poultry and eggs. Better conditions of production have been created, and poultry keepers have gained thereby. Now it is proposed to make better conditions in marketing and even greater gains will, it is believed, be made. The new scheme is to standardize the market poultry and eggs and establish a system that will place the products on the market according to the standard, so a higher price per pound for birds and a higher price per dozen for eggs will be obtained. The leaders in the American Poultry Association believe this is readily possible and have set themselves about the task with great vigor and enthusiasm. Every person who has fowls and sells either eggs or birds should follow closely the proceedings of the association in this latest endeavor to enable the poultry raiser to make a larger profit.

Chickens and eggs return prices according to when, where and how they are marketed, says a prominent member of the association. Some fowls get to the consumer in excellent condition and sell at fancy prices. Others, equally as good in every way when caught on the farm, show up badly when offered to retailers and consumers and sell for a low price. The country buyer soon learns to buy all poultry at a low price in order to be sure to avoid loss.

If a standard is adopted and methods are put in force to insure the poultry going on the market quite up to the standard, losses will be greatly reduced and producers may obtain higher prices in consequence.

The Poultry Association has a committee at work on this problem, headed by Robert Essex, a noted practical poultryman and authority. This committee is preparing a book for the use of farmers and dealers, to show them how poultry products may be standardized and losses eliminated. The committee is making investigations and is asking the co-operation of farmers in their work.

There is one way that the farmer can help in the preparation of that book, and the object of this article is to ask him and his wife to do so.

1. Tell us about the greatest difficulties you have to meet with in marketing your poultry and eggs.
2. Tell us, so far as you know, where the greatest loss occurs—where the most disappointments arise.
3. Do you keep pure-bred poultry of a single variety, and do you try to produce and market eggs of a uniform color, size and shape?
4. Where and in what temperature do you keep your eggs while holding them for market? What other farm product do you store nearby?
5. How often do you market your eggs, especially in hot weather?
6. How are they marketed—sold to the huckster who calls at your door, sold for cash to a local dealer or traded for merchandise?
7. Do you make a practice of sorting out all the small, dirty and misshaped eggs and using these at home?
8. Do the dealers who buy your eggs during the summer months candle them and only pay you for the good ones? Or do they take them just as they come?
9. Do you know how to grade or candle eggs? Do you do it before sending them to market?
10. Do you keep male birds with your laying hens during summer months?

We want all our readers who are interested in making their poultry pay better to send in replies to all these questions. The answers we receive will be turned over to the committee on market poultry and egg standards, to guide them in the preparation of their book.

The poultry editor feels that this is a matter of great importance, and offers a valuable opportunity to every poultry producer. And it can be made especially valuable to farmers and farm women who will organize a poultry club and be ready to make practical use of the information the new book on standards will supply. One more proof is given of the great advantage and desirability of having a local farmers' organization in each community, and that a part of a great national system.

Helpful Hints for Homefolks

FIRESIDE SOCIAL CHATS

By Aunt Sophia

I AM ONLY TO SAY just a few words this time, as we have with us again Mrs. Busyhand to give us another page from her diary of a busy life, and after her comes a stranger, who will not tell us her name, but who wants to talk a few moments on pie education. Mercy! We never knew there were but two things to learn about pies—one is, how to make them, and the other how to hide them from little Johnny. But it seems there are some things in connection with mixing, baking and even eating pies that we have not understood, so we will all be interested and helped by this pie preachment.

* * *

An old schoolmate of mine made me a two-days visit last week. How we do enjoy such visits, when our memories carry us back to old times and we live over again the happiest hours of bygone days. This friend of mine came into the kitchen one morning as I was beating steak for breakfast and gave me this hint: "Sprinkle the flour on the steak before you beat it, instead of after it has been beaten, and use a little more flour. Try it." Always ready to try a new idea, and this was a new one to me, I followed her directions and every one at the table bragged about the flavor of that steak. I had learned something worth while.

* * *

Jack Frost is hanging around, with his magic brush, ready to paint his wonderful floral and woodland scenes on our window panes. As an artist he is wonderful, but he is so mischievous! All the time he is drawing those designs he is "playing hob" with the house plants. Jealous, I suppose, and does not want his work to have a rival in our eyes. But I am not fond of Jack, or his work, although I can't help but admire his artistic skill, and when he touches my geraniums with his death-dealing wand I am much vexed with him. I have found a way to mitigate his evil influence. When I find he has chilled any of my plants I put them in an almost air-tight chest and place it in a moderately cold room and bring it gradually to a warmer temperature, and behold! my plants come out unscathed.

MRS. BUSYHAND'S DIARY

By a Farm Woman

(Continued From Last Issue)

The next morning the big engine pulled in and got into position near the silo. The neighboring men and teams began to arrive, and soon the noise and work began. Some of the neighbor women and an aunt came to help us and we "got busy" also, preparing the vegetables and meat for dinner, setting two tables in the dining room, and numerous other details to attend to, such as arranging two wash tubs with rainwater in for the men to wash in (besides the wash pan and wash bowl) and five or six towels, soap, etc., etc. These are the things we had for dinner:

Mashed Irish Potatoes Sweet Potatoes
Roast Beef and Gravy
Butter Beans Bread and Butter
Cheese and Crackers
Peaches and Cream
Pie Coffee Cake

The men do not care for many nicknacks. What they want to eat is plenty of solid, substantial food—and lots of it. Twenty men sat down to dinner. Also we had them for supper. We had about the same things for supper, with the exception that we gave them bowls of hot oyster soup instead of meat, and for pickles we gave them sliced ripe tomatoes with dressing.

The next day we did not work hard. I was expected to go as a delegate to the state W. C. T. U. convention, but owing to the silo filling coming just at this time it was impossible for me to go. So goes the life of a farmer's wife. I was somewhat disappointed about not going, but did not "make a fuss" over it. Wednesday forenoon I ironed while Mary straightened up the living rooms. I forgot to say that one reason I was disappointed on not going to the convention was that I was invited by my cousin, Robert Livingston, of the famous and world-renowned Livingston seed firm, to stop off on my way home at his house at spend the night with his family in Columbus.

About noon the phone bell rang and a friend told me to get ready and take a drive with them and attend the Woman's Missionary Society. So Mary made me go, while she finished the ironing. It was a beautiful fall afternoon and the ride in an easy-going buggy, behind a safe, though spirited horse, was certainly enjoyable. The subject of the meeting was "Hindrances to Missions in Egypt." Although Mohammedanism is a large and mighty foe, yet signs of its weakening influence and its shallow, evil power do but show its falseness and prove that Christ is almighty and that soon He will reign o'er all nations.

In the evening four of us went to prayer meeting and received inspiration and help for life's duties.

(To Be Continued)

PIE EDUCATION

THERE are some things every one knows about pie without needing to be educated. On the other hand, there are some things we may not know so well. Pie is the great American specialty. As pie bakers and pie eaters, we reign supreme. We see people enjoying a ripe old age and eating pie with all the gusto of a school boy. That is, some of them do. But, as a matter of fact, we are also a nation of dyspeptics, and doubtless the next generation will have weaker digestions because their progenitors taxed their digestive organs a bit too heavily, and pie is more or less responsible.

There are pies, and pies. It all depends upon how they are made as to the extent of the burden they place on the digestion, and a pie need lose none of its flavor to lose a lot of its burden on the digestion.

Pie crust is not absorbed until it reaches the intestines, because of the fact that the starch grains of the flour are covered or surrounded by an envelope of fat. There is nothing in the saliva or gastric juice to dissolve this fat, therefore it goes into the intestines before it is able to be worked upon, thus overworking the intestines and losing a part of its nourishing element, because of its short stay in this digestive tract.

There are four different kinds of pastry—plain pastry, one-fifth shortening to one part flour; flaky pastry, one-quarter shortening to one part flour; rich pastry, one-third shortening to one part flour, and puff paste, one-half shortening to one part flour.

The essentials for making good pastry are:

1. Cold ingredients.
2. Pastry flour.
3. Best shortening.
4. Light handling dough.

Lightness of pastry depends upon two things, amount of shortening and kind of shortening. Lard makes the tenderest crust, but butter gives the best flavor. If a very small amount of shortening is used, baking powder may be used in the pastry. The reason why the ingredients used in making pastry should be cold is that when the flour and lard and water are warm they stick together, so less air is mixed into the dough, and it is tough. If the materials are cold the cold substances expand more. Butter leaves holes by melting in the dough when it is put into the hot oven and makes a flaky crust.

Pastry dough should be thoroughly baked and browned. A fruit pie should bake for thirty to forty minutes, and should be eaten on the same day it is baked, as standing causes the under crust to become soggy. Paste cooked without filling will keep for several days, but must be carefully reheated by slipping in a warm oven for a few minutes before using.

The pie crust should be rolled one-quarter inch in thickness and should be a little larger than the tin to allow for shrinkage. Allow more paste for the lower than the upper crust, and do not fail to perforate the upper crust. Always brush the edge of the lower crust with water and press the upper one down on it.

FLAKY PASTRY

One cup flour.
One-fourth teaspoon salt.
Two tablespoons lard.
Two tablespoons butter.
Cold water to make stiff dough.

METHOD OF PREPARING

Sift salt and flour, add fat and cut it in with two knives. It should be cut very fine if flaky crust is desired. Add water, slowly mixing with knife. Do not touch with the hand. Roll paste on slightly floured board, using as little flour as possible. Roll in one direction only. Roll thin and bake till brown.

PUMPKIN PIE

One cup mashed pumpkin.
One cup sugar.
Three eggs.
One pint milk.
One teaspoon ginger.
One teaspoon cinnamon.
One-half teaspoon allspice.
One-half teaspoon cloves.

METHOD OF PREPARING

Beat the egs, add to them the sugar, pumpkin and spices. Beat this thoroughly, add the milk and mix thoroughly; then bake in a raw crust.

LEMON PIE

One tablespoon flour cornstarch.
One cup sugar.
One cup boiling water.
Juice and grated rind of one lemon.
Yolk of two eggs, well beaten.
One teaspoon butter.

METHOD OF PREPARING

Mix cornstarch and flour together. Add boiling water slowly and cook ten minutes, stirring frequently. Add this mixture to the beaten yolk, butter and

House Dress Pattern GIVEN

This pretty, new, one-piece house dress is the most practical and attractive house dress that can be worn this season. The blouse closes at left side and has new Mandarin arm hole, with sleeves inset. Round neck, trimmed with handsome collar; removable chemisette. A four gore skirt is attached to the blouse. Closes at side of front and has reversed box plait in back. Empire or regulation waist line can be used. Very easily made—use cheviot, wool eponge, crepe, charmeuse or any suitable material. Pattern No. 5944 is cut in sizes 32 to 40 inches bust measure. Requires about 4 yards of 50-inch material and 2 yards insertion. To quickly introduce our big home and farm magazine we make this liberal offer good only 20 days: Send 10 cts. for trial 3-months' subscription and enclose names of 5 housekeepers and we will send you this popular dress pattern free. Be sure to give size, also say you want dress pattern No. 5944.

lemon and cook until egg thickens. When mixture is cool, place it in a baked crust and cover with meringue. Bake till brown.—Mrs. C.

What to Wear and How to Wear it

By Ethel C. Marsh

AT THIS SEASON it is easy enough to say what shall and what shall not be worn by the well-dressed woman. Two points are worthy of note. One is the continued use of the low neck. It was believed that with the approach of winter weather this would give way to the high collar, but that women have discovered the comfort of the low finish and refuse to give it up. Instead of doing this they wear heavy neck pieces of fur and all manner of heavy outer garments, but the waist remains low. The style preferred has a V-shaped opening in front, edged with a little frill of whatever material serves for the chemisette, net, lace, etc. In order to make such a waist becoming even with a coat we find the pretty lingerie collars worn outside the wraps.

The other noteworthy point is the use of long sleeves despite the low neck. This is practically invariable and the sleeve that is best liked fits the arm rather closely, a dart and a single seam being the means employed.

Separate skirts are worn in street toilettes and such a model as No. 6297 is favored. With these skirts plain blouses, somewhat in the manner of No. 6296, are worn. The plainer they are the better, for a heavy wrap is usually worn with them.

Rough finish materials are used for skirts and the new plaids are much in evidence, with buttons as the only trimming, if we except the curiously cut seams of many of the models and the hints at drapery that are worked in, as suggested in 6297.

PARKER'S HAIR BALSAM

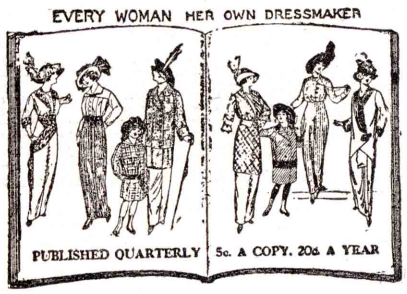
Latest Fashion Book
2 CENTS POSTPAID



Very Latest Fashion Book Only 2c

READ THIS VERY SPECIAL OFFER

FOR the benefit of our readers who use patterns, we publish four times a year the well-known fashion book, "EVERY WOMAN HER OWN DRESSMAKER."
The Spring Fashion Number is ready February 1.
The Summer Fashion Number is ready May 1.
The Fall Fashion Number is ready August 1.
The Winter Fashion Number is ready November 1.
"EVERY WOMAN HER OWN DRESSMAKER" tells how to make Coats, Waists, Skirts, Costumes, Aprons, Dressing Sacques, Underwear, Baby Clothes, Clothes for Boys and Girls, etc., etc. Every woman who uses patterns or does sewing at home should buy "EVERY WOMAN HER OWN DRESSMAKER" four times a year. Besides telling how to make clothes, it illustrates and describes hundreds of the newest styles for Ladies, Misses and Children.

OUR SPECIAL OFFER—If you order any pattern shown in this or any other issue of Up-to-Date Farming we will send you the very latest issue of "EVERY WOMAN HER OWN DRESSMAKER" for 2c. Just send 2c for postage when ordering a pattern. Address FASHION DEPARTMENT, UP-to-Date Farming, Indianapolis, Ind.

What is Now the Fashion

6225. GIRLS' DRESS.—This model has a long Balkan blouse, with flat hip band and diagonal front closing. This is worn over a one-piece skirt joined to an underwaist. Blouse and skirt may be of one material or of two. Plaid, stripes and figured materials are smart for the blouse with a plain skirt. No. 6225 is cut in sizes 4, 6, 8, 10 and 12 years. Medium size requires 2¼ yards of 44-inch material.

6457. RAG DOLL AND CLOTHING.—The rag doll is by far the best for very little folks and all children generally love it. This pattern gives the body of the doll and a design for bloomers and a one-piece dress. Canton flannel or other material can be used for the doll and cashmere or any remnant of material for the clothes. The pattern is cut in sizes for dolls of 16, 20 and 24 inches in length. Medium size requires five-eighths yard of 36-inch material for the doll and seven-eighths yard of 36-inch goods for the dress.

4784. GIRLS' DRESS.—A favorite model this. It has the Gibson tucks at the shoulders, a front closing at one side of the blouse and a pleated skirt, with high neck finish and full length sleeves. This style is handsome in plaid materials and also in serge or velveteen. No. 4784 is cut in sizes 6, 8, 10 and 12 years. Medium size requires 3¼ yards of 36-inch material.

6297. LADIES' THREE-GORE SKIRT.—A smart tailor-made skirt which can be worn with odd blouses or as part of a costume. It has three gores, a panel back and a side front closing with a drapery suggestion at the knee. Brocaded velvet, cheviot, serge, broadcloth and figured fabrics will be handsome made in this style. No. 6297 is cut in sizes 22 to 30 inches waist measure. Medium size requires 3⅛ yards of 44-inch material.

4634. LADIES' KITCHEN APRON.—This thoroughly serviceable apron is a one-piece model and may have the full length sleeves or not as desired. Gingham is the best of apron materials, but calico and other wash fabrics can also be employed. No. 4634 is cut in sizes 32, 36, 40 and 44 inches bust measure. Medium size requires 5⅛ yards of 27-inch material, with sleeves; 4¾ yards of same width without.

4650. LADIES' HOUSE DRESS.—Far neater than any wrapper, this simple frock has a blouse with a tuck at each side of front and back and a front closing. The seven-gore skirt has a reversed box pleat in the back and closes at the side of the front. Wash materials, challie, cashmere and the like are used for these dresses. No. 4650 is cut in sizes 32 to 42 inches bust measure. Medium size requires 5⅝ yards of 36-inch material.

6087. LADIES' HAT.—The soft, squashy hats that are now worn can be made at home with little trouble. This design shows one which has a circular crown, sides which are shaped to it, and a medium brim. Ratine materials, eponge and fur cloth are used and felt can also be employed in making them. The hat pattern is cut in sizes for ladies, misses and children. Ladies' size requires one yard of 27-inch material.

6296. LADIES' BLOUSE.—A stylish, but simple blouse made without the usual box pleat where the front closes. The open neck is trimmed with a little collar and revers and the shirt sleeve is inset at the shoulder. Silk, crepe or wash materials can be used for this style waist. No. 6296 is cut in sizes 34 to 42 inches bust measure. Medium size requires 2½ yards of 36-inch material.

Price of Patterns, 10 Cents Each
These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

FASHION DEPARTMENT

PREPARING POPCORN

Chocolate Popcorn.—Two teacupfuls of white sugar, one-half cup of corn sirup, two ounces of chocolate, one cup of water. Put these ingredients into a kettle and cook them until the sirup hardens when put in cold water. Pour over four quarts of crisp, freshly popped corn and stir well to insure the uniform coating of the kernels.

Sugared Popcorn.—Make a sirup by boiling together two teacupfuls of granulated sugar and one teacup of water. Boil until the sirup strings from the spoon or hardens when dropped into cold water. Pour over six quarts of freshly popped corn and stir well.

Popcorn Balls.—One pint of sirup, one pint of sugar, two tablespoonfuls of butter, one teaspoonful of vinegar. Cook till the sirup hardens when dropped into cold water. Remove to back of stove and add one-half teaspoonful of soda dissolved in a tablespoonful of hot water and then pour the hot sirup over four quarts of freshly popped corn, stirring till each kernel is well coated, when it can be molded into balls or into any desired form.

Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

ONCE MORE we must appeal not only to the Cadets of Equity, but to all in whose hands this paper may come, to read every letter and name in this department. The young people of today are the hope of the future not only of the country, but of the human race. No one can read these letters without appreciating the progress the young people are making; and that so many of them, hailing as they do from the better walks of life, and from the most intelligent circles of our people, thus enter so heartily into our work, encourages us in what we are doing. There is a better day dawning for agriculture, and in that all classes will be benefited. It only remains to get more people to read—to bring these truths to the attention of everybody. We are doing much and sacrificing much. If all our friends, old and young, would help us by getting new subscribers how grateful we would be.

DEAR CADETS—I am a farmer girl, 17 years of age, and live in the northern part of Wisconsin, on a farm of 120 acres, where we raise corn, oats, potatoes and fruit. We are on a mail route and a cream route. The mail carrier comes every day, but the man who gathers the cream comes only every other day. We have taken UP-TO-DATE FARMING a long time and think it is the best paper going. I would like to hear from all the Cadet boys and girls and also to exchange photos—will answer all.—Frances Becht, Ashland, Wis.

DEAR CADETS—I am a farmer boy, and like farming very well. We raise corn, oats, wheat and tobacco, and all kinds of vegetables. I have been taking UP-TO-DATE for about a year. It certainly is a good paper. I always read the Cadet letters first. I go to school almost every day. We live about 100 yards from Walnut Grove Baptist Church, of which I am a member. I have a guitar and violin and can play some on both of them. I was 17 years old Nov. 4. All you Cadets write me a card or letter; every one of you will get an answer. I close with three cheers for UP-TO-DATE.—Willie Macey, Lodiburg, Ky.

DEAR CADETS—I live on a farm of 63 acres in the state of Iowa, where we raise corn, oats, wheat and fruit. I am 19 years old and enjoy reading the Cadet letters. I belong to the M. E. Church of Emmerson. Our church building was struck by lightning and burned June 27 and we are now building a brick church that will cost, when completed, $12,000. We also live near a lake, where we young folks have great times skating in the winter and boating in the summer. I hope to become a Cadet and will answer all the Cadet boys and girls that write me.—Lillie P. Scott, Hastings, Ia.

DEAR CADETS—I am 27 years old and only a short time ago became interested in the Cadet page. UP-TO-DATE FARMING has been coming to my home almost three years, and I would like to hear from the Cadet boys and girls.—Stephen Cooper, Bristow, Va.

This little girl from Oklahoma deserves a place among the Cadets:

DEAR CADETS—I am a little girl, 13 years old, and thought I would write, as I like to read the Cadet letters. I think I have missed much by not writing sooner. I live on a farm of 180 acres and am a busy little girl. I embroider some, but papa raises lots of cotton and I pick 200 pounds a day sometimes. I hope to hear from all the Cadets and will leave room in our glorious paper for some one else.—Susie Pendergrass, Haskell, Okla.

DEAR CADETS—I am a Georgia girl of 16 years and live on a farm of 130 acres. Cotton and corn are our chief products. I would be delighted to hear from any of you Cadet boys and girls, and will answer all cards and letters I receive.—Elma King, Curryville, Ga.

We want everybody to read all the Cadet letters, but here is one of special interest from a real business farmer boy of Montana:

DEAR CADETS—I am 16 years old and live on a 540-acre ranch. We have seventy head of cattle, ten horses and other small stock of the farm. We have been taking UP-TO-DATE FARMING for three years and can't do without it. We have about twelve cars of hay to sell and one car of potatoes and grain. Crops in this part of the country are O. K. I will answer all cards and letters I receive.—Charley DeVries, Roberts, Mont.

DEAR CADETS—I live on a 40-acre farm near the town of Sunbury, in the good old state of Pennsylvania. I walk three miles morning and evening to and from Snydertown high school, in which I am in my senior year. I would like to exchange post cards with the Cadets.—Wave M. Furman, Sunbury, Pa.

What do you think of rhymes like this from the icy regions "away up yonder?"

DEAR CADETS—Here's an Oregon boy,
Twenty years of age,
Who always reads with bubbling joy
The good old Cadet page.

Eleven years I spent, you know,
On Alaska's frozen drift;
Skimmed o'er the ice and faced the snow,
With dog team strong and swift.

And now I want you all to write
And ask about that land
Of nightless day and dayless night,
And northern lights so grand,
Where polar bears and ice worms fight
And blizzards blow to beat the band.

I'll try to answer every one,
And will not make you wait,
Though all I have to write upon
Be good old UP-TO-DATE.
—Frank H. Doree, Rex, Ore.

DEAR CADETS—I am an Oregon girl, 14 years old, and live on a small farm in the beautiful Chehalem valley. The most beautiful crop grown here is weeds; next come strawberries and apples. We grow fine tomatoes here, too, but the market for them is not good. I lived eleven years in Alaska and came from there about two years ago. Skagway is noted for its beautiful, awe-inspiring displays of the aurora borealis, the northern lights. I want all the Cadet boys and girls to write to me, and I will try to answer all cards and letters I receive.—Florence Doree, Rex, Ore.

DEAR CADETS—This country is pretty rough. There are many caves and canyons. One cave has thousands of names and addresses in it from all over the United States. It is known as the Name cave. I am 19 years old, my birthday being June 5. I would like to receive cards from Cadets whose name or birthday is the same as mine.—Ora Terrell, Longdale Okla.

DEAR CADETS—I am a farmer boy, 21 years old, and live on a 300-acre farm in the eastern part of South Dakota. We raise corn, wheat, oats, barley and rye. I am a lover of music and can play a cornet. I often play cornet solos with piano accompaniment; have played in a public band for two years. I have taken UP-TO-DATE FARMING for more than a year, and find great pleasure in reading the Cadet letters. Would like to exchange letters and cards with the Cadet girls and boys.—Frank Ediger, Freeman, S. D.

DEAR CADETS—We get UP-TO-DATE FARMING and I think it is a fine paper. I should like to hear from all Cadet boys and girls. My father owns a homestead about eight miles from the railroad. I am 20 years old and have four sisters and a brother. I promise to try to answer all letters and cards I receive.—Maude Brack, Clancy, Mont.

DEAR CADETS—I am a farmer's daughter, 15 years old, and have long taken a great interest in the Cadet letters. I consider it a great privilege to become acquainted with girls and boys in the different states. I live on a farm of 560 acres. Our main crops are wheat, corn, oats, hay and potatoes. I would dearly love to exchange letters, cards and photos with the Cadets and readers, and will answer promptly.—Matilda W. Hofer, Freeman, S. D.

DEAR CADETS—I have lived on a farm all my life and we have taken this paper for more than two years. We have 220 acres of land and milk ten cows. We keep eleven horses, thirty-five hogs and forty sheep. I am 19 and myself and two brothers do most of the work, for our father is lame. I would like to hear from other boys and girls about the country they live in.—Jay Ormsby, New Lathrop, Mich.

We have many letters from the great state of Texas, and that shows we have a large circulation there and that the paper is liked in that state. The following will be read wherever the paper is read:

DEAR CADETS—I am a Texas farmer girl, 17 years old. Papa takes UP-TO-DATE and I think it is a grand paper. I always turn to the Cadet page, for I like to hear

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

Big Entertainer 163 Parlor Tricks and Games, 310 Jokes and Riddles, 73 Toasts, 15 Card Tricks, 4 Comic Recitations, 3 Monologues, Checkers, Chess, Dominoes, Fox and Geese, 9 Men Morris. All 10 CENTS POST PAID.
J. C. Dorn, 709 S. Dearborn St., Dept. 79, Chicago, Ill.

A Fine Christmas Present

HUMANATONE
25c
New patented musical instrument. Wonderful inventions; nothing like it; astonishing; marvelous. You can be a real musician and play all the latest popular songs, ragtimes, old time ballads, sacred hymns, dance music, &c.; also fine for piano accompaniment; sure to please. Made entirely of strong metal; will last a lifetime. Thousands sold. Sample by mail 25 CENTS (silver) or 3 for 60 cents. Address
G. P. RECH, 531 BELL ST., INDIANAPOLIS, IND.

Coral Necklace Given

Send 10c. for three months' trial subscription to the Household, with 5c. extra for mailing expense and we will send you **absolutely free** a handsome new style, Genuine Coral Necklace, made from corals of delicate light red color; very stylish and quite expensive, but we give away a limited quantity free, just to introduce our magazine. Send 15c. immediately. Your money back if not delighted. Address, HOUSEHOLD, Dept. CN-32, Topeka, Kan.

What 15c Will Do

The little matter of 15c in stamps will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the nation; now in its 21st year of increasing in success. The paper fills the bill without emptying the purse; it costs but $1 year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the PATHFINDER is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends.
Or send $1 for full year; money back any time if not satisfied. Address Pathfinder, Box 7, Washington, D. C.

A Merry Christmas for that Boy of Yours!

THE BOYS' MAGAZINE EDITED BY WALTER CAMP
is the finest boys' publication in the world.

$25 for a Name for this Pony

I will give $25.00 FREE for the best name for this beautiful prize Shetland pony. Send the best name you can think of right away, for not only do you have a good chance to win the $25 prize but

You Can Win the Pony, Too

for I am going to give him to some boy or girl who will do a little easy work for me. I have just given "Dandy," another beautiful pony, and now I am going to give away this pony. But first I want a name for him.

1500 VOTES FREE

Just as soon as you send me a name for the pony I will tell you all about my great offer and I will also send you a special coupon good for 1500 free pony votes. Remember, I will give $25 for the best name for this pony, and I send you 1500 free pony votes and full particulars about the pony as soon as I hear from you. Write me today.

COPYRIGHT, 1913, BY A. M. PIPER
A. M. PIPER, 674 Popular Bldg., Des Moines, Ia.

from the different states. I work in the fields, but I can't say I like it much. I would rather go to school than pick cotton. My sisters and brothers and myself are keeping "bach" while papa and mama have gone to the Dallas fair. Three of our girl friends stay with us. One is from McCarley and two are from Spur, Tex. My father is a representative in the state legislature from the 105th district. He spends a great deal of his time in Austin. My chum is the sheriff's daughter and we have quite a lot of fun while my papa is making laws and her papa is enforcing them. I would like so much to receive cards and letters, and also photos, from any of you who wish to write.—Pearl Goodwin, Jayton, Tex.

DEAR CADETS—I am a reader of UP-TO-DATE and I like the paper fine, and wish to become a Cadet of Equity. I am 18 years old and live on a farm out here in the west. I would like to hear from the Cadets and will answer all letters or cards. —Carrie Moedl, Idaho Falls, Idaho.

The following letter shows that our paper is appreciated by all classes of intelligent people, and in all parts of the country:

DEAR CADETS—I am a city boy, 19 years of age, and live in the town of Albemarle, N. C. I read UP-TO-DATE and think it is a grand paper for either farm or city. My occupation is mill work. I am foreman in the spinning room of a hosiery yarn mill that runs 16,000 spindles. I work about thirty hands ranging in age from 12 to 60 years. I would like to exchange post cards with all the Cadet girls and boys; will answer all I receive.—George Cauble, Albemarle, N. C.

It is easy for this department to jump from one part of the country to another. The difference in the lives of the writer of the above letter and the one that follows is almost incomprehensible:

DEAR CADETS—I am 20 years old and live in the strike-ridden copper country. The strike has been on for three months now, but the strikers are facing it bravely. I enjoy reading the Cadet letters and I am also interested in the hunting and trapping department, as I am a hunter and trapper myself. I am also a taxidermist. There is nothing I enjoy more than to be out with rod or gun. Cards and letters from the Cadets are welcome, and I will try to answer all.—Felix Ruonavaara, Gay, Mich.

We cross the country again and must admit this bright little fellow from Virginia:

DEAR CADETS—My father takes UP-TO-DATE FARMING. He has been a subscriber for about nine years and he thinks it is the best paper for all to read, both young and old. I have been reading the letters and would like to join the Cadets of Equity and receive postals and letters from any of the members. I am 12 years old and go to school at Driver.—Jesse E. Davis, Beamon, Va.

Now take this letter from the far northeast:

DEAR CADETS—Here comes a 17-year-old boy from Maine, who would like to join the Cadets of Equity. I have taken UP-TO-DATE FARMING for two years and enjoy the Cadet letters very much. I live on a 10-acre farm in the suburb of this city. I am greatly interested in wireless telegraphy and would like to correspond with any of the Cadets who are also interested in that wonderful achievement. I would also like to hear from all the Cadets; will try to answer all.—Earle B. White, Belfast, Me.

DEAR CADETS—I am a farmer's daughter, 14 years of age, and live on a farm of 480 acres. I love farm life better than anything else. I enpoy reading the Cadet page very much. I think the letters are as interesting as any good story book. The summers here are very pleasant, but the winters are generally quite cold. I would like to exchange cards or letters with the Cadet boys and girls and will try to answer all.—Frieda H. Lorenzo, Alexandria, Minn.

Now, dear friends, what more can we do? You have read the long list of excellent letters we have printed, and yet there lies before us a great pile of equally good letters that we can never get to again. All we can do is to give the names and addresses of the writers:

WILD ANIMALS KILLED BY FORESTERS

DURING the past year 4,686 predatory animals were killed by federal officers in the national forests.

The ranger's bag of beasts of prey this year, as shown by forest service figures, was made up of 206 bears, 3,541 coyotes, 133 mountain lions, 62 lynx, 583 wild cats, 64 wolves, and 97 wolf pups. The national forests are becoming cleared of wild animals that prey upon domestic live stock and game, for the forest ranger fills in odd moments between other jobs by thinning out "undesirable citizens" of the animal world.

Wolves are said to cause greater losses to western stockmen than any other of the predatory animals. It is estimated that a family of wolves will destroy about $3,000 worth of stock per annum, and that one able-bodied individual costs the grazing industry $600 a season.

The wolves are of two classes—the smaller prairie wolves or coyotes, and the larger grey, black, or timber wolves, called "lobos." These latter are the great stock destroyers against which the campaign of the rangers has been waged.

The methods of hunting wolves in the west vary. On the plains wolves are sometimes hunted with dogs and horses, but this way is considered expensive and often dangerous. This sport is described by Roosevelt in his earlier hunting books. On national forests the rangers either poison or trap, or by watching trails and hiding near a den, shoot the old wolves when they return from foraging.

The skins are either kept as souvenirs, or sold. Wolf skins in the west are said to bring from $4 to $6 for robes and rugs; a mountain lion skin, $10 to $20, and a bear skin, anywhere from $20 to $150, according to size and species. In addition to this there are bounties on bear, lions, and wolves in most of the western stock states. Wyoming, in ten years, has paid out, it is said, over $65,000 in bounties on wolves alone and $95,000 more on coyotes and mountain lions.

The forest ranger has saved the stockmen many thousands of dollars, while the protection to game animals such as deer, elk, and antelope, is of equal importance.

SOME NOVEL GAME LAWS

OHIO AND PENNSYLVANIA require hunters to wear a badge conspicuously exposed, bearing the number of their hunting license.

Hunters are required by the authorities of Manitoba to wear a white coat and cap, while those who hunt for big game in Saskatchewan must wear a complete outer suit and cap of white.

Maine, New Jersey, North Dakota, Washington, Mississippi, Louisiana, Minnesota and Wyoming prohibit the use of silencers. Connecticut has provided that any hunter who shall injure a fence or let down a bar without replacing it shall forfeit his hunting license and the license privilege for two years.

Connecticut, Pennsylvania and British Columbia require license applicants under 16 years of age to furnish the written consent of parent or guardian. Vermont has a similar restriction for those under 15 and Oregon does not permit children under 14 years of age to hunt except on the premises of their parents, relatives or guardians.

Florida repealed all local game laws and made the seasons uniform throughout the state. New York placed a close season on quail for five years. Kansas added both quail and prairie chickens to the close-season list until 1918. Ohio suspended hunting of quail, ruffed grouse and doves for two years. Pennsylvania eliminated the open season on doves, kildeer, plover and blackbirds, while Utah extended complete protection to doves, swans and all shore birds except snipe. The trend of legislation during the last year has been toward electing the close season.

Expected of Him

"Jones looks on the best side and puts everything on an easy footing."

"Of course he does. He is a shoemaker, and it is his business to make easy footwear."

Impeachment

"What's the matter at your house?"

"It's a case of impeachment. My wife wants to impeach the cook."

To Make It Easy

"Papa, why do secret societies keep a goat to ride?"

"So the joiners can 'butt in.'"

WHEN WRITING TO ADVERTISERS DON'T FAIL TO MENTION UP-TO-DATE FARMING

Bracelet 25c It's all the rage. Girls, wear it to school and all the others will envy you. Handsome gold finish, heart shape design, set with stone. Adjustable to any wrist. Not more than two to one person at the introductory price of 25c. S. E. FERRY, Irvington, Ind.

DOMINION WATCH CO., Dept. 30 MONTREAL, CANADA

Hunting and Trapping

For Pleasure and Profit

NOTICE TO SPORTSMEN

This department is open to contributions from readers. Accounts of actual experience, and practical methods of hunting and trapping, either as a pastime or as a business, are solicited. Photographs, if good and clear, are especially desirable, and will be paid for at regular rates. Prizes are awarded to all whose letters are published, and at the end of the season a grand prize of considerable value will be awarded to the best contribution received during the entire season. Write one side of paper only and address all communications to TIM, THE TRAPPER, Sporting Editor, UP-TO-DATE FARMING, Indianapolis, Ind.

NOTES

When you find a good dealer stick to him and watch the season.

In catching muskrat, set the traps in the water so the rat will drown, if you can.

The carbine is the most popular gun for trappers and brush hunters. Short, light, easy to handle, it gives the utmost satisfaction.

Trappers would do well to be sure that furs are prime before starting the line of traps.

It is said that because of early and late trapping, when furs are not in prime condition and skins must be sold at from one-fourth to one-half prime value, the annual loss amounts to $5,000,000.

Furs are practically double what they were in price ten years ago.

A GOOD FOX SET FOR IDAHO

Dear Tim: I live in a part of Idaho where the snow usually gets three or four feet deep in the valley and six to twelve feet in the mountains. We travel altogether on skis when trapping and like them much better than web snowshoes. The webs appear to be first class for level country or going uphill, but to go around the side or down it the skis beat them, especially over crusted or icy places, which are found in plenty while traveling through the mountains.

I am not much of a trapper, but I find coyotes much harder to trap than fox. The kind of fox set I like best is hard to find and have it where the snow will not drift on it too much or fall on it more than a couple or three inches. Find a fir tree that has long, drooping branches that the snow will bend down till they touch the snow, which forms a good bank where there are two or more small saplings about as far apart as you think they ought to be for a fox to attempt to walk between, and then make a hole in the snow bank as deep as you think the bait ought to be from the trap, which is placed just in front of the two saplings that the fox may step in just as he attempts to go between and if he should step over it the bait should be far enough back of the trap so that the fox will have to take two or more steps in walking backwards to get out. If there are no saplings where you want them go out and cut some and stand them up one on each side of the hole, making it appear as if they grew there. The trap may be chained to one of these, which should be quite large if it is one you have cut. It is a good plan to have the trap fastened to a loose drag, so that Mr. Fox can take drag and all and not spoil the set. You will find him in the first bunch of brush he comes to. Of course the drag should not be too small and a dry one with stout knots and a few limbs, not too many.

We have nearly all kinds of fur-bearing animals here, but they are pretty well trapped out. I always like to read trapping stories and perhaps this letter will be interesting to others. I have been taking UP-TO-DATE FARMING for about a year and like it much better than I expected I would when I subscribed for it. I have been reading the trapping department as well as the rest of the paper, which also interests me.—F. P. Rowland, Spink, Idaho.

CATCHING THE INDIANA SKUNK

Dear Tim: Some two or three months before the trapping season begins I locate my prospective sets around old rail piles, barns, brier patches and along corn fields, wherever skunks are apt to frequent during the winter season. At each of these locations I construct a shelter of logs, about six feet in length, piled one on another, leaving an entrance of about six inches in width. A rabbit or bird or other food pleasing to his skunkship is then sprinkled with skunk bait and placed in the center of the shelter and Mr. Skunk is permitted to help himself, and soon comes to consider the log pile his larder and dining room. When the first snow comes, a trap at each end of the opening in the shelter makes his captivity a certainty. The trap is set in a small excavation just large enough to hold the trap and cover it with the leaves that should be scattered in the entrance when the shelter is first constructed. I use No. 1 and No. 1½ traps.

Another satisfactory set for me is at their dens. Fine brush is piled near the den, very close and compact. Three lengths of six-inch tile are put together through the brush pile. I use a bird for bait, placing it in the middle of the tile, and place a trap at each end, covered with dry leaves.

I stake my traps apart, for occasionally two skunks are taken, one at each end, and they fight if they can reach each other. I enjoy the stories of hunting and trapping. Hurry up, boys, with more of them.—Marshall English, Greensburg, Ind.

TAKES SKUNKS ALIVE

Dear Tim: May I have a seat at your camp fire and join the circle of UP-TO-DATE's mighty nimrods? (Sure, our camp fire is ready to toast the shins of all true sportsmen?—Tim.)

We have been taking UP-TO-DATE FARMING for some time and think it a fine paper. I will now relate an experience of mine, catching skunks. Last February, when the ground was blanketed with snow, I found a skunk trail which I followed to the den, a hole in the ground. Returning home, I got my spade and going back to the den I soon unearthed four grown skunks and captured them alive, took them home and put them in a cage. A day or so later I caught three more and took them home also. I found I had six females and one male. I knew something about the idea of skunk farming, so I made a pen and kept them all. On the 10th day of May I found my stock increased by twenty-two young. On August 15th I sold out at $45.

I enjoy hunting for the sport, and like the money as well.—Walter Boesch, St. Mary's Mo.

THE CIVET CAT AND ITS CAPTURE

Dear Tim: Possibly many of the readers of your department do not know the civet cat, found principally in the hill countries. About the size of a house cat, gray-brown in color, a bushy tail, the civet cat is a pretty, intelligent creature, easily tamed, and makes an interesting pet. It seldom bothers poultry, rats and mice being its prey.

To trap these little fur animals, find their tracks and drive down a stake. Dig a hole for the trap so it will set level with the ground, and cover completely, though lightly, with leaves. Nail or tie a piece of chicken or rabbit meat to the stake, at a height of ten or twelve inches above the trap, and sprinkle it with a prepared bait. A good "bait" can be made by cutting small fish in fine pieces, bottle and place in a warm place for three days, when it is ready for use.—Charlie Skaloud, Guy, Tex.

GOING TO MAKE THE FUR FLY

Dear Tim: Up here in the oldest and coldest corner of the country we have a number of fur animals who must raise good, thick fur, or freeze. We have fox, coon, mink, skunks, muskrat, deer, gray squirrels by the thousand, and some weasels. I own a .25-caliber Stevens sporting rifle, a shotgun and a pistol.

Last year my partner and myself captured six foxes, fifteen skunks, twelve mink, thirty-five muskrats and so many squirrels we couldn't count 'em. We are preparing now to start to the grounds again, and hope to have as good or better luck this season.—Merle W. Cobleigh, Brattleboro, Vt.

His Place in Nature

"My dog can scent a thunderstorm long before it gets here."

"Then I suppose he is a storm (s)center."

Couldn't Remember

Aunt—My dear child, you are so ignorant of ancient history!

Child—Yes, auntie, but you could not expect me to know things that happened when you was a girl.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

By the President of the F. S. E.

"The new tariff," said Secretary of the Navy Josephus Daniels, "which will remove from the farm the excessive charges for every article needed in cultivation and in the home, will cheapen living for the farmer. * * This blessing is almost in sight and its gradual unfolding will mean a new and better day for the dwellers on the farms."

—o—

This utterance was made at a banquet given by the Kansas City Commercial Club. It means just this, according to the secretary: The farmers can go about their usual business of producing the crops while the new tariff law will be on the job twenty-four hours every day to remove from the machinery the farmer buys to cultivate his crops, and his needs in the home, "the excessive charges," to the end that a better day will dawn "for the dwellers in the country."

—o—

But the secretary has evidently not been reading the trade papers. If he had read them he would have seen that marking up the prices of manufactured goods is the order of the day. Who has heard of the price of a machine, or house appliance, or any family necessity, or labor being reduced? It is not surprising that the secretary of the navy is not informed about conditions agricultural, but the unfortunate thing is that he would make such statements and raise such hopes among the farmers when there is no foundation for expecting any such results.

—o—

The secretary also said:

Products of the farms are bringing better prices and we may look to see increased interest in the raising of cattle, sheep and hogs. . . . One advantage of the tariff (free trade) will come when the Beef Trust, for example, puts the price up too high, for the products of the Argentine Republic will come in to compete with the trust prices.

—o—

Bless his heart! The secretary has probably been plowing the seas while the farmers were plowing the land and he does not know that short crops are the cause of the high prices, or that the only crop of 1913 that was a good one—wheat—is not selling at a high price, but is the lowest it has been for years, the result of removing the tariff protection. As a sop to the consumer he predicts that Argentina will break the trust's prices for meat when they get too high. Well, when will they be too high if not now? And will the meat trust, which dominates the Argentina cattle and meat markets also, wreak vengeance on another part of the same body in this country, by glutting our markets to make cheap meat?

—o—

It was just the kind of speech the Kansas City Commercial Club, composed of people who farm the farmers, wanted. What the secretary would say was all arranged beforehand. The farmers down in the southwest were hit mighty hard the past season by the great drought and many of them were feeling blue. The packers and others in Kansas City concluded that it was time to cheer them up, so the secretary of the navy, who probably knows nothing about farming, was sent for and they got him to utter this "jolly," knowing that what he said would be flashed all over the country and printed in thousands of papers. If the secretary of the navy says foolish things about farmers and agriculture it will never hurt him, because his work is in another department. If the secretary of agriculture would say these things he would be held to account. So the secretary of agriculture was not there to sing the song to lull the farmers to sleep in false security.

—o—

The moral of all this is, farmers must not believe everything they hear. There are many false prophets in the land today blowing mighty blasts on their horns. The wise farmer will think for himself. We do not advise farmers to expect lower prices for what they buy because of any changes made in the tariff. We do warn them that prices of nearly all the products of the farm will be lower than under protection, the crops being of equal size. We do not advise that any extra effort be made to increase the production of cattle, considering the high prices for feed and the uncertainty of prices for the finished animal, which is all under control of the cattle buyers. We would not be surprised to see Argentine meat thrown into this country to break the price of live cattle from the producers, but to break the price of meat to the consumer, never as long as the same combination dominates both countries.

—o—

When a new era of prosperity and good living comes for farmers it will be because of what they themselves have done. Prosperity will never be legislated to agriculture, but stagnation may be. The new tariff law is very apt to bring stagnation in some lines of agriculture, and not materially help any. If farmers want a readjustment let them organize to work in concert and they can rule not only their own business, but the country.

—o—

This paper has been the leader in sound co-operation for farmers for years. Its teachings now are exactly the same as they were ten years ago, but it is somewhat more advanced in the plans for putting the teachings in practice.

—o—

We mean that the underlying principles of co-operation as we teach them today are the same as we taught ten years ago, but changing conditions in the country have from time to time suggested changes in the plans for building the sound organization for farmers, and in the business system with which the organization must be equipped.

—o—

For instance, ten years ago there were few local farmers' organizations. Nearly every community presented a virgin field to organize a local union. Since then practically every community that produces any crop or crops to sell has its farmers' association. This suggests that the farmers' organization that aspires to equip all of American agriculture with a marketing machine must include the feature of federation.

—o—

We have said that it will be an impossible task to destroy or disorganize all such associations and substitute a local unit of a national organization in their stead. But it is not impossible to interest all such associations in one marketing system that all can use to bring about intelligent reports and distribution—unity of action in the matter of marketing. This is the task before us and one that calls for the sincere efforts of every officer of every independent association.

—o—

A few years ago the problem of gathering reports of crops and of demands was a very formidable one. But since telephone service has reached nearly all the farms, and since the telegraph companies have instituted their cheap Day Letter service and the much cheaper Night Letter service, the matter of getting reports is not much of a problem. Particularly is this true in the plan of organization and federation that is now being established, when 2,000 telegrams, at an average cost of 50 cents, will place a report of all farm crops, ready to market on any one day, at the national headquarters.

—o—

But teaching the right plan of organization is not all that we do. UP-TO-DATE FARMING considers it its duty to point out the weaknesses of some of the many plans that are being foisted on the country continually. This is not a pleasant duty, but a duty we consider it, therefore it is not for us to shirk it. Farmers have had too many impractical plans thrust on them and they have always supported them, to a greater or less degree. The failure of such movements has shaken the confidence of farmers in all organizations and therein lies the greatest hindrance to quickly completing the successful system of marketing that is now available, and on which the sound organization that will be enduring is being built.

—o—

Let it be understood that competitive marketing is the bane of agriculture. Then let it be understood that co-operative marketing will be the solution of farmers' business problems. We do not mean community co-operation, or county co-operation, or state co-operation, or separate crop co-operation alone, but we mean national co-operation. If a crop is for sale in twenty-five states, then an organization that will eliminate competition in marketing that crop and make co-operation possible must reach to the producers in those twenty-five states. To organize the producers in ten states and leave the producers in fifteen states to market blindly will ruin the markets for all. This statement is incontrovertible.

—o—

And it is just as true that the organization that furnishes the co-operative marketing system for one crop must also do the same for all the other crops to maintain a balance of values amongst all of them. Otherwise some crops will sell proportionately higher than others and this will cause some to be overplanted and overproduced, with too low prices the result.

—o—

We have said these things before. But since each issue of this paper goes to thousands of subscribers who did not read it before, they are worth repeating. Our main thought was, though, to make it introductory to what follows.

—o—

Recently some publishers of farm papers have undertaken to go farther than to tell their readers that they "must organize" and they "must co-operate." They now pretend to tell them how to organize and how to co-operate. In a northwestern farm paper no plan—at least no plan is revealed—how they can co-operate with each other, but the business of marketing will still be done competitively.

—o—

All of which means that the field is weekly becoming more cumbered with independent local associations without any plan or system of co-operation with each other. It is becoming more evident, too, that it is out of the question to expect that any present national farmers' organization can absorb all of these associations and thus bring about concert of operation and unity in marketing. But it may be possible to get them to unite on one proposition, marketing, and, while retaining their names and all their prized local features and their selected officers and be independent in government, all should be glad to avail themselves of the advantages that a national federation for marketing can only give them.

—o—

This will be one of the important problems that will be considered in the next annual convention of the Farmers' Society of Equity, that will convene at Indianapolis on December 16th. All members of our Society and members of other organizations who desire better methods of price making and marketing should attend this convention.

1913 Annual Convention of the Farmers' Society of Equity

Indianapolis, December 16, 1913

The 1913 Annual Convention of the Farmers' Society of Equity will be held at headquarters, Indianapolis, Ind., beginning Tuesday, December 16, 1913.

At the convention officers of the National Union will be elected and every other thing for the good of the organization and agriculture that comes before the convention will be considered and acted upon. Several matters of extraordinary importance, as affecting the society and the future of agriculture in America, will come before the convention. This fact makes it important that there should be a complete representation of subordinate Union by-laws as follows:

For the guidance of members and unions we quote from the National unions.

ARTICLE VIII

Officers

Sec. 3. The officers of the National Union shall be a President, a Vice-President, a Secretary, a Treasrer, a National Organizer and seven directors.

Election—Representation—Term

Sec. 4. The officers and directors of the National Union, with the exception of the Secretary, shall be elected by a popular vote of the members on blanks furnished by the National Union, or printed in the official paper and forwarded to the National Secretary by mail, or brought by delegate representing such Union or Unions, to be voted in the National Annual Meeting of the Society.

Sec. 5. The Annual Meeting of the Farmers' Society of Equity is to be composed of representatives of subordinate Unions as follows: Each Local Union is entitled to one representative. If it is impossible for a Local Union to send a delegate, it may join with another Local Union, or more than one, to send a delegate. In this event that delegate will be allowed as many votes in the convention as he carries credentials from organized Local Unions. Each County Union shall have one representative. Each State Union shall have one representative-at-large and one for each two thousand members in the state or major fraction thereof.

Board of Directors

Sec. 7. The Board of Directors shall consist of the President and Vice-President (ex-officio) and seven elected Directors.

The following nominations have been made and they are now submitted to the membership:

For President

J. A. EVERITT, Indianapolis, Ind.—Mr. Everitt is the present president.

For Vice-President

W. H. MITCHELL, Hutchinson, Kas.—Mr. Mitchell is the present vice-president. He was one of the incorporators of the society in 1908. He is one of central Kansas's progressive farmers, but has retired from active work on the farm and lives in the city of Hutchinson.

HARVEY JORDAN, Atlanta, Ga.—Was one of the founders of the Southern Cotton Association and its president from 1905 to 1911. He was a member of the committee to study agricultural conditions and co-operation in Europe this year. Mr. Jordan, in a letter to the F. S. E., said: "Your society is thoroughly correct in its conclutions that the needs of the hour for farmers is to organize them on a sound business basis for better marketing. This has been my contention, and toward which my efforts for years have been directed. We need some specific, clear-cut method to pursue.

For Treasurer

C. HAYES TAYLOR, Indanapolis, Ind.—Mr. Taylor is a director of the society at present and actively at work at national headquarters and is associate editor of the official paper. His work during the past year has brought him more or less in touch with all members, therefore a more extended introduction is probably unnecessary.

For National Organizer

H. F. CUTTING, Portland, Ore.—Mr. Cutting is present national organizer. He has to his credit, largely, organizing the state of Oregon in 1913. At present he is organizing in Washington.

A. Y. SATTERFIELD, Sterling, Idaho.—Mr. Saterfield was one of the leaders in organizing Idaho in 1913, also the northern part of Utah, which is working with Idaho as a unit. He is president of the Idaho State Union, F. S. E.

For Directors

W. GREISENTHWAIT, Oregon City, Ore.—Mr. Greisenthwait is president of the Oregon State Union, F. S. E., and vice-president and a director of the Equity Warehouse Company of Portland, Ore.

ROBERT STEVENSON, Lebanon, Ind.—Mr. Stevenson is a director now.

JACOB BRETZ, Bretzville, Ind.—Mr. Bretz is a present director.

S. W. MORRIS, Rochester, Minn.—Mr. Morris has been a director from the time of the incorporation of the society. He has always been prompt in attending the meetings of the directors and the conventions of the Society.

FRED N. PARKINSON, Idaho.—Mr. Parkinson is a director at present and an active organizer in the field.

T. C. WILSON, Columbia, Mo.—Mr. Wilson is secretary of the State Board of Agriculture of Missouri and secretary of the American Apple Growers' Association.

ALBERT E. JACK, Chicago, Ill.—Mr. Jack is secretary of the Milk Producers' Association of the Chicago district.

J. A. HARMON, Shawnee, Okla.—A director at the present time.

C. B. LOZIER, Robertsdale, Ala.—Mr. Lozier is secretary of the Baldwin County Union, F. S. E., and business manager of the Gulf Coast district in marketing.

A. E. WEBER, Geneva, Neb.—Mr. Weber is a member of Geneva Local Union, F. S. E. In putting him in nomination the local said it would like to have Nebraska represented on the board of directors.

T. A. HARPER, Dundee, Ore.—Is a member of Oregon City Local Union, F. S. E.

W. S. SHURE, Summerdale, Ala.—Mr. Shure is a director at present.

J. H. ADAMS, Minneapolis, Minn.—Mr. Adams is editor of "Co-operator and Farmer," which is a magazine devoted to farmers' elevators and the grain growers particularly and "the interests of managers of farmers' co-operative companies" in general.

Vote for one candidate for each office of President, Vice-President, Treasurer and National Organizer. Vote for seven directors.

Each member is entitled to vote. Members-at-large will send their votes direct to headquarters, Farmers' Society of Equity, Indianapolis. The votes of the local unions may be sent by the delegate to the convention, but if no delegate, then by mail. The ballots will be counted when the national convention meets, December 16th, and the candidates having the greatest number of votes will be declared elected.

It is important that every member should vote for National Officers and Directors, and that every local, county and state union should be represented by delegate in the convention.

Report to headquarters as fast as delegates are selected, giving names and addresses.

"Delegates' Credentials" blanks are in the book of blanks sent to every local union. Let the delegates bring their credentials to the convention, but notify headquarters by letter.

BALLOT

This ballot is cast by (name of member or name of Local Union).....

Pennsylvania Members Making Progress

The Clarion County Union met at Limestone on October 25 with fifty or more delegates in attendance. Indications point to the establishment of at least two additional Equity stores in the country. The fertilizer trade with members will be hereafter conducted on a county unit basis in charge of the county union. The requirements will be from twenty-five to thirty cars.

Limestone and Bethlehem locals shipped a car of buckwheat last week, obtaining an increase in price of 10 cents per hun-

The picnic recently pulled off at Churchwell was a decided success, 500 or more being in attendance, and Prof. Jones of Jefferson County delivered an excellent address on rural uplift.—R. M. Forringer.

Co-operation Saves $1,500

We have saved our members at least $1,500 on grain sacks by co-operative buying, and advanced the price of wheat at least 4 cents per bushel by co-operative selling since the Farmers' Society of Equity was organized in this part of the country. —Peter Christiansen, Idaho.

From a United States Senator

I am in receipt of a copy of UP-TO-DATE FARMING, October 15th issue, and read with great pleasure and satisfaction your editorial, "More Money to Teach Farmers." I wish to congratulate you upon the tone and spirit of the article, and to state that I am in entire accord wtih the deductions you have drawn in your presentation of the case of the money subscribed by the big packing companies. I take the liberty to write you for the reason that I enjoyed reading your article so much I felt it a duty one poor mortal man owed to another for good work well done.—Yours sincerely, Harry Lane (United States Senator from Oregon).

Old Lady—Here is a quarter for you, my poor man."

Tramp—Thank you, my good leddy. If there ever was a fallen angel you are it.

SWEET CLOVER SEED—The true white blooming variety (Melilotus Alba). Write for free sample of new crop seed and latest prices. Henry Field, Shenandoah, Ia.

Oregon Equityites Coming to the Front

The following paragraphs are extracts from a letter received at headquarters from William Grisenthwaite, president Oregon State Union:

The State Union held a meeting Saturday, October 18. The delegates took up several matters of importance, including sending a delegate to the National Union at Indianapolis in December, endorsing the efforts of United States Senator Harry Lane of Oregon in behalf of industrial alcohol, co-operating with other farm organizations in preparing an agricultural exhibit for the World's Fair to be held in San Francisco, and to promote a state and national federation of all farm organizations.

I am pleased to say that some wholesale concerns who at first hesitated to sell to the Equity Warehouse Company are now filling our orders.

National Organizer Cutting is meeting excellent success in his work across the Columbia river in Washington. The Washington locals, being contiguous to this territory, will work with the Oregon union and through the Portland warehouse officers.

Orders sent in by members and filled through the county warehouse company make a great saving for them. One of many instances: Bran was $24 a ton in a local market. The Equity Warehouse Company supplied members at that point at $22.50 laid down. Of course, local dealers dropped their prices to the same figure.

One local, Mountain Dale, has been especially active and successful in co-operative business accomplishments.

Farmers in the vicinity of Mountain Dale, Ore., who are members of the F. S. E. are supporting the work loyally and with much business ability. The Mountain Dale local recently placed an order with the Equity Supply House in Portland for winter provisions to the amount of $365. Keith Lackey, manager of the Equity Warehouse Company in Portland, was induced to visit the local and show the boys how things were working on the inside and outside. His talk gave them great encouragement.

The Oregon members realize that merely "joining" a local accomplishes nothing unless the membership carries out the purposes of the society. Business can not be done without men and material to do business with. The society exists for co-operation in the business of farming, and particularly in the marketing of crops and purchase of supplies. Benefits (profits) can be derived only by doing business through the society. There should be active, substantial participation by each member in the business of the local. Nowhere throughout the country do members show a keener appreciation of these facts than our brothers out in Oregon.

Another Kind of Co-operation

"If members of the Farmers' Society of Equity and other readers of this paper fully realized how much of a power they were and how effectively they could exercise that power in one among many ways for definite results, each and every member would act wisely in his best interests by patronizing the advertisers whose announcements appear in UP-TO-DATE. The appearance of these ads in UP-TO-DATE makes it possible for the publisher to send you this fine, big paper. More advertising, whether new advertisers or larger space, means that the publisher *can* and *will* give you a *bigger* and *better* paper.

"All of this gives the Society movement impetus, and the bigger the Society grows the more of a power are *you* as an individual member. Patronize the advertisers whose announcements appear in UP-TO-DATE and this paper will be the better salesman for those advertisers. Consequently they will respond with larger copy because of the increased demand for the article or product which they have to sell you. These advertisers are reliable and square in their dealings. Read our guarantee on Page 5. You can benefit yourself through the development of this Society by going further than that and calling the attention of the publisher of UP-TO-DATE to any ad you see in any other publication offering something which you want to buy. In doing this be sure to send the clipping and tell the publisher of UP-TO-DATE what paper you saw the ad in. By doing this you will enable the publisher of UP-TO-DATE to ask Mr. Ludwig of the Advertising Department to call on the advertiser and ask him to make his announcement to you in UP-TO-DATE, backed by the guarantee on Page 5.

"The fact that you do this will prove to the advertiser that readers of this paper are live buyers looking for full value in their purchases and that you are only so because you are a member of the Farmers' Society of Equity, coming to be the greatest institution and power in agricultural history, or a reader of its official paper."

How would you like to have a large assortment of Holiday Cards, Seals, Stamps, etc., at My Expense?

I HAVE been giving beautiful post cards for years and many families wait for them as the holiday season approaches. I am now ready to make my 1913 holiday distribution just ahead of Santa Claus, because what I send will save you from buying post cards and you will probably save the expense of some presents by using my beautiful Christmas cards. There are 30 Christmas, New Year and other post cards and many Christmas cards, seals, tags, stamps, etc., in the collection.

This, my annual gift, with my compliments and good wishes, will be sent to every old or new subscriber who sends now 50 cents or more on subscription. It is time for many thousands to renew. You will be pleased if you accept this offer.

Subscription—One year, 50c; three years, $1.

Yours sincerely,

J. A. EVERITT, Editor,
Indianapolis, Ind.

RIGHT GRADING SHEEP ESSENTIAL TO SUCCESS

To make the best gains, sheep when brought into winter quarters should be kept separate from lambs, rams and the feeding flock. Weak, thin ewes should be separately yarded so that they may get their share of the feed. Rams should be kept in lots of ample size so as to allow them plenty of exercise.

By taking these precautions and regularly providing the flocks with suitable feed and an abundance of fresh water and by sheltering them in clean, well-ventilated quarters, success in sheep husbandry is insured, according to Frank Kleinheinz, shepherd of the Wisconsin Experiment Station flocks.

Choice of feeds depends to a large extent upon the conditions in which the breeding flocks enter winter quarters. If in good flesh and having access to good roughage, such as clover, millet, alfalfa hay and roots or corn silage, hardly any grain is necessary, but if the sheep are in a thin, weak condition, no time should be lost in supplying them with hearty grain rations. Otherwise results at lambing time will be disappointing. Pure water should be supplied the flock at all times and salt should be kept where the sheep may have ready access to it. Successful flock masters consider it a serious mistake to provide their sheep with salt but occasionally, for under these conditions they are apt to eat too much, which oftentimes causes excessive drinking of water and a derangement of the digestive organs.

We Want You to Know

If you are dissatisfied with your present location why not get a homestead in western Canada? Write G. W. Aird, 215 Traction Terminal Building, Indianapolis, Ind., or Superintendent of Immigration, Ottawa, Ontario, Canada, for literature, maps, rates, etc.

Absorbine reduces thick, swollen glands on horses as well as any bunch or swellings. Send to W. F. Young, P. D. F., 102 Temple street, Springfield, Mass., for free book, "Evidence."

Now is the hunting season. Marlin fire arms are noted for their superiority. Send 3 cents stamps to the Marlin Fire Arms Co., 104 Willow street, New Haven, Conn., for the 128-page Marlin catalog.

A Cart Load of Fun For 10 Cts

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in "A Cart Load of Fun" are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. "A Cart Load of Fun" is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.
COONER & FORTUNE, Indianapolis, Ind.

XMAS Present Problem Solved

Give the Boy or Man a Wonder Telescope

5 to 10 Mile Sight Range

If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects miles away just like they were close—write today. Enjoy it day and night. Needed on every farm. Telescopes this size have sold for $5 to $8. It is brass bound; protected with brass caps on ends; 5 sections; opens out over 3½ feet long; closed, 12 inches long. Entertain your friends day and night with the "Wonder." We have thousands of testimonials.

Our Offer To advertise the "Wonder" telescope we will send one for only $1, provided you send 3 names of friends you think will be interested in it. Send 10c extra for ordinary postage, or 20c for insured delivery, and we guarantee safe arrival. If not a bargain and you are not well pleased, money will be refunded. Full instructions free with each telescope.
PEOPLE'S WHOLESALE STORE, Indianapolis, Ind.

It is far beyond expectations. If I couldn't get another I wouldn't take $5 for it.—O. F. Folk, Elk Lick, Pa.

Worth $10 to me. I can see cattle at 15 miles and a nickel at 60 yards.—Tervis S. Sepeda, Morgan Hill, Cal.

It's a dandy; all you claim and then some. I trained it on the Buttes, 28 miles away. They looked like 2 or 3 miles instead. I can count stock in farmer's yard 4 miles away.—Chas. A. Story, Ft. Robinson, Neb.

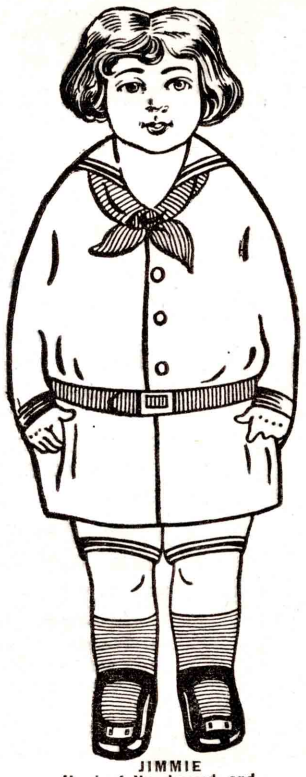
Every boy and man on farm needs one.—Chester Housen, Minden, Ga.

Our farm is on a hill and we can see 10 miles away. Count windows in houses which cannot be seen with the eye.—Henry Conner, Manor, Tex.

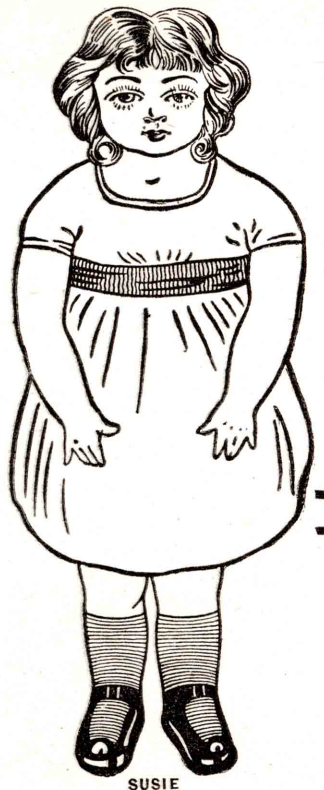
Can see children playing at school 6 miles away.—P. H. Herrington, McDade, Tex.

Can tell time on clock 2 miles away.—J. Beers, Columbus, Ind.

LOUISE
(OVER 2 FEET TALL)
Louise is a grand big baby, over two feet tall. You can dress her in a baby's clothes. She will sit or stand. She can't break. She is a beauty.



JIMMIE
He is fully dressed and measures 9 inches high. He comes to you with a pretty blue suit, red tie and brown shoes.



SUSIE
She wears a white dress, red sash, blue stockings and brown shoes. She is 9 inches tall. All the girls love her.

Will You Accept These *Three* Big Dolls?

This family consists of Louise, over two feet tall; her brother Jimmie, a husky fellow, and sister Susie, each nine inches tall. If you get them you can name them to please yourself.

Louise is a big, plump baby, very like a real live youngster, and can wear baby's clothes. Her hair is brown. She has bright eyes and rosy lips. Her legs and arms bend and she will sit or stand, as you want her to. Every little girl will love to have a dolly like this to dress and undress, and play with. Brother and sister dolls are just too cute for anything.

Louise is as big as a real baby and nearly as large as the little girl.
(From a photograph.)

Our Offer We will send this whole doll family—Louise, over two feet tall, and the two other dolls, nine inches each in height. All you need to do is to send us one six-months subscription to Up-to-Date Farming (new or renewal) for 25 cents, or let us extend your present subscription six months. Address

Doll Dept. 98A, Up-to-Date Farming, Indianapolis

No Christmas Present for a Little Girl Could be Better

This big doll is delighting thousands of girls in all parts of the country. There was never a finer plaything for the little folks. No matter how many dolls the girls have, they always want another. Louise and her brother and sister will be given away to little girls or any one who sends a subscriber.

If you want more than one doll family for Christmas gifts send more subscribers. We will give a doll family with each six-months subscription at 25 cents. Clip the coupon and add more paper for list.

This little girl is showing Louise her picture book. She plays with her big doll for hours every day.
(From a photograph.)

Don't Let Your Hogs Die =

Sidney R. Fell,
President
The S. R. Feil Company

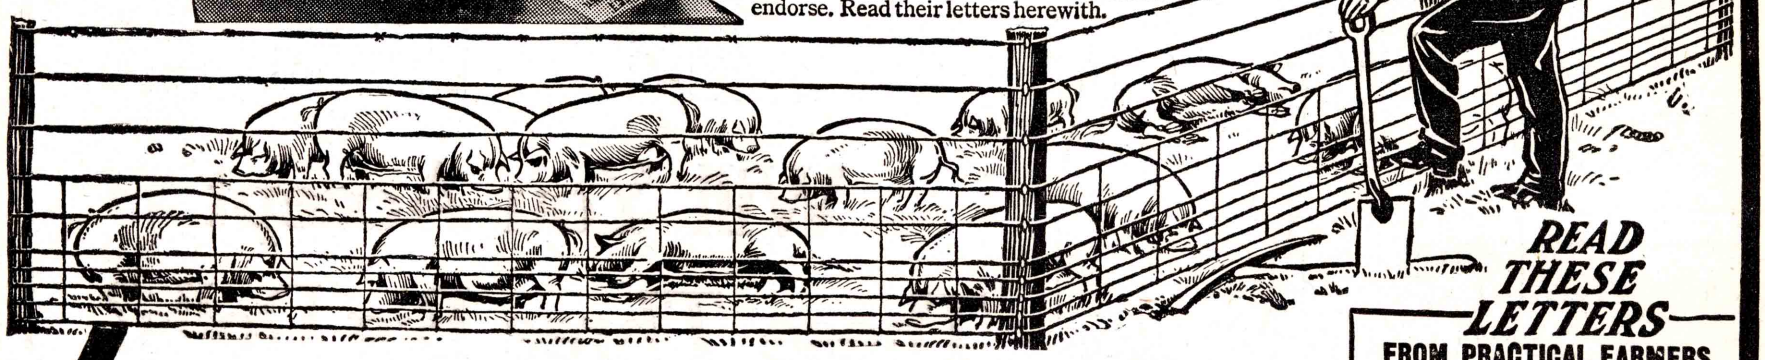
is a Registered Pharmacist, a graduate of the Cleveland School of Pharmacy and of the National Institute of Pharmacy. He has been engaged in laboratory work for more than twenty-five years and was formerly assistant to Dr. Nathan Rosewater, former Chemist of the Ohio State Dairy and Food Commission, for many years has been engaged in compounding veterinary remedies.

My Liberal Offer is Still Open

Don't let them contract contagious diseases when prevention is possible. Put them in condition to better ***resist*** the scourges which are carrying off thousands right now. Get rid of one of the chief causes—***worms***—deadly, disease-breeding worms. Wormy hogs are ***easy victims*** of any contagious disease. They are weak, unthrifty, dangerous property. Worms rob them of their strength and vitality and often open the way for Cholera and Swine Plague to get a foothold on your farm. Let me get rid of these costly pests—

I'll Stop Your Worm Losses

with **Sal-Vet**, the great worm destroyer and conditioner—or no pay. I've been doing it for farmers everywhere—I stand ready to do it for you and ***before you pay me a penny.*** I offer you a ***safeguard against loss*** from stomach and intestinal worms, which farmers and stockmen, say, is the ***most successful*** and efficient preventive ever discovered and which many Agricultural Colleges and Experiment Stations endorse. Read their letters herewith.



I'll Feed Your Stock 60 Days Before You Pay

simply to show you what **Sal-Vet** will do for you, I will prove to you what I have proved to thousands of farmers in every State. I'll furnish all the **Sal-Vet** you will need for 60 days' use. Feed it according to directions—if it don't do what I claim you won't owe me a penny—if it does—the cost is trifling compared to the benefit.

The Great WORM Destroyer

TRADE MARK

SAL-VET

REG. U.S. PAT. OFF.

The Great LIVE STOCK Conditioner

is a medicated stock salt—death to deadly, disease-breeding stomach and intestinal worms. It is a great conditioner for all stock. Cholera and swine plague are sweeping the country. Low vitality caused by worms is often responsible for these diseases starting on many well kept farms. Take no chances. Don't experiment—feed **Sal-Vet** and rid your hogs of deadly worms. You have nothing to lose by accepting my prove-it-before-you-pay offer.

Send No Money—Just the Coupon

Tell me how many head of stock you have. Don't send me a cent of money—just the coupon. Simply pay the freight charges on arrival—feed the **Sal-Vet** according to the directions, then after the sixty days are up, report results. If it don't rid your stock of profit-eating, disease-breeding stomach worms and intestinal worms—I'll cancel the charge. ***I take all the risk.*** Don't delay sending me the coupon. The time to take precaution is NOW. Tomorrow may be too late.

Get your coupon in so that I will have a chance to fill your order at once. I am shipping tons of **Sal-Vet** every day on this offer.

READ THESE LETTERS FROM PRACTICAL FARMERS

"The cholera has been killing hogs all around my home, but I have not lost a single one. I have never used so effective a remedy."—Sanford Gerst, South Boston, Va.

"I found 'Sal-Vet' to do just what you said it would; it is sure death to worms. Moreover, although the cholera has reached throughout this neighborhood, I have not had a single loss since feeding 'Sal-Vet.'"—Joe Gahimer, Alexandria, Ind.

"The hog cholera is all around us in this neighborhood, but so far there is not a single case among the hogs belonging to the men who are feeding 'Sal-Vet.'"—Thomas Cannedy, Roodhouse, Ill.

"Hogs all over our country are dying in large numbers, and many right here in my town have lost hogs from some cause, but I could not wish mine to do better than they have since feeding 'Sal-Vet.'"—D. E. Knight, Honeah Path, S. D.

"Before getting your 'Sal-Vet' I had lost thirteen of my best hogs, but since feeding 'Sal-Vet' I did not lose a single one, and every animal is in fine condition."—Geo. Moren, R. No. 1, Pittsburg, Kan.

"Before I started to feed 'Sal-Vet, my hogs were sick; and I had lost six of them; since feeding 'Sal-Vet' I have lost none, although some of them were pretty sick before they had access to 'Sal-Vet' and had lost their hair. However, they pulled through all right and now have good appetites and are thriving."—Earnest Triebel, Rt. No. 2, Clearwater, Minn

"'Sal-Vet' freed my hogs from worms by the wholesale. I'll not be without it."—(Signed) Henry Iverson, Wagner, S. D.

"My hogs are doing finely; have kept 'Sal-Vet' before them for two months and while there has been lots of disease amongst hogs in this section, none of mine have been sick."—Geo. A. Eline, Rt. No. 20, St. Mathews, Ky.

"I have kept 'Sal-Vet' before my hogs all the time, and I never saw them do so well. A lot of hogs died all over this part of the country, but mine have remained perfectly healthly."—Thomas V. Smith, Ellington, Mo.

LOOK FOR THIS LABEL

on all SAL-VET Packages. Don't be deceived by imitations. Don't buy "Sal" this or "Sal" that. Get the original genuine **SAL-VET.**

PRICES 40 lbs., $2.25; 100 lbs., $5; 200 lbs., $9; 300 lbs., $13; 500 lbs., $21.12. No orders filled for less than 40 lbs. on this 60 day trial offer. Never sold in bulk; only in Trade-Marked **Sal-Vet** packages. Shipments for 60 days' trial are based on 1 lb. of **Sal-Vet** for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular sized pkgs.

Does This Remind You--?

Peace on Earth

The Soil's Great Need

The great need of the soil is organic matter, or humus. Green manuring, i. e., plowing down heavy growths of clover, cowpeas or other leguminous crops in the late fall, is one source of supply, and a good one, but the best way to get the right kind of organic matter into the soil is to feed up all the forage and carefully save all the manure. The average milk cow will drop twenty tons of this organic matter during a year. The hog will practically pay for all his feed in value of the manure if it is returned to the land without waste. The droppings of sheep more than pay for the grain and hay they consume. Make it a business to put organic matter in the soil.

When Writing to Advertisers Don't Fail to Mention Up-to-Date Farming

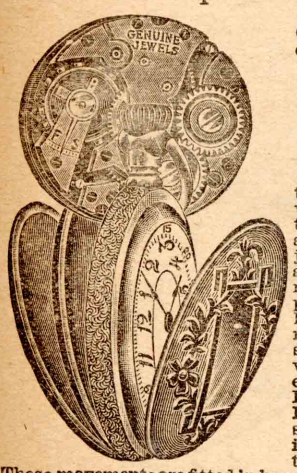
Great as Christmas Presents

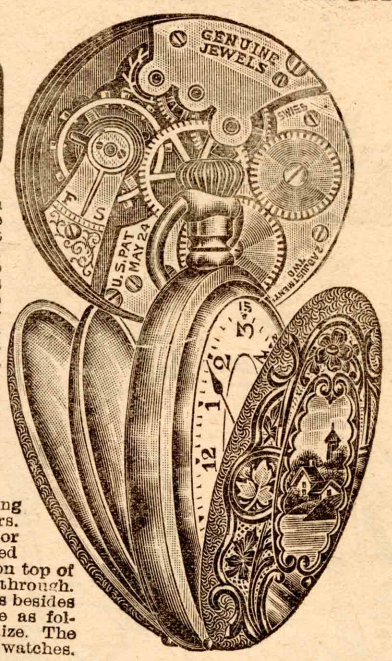
Only once for each reader

One Gents' or Ladies' Gold Watch

will be sent upon receipt of only

$1.00





The movement in these watches are very carefully put together with full amount of genuine jewels. All wheels and other parts in the movement are finely polished and carefully regulated. The movement has a straight line lever with winding wheel exposed and a patent Breguet hair spring. It is stem wind and set. This movement is guaranteed by us to keep correct time.

These movements are fitted in heavily gold filled Hunting cases guaranteed to keep their appearance for 20 years. "Gold filled" metal is the strongest and best metal for gold watches and should not be compared with so called "gold plate", which simply consists of a gold surface on top of some other metal. Gold filled metal is solid metal all through. Our written guarantee accompanies every watch and is besides engraved in the case. The size of these watches are as follows: Gents watch size No. 16 which is the best liked size. The Ladies' watch is also of the size most popular in Ladies' watches.

Either one of these watches under ordinary circumstances, is sold at a price ranging from $12.00 to $15.00. We now offer you one of these Gents' Gold Watches or one of these Ladies' Gold Watches at the price of only $7.00. We do not even demand you should pay this extremely low price before you have convinced yourself that the watch you select is to your entire satisfaction and exactly as described by us. You only have to send us $1.00 and we will send you the watch so you can examine it. If you then are satisfied pay the balance of $6.00. If you are not satisfied, we will take the watch back entirely at our expense and return your dollar.

The reason we sell these watches at such an exceptionally low price and entirely at our own risk, is that we condfidently believe every reader of this paper wants a fine reliable gold watch when it can be had at such a bargain price. We expect in this way to receive thousands of names and addresses to which we at the same time send our beautiful new Free **Catalogue** for goods and consequently secure many new customers. Our Catalogue embraces not only watches and other jewelry, but also Gents' and Ladies' Clothing, Furniture, Groceries, in short everything and anything that is needed in a family or on the farm. In this magnificent catalogue you are offered all these different kinds of merchandise at bona fide bargain prices thus saving you a great deal of money.

Write your name and address on the coupon below and mail it to us at once with $1.00.

COUPON For Readers of UP-TO-DATE FARMING this offer expires January 10th.

LUNDIN & CO., 117 N. Elizabeth St., Chicago, Ill.

Gentlemen: – Enclosed please find $1.00. As per your promise sendfor my approval the watch I have marked below with a cross (X). It is agreed that if I shoud not be well satisfied with the watch, you will refund my $1.00.

....Gents Gold Watch. ....Ladies Gold Watch.

Make a cross (X) on the line in front of the watch you desire. Should you wish to receive both watches, send us $2.00 and we will send both watches for your approval.

Write your name and address below. If it should be inconvenient for you to secure a money Order or register your letter, simply enclose a paper dollar with this coupon in an envelope. We guarantee that it will reach us safely if addressed to us.

Name .....

Post Office .....

State .....R. F. D. .....Box .....

☐ Should you desire to receive only our new Free Catalogue, you can also use this coupon by making a cross (X) in the square in front of these lines. The Catalogue will at once be mailed to you free, postage prepaid by us.

People visiting Chicago are invited to call at Lundin & Company's place of business, 117 & 119 N. Elizabeth St., near Washington Boulevard, and there look at and examine these Watches as well as any other kinds of merchandise in which they may be interested. E-45

Christmas Thoughts and Other Things

Being a Few Words on Particular Matters From the Editors to the Reader.

WHAT DOES CHRISTMAS MEAN to you, reader? To us, to UP-TO-DATE FARMING as an institution, it means giving to the cause to which we are devoted the best we have to give, and that is our loyal service in the work of making farm life what it ought to be and can be made. It is all we can give our readers, this service of our hearts and hands, and we want now to say to you, while wishing you a Merry Christmas this year, that we are working, planning, hoping and striving to bring about, so far as we can, the better life we all desire to live, but which can not come to many of us until some grievous wrongs are righted. These wrongs can be righted and will be righted when farmers are encouraged to stand by each other, and for the right.

In our homes, and with our relatives and friends, Christmas means—well, just read what Aunt Sophia says to the women folks in this issue about Christmas giving. We approve most heartily her doctrine. The idea of giving gifts should mean that each gift should contribute to the happiness of both he who gives and he who receives. Christmas giving is made a farce in so many ways. It is made to serve the spirit of selfishness rather than the spirit of service. It is a farce, because gifts given in such a spirit carry no blessing with them. He who gives from a sense of duty loses the good of giving. Let us give because we want to serve our fellow men. So, like Aunt Sophia, our gifts are to those who need and are of what they need. This is our idea of Christmas, and what it means to us in our personal relations with our neighbors, friends and loved ones at home.

We feel, however, that we have a fellowship with every subscriber of our paper. We are in effect one great family. You have paid us for the paper, for the pleasure and profit you may obtain from it. Our greatest pleasure is in giving you for your needs. We want this paper to be of service to each one of you individually, and to the general welfare of agriculture as a whole. Whatever helps all of us helps each of us. We want to add to our wish that this Christmas season may be a joyful occasion in some way to every one of our readers, the assurance that we shall give you the best service our means and abilities can provide—a service which we intend shall add to your prosperity and contentment.

We Must All Watch Congress

The special session of Congress that lagged along until the regular session trod on its heels did a vast amount of work, so we are told. We have all along been telling our readers what our chief lawmakers were doing, because it behooves us to watch the big lawmaking factory. It is certain that without watching, and without letting them know they are being watched, the crafty "interests" would run away with the balance of our liberties. Keep your eye on Congress.

Is It Truth or Slander?

An Indiana fruit grower rose to his feet in a gathering of fruit growers and declared that the reason farmers had not made a success of co-operation was because they were suspicious of one another. Another man interrupted with the remark that they have good reason to be. We don't believe it. Farmers are not only less suspicious of each other than any other class, but they have been unsuspicious of even strangers to their own hurt. Shrewd business men are more suspicious of each other, and have better reasons for it, than any community of neighbors on the farm. Yet they co-operate successfully. Why? Because they do so on plans that make it difficult or impossible to sink their co-operative bark by inefficient or dishonest work. When the farmers learn to do a co-operative business under business safeguards they will build the greatest success in co-operation the world has ever known.

WHEN WRITING TO ADVERTISERS MENTION UP-TO-DAE FARMING

Don't Buy an Engine

until you investigate the Temple Gasoline-Kerosene Engines. Sizes: 1¾ to 50 H.P. All Temple Engines are slow speed, heavy duty. They weigh and bulk from one-third to one-half less than horizontal engines, and notwithstanding, they are built stronger in proportion to strains. These advantages greatly increase their range of use.

Temple Engines cost nothing. They pay for themselves in fuel saving. They secure from the machines operated top-notch efficiency. They save from one-quarter to one-half the fuel of the average engine.

Temple Engines Have Won Five 1st Premiums for Low Operating Cost, Stability and Steady Power

This is the Company's 61st year as manufacturers. It is one of the pioneer engine makers of the country, which means reliability of its product.

Balanced Rations

Merry Christmas.

And a Happy New Year.

Make over the old farm and make it better than ever.

Peace on earth comes high, but lack of it costs us more.

Now is the time to begin a regular system of winter reading.

Put a few good new books in the bookcase for the winter.

Sam Saxon says it is what a farmer don't know that hurts him.

We can't judge the flavor of an apple by the beauty of its skin.

The farmer who fails to realize his duty to the community is asleep. Wake him up.

We can make a habit of anything—even work. Here's a fine hint for a lazy fellow.

The man who has made a success to be proud of need not be ashamed of his failures.

A year's subscription to UP-TO-DATE FARMING to a fellow farmer as a Christmas gift—why not?

And now the scientists have found a bug that eats the chinch bugs. Will wonders never cease?

Turning over the new leaf doesn't amount to much. What you write thereon is what counts.

Every good road should lead to a good market. If markets were always good, roads would be better.

The chief trouble with the happy-go-lucky system of living is that it ends in neither happiness nor good luck.

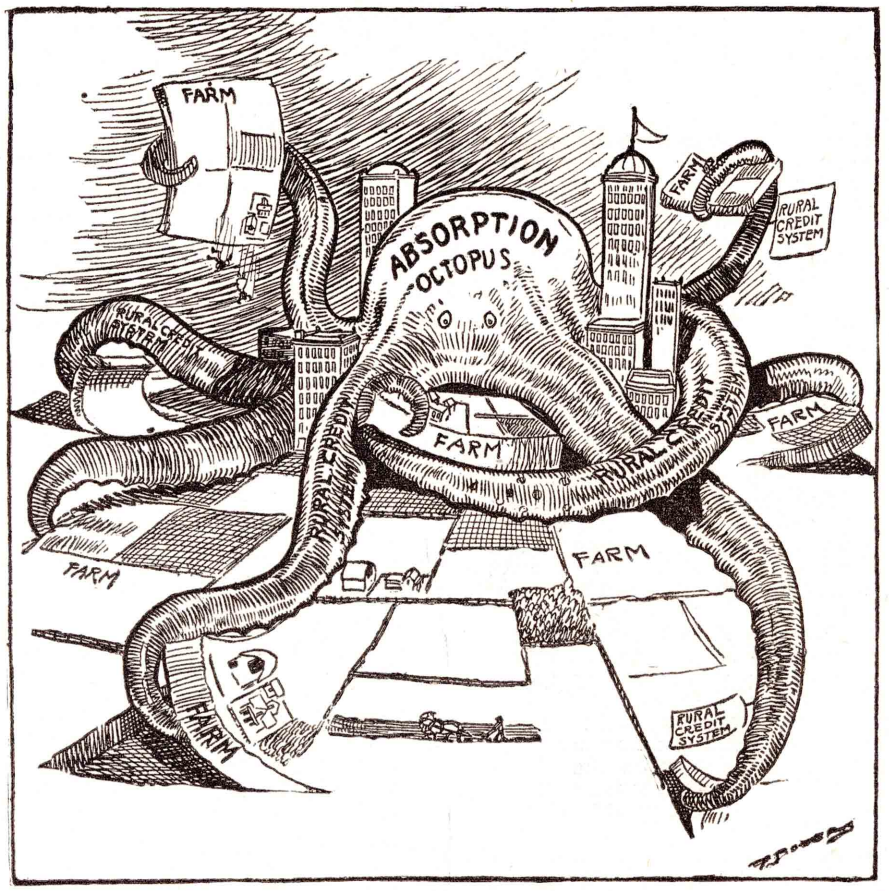
The short days bring the long evenings. Make use of them in helping to build up a better social life in your community.

Sam Saxon says Santa Claus is in full agreement with P. T. Barnum's famous statement that folks enjoy being humbugged.

The highway the individual farmer is most interested in improving is the one that leads from his front gate to the business street of his market town.

When a farmer begins to keep an account of costs and profits on every crop produced on his farm he's going to learn things no other method could teach him.

The farmer who shoulders his ax and hies to the wood lot to cut firewood from dry oak and hickory, with the thermometer way b'low zero, thinks, mayhap, he has a hard time of it, and wishes he could sit in a city office and soak up steam heat. But there's two sides to those soft snaps in the city man's life. First there comes a coal strike by the miners, and coal prices go right up till it makes a man dizzy to watch the figures. Then along comes a teamsters' strike and no coal can be delivered at any price. The only strikes the farmer need concern himself about are the ones he makes with his ax, and good, dry wood in the wood shed is a blessing.



The Rural Credit System may become an absorption octopus and swallow bodily the farms it fastens its tentacles upon. See editorial on "Still Talking Rural Credits," page 4.

The World's Bread Supply

THE NEW TRADE relations between the United States and other countries seem to point to this country as the power that will control the bread market of the world. A wealthy wheat grower of Canada recently visited Liverpool for the purpose of personally studying the flour market. He told the British dealers that the new tariff in this country gave our millers, the great mills of St. Paul, Minneapolis and other great flour centers near the Canadian border, absolute control of that great life necessity. It has long been the cherished ambition of these mills, he said, to thus control that important market, and they are now fully able to gratify that ambition. The wheat production of the United States northwest has long flowed to these mills, and now the vast Canadian production can do the same on the same terms. Therefore, all the American mills have to do is to buy the wheat and agree that they will sell only flour. That will assure them a practical monopoly of the flour trade and give them control of the world market.

The present arrangement will affect the price of wheat, but not of flour. The American growers, because of the free Canadian competition, will have to accept lower prices, but those lower prices to the United States growers will be better prices to the Canadian growers, because they are no longer required to pay a tariff out of the price they receive. And this applies to other grains as well as to wheat.

What all this means to the farmers of the United States requires no guessing to understand. Competition lowers price. Everybody knows that. The price of grain will be reduced, and the near-border mills, being thus able to get the wheat, can easily agree on the price for flour, which the smaller millers will gladly conform to. This can mean nothing else but lower grain and higher flour—increased profits to the big mills. This seems to be the general tendency of modern legislation. The people understand it and know the effect it is bound to have upon the masses, but they accept it as seemingly inevitable and thus permit its continuance. We seem to be passing through a period of greedy activity on the part of the few and of inactivity, quiet submission, on the part of the many. But we shall continue our notes of warning. Farmers have not yet been able to control the tariff, but they CAN get in a condition to control not only their business of marketing, as this paper so plainly shows, but, when they do this, they can be the rulers of the country and dictate the laws.

What Others Say and What We Think of It

"Eggs are on the zig-zag," says a market report in a produce paper. Must be egg-nog.

"Good turkeys are scarce," says another market report. Well, what else could you expect right after Thanksgiving?

"The idea of community organization is growing."—Farm, Stock and Home. And it will keep on growing until it becomes national organization.

"Locate as many egg customers in the nearest city as you are able," advises a poultryman in Green's Fruit Grower. We have more difficulty just now in locating the eggs.

"Fertilize with discrimination."—The Country Gentlemen. Nitrogen, phosphoric acid and potash are also good, and old-fashioned barnyard manure is not bad, T. C. G., not bad at all.

"Let's go a bit slow in this 'national network of highways' business. It is as full of opportunities for graft as a sponge is full of holes."—Farm, Stock and Home. Right-O. And a graft-built road will also soon be full of holes.

"There are many ways to reduce the cost of living. Stop smoking, stop drinking, eat plainer foods, stay at home nights, and, in short, cut down on the luxuries of life. The great question of the cost of high living is, are you getting your dollar's worth?"—Exchange. Good advice, all right; but, just how much is a dollar's worth?

"The country banker is interested in farming because of his close relation to it; the city banker is interested because of his relation to the country banks, and all bankers are interested in agriculture because they realize that it is the country's most fundamental and important industry," said Col. Farnsworth at the Dry Farming Congress held at Tulsa, Okla. One fundamental the bankers have so far failed to realize is that farming can not be fundamentally profitable until the business of marketing is made fundamentally sound.

"There is a sufficient number of farmers in every community who are in a condition financially to help their neighbors if they were so inclined, and these same men allow their surplus money to lie idle year in and year out, not even drawing interest. It would be possible for this class of farmers to organize a system of credit and lend their money to their neighbors, by which they would be assured of collecting their money, and it would be a great help to the farmer who is compelled to borrow money each year to make his crop or to mortgage his crop for supplies."—Texarkana Press. So it would, indeed. Another reason for a local union in each community to bring the farmers together.

Still Talking About Rural Credit

STILL TALKING RURAL CREDIT

IN SPITE of the clearly expressed judgment of the disinterested and intelligent masses of the American people, including the farmers themselves, that such a measure is not necessary, there is still more or less talk of a so-called rural credit system. The claim of those who urge such a system is that the farmers must borrow money; that the present money resources of the country are out of their reach, and that there must be a distinct system of banks, different from what we now have, for the purpose of lending money to the farmers. But somewhere as an essential feature of all these theories is the issuing of mortgages and bonds on the lands and homes of the people. With that feature eliminated, those who now so strongly urge the creation of a special rural credit banking system would lose their interest in it and cease to advocate it. The purpose of the real instigators of the measure, as is apparent from many phases of the arguments for it, is not so much to benefit the farmers as it is to create an outlet for their accumulated millions and get into line for bond speculation on the homes of the American people. Farmers can now borrow money on mortgages, but they can not mass their homes and bond them, thus adding the homes of the people to the speculating schemes of the money changers and making the farmers themselves subservient to the money power. Those millions have been accumulated by schemes of absorption, and those same schemes, continuing in operation, will soon draw the money back again, and hen the same power will have the noney and also the real estate bonds.

If the farmers are scarce of money and need to borrow, it is because of this very absorptive machinery. The business of farming is not based on money, but on soil and labor, and that is the only means of creating wealth. Miners may bring additional wealth into use, but they do so only by the discovery of wealth that already existed. Manufacturers may increase the value of commodities and thus add to the wealth, but it is not new wealth; it was there before, though in raw material.

But it is not so with farming. When the farmers bring forth a crop from seed that perishes, the value of that crop is wealth that did not exist before; it is an actual creation of wealth. Then why should not the farmers have the benefit of that wealth? It is theirs just as much as is the mineral brought from the hidden recesses of the earth the property of those who find it and bring it forth. And that which is thus created by the farmers, the crops that yield their millions from the soil, and "the cattle on a thousand hills," are absolute necessities. The world must have them or starve, and they can be had only by buying them with money. Why, then, have not the farmers the money? Because a few who "toil not, neither do they spin"—that is, they are neither producers nor manufacturers—have organized systems that draw this money back into the hoarders' coffers, whence it is desired to let it out again and make an additional means of absorption, bringing with it this time ultimate control of the lands and homes of the people.

What the farmers most need is protection from the few that so ruthlessly absorb, take from them, the wealth they create. The country is cobwebbed over with worse than devil-fish tentacles sucking in the wealth earned by labor or created from the soil. No sooner is a crop harvested than a rush to market places it in the ever-open jaws of absorption. These absorbing powers are not natural, and they are not business necessities. They are artificial methods of getting what others have produced. So far as the farmers are concerned, these suction forces are most effective in the marketing and distribution of the crops. And these may be easily and effectually remedied. If all good men in official stations would direct their efforts to the completion of a better marketing system, such as this paper is establishing, cutting out unnecessary handling and exorbitant profits, the problem of rural credits will solve itself, as will other problems that now puzzle the people.

* * *

Since the above was written the President has delivered his message to the new session of Congress, and his recommendations concerning rural credit are of such a nature that we feel strongly the necessity for opening the minds of the farmers to a phase of the proposition which has evidently escaped so astute a person as our chief executive. We very much regret the position President Wilson takes in his recent message to Congress in favor of a rural credit system. This is, in effect, saying to the farmers in the richest country on earth: "You can not get money unless you borrow it, and we want to make it easy for you to borrow it."

Why can't the farmers get money without borrowing it? As must be admitted by everybody everywhere, the farmers are the only real creators of wealth in the world, and the wealth they create from the otherwise absolutely useless soil is of such a character that the rest of the world must have it, must BUY it, or starve. If the other people buy it they must pay money for it. Why, then, can not the farmers have money without borrowing it? It is because the country is cursed with systems of absorption that gather in the money as fast as the farmers get it, and those same devil fish tentacles would suck in the borrowed money just as certainly and as quickly as they do the money received for the hard-earned crops. After that the farmers would be without money just the same, for then there would be insatiable claims by the money power upon their lands and homes.

Better do something to destroy the merciless suction power that even now has in its power the entire business of the country outside of farming, and that, under the attractive but misleading name of "rural credits," is determined to get its cruel fangs into the agriculture of the country.

President Wilson is a sincere, honest and determined man, but it is evident that he knows more of Latin and Greek and the intricate problems of science than he does of the real conditions and needs of the farmers. Hence, when the representatives of the money power who wish this new means of absorption, accumulation and control of the homes of the people open to them—when these misrepresentatives come before him like wolves in sheep's clothing, come before him with the false and deceptive plea that they wish to benefit the farmers—he listens.

How unfortunate! But it is that way. The President congratulates himself and the country on the fact that the national treasury last fall furnished money to aid in the moving of crops! Did Mr. Wilson note what amount of that money was deposited in the banks of the District of Columbia, where there is not a car load of surplus products to go out of the District perhaps for a year? And does he realize that the great cry for money to move crops does not come from the farmers at all, but from those who wish to buy the crops at the lowest prices they can compel the farmers to accept? This boasted distribution is little else than greasing the wheels of the market monopoly that gathers in the stuff at the low prices of harvest time and stores it in order to extort merciless profits from the consumers in times of necessity? Why, hardly had the money been used by the speculators to whom it was loaned and the crops "moved" from the farms to the storage houses before another branch of our government set forth on an expedition of investigation to find out why products thus stored and held in storage are so costly to the consumers!

We wonder sometimes how farmers and consumers can be persuaded to submit to these things. They come, however, as a daily round, deceiving honest officials as they deceive those who seem to submit so tamely to the glaring wrongs. But sentiment is changing and there is coming an awakening—a demand for Equity rather than the tightening of the grasp of a merciless control.

Department of Agriculture and Farmers' Interests

SEVERAL TIMES we have had to criticize the United States Department of Agriculture from a farmer standpoint, and it does seem that the Department is bent on serving other classes than the people in whose interest it was ostensibly established. Nearly all its crop reports, as not only this paper but others have noted, seem to be timed to the benefit of the buyers of farm products rather than to the producers and sellers of them. At the accustomed selling time production is almost invariably reported large, and the effect is to depress prices, but when the farmers have sold and the stuff is in the hands of the speculators it is then discovered that the supply is short and high prices are justified.

We are just now directed specially to the potato crop. A few weeks ago, when the main crop was being harvested and made ready for the market, statement after statement went from the Department, and the papers were kept full of the assurance that, though the potato yield was not at its best in some places, yet conditions were such that there would be no shortage in the supply in this country, there would be an abundance of potatoes to meet the demand. The effect of this was to induce farmers, even in sections where the crop was almost a failure, to sell rather than to hold. It made them believe there could be no great increase in price. Thus the speculating storers got the potatoes, and upon depressed prices of their own making, apparently justified by reports from Washington.

But now, the last of November, dispatches from Washington tell us that Secretary Houston has called a public hearing to decide upon the removal of the quarantine regulations that prevent the importation of potatoes from foreign countries because of various potato diseases known to exist in those countries. It is desirable to remove these obstructions, says the secretary, in order that potatoes may come in from abroad to "make up this year's scant native supply," a shortage of a hundred million bushels! Are the potatoes thus to be admitted from abroad to benefit American potato growers? Not a bit of it. The native growers, the bulk of them, have already sold their potatoes at prices depressed by Washington reports. Are those potatoes to reduce retail prices and benefit the consumers? No. They will come at the lowest possible prices directly to the hoarding speculators, who will control the markets just the same as if they had not come. But those speculators will have that many more bushels to make their extortionate profits on. Who, then, is to be the beneficiary?

We have to admit, as was said by one who has carefully studied this marketing situation, that it is thoroughly disgusting to think how the Department of Agriculture so constantly keeps up an agitation that can not fail to be damaging to all the agricultural interests. As we have said, this new scheme will not materially reduce prices to consumers, but it will seriously affect farmers who, in spite of other reports, kept their potatoes. It takes a good quality of potatoes to bring the farmers 50 cents a bushel in New York state, Michigan, Wisconsin and other heavy producing sections. Fifty cents is not an exorbitant price, and it is not a cent more than the growers ought to have for producing them. But the Department of Agriculture is not satisfied with that situation. It certainly does look like the chief function of the Department is to distress agriculture and harass the farmers in every way it can conceive of.

The Packers' Monopoly and Price

MONOPOLIES that obtain control of certain commodities so they may compel, for personal or corporate benefit, lower or higher prices on those commodities, are harmful to those who have them for sale as raw material, or who must buy them for use. Such are evidently the combined packers of the United States. We agree, though, that even these monopolies may benefit producers by creating a market for their stuff where there was little demand before, and by offering remunerative prices even though higher prices must be charged as the products go to the users. E. T. Hatch of Washington, a farmer of twenty-five years' standing, and president of Brush Prairie Local, F. S. E., gives a case in point. We quote:

In your issue of November 1st I notice a good deal regarding the effort being made by the packers to induce the farmers to raise more cattle and meat. I distinctly remember hearing James J. Hill—and he is one of the wisest and safest men in the country—advocate the same thing the packers are asking now. Out here in the northwest we had no market to depend upon until the Swift interests started a packing plant and stock yards at Portland, Ore. Prices have been better ever since they came than before, and far more dependable.

Two weeks ago three of us neighbors each took a large sow that had passed profitable breeding age, and that we had fattened, to the yards. Every courtesy was shown us as we drove in with our old farm wagon, and in a short time we had a check. My sow weighed 460 pounds and at $7.40 per hundred pounds brought $34.04. Commissions and all charges on the three hogs was 94 cents. If that is extortionate it is not the kind that hurts.—E. T. Hatch.

Very true, Brother Hatch, and we are glad you had this streak of sunshine through a murky cloud. But you did direct marketing and got the full benefit of it. Had you sold to Mr. A, and had Mr. A shipped to some distant market city, where the stuff must be handled and rehandled, the result might not have been so satisfactory. And had each of you had two sows instead of one, and all of your neighbors had two sows just like them, and had most of the farmers of the country been similarly supplied, you would, perhaps, have received no more for the two sows than you got for the one.

Our plea is for Equity. You evidently had it there. We want a better marketing system that will take the supply direct to the demand, or as near as can be, and by the cheapest route, with only necessary handling and the fewest possible commissions and profits between the seller and buyer. You had that also, and we congratulate you. We want abundant production, but we want it to supply the demand in such a way as to give both producer and consumer equitable prices, which, far too often, is not the case.

A Southern Alfalfa Association

WITHIN the past decade a wonderful advance has been made in the agricultural development of the south, and hand in hand with this development rapid strides have been made by the various towns and cities. The farmers of the south are just waking up to the possibilities of their soil and a new day is beginning in their agricultural life. Even now many of them do not realize that with the long growing season the soils of the south are capable of being made the most productive in the United States. Along with this realization comes the determination to make the south the greatest crop-growing section in the world and at the same time enrich the soil more and more each year.

The progress of soil enrichment will come through a liberal use of cover crops. A bountiful crop of corn, oats and of other grain can be produced throughout the south, and after its gathering a cover crop can be placed on the soil, enriching the soil and preventing erosion during the winter months, and bringing a goodly yield of hay in the spring in ample time to grow other crops during the year. As many as three crops can be grown in a single year in most sections.

A striking illustration of what is being done throughout the south is shown through the work in the section surrounding Rock Hill, S. C. This place, which is termed the alfalfa center of the southeast, is taking the lead in the clover crop movement. Thousands of dollars worth of hay formerly purchased from the markets of the middle west are now being grown at home. The soils in this section are especially adapted to alfalfa, with few exceptions, and in those cases other cover crops can be successfully grown. The average production of alfalfa is around five tons per acre, but in some few cases the yield reaches six to eight tons, and rarely less than four. While alfalfa has been grown on a limited acreage for several years, the success of the hay crop in this section was not thoroughly demonstrated until about two and one-half years ago. Since that time the acreage has been steadily increasing until now there are several hundred acres of alfalfa right around Rock Hill in addition to hundreds of acres of other cover crops. The cost of producing alfalfa averages around $10 per acre per season, exclusive of preparing for seeding, which runs the cost to about $5 per acre the first year, and the market price is from $20 to $25 per ton. There are some fields which have been in alfalfa continuously for eight years.

A decided impetus of the growth of alfalfa and other cover crops was secured in the fall of 1912 when an alfalfa association was organized. This association, which now includes practically every farmer in that section, by co-operation was able during the past season to secure ground limestone delivered at Rock Hill for $2.25 per ton, a little more than half the former cost when purchased by individual farmers. Over 2,000 tons of ground limestone was purchased by members of the association during the past season and the demand was nothing like filled. Some of the farmers are already placing orders through the association for limestone during the next season so as to get it in ample time.

As a result of the work at Rock Hill, alfalfa growing is being introduced in other sections throughout the south and various alfalfa associations have been organized. It is believed that in a few more years the south will be producing practically enough hay for home consumption and that the cattle-raising industry will be taken up throughout the south.

The Value of the Advertisements

Do you know how much real education is contained in advertisements? It is a fact that much knowledge may be gained through reading the advertisements, while as a guide for buying the farm and family needs there is nothing that takes their place.

Our Advertisers—Guarantee

The United States Postoffice Department now exercises a close watch for frauds and fraudulent advertisers. The public, therefore, can have confidence in advertisements appearing in reputable papers. But in addition to this Up-to-Date Farming stands back of its advertisers and should any purposed swindler or deceiver gain admittance to our columns, we will make good any loss resulting to actual subscribers. A condition is that the matter must be reported to us within one month of the transaction and within sixty days of the date of the paper, and you must have said "I saw your advertisement in Up-to-Date Farming" when writing to the advertiser. Medical advertisements are not accepted.

Bumper Crops or Bayonets

THIS GOVERNMENT expended $440,000,000 last year on the war business, in appropriations to the army and navy; it spent only $20,000,000 on agriculture. Yet agriculture is of the utmost importance, the ultimate source of business vigor and common welfare. The stability and progress of America depends on its agriculture, and the supreme effort should be to build up our agricultural interests. Yet, for every dollar given to promote agricultwenty-two dollars were given to preparations for war! Of the twenty millions given to agriculture, practically all of it was devoted to the accumulation of agricultural knowledge by the governmental agencies. Very little of it was used to place that knowledge where it would become a factor in real farming operations. Knowledge, to be of service, must be applied to farm practice by practical farmers, who can not go to the colleges, do not read the bulletins and will not take up with new ideas until their value has been demonstrated. Then why not cut down the war expenditures a few millions and devote the saving thus effected to a practical plan for making use of the knowledge already acquired by experiment and research? This can be done through the development of the county demonstration system that has already gained foothold in many states, fostered by state aid. In connection with this, the dire need for a change in the marketing system must not be overlooked. Economical and increased production is but half the requirements of agricultural development and progress. Economical and profitable marketing is equally as important, for agriculture can not be progressive unless it is prosperous. The foundation for reformed marketing must be laid in local organization of farmers and built up by the co-operation of the community units. There can be no other way. The principles of successful co-operation are simple and easily learned. The county agents should be organizers as well as agriculturists. And should Congress pass a bill to carry forward the work of practical agricultural demonstration, the appropriation should be made to extend the problem of marketing and distribution. To build up successfully and quickly a progressive and prosperous agriculture, it is imperative that we build up an organized agriculture, and in this the farmers should have the co-operation of Congress, through the Department of Agriculture.

Mr. Dooley and the Grapes

"Hinnissy," said Mr. Dooley, "did ye ivir hear uv thim Mishigun grapes?"

"What wus they, Mister Dooley? Sour grapes that sum pollytishun hung on th' shlippery ellum tree?"

"Hinnissy, they wus golden grapes."

"That must be a new variety."

"No, me frind, it's th' same ol' kind that th' Amerrycun paypul have bin atin' f'r th' last twinty years er more. Airly in th' saison buyers wint to th' grape belt uv Mishigun an' they sez to th' raisers, sez they, 'All th' signs indykate that grapes is goin' to be as thick as pollytishuns at a harvist home. Folks'll be throwin' 'em to th' hogs an' th' blackbirds. We'll give yez an avin tin sints a basket fer yer grapes, an' that's ivry sint ye'll git. Ye can thank yer stars if yez all don't land over th' hills in th' poor house.'

"What happened, Hinnissy? Did th' consoomer dwellin' in th' bowels uv Shekawgo shwin around in a lake uv grape juice this fall? Did his woife shpend her toime makin' grape jilly an' grape pie? Not mooch, Mary Ann! Whin she wint down to th' cahrner grocery shtore an' seen th' sign, 'GRAPES, 30c A BASKET,' she runned home so fast that she made a slit skirt out uv her Mother Hubbard.

"Growers that signed th' contract were shtung, Hinnissy, shtung so bad that they couldn't see out uv their eyes. Whin th' buyers got all th' grapes they could sell they brought no more refrigerator cahrs to th' grape belt. Th' grapes that wus wasted would kape up th' markit proice in Shekawgo.

"Folks in th' city scratched their heads an' wondered whin th' proices would go down so that they could fill their jahrs. Thim markit jooglers joogled th' markit till ivry wan wus dizzy an' disgoosted."

"Will, Mister Dooley, an' what are yez goin' to do about it?"

"Arganize, Hinnissy, er die. If these Mishigun men die, grape vines will shpring frum their graves, but sum wan ilse not in th' fam'ly will pick th' grapes. Hinnissy, ye mark me wurrds!"

Smile Awhile

Lucky After All

Bix—Well, sir, I have no luck at all.
Nix—That is certainly better than bad luck. How thankful we ought to be!

Not in Doses

"Mrs. Brown has kleptomania."
"Indeed! What is she taking for it?"
"Anything she can get her hands on."

The Usual Noise

"You have a new baby at your housee, I hear."
"Goodness me! I knew it was disturbing the neighbors, but I had no idea you could hear it that far!"

Not the Thing

"Why didn't you go to work for him?"
"I asked for a situation and he only offered me a job."

Worse Afterwards

Wife—You proposed to me a dozen times before I agreed to marry you.
Husband—Since then I've had to ask you more than that many times before you would agree to anything.

Didn't Know He Was Away

Cholly—Did you read the account of their having such a big lobster in Boston?
Maude—No, when were you there?

Class in Astronomy

Teacher—What are asteroids?
Pupil—Ain't they what doctors take out of children's noses?

Why Knot?

A Maine lumber dealer recently shipped a car load of lumber to a firm in Baltimore. Upon its receipt and examination the customer dictated to his stenographer the following terse and telling message, which was immediately wired:

"Knotholes received. Please send the knots."

Who Owned the Dog?

While going along a country road the driver of an automobile saw ahead of him an old farmer walking by the roadside; also a dog. The dog was not content to remain on the side, but kept crossing the road and was caught by the car and instantly killed.

The driver turned the car as quickly as possible and went back to see what damage had been done and found the farmer gazing sorrowfully at the remains of the dog. The driver took out his pocketbook and handed the farmer $10, asking if that would pay for the dog. The farmer said it would, so the other got in the car and went away.

The farmer watched the car until it was lost to view; then, taking off his hat to scratch his head, remarked: "I wonder who owned that dog?"

Entitled to High Honors

"Waal, Jim, I heard you was over to Charlotte, and I thought I'd stop and inquire how things went?"

"Who you callin' Jim?"

"Why, you, of course."

"Then, sir, I'd have you know that my name is James Johnson Jones."

"But we've bin nayburs and friends fur the last fifteen years, and I've allus called you Jim."

"Yes, I know, but things are different now. Sunthin's happened."

"Good Lord! But what kin it be?"

"You know that red calf of mine—the one you said was a whooser? Waal, I entered him at the county fair and he took the blue ribbon."

"Jim Johnson, you don't mean it?"

"It's a cold fact."

"Then, by gum, if you'll run for President of the United States I'll vote for you all day long."

Time for Reflection

An old negro parson in a southern church was denouncing theft to his congregation, when he said:

"If there is any member of this congregation who is guilty of theft he had better repent at once and be saved."

On his way home he was stopped by old Rastus, who had listened to the sermon intently.

"Don't you think, parson, that next Sunday will do just as well as tonight to repent?" asked Rastus.

"But, Rastus, why not repent tonight and be saved, man?"

"Well, parson, it's this way," explained Rastus. "I want just one mo' chicken fo' tomorrow dinner, and I know wha' I can get dat chicken widout bein' caught tonight."

"Well," said the parson, hesitating, "I don't know what to say, so I think I will take dinner with you tomorrow and we can talk the matter over at that time."

1913 RECORD
Magnificent Crops in all Western Canada
All parts of the Provinces of Manitoba, Saskatchewan and Alberta, have produced wonderful yields of Wheat, Oats, Barley and Flax. Wheat graded from Contract to No. 1 Hard, weighed heavy and yielded from 20 to 45 bushels per acre; 22 bushels was about the total average. Mixed Farming may be considered fully as profitable an industry as grain raising. The excellent grasses full of nutrition, are the only food required either for beef or dairy purposes. In 1912, at Chicago, Western Canada carried off the Championship for beef steer. Good schools, markets convenient, climate excellent. For the homesteader, the man who wishes to farm extensively, or the investor, Canada offers the biggest opportunity of any place on the continent.
Apply for descriptive literature and reduced railway rates to Superintendent of Immigration, Ottawa, Canada, or to Canadian Government Agent.

OUR MARKET REVIEW

Semi-Monthly Review of Crops Markets and Trade

UNDER the head "State of Trade" Bradstreet's gives this summary of the condition of various trades in the country as of date December 6, 1913:

Warm weather dulls demand. Retail and holiday goods slow. Jobbing quieting down as year end approaches. Wholesale conservative. Industry slackens further. Iron and steel dull. Cotton goods and automobile manufacturing active. Stock market stronger. Money in restricted supply. Clearings expand. Excessive winter wheat growth.

The two-weeks period just past was notable for warm, moist weather conducive to a full recovery of meadows and the filling up of wells before winter sets in. Also the unseasonable warm weather has caused a rank growth of winter wheat, which will be beneficial generally if the cold weather that set in the first week in December continues. With much more growing weather before spring, many fields of wheat will be injured by jointing, with danger of fly also. A good thing is to pasture rank wheat, or, if this is not practical, mow it. Floods in Texas and great snow storms in the central west have been among the unusual events to record. The winter wheat prospect is almost unprecedently good.

A letup in rushing wheat to market, the good world's demand and crop damage reports from Argentina have checked the visible supply increase and caused a good advance in the price. The visible increased only 103,000 bushels since our last report, against 5,247,000 bushels the two weeks preceding, and compared with an increase of 11,440,000 bushels the last two-weeks period the year before. The price of wheat is 2c to 5c a bushel higher than two weeks before. Attention is called to the future prices quoted for spring wheat at Minneapolis and Winnipeg, Canada.

Corn continues to hold its strong position, both as regards visible supply and price. The visible decreased over a million bushels, while the high price has been maintained, to a little higher.

Oats have behaved well the last two weeks. It is a pleasure to record a decrease of over one and a half million bushels in the visible and an advance of 1c to 4c in the price. Thus our prediction of higher oats prices is being realized. This grain is due for further advance.

The cotton crop will be about 14,000,000 bales and the trade seems to think this is worth 13c to 14c a pound. Because of the past activities of the federal authorities there is not likely to be any corners attempted and unless some element enters into the matter, not known now, prices may be expected to be around present levels.

Potatoes—The small receipts at central markets are worthy of note. Prices are higher, with prospects of them going still higher unless the Department of Agriculture decides to admit potatoes from countries formerly debarred because of diseases. Imported beans are now offered on some markets. We are not able to forecast what effect these will have on future prices, because of lack of knowledge of the foreign crop. The warm spell of weather was making good progress toward breaking the egg corner when the cold wave came. Future egg prices will depend almost entirely on the weather. Oranges have again glutted the markets and sold by the case at 1 cent per orange. Some day the citrus fruit growers will adopt the Equity plan of marketing and get such definite results that they will wonder why they permitted themselves to be led to the slaughter nearly every year.

Advice

Wheat—Hold for higher prices or feed in preference to corn at prevailing prices. Corn—Market any surplus old corn. Sound, dry new corn should bring 60 cents to 70 cents from the field and we advise selling at such prices rather than cribbing. Oats—We look for higher prices. Cotton—Hold for 14c grade middling upland, basis New York market. Broom corn—Prices ought to go higher. Beans—We look for higher prices. Potatoes—Market gradually at prevailing prices. With the proposed conference in the Agricultural Department on the 12th inst., we will not attempt to forecast future values.

The following tells the balance of the market story:

Visible Supply

The visible supply of grain in the United States by Bradstreet's reports on Nov. 29, 1913, with comparisons, are shown in the following table. (The sign — before figures means decrease, X means increase.)

	Nov. 29, 1913 Bushels	Change from 2 wks. before Bushels	Change same period last yr. Bushels	Change from a year before Bushels	Change from 2 years before Bushels
WHEAT	67,916,000	X 103,000	X 11,440,000	X 4,650,000	— 9,132,000
CORN	3,847,000	—1,105,000	X 359,000	X 374,000	X 477,000
OATS	35,453,000	—1,663,000	— 856,000	X 20,497,000	X 10,358,000
BARLEY	8,027,000	X 909,000	X 80,000	X 1,958,000	X 3,272,000

The visible supply of wheat in Canada on the same date was 48,162,000 bushels. This is 1,026,000 bushels more than two weeks before and 4,687,000 bushels more than a year before. The visible supply of oats was 10,780,000 bushels on the same date, which is 1,524,000 bushels more than two weeks before and is 4,972,000 bushels more than a year before.

Closing Prices of Cash Grain

Cash grain closed in the leading markets on Dec. 6, two weeks before and a year before as follows:

WHEAT, No. 2 RED			
Chicago	96½@ 97	91 @96	1.02
St. Louis	95 @ 96½	90 @94	1.07
Kansas City	88 @ 89	86½@87½	99
Cincinnati	97 @ 98	95½@97	1.08
New York	1.00 @1.01	97½@99	1.07

Minneapolis—Spring wheat—No. 1 hard, 87⅞@88⅛c; No. 1 northern, 85¾@87⅜c. Two weeks before, 86c and 84@85½c respectively. A year before, 82½ and 80⅛@81⅝c respectively.

CORN, No. 2 WHITE			
Chicago	73½@74	74½@75	46
St. Louis		76	47
Kansas City	71 @71¼	71 @75	47
Cincinnati	76 @77	75½@76	52
New York	85	82½	53½
OATS, No. 2 WHITE			
Chicago	42½	39½@39¾	35
St. Louis	43 @43½	42½	34½
Kansas City	41½@41⅝	40½	34½
Cincinnati	41½@42	41¼	39

Future Grain Prices

Chicago grain futures closed on Dec. 6, 1913, and two weeks before as follows:

Wheat—December, 88c; May, 91¾c. Two weeks before, 86¼c and 90½c respectively.

Corn—December, 72¼c; May, 71c. Two weeks before, 70¼c and 70⅜c respectively.

Oats—December, 40¼c; May, 43c. Two weeks before, 38c and 41⅞c respectively.

Winnipeg, Canada, Dec. 6.—Spring wheat closed: December, 84⅜c; May, 89⅜c. Two weeks before, 82⅝c and 89c respectively.

Cotton

New York, Dec. 6.—Cash cotton closed as follows: Middling uplands, 13.50c; middling gulf, 13.75c. Two weeks before the price was the same. A year before the price was 75c a cwt. lower.

Chicago Produce Market

Chicago, Friday, Dec. 5, 1913

Chicago quotations are used in our report for the sake of uniform comparisons issue after issue, and this year with former years. For advice about other markets and all advice about marketing address The Farmers' Society of Equity, Indianapolis, Ind.

POTATOES—Arrivals by cars, with comparisons, follow:

	This week.	Last week.	Last year.
Monday	30	83	97
Tuesday	45	40	86
Wednesday	30	30	52
Thursday	28	*..	83
Friday	20	45	82
Total, 5 days	153	198	400

*Holiday.

Market was very quiet, but firm and nice, sound. Potatoes sold a little higher. Buyers were looking for fancy goods and paid higher prices for Dusty Rurals. At the same time a few cars of common stock, showing some field frost, were almost unsalable. Receipts continue very small and this is the chief factor in lending strength to the market.

Sales reported were: Per bushel, Wisconsin round white, in bulk—1 car at 70c, 1 car at 73c, 1 car fancy Dusty Rurals at 75c. Sacked—1 car showing field frost at 65c, 2 cars at 70c.

Per bushel—Wisconsin round white, bulk or sacked	$ .65@ .73
Fancy Dusty Rurals shade over.	
Minnesota	.65@ .70
Michigan	.65@ .70
Idaho Russets, fancy	1.00@1.10
Pearls	.75@ .80

NEW POTATOES—Trade is slow. Bermudas in barrels held at $7.50 and Florida hampers at $2.00. They are not moving.

The price of Michigan and Wisconsin potatoes is from 3c to 5c a bushel higher than two weeks before. The price of Idaho and Oregon potatoes is from 10c to 25c a bushel lower than two weeks before. A year before the price was 25c a bushel lower.

SWEET POTATOES—Are ruling dull. Demand is tame. On account of mild weather the potatoes do not hold up. No one cares to have many on hand. The best sound are held steady and have some sale. Ordinary and common stock drags and rules weak. The shrinkage in repacking is sometimes heavy.

Hampers—Delaware, kiln-dried, if sound	$ .65
Poor, coarse, dirty or soft	.25@ .50
Jersey, kiln-dried, sound or made sound	1.00@1.10
Maryland, fine, sound stock	.75@ .85
Mississippi, good, sound	.65@ .75
Illinois, fair to choice	.60@ .75
No. 2, or showing rot	.25@ .50

The price of sweet potatoes is 15c to 25c a hamper lower than two weeks before. A year before the price was 25c to 40c a hamper higher than present quotations.

BEANS—There is not very much doing. Inquiry for the several lines is quiet. No pressure to sell exists and prices remain unchanged.

Pea Beans—	
Hand-picked, choice	$2.15
Common	1.75@2.00
Mediums nominally about same as pea beans.	
Red kidneys, choice	2.80
Brown Swedish, long	1.75@2.00
Round	2.00@2.25
Imported	2.30@2.35

The price of all varieties is the same as two weeks before. A year before choice hand-picked pea beans were quoted at $2.55@2.65.

BROOM CORN—The market is ruling firm.

Per ton, Illinois corn	$150@160
Oklahoma	110@160

The price of broom corn is the same as two weeks before. In fact, there has not been any change for a number of weeks.

HAY—Receipts, 1,223 tons; shipments, 55 tons. Demand continues good for choice timothy and prairie hay. Offerings only fair and market firm. Low grades steady. Demand and offerings moderate.

Choice timothy hay	$18.00@19.00
No. 1 timothy	16.00@17.00
No. 2 timothy	14.00@15.00
Iowa and Nebraska prairie	13.50@14.50
Illinois and Wisconsin prairie	7.50@ 9.00

A year before the price of choice timothy hay was 50c a ton higher.

Straw—Rye straw quotable at $8@8.50. Oat straw at $7@7.50. Wheat straw at $6.50@7.

EGGS—The receipts at Chicago (not including through shipments) for the days mentioned were as follows:

	This week. Cases.	Last week. Cases.	Last year. Cases.
Monday	4,568	2,455	2,692
Tuesday	3,484	2,629	2,060
Wednesday	2,945	3,960	2,870
Thursday	2,710	*....	2,270
Friday	1,910	3,612	2,332

*Thanksgiving day.

There is a noticeable lack of demand. Buyers are curtailing purchases to their immediate requirements. Consumption is falling off. Receipts show more fresh-laid from some sections.

Firsts, running largely to new-laid eggs, with not over 2 dozen loss to the case, 33@34c; ordinary, 31@32c; miscellaneous lots, 27½c to 32½c, according to quality. Top prices for new-laid only. Refrigerator

(Continued on Page 18)

BROWN FENCE
WE PAY FREIGHT
13 Cents Per Rod Up
Strongest, heaviest wire, Double galvanized. Outlasts others nearly 2 to 1. Low prices direct from factory. Over 150 styles for every purpose—hog, sheep, poultry, rabbit, horse, cattle. Also lawn fence and gates of all styles. Mail postal for catalog and sample to test and compare with others. Address

Shall we send you free book about
APPLETON WOOD SAWS
It shows pictures of all our buzz, drag, circular log saws and portable wood sawing rigs, with or without Appleton Gasoline Engines, Tells you straight facts which we guarantee our saws to back up. Opens a way for you to make money this Winter sawing your own and your neighbors' wood. You want a saw to last—made strong—boxes that never heat—don't experiment with cheap saws then, buy an Appleton, 40 years the standard. Send for booklet to-day.
Batavia, Ill., U.S.A.
APPLETON MFG. CO. 664 Fargo St.

Pay No Tribute TO THE TRUSTS
Reduce Your Cost of Living
"A penny saved is a penny earned."
Why pay tribute to machinery and oil trusts? Have your farm work done by engines at factory prices—save money on your engine and on its operation. Kerosene is getting lower in price, gasoline is constantly advancing.
The Amazing Detroit Kerosene Engine
—sold to you at factory prices, is the engine which will help you beat the Trusts. It runs on cheap kerosene (coal oil), uses alcohol, distillate or gasoline also—runs in either direction—has only 3 moving parts—throttle governed—water cooled—speed controlled while running—sold on 5-year guarantee and 15 days' trial. Every engine tested and shipped ready to run.
NO Cams Gears Valves NO Sprockets Cranking Trouble
Engine pumps, saws, threshes, churns, separates cream, grinds feed, shells corn, does other farm work. Simplest engine in the world. Why pay trust prices when you can get Amazing Detroit at factory figures?
Cylinders cannot carbonize.
Write today for catalog and special introductory prices.
Detroit Engine Works, 396 Bellevue Ave., Detroit, Mich.

Subject: My Most Profitable Crop:

First Prize $3.00 Second Prize $2.00 Third Prize $1.00

Notice to Subscribers

This department is designed to induce subscribers to contribute accounts of their ideas and experiences. For the three best letters received each issue the cash prizes offered above will be awarded and every letter used will be paid for at the rate of 50 cents each. In awarding the prizes the merit of the ideas will be the factor determining the value of the article. As many of the others as space will permit will be published. All used will be paid for.

Write on one side of the paper only, and give full name and address. Address all contributions for this department to the Country Contributor Editor, Up-to-Date Farming, Indianapolis.

PRODUCING DAIRY COWS

(First Prize)

If dairymen would depend upon raising their dairy animals themselves the result would be much more satisfactory, as a rule, than to buy from stockmen or speculators in a haphazard way any "pickups" that are offered. In order to begin right in rearing dairy stock, calves should be selected whose grandams on both sides had a good record at pail or churn. Then there will be a reasonable hope that the calf will evolve into a profitable member of the dairy herd. If we are in the dairy business for milk, then the attention is drawn toward the animal which will turn her food and energies into furnishing an abundance of milk, but if the aim be cream or butter then quantity must yield to quality and must yield a certain per cent of butter fat. But if the dairyman considers the rearing of calves only as a side issue, and as a result gives only indifferent treatment, he would just as well buy his cows, for a stunted calf is a pitiable object and will never fulfil its destiny, no matter what its after treatment may be. Extravagance in the feeding of the calf is pardonable, but parsimoniousness never. Extravagant feeding—it would be so called by many—means milk fresh from the cow, or new milk for three weeks after the birth of the calf, and the calf that is not worth what new milk it can consume during the first few weeks of its life is not worth rearing. Remember this truth: The first weeks of the calf's existence determine its value later on.

We allow the calf to remain with its mother for a day or two, not from any sentiment we may have on the subject, although we pity the dam when her maternal instinct is ignored and her offspring is removed from her sight as soon as possible, but believe it tends to the betterment of both, besides being more natural.

As soon as removed from its dam the calf should be given a stall which is light, clean and warm if the weather be at all cool. The new-born animal is "a creation of warmth" and nothing is so exhaustive of vitality as cold, therefore the stall of the calf should be of the same temperature as the blood of its mother upon which it was nourished until its birth—blood warm.

New milk is richer than blood—at least the milk from a good cow is—so it is best to dilute the new milk to a reasonable extent. The food of a calf in a state of nature is milk, and nature can not be improved upon. Solid food is not fit for the stomach of a young calf. At a reasonable age sweet skim milk may be substituted for new milk gradually. Later on corn meal may be added, leading later on to clover hay, corn, silage, etc.—A. C. McPherson.

FROM PRODUCER TO CONSUMER IN OHIO

(Second Prize)

I am going to take advantage of the opportunity offered by your contributors' department to tell the readers of this most progressive and business-like farm paper ever published of something new under the sun. I believe this is the first and only establishment of the kind in the United States, but more will follow until we have a system of them covering the entire country. I refer to the Union Labor Exchange recently formed at Akron, O., formed to handle the Farmers' Society of Equity union label products exclusively if that is possible, and will tell something of its plans, aims and objects.

The increasing cost of life's necessities brought the union labor of Akron face to face with the great need for some practical plan to lessen the expenses of living, if possible, and as a result of long deliberation the Akron Union Labor Exchange was formed, to deal as nearly direct with producers as could be made practical and profitable. The writer and William Held, a member of the Molders' Union, outlined a plan whereby the Central Labor Union of Akron would guarantee to the farmers of Holmes, Wayne and Knox Counties that 300 heads of families (union laborers) would contribute $1 each to a fund to defray the expense of equipping a building and putting the Exchange in position to transact business, and then give it support and patronage. The farmers of the local unions of the counties named to agree for the $1 thus advanced to give a discount of 10 per cent on all purchases for a period of one year. The farmers are to supply farm products bearing the F. S. E. union label, and the union patrons of the Exchange agreeing to use none but labeled farm products so long as they could obtain them.

The C. & A. C. Railroad Company has promised the enterprise that when sufficient tonnage is handled a special car service will be put on for this trade so that all freight for the Labor Exchange will be placed in one car, or cars, exclusively for the Exchange, and those cars "spotted" immediately upon arrival in Akron so they may be unloaded at once. Therefore all farm products along the line can be gathered one day and be on the tables of the housewives the next, through the medium of the Exchange only, as near direct from producer to consumer as possible.

The Central Labor Union has a contract with the management of the Exchange not to exceed a certain maximum percentage on all business transacted. The managers of the Exchange agree to handle and deliver all farm products for 15 per cent of the retailing prices, this percentage being the estimated running expense of the Exchange. The Exchange has located at 66 Mill street, Akron, and the managers are in the market for all kinds of farm products, giving the preference to those bearing the union label of the Farmers' Society of Equity.

Akron has about 65,000 inhabitants and is one of the most progressive and enterprising cities of its size in the county. The management hopes to make it a great distributing point for F. S. E. products.—J. H. Harpster, Akron, O.

AMERICAN STEEL & WIRE CO.'S

Thoroughly Galvanized Wire

A New and Decided Advance in the Manufacture of Wire for Woven Wire Fences

A Galvanizing of Great Durability, Originally Developed and to be Found only in the American Steel & Wire Co.'s Fences

THE American Steel & Wire Company is the first to develop a THOROUGHLY GALVANIZED WIRE. It has a thicker coat, a quality more refined, and a deeply adhesive contact of the zinc and the steel that solidly unites the two metals, highly flexible without injury, and having a finish and weather resistance unequalled—a *thoroughly galvanized wire.*

There are wonderful records of super-extraordinary efficiency, such an an auto tire lasting 30,000 miles; a pair of shoes, suit of clothes or a wagon showing astonishing durability; two ships built exactly alike, one being vastly better; or a certain piece of woven wire fencing apparently indestructible under long years of severe trial.

Years ago, in making and galvanizing steel wire, we searched out the reason for this spasmodic super-excellence, and found it to be the *chance combination of a high state of perfection*, in the finest detail, of *man, methods, machinery* and *materials*. We then mastered these fickle elements of chance by the employment of a tremendous manufacturing organization and brought them under control for steady and continuous production.

We now announce the final completion of our facilities for the extensive and permanent production of this thoroughly galvanized wire. We shall use it in the manufacture of our celebrated woven wire fences—the AMERICAN FENCE, the ELLWOOD FENCE, the ROYAL FENCE, the ANTHONY FENCE, and all our other fences.

These fences are adapted for all field, farm and poultry uses, and possess superior structural advantages in quality of steel and fabric. Dealers everywhere throughout the country display these fences and will quote lowest prices.

They cost no more than other fences, and considering the *extra large and heavy wires* used, and the exclusive use of new *thorough galvanizing*, makes them especially attractive as the best and cheapest fences.

FRANK BAACKES, Vice Pres. and Gen'l Sales Manager

AMERICAN STEEL & WIRE COMPANY

A FIFTY-ACRE FARM

(Third Prize)

Grapes are the most profitable crop on my fifty-acre fruit and dairy farm. I have eight acres of grapes, three acres of strawberries, three acres of blackberries and raspberries, and a small orchard of apples, cherries, peaches and pears.

My fruit and dairy farm is now twelve years old. I have at last arrived at the realization of my dreams. Here are the gross receipts for the summer and autumn of 1913:

Our grapes brought $1,400, strawberries $1,200, raspberries $122.12, blackb.rries, $141.49, cherries $18.75, apples $20, pears $4, cows (June 1 to November 15) $250.70. These sums compose a gross total of $3,157.06. These results do not take into account the eggs, poultry, butter, milk, vegetables and fruit consumed on the home table or put away for winter, nor does it include corn and hay raised for feed.

Expenses for all hired labor, baskets and crates amounted to $720.28 for the past summer season.

I keep an exact account of every penny handled, whether income or expense, and from what source. Our big specialties are grapes and strawberries. Raspberries and blackberries come next and cow products third. The grapes are sold part to a commission house and part to grocers. Other berries are sold to grocers.

The secret of berry and grape sales and good prices has been careful, honest sorting and repacking after picking. Another secret is sticking to the original plan year after year. Neighbors cut out acres of grapes last year and in previous years because of low prices. They've raised strawberries spasmodically and happened to be out this year, our big year. The spasmodic crop enthusiast never prospers.

Grapes are my most profitable crop, free of pests here. Hardy bearers, easy to market and requiring half the labor of strawberries.

Sticking to definite plans, efficient bookkeeping and careful, intelligent labor are a sure road to success.—A. B. Kirk, Illinois.

SUCCESS IN RAISING TURKEYS

I am a new subscriber to your paper and think it is fine. I will tell about my turkey crop of last year. I had four turkey hens and one gobbler. I raised sixty-five young turkeys and sold them at 14 cents a pound. I received $110.10 for them. I will tell you how I raised them. When the turkeys commence to lay I take the eggs of the first laying and set them under common hens and make the turkeys lay again, when I let them have their eggs to hatch and let them go for themselves. When the first ones are hatched I put them in a coop and make a pen around it about 18 inches high and about as large as a wagon box or larger. When the young turks can fly over the pen then I let them out through the day, but see that they return to the pen at night. I let the hen out with them. On cold nights I catch all the little ones and the hen and put them in the granary, as the first hatch make early turks and the

nights are cold yet. I dust them well in the wing feathers with louse powder, as much grease will kill them. I feed my turkeys often, four or five times a day. I feed bread soaked in milk, sweet or sour. I put plenty of pepper on their feed. I also give them cut onion tops in their feed, as they love onions and they keep them healthy. Then I gradually mix their feed and learn them to eat coarse feed. When I can learn them to eat corn I give them some toward fall so they will grow and also fatten. I think I made lots of money for no more than I had invested. I had them all taken away to market in one load, which netted me $1.10. Those set with turkeys caught up in size with my house turkeys by fall, as the old turkeys rove around with them, and they catch a lot of grasshoppers, crickets, worms and bugs. I think all farmers ought to keep turkeys. Now, if any have done better than this let us hear from you.—Mrs. Susie Loucks, Indiana.

MAKING A HIT WITH SPUDS

Getting our spring work done in unusually good time in 1911, and having a bit of time for extra effort of some sort, I began to study how to make it of most value. I finally decided to plant an extra acre to potatoes, and selected a low plot of ground usually too wet for cultivated crops. I took a gamble on the season, as I knew that if the weather should be dry, my potatoes would thrive exceedingly, while those planted on higher ground would suffer from drought. Fortune favored my potatoes, as the season was very dry.

Three members of our force did the plowing, planting and harrowing in one day, and we did a thorough job of it from beginning to end. Everything the best that can be done is the rule of order on our farm.

Computing time at standard wages for this section, this potato patch stood me in $40, distributed as follows:

Team and machinery.....	$ 3.25
Seed	8.00
Planting	10.00
Digging	15.00
Rent (or interest on land)....	3.75
Total	$40.00

I harvested 200 bushels of potatoes from the acre and held nearly the entire crop over until the spring of 1912, when prices had advanced to a point well above $1 per bushel. We sold the crop for $200, which left us a net cash profit of $160 after deducting all items of expense. Not so bad for Minnesota soil worth $75 per acre. —A. G. B., Minnesota.

RAISING SQUABS

I am just a little boy, but I will write you about a few pigeons I had for raising squabs. Raising squabs is a very particular job, but very profitable if one has suitable buildings, warm, clean and dry. Having a few pairs of pigeons, I decided to try my luck, so I got my buildings ready, prepared square nests and in these I put tobacco strippings or trimmings, not making any nests, but leaving that for the birds to do, which they did in due time. They laid two eggs every month but one, and that generally was February. Their food must be fed on sand or fine gravel, one to two inches thick, and where it is dry. Nothing wet or musty must be left lying around. Bath water must be provided for them every day; also clean water to drink. The dishes must be scrubbed and scalded once or twice a week. The feed must be one year old, not new grain. I feed kafir corn, Canada peas, red wheat and hemp seed. In winter I feed two parts corn to one part wheat. Pigeons must have oyster shells finer than for chickens, made especially for them. In this I put a large piece of rock salt.

The larger class of birds are the best to raise from, such as the Homers, Runts and Dragoons. From six pairs I cleared in one year $10. Some feed was wasted, but I was careful to feed only as much as they would clean up. We baked an old-fashioned Johnny cake for them once a week.

Hoping this will encourage some other boy and girl to start a bank account, the same as I.—Wilber Dobson, Michigan.

POTATOES IN ARKANSAS

The most profitable crop on my forty-acre farm this year was about an eighth of an acre of Irish potatoes planted the 17th of February. The ground was broke, harrowed, laid off and planted in rows two and one-half feet apart and covered with two furrows. When the young plants were nearly through I ran a harrow over the ridges to pulverize the ridges and kill any vegetation that might be coming up. When they were pretty well up I went round them with a "scratcher," which plowed middles and rows as well. Next I plowed them with a fourteen-inch sweep, next with a sixteen-inch sweep and the last time, after they were blooming and had small potatoes on them, I ran through the middles with an eighteen-inch sweep.

In July I dug about twenty bushels of nice, large potatoes after using potatoes from the 10th day of April for a family of five. I could have sold them for $1 per bushel, but kept them for home use. In about a week after the potatoes were dug I harrowed the ground laid off in rows, sowed sorghum seed and harrowed again. When the sorghum was about knee high I ran through the middles with the scratcher. This, when headed, was cut and fed to hogs. This crop of potatoes and sorghum was raised on sandy upland without any fertilizer.—W. F. Smith, Arkansas.

A GIRL STOCKMAN

Will you let a girl 13 years of age enter your contributors' contest? I want to tell about my stock. I have, of my own, twenty hogs, two horses, nine head of cattle and a dog. All of these I take care of myself, although I go to school regularly.

I have three cows and raise calves, which I sell after feeding them for awhile. I raise pigs each spring and have four of last spring's pigs ready for the market now. I have sold about $145 worth of hogs already this year, and I have a steer ready for market that will weigh 1,200 pounds. I think stock raising is very profitable.—Cleo M. Gilbert, Lorimer, Ia.

MOVING TO TOWN

FROM ALL SECTIONS of the country the complaint is going up that too many farmers are moving to town. That is, we infer such complaint is being made, because the newspapers and the farm papers are all bewailing the fact and pleading with the farmers who are considering such a thing not to leave the farm, but to stay right out in the country. "We will be better off," they say, "and so will you. We don't need you here, and we do need you out there, so stay there." The agricultural professors, in their public addresses, back up the efforts of the press. How many of those who are so vigorously protesting against the movement from country to town know why the move is made? Is it not true that there may be many reasons for the change, and most of them perfectly natural ones? In many localities those who move to town are those who are failures as farmers. They eke out a mere existence. They are not fitted, by either nature or training, to till the soil and build up rural life as it should be. They go to town to work for wages, and they are no worse off, to say the least. In the majority of cases they have bettered themselves. Their children have better school facilities. Their labor helps build up town industries. There is a good thing done when an incompetent farmer becomes a competent laboring man. And their places are filled on the farms they leave by better farmers.

In other localities, farm owners who have become well-to-do go to town because they can retire from the farm and are willing to do so.

The secretary of the Kansas Board of Agriculture, who keeps a closer watch on the farms than any other official, says that it is because the farmers make so much money that they move into town. The profits of agriculture enable them to move into the towns and cities, give their children the advantage of better education and keep their girls where there is something going on. Sometimes they are dissatisfied with the change. More often they are not. They may be of no particular benefit to the town. They were, undoubtedly, good farmers. The farm's loss was no gain to the town, so far as business development and activity is concerned. The man who takes the farm may be as good or even a better farmer than the one who left it. The country loses nothing in the production of food supplies.

The question of moving to town is one each farmer who considers it must answer for himself. He knows what he can do in the country. He must find a place for himself in town. The problem is not one of great importance to the country or the town. The successful farmer will not leave the farm for town unless he has means to live on after he moves. The unsuccessful farmer has a chance to better himself in town, and the unsuccessful farmer is an incumbrance to the country as long as he is operating a farm. His place could be filled by a better man. The farm deserves it, and the country needs it. We should stop lamenting the fact that farmers now and then move off the farms into town, and turn our thoughts toward making conditions of farm life as attractive as possible. Do this, and the farm population will take care of itself without exhortation or warning.

Some Cow

For some reason or other, wherever you find a man from Minnesota, Colorado or California you are sure to hear glowing accounts of the remarkable advantages and achievements of the particular state from which he may happen to claim citizenship.

W. C. Thompson, one of our Minnesota "giants," is no exception to the rule. We print below his latest:

"If all the cattle in Minnesota were one cow, she would browse the tender herbage of the tropics, whisk the icicles of the north pole with her tail and supply milk enough to fill a canal reaching from Kansas City to the Gulf, on which to ship the boat loads of her butter and cheese."

A Genuine Rupture Cure Sent On Trial To Prove It

Don't Wear A Truss Any Longer

After Thirty Years' Experience I Have Produced An Appliance for Men, Women and Children That Actually Cures Rupture

Are You Ruptured?

If so, the BROOKS APPLIANCE is made for You; You and all other Men, Women and Children who are sufferers from this annoying and dangerous trouble. That truss you have been wearing—one of many you have tried—chafed and irritatehd you and was worse than nothing. It had springs and pads and harness and straps and fixings galore and was continually getting out of shape—slipping down or working up and always needing attention. Then, there were salves and washes and ointments to make the case worse and harder to bear. I want to say that you will find none of these annoyances and vexations in the BROOKS APPLIANCE. At least they are reduced to a minimum. This APPLIANCE was made with a view to eliminate, to do away with just such trouble. I would have been foolish to work half a lifetime, thinking out and perfecting a thing that had no advantage or was not better than scores of other inventions upon the market. In my APPLIANCE you will find the old objectionable features LEFT OUT. You will find it easy to wear. You will scarcely realize you are wearing it. There is no binding, drawing and slipping out of place. It does its work effectively and with comfort to the wearer. I want you to read my book, in which I have taken pains to give full particulars about it. Then, there are a few letters printed in it—selected at random from among hundreds written by men and women who have been cured. You can write these folks and see what they say. If I were you I would see to this matter without waiting. You can put off some things without running much risk, but a rupture is a dangerous proposition to neglect. A rupture is not only bad and serious of itself, but it leads to things infinitely worse. Fill out coupon and mail TODAY. Tomorrow will do, but today is better.

Don't Make The Child Wear A Truss Through Life

I WANT TO REACH THE PARENTS OF EVERY RUPTURED CHILD IN THE COUNTRY.

The Truss Is a Flesh Torturing Invention Fit Only as a Relic of Barbarity.

I want them to know about the Automatic Air Cushion Rupture Appliance that I make for children who are afflicted in this way.

The Brooks Appliance Cured His Rupture. Now He Is as Sound and Whole as if He Had Never Been Ruptured.

My appliance can be put on any child with perfect safety to the little one. For growing children there is nothing better to be had—no matter how much you pay—than my appliance. I want the parents or others who may have children in their care to understand that there should be no delay in getting proper help for ruptured children. Every day that the rupture is allowed to go on without the right means of correcting it—just so much harder will it be for the child to get rid of it.

The above is C. E. Brooks of Marshall, Mich., the Inventor, who has been curing rupture for over 30 years. If ruptured write him today.

If you have tried most everything else, come to me. Where others fail is where I have my greatest success. Send attached coupon today and I will send you free my illustrated book on rupture and its cure, showing my Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember, I use no salves, no harness, no lies.

I send on trial to prove what I say is true. You are the judge, and once having seen my illustrated book and read it you will be as enthusiastic as my hundreds of patients whose letters you may also read. Fill out free coupon below and mail today. It's well worth your time whether you try my appliance or not.

No ruptured child can ever be free from the thought of the rupture, and it is not fair to any child not to have an equal chance with other children. No matter what we may wish to think—ruptured children do *not* have an equal chance.

Common trusses do not help.

Thousands of men and women know that from their own experience with such trusses.

But it is not necessary for children to wear harsh, cumbersome steel trusses any more.

You may have had to wear something like this, but don't make your child do it. Give the child something better.

My Appliance is better and I want to prove it to you.

I will make an Appliance to the child's measure, send it on TRIAL—put it into your hands to see and use and then you can say whether it is what I claim or not.

The Automatic Air Cushion conforms with every movement of the child; there is an even, gentle pressure which gradually binds the broken parts together—as you would bind a broken limb—and then no matter how much the child jumps, runs, rolls over or falls down—the pressure is kept up just the same—always drawing the parts together.

Write me today and get all the information—send the coupon.

Others Failed But The Appliance Cured

C. E. Brooks,
Marshall, Mich.

Dear Sir—Your applience did all you claim for the little boy and more, for it cured him sound and well. We let him wear it for about a year in all, although it cured him three months after he had begun to wear it. We had tried several other remedies and got no relief, and I shall certainly recommend it to friends, for we surely owe it to you. Yours respectfully,

WM. PATTERSON.

No. 717 S. Main St., Akron, O.

Pennsylvania Man Thankful

Mr. C. E. Brooks,
Marshall, Mich.

Dear Sir—Perhaps it will interest you to know that I have been ruptured six years and have always had trouble with it till I got your Appliance. It is very easy to wear, fits neat and snug and is not in the way at any time, day or night. In fact, at times I did not know I had it on; it just adapted itself to the shape of the body and seemed to be a part of the body, as it clung to the spot, no matter what position I was in.

It would be a veritable God-send to the unfortunates who suffer from rupture if all could procure the Brooks Rupture Appliance and wear it. They would certainly never regret it.

My rupture is now all healed up and nothing ever did it but your Appliance. Whenever the opportunity presents itself I will say a good word for your Appliance, and also the honorable way in which you deal with ruptured people. It is a pleasure to recommend a good thing among your friends or strangers. I am

Yours very sincerely,
JAMES A. BRITTON.

80 Spring St., Bethlehem, Pa.

REMEMBER

I send my Appliance on trial to prove what I say is true. You are to be the judge. Fill out free coupon below and mail today.

Ten Reasons Why

You Should Send For Brook's Rupture Appliance

1. It is absolutely the only Appliance of the kind on the market today, and in it are embodied the principles that inventors have sought after for years.
2. The Appliance for retaining the rupture can not be thrown out of position.
3. Being an air cushion of soft rubber, it clings closely to the body, yet never blisters or causes irritation.
4. Unlike the ordinary so-called pads, used in other trusses, it is not cumbersome or ungainly.
5. It is small, soft and pliable and positively can not be detected through the clothing.
6. The soft, pliable bands holding the Appliance do not give one the unpleasant sensation of wearing a harness.
7. There is nothing about it to get foul, and when it becomes soiled it can be washed without injuring it in the least.
8. There are no metal springs in the Appliance to torture one by cutting and bruising the flesh.
9. All of the material of which the Appliances are made is of the very best that money can buy, making it a durable and safe Appliance to wear.
10. My reputation for honesty and fair dealing is so thoroughly established by an experience of over thirty years of dealing with the public, and my prices are so reasonable, my terms so fair, that there certainly should be no hesitancy in sending free coupon today.

Cured at the Age of 76

Mr. C. E. Brooks,
Marshall, Mich.

Dear Sir—I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On November 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, 76 years, I regard as remarkable.

Very sincerely yours,
SAM A. HOOVER,

High Point, N. C.

Child Cured In Four Months

C. E. Brooks.

Dear Sir—The baby's rupture is altogether cured, thanks to your appliance, and we are so thankful to you. If we could only have known of it sooner our little boy would not have had to suffer near as much as he did. He wore your brace a little over four months and has not worn it now for six weeks. Yours very truly,

ANDREW EGGENBERGER.
21 Jansen St., Dubuque, Ia.

Confederate Veteran Cured

Commerce, Ga., R. F. D. No. 11.

Mr. C. E. Brooks.

Dear Sir—I am glad to tell you that I am now sound and well and can plow or do any heavy work. I can say your appliance has affected a permanent cure. Before getting your Appliance I was in a terrible condition and had given up all hope of ever being any better. If it hadn't been for your Appliance I would never have been cured. I am 68 years old and served three years in Eckle's Artillery, Oglethorpe Co. I hope God will reward you for the good you are doing for suffering humanity.

Yours sincerely,
H. D. BANKS.

Pastoral Paragraphs

Keep the manure hauled out as fast as made, or leave it in the stall until you can haul it.

An acre of a good stand of sweet clover will afford abundant grazing for twenty hogs. Plan for it.

Sam Saxon says the bankers have taken so much interest from the farmer they really ought to take some interest in him.

A good smokehouse on every farm will help make life on the farm more worth while. Hollow brick or tile makes a fireproof structure, also fly proof and rat proof, and, with a strong lock on the door, thief proof.

There is no better building material than brick, and there's no better feed for any kind of live stock than corn; but as brick without mortar is of little use, so is corn without some leguminous feed such as bran, cowpeas, alfalfa, soja beans, tankage, etc.

TO FREE HOGS FROM LICE

See that your hogs are free from lice. They will do much better, as well as look better.

Examine behind the ears and under the arms. If you find either lice or nits get busy.

Remedies—If one has less than a half dozen head of hogs a simple treatment is to mix equal parts of kerosene and machine oil. Put the mixture into a good oil can and squirt a little back of the ears and at the elbows. If necessary, repeat in a week.

For a larger number secure secure a coal tar dip at your drug store (zenoleum, kreso or kreo) and mix it with water according to directions. Spray the hogs thoroughly and repeat in ten days.

At the same time give the pens or house a good cleaning and spraying.

DAIRY NOTES

By A. C. McPherson

The quality of butter is determined from the time the milk is drawn from the cow. If the milker is careless in dress and habits, then the first stage is reached and the flavor of the butter product will not remind one of clover hay or have the aroma so much to be desired. If the milker has an ungovernable temper and scolds and beats his cows the milk will be of inferior quality and less in quantity also, so much does mind and temper of the cow influence the milk secretions. This fact is recognized by all intelligent dairymen.

When dairymen make a study of the cow and understand that her organism, especially the breathing apparatus, is much the same as that of the human being, then many needed reforms will begin. He will build sanitary quarters for his cows, which will be properly ventilated, where sunlight and fresh air will be admitted from their proper sources and not from cracks in an old tumble-down stable, for he will realize that every shiver of the cow shakes money out of his pocket, and so provide comfortable quarters; and, in order that the air should be as pure as possible, will not let the refuse of the stable lie directly under the windows so the effluvium will be breathed over again and again and contaminate the blood and breed tuberculosis. He will rid his stables of cobwebs, the catch-alls of germs, and while the cows are taking their outing will open windows and doors and remove refuse and see that stalls are in order and the remains of yesterday's dinner removed. These details may seem unimportant in themselves, but they count and are important factors toward correct dairying. If milking is done in the stable the milk will be removed soon as possible and taken to the milk room. A better way is to have a milking shed in which to do the milking. This can be built adjoining the stable, or some convenient distance away. In this way the danger of contamination of the milk is lessened.

If a water system is in operation in the stables their stalls and runways should have the hose turned on once a week in weather suitable and thoroughly cleansed. There is a close connection between the health of the cow and the consumer of her products, and while one is careful of conditions of the family cow, knowing that what is deleterious to her best condition is in the same ratio menacing to the health of the family, should not a sense of duty influence keepers of dairy animals in general to furnish the best conditions and surroundings necessary to insure pure products? Exercise should be allowed the cows daily, except perhaps in the bitterest weather. If the weather will at all admit they should be out in the air and sunshine a few hours each day. Breathing the impure, confined air of close stalls for so many hours in succession is a prime cause of tuberculosis.

Shorty's Shortcuts

(By Himself)

ON THE FARM where I was raised we had a permanent hog lot. To save land this hog lot was good for nothing else. I've seen hog lots just like it on farms in all parts of this country. Some are in the woods, others on a rocky hillside. Put the pigs just anywhere.

Now, on this same farm where I did all my growing up, we had a covered yard between our cow barn and the horse barn, and my father would cart all the manure from the barns to this covered shed and spread it out evenly and then sprinkle land plaster over it each time. Manure saving was the saving grace on that farm. None of it was allowed to go to waste. I had the value of manure saving drilled into me, by fair means and foul, for if I did not attend to it according to the notion of my sire, he attended to me according to his notion of proper attendance for the error of my ways. Ah, me! The land did not have anything on me in the way of dressings, though the land was top dressed, while my applications came—well, elsewhere.

When I started out farming for myself I found my farm to possess the regulation hog lot—a hillside lot near the barn, with a few stumps and rocks in it. Never was used for anything but for pigs and hogs to walk on. I used it for the same purpose until a bunch of fat hogs got the cholera, or the cholera got them. It took all I had. So, being afraid to put more hogs in the same lot, I made another one. Then I cleaned up the old lot, plowed it, sowed oats, and they grew so rank they went down—I mowed them for hay. That hog lot was the richest spot on the farm. Then I remembered my manure education, and the thought struck me that hogs were just as productive of soil fertility as cattle, or horses, or sheep, or chickens. The manure from forty hogs would be just as valuable as that from five or six cows. I saw I had been neglecting an opportunity. From that day to this I have had no permanent hog lot. I fence in a part of a field for hog pasture and have movable hog houses. I always finish my hogs in winter, and my winter feed lot becomes a field the next summer for the production of a crop. I no longer lose the manurial value of from 500 to 1,000 bushels of corn each year.

Edgar Knew Them

The teacher was hearing her class of small boys in mathematics.

"Edgar," she said, "if your father can do a piece of work in seven days, and your Uncle William can do it in nine days, how long would it take both of them to do it?"

"They would never get done," answered the small boy earnestly. "They would sit down and tell fish stories."

LIVE STOCK NOTES

Keep the hogs from huddling up in bunches on cold nights. They become hot, then catch cold.

Hogs are sensitive to cold, no matter how fat they are. Give the hogs a clean, dry, comfortable place to sleep. It pays.

A muslin window in the stock barn is better than one of glass. It gives subdued light, which is the best kind, and supplies ideal ventilation.

Bright corn fodder run through a cutter, wet and then sprinkled with bran shorts or ship stuff, makes an excellent winter ration for the horses.

It has been found that milk will keep sweet a much longer time if put in red-colored bottles. The red light rays seem to have a beneficial influence on the bottled milk.

Five parts corn to one part cottonseed meal makes an excellent combination for work horses or mules. Feed daily about 1¼ pounds of the mixture for every 100 pounds of the animals' weight.

Otis Crane, the county agricultural agent for Grant County, Indiana, has enlisted the co-operation of the county school teachers in compiling agricultural statistics to aid the work of agricultural progress. He reports a silo on one out of every eighteen farms in the county. Can any other county beat it?

HORSES HAVE INDIGESTION

Horses frequently suffer from indigestion caused by imperfect nutrition. Have the teeth attended to by a veterinarian. Give the drinking water before meals. Do not feed any bulky feed at noon or work the horse soon after a meal. Allow free access to rock salt. Bed with sawdust or planing mill shavings, if he eats his bedding. Feed whole oats (old) and one-sixth part of wheat bran, wetted at feeding time. Allow one pound of this mixture for each 100 pounds of live weight and give a like amount of mixed or timothy or prairie hay.

A QUARANTINE PEN

By quarantine pen we mean simply a pen or a few pens which are situated a safe distance from the main hog pens or yards. Such a pen should contain comfortable sleeping quarters as well as room for exercise, and should be so arranged that the owner need not go inside to feed or water.

Such an arrangement seems a lot of bother, but it is a very wise plan to follow. As the number of hogs increases, diseases will become more troublesome. Every new hog coming to the farm should be kept by itself for at least ten days or two weeks. Then, if it has shown no indications of sickness, spray it with a good dip and introduce the animal to the herd.

Keep the quarantine pen clean and ready for use. If any of your hogs get sick and you have any reason to suspect a contagious disease, at once separate the well hogs from the sick.

It Did the Butting

Lawyer—So you charge your neighbor with trespassing. Do his buildings abut on your grounds?

Complainant—No, but his tarnal goat does.

1429S Hastings St., Detroit, Mich.

A COW AT SCHOOL

A NEW ERA has begun in education. A cow, just an ordinary milk-producing bossy, has been made a part of school paraphernalia. This occurred at the Lewis and Clark High School in Spokane, Wash. It will be remembered, if we hark back to the days when we were in schools without cows, that Lewis and Clark were pioneers, blazing trails for a new empire, for undiscovered opportunities. It is quite fitting, as well as a curious coincidence, that a new trail in the empire of education should be found by a school in the territory those pioneers explored, and in a school bearing their name. We are not told the name of the cow, but it should be Louise Clark, if it necessitates a rechristening.

This cow was used for object study, and for the first time in history a cow took part in the program of a teachers' institute. Fifty teachers, including many women, surrounded the animal, with score sheets in their hands, and listened to J. W. Herngate as he gave in plain language the plain facts about the animal. Here was a wonderful machine, more interesting than any human invention, which had been designed and constructed by the Master Mind, perfect in all its intricate parts, to convert the herbs and vegetation of the soil into the most useful food products for man.

The teachers of the young were being taught the simple facts of the first order about dairy cows—facts that should be known to all boys and girls, yet are not known to many old and experienced farmers who have handled cows all their lives. Why not teach the children about cows? Why is not the study of the alimentary canal of the cow as important a part of one's education as the facts about the Suez and Panama canals? We use products manufactured in part in the one. We may never use a product that ever had aught to do with the other. Why not know about cows, great and important factors in everyday life, as well as to know how long and how wide is the great wall of China or the principalities of Timbuctoo and Hindustan? Why not know how to extract the nourishing fluid from the udder of a cow, as well as to extract the cube root of 1,845,764? Why not know the history of the development of a highly productive strain of dairy cattle, and how it was accomplished, as well as to know how many volcanoes in Mexico or the names of the Sandwich islands?

We are at last coming to realize that we should know more about the practical things of life. It is time. We have reached a point in the development of our race, and in the business of supplying ourselves with the necessities, comforts, pleasures and luxuries that we are in need of greater proficiency in doing the work of the world. We have established a standard of living that calls for greater intelligence of a practical order, which will enable us to make the best possible use of the material things in our charge. Therefore it is with all seriousness we say, Welcome, Madam Cow, to our public schools. May your example be followed speedily throughout the land.

"If I were buying a dozen incubators they would all be Queens."
C. E. GRAGG, BUTLER, MO.

Mr. Gragg wrote after he had taken off two 95% hatches. The grand record of the

Queen Incubator

is built on service. You can depend on good hatches every time you fill it with fertile eggs. I build honestly, so your machine will last many years. See my 1914 Model with its 28 Special Features. Paying a higher price for other incubators will not get you a better hatcher. Send for finely illustrated 1914 catalog.

Box 19, Lincoln, Neb.

Poultry Pickings

The soft roaster is a bird in high favor in most eastern markets.

Increase the corn ration as the cold days come, and begin feeding a warm mash in the morning.

House conditions are as important as feed for winter egg production. See that the conditions are right.

Now is the time to select the cockerels for next season's breeding. Send all the others to market at once.

A little meat meal now to take the place of bugs, worms and grasshoppers, which the chickens can no longer find for themselves.

Egg production is often stopped for days, even weeks, by a sudden change in the temperature and a draft through the poultry house at night.

Large muslin windows and concrete floors are great helps to keep the fowls healthy. They both help keep the hen house dry, and dryness is very essential.

Keep a cabbage hanging up in a protected spot and feed some vegetables in the mash. A basket of clover leaves from the hay mow will be relished.

The more you know about your poultry the more you can make them do for you. Every woman who cares for poultry should learn all she can about them.

Don't allow the biddies to spend their time humped up in the cold. Keep them working in a straw litter to find millet seeds. The busy biddy is the business bird.

Don't try to keep the air warm in the cold weather. The fowls will stand cold better than warmth in the winter. Frozen combs are due principally to lack of vitality and too much moisture in the house.

Did you thoroughly clean out the poultry house and whitewash the interior with an admixture of five quarts cream of lime, one pint zenoleum and one quart kerosene? If you did not, then your birds will not do as well as they might, winter or spring, and even next year's pullets will be less vigorous. Watch all opportunities.

HOW TO FEED DUCKS FOR MARKET

Do not feed ducks with chickens. Ducks eat slowly and are timid. Keep the ducks up in pens to which the chickens are denied access. It is best to separate the old from the young, giving them separate pens.

Whole grain is not best for ducks, nor conducive to the most rapid fattening. Feed grain ground into meal, and if possible moisten it with skim milk or buttermilk. Equal parts corn meal, middlings and bran, to which should be added a spoon of pulverized charcoal for each gallon of feed, is good. Raw chopped vegetables or cooked vegetables are excellent feed for fattening ducks.

Use flat boards for feed troughs. Feed the morning and noon meals and then let the ducks out for a bit of exercise. Give them their supper late in the evening, just after the chickens have gone to roost. Keep the feed boards clean. Give them sheltered, dry quarters, with plenty of clean litter to sit on at night.

Plenty of clean water is a necessity at all times.

POULTRY NOTES

By A. C. McPherson

It is to be hoped that our farmers brought home from the poultry shows and institutes germs which will develop into well-defined cases of hen fever later on. As a rule the average farmer does not realize the many advantages he possesses over the town or city poultry keeper. One reason poultry is more profitable on the farm is that where other stock is kept there is always more or less waste which the wide-awake American hen promptly takes care of. Where poultry is given free range they wander far and wide, especially turkeys, in search of scattered grain and insects, which, if allowed to go undisturbed, would shorten grain and fruit crops. Thus not only waste, but injurious matter is converted into a source of revenue, viz: eggs, broilers and roasts. Also, they are all the year round revenue producers, and will yield 100 per cent on capital invested, and besides can be grown on soils that can not be used for cereals or fruit. If we compare poultry raising with other agricultural pursuits we find another advantage—all other stock is taxed, the hen goes free. Another advantage to the farmer in keeping poultry is the care can be left to the women folks of the family. The poultry business in this country would be doubled in a short time if the farmers would adopt some pure breed of poultry, a variety most liked by the wife if she is to care for them, and then allow the revenue from such a flock to go into her purse. It would give her an independence, while she would be cultivating a love of the beautiful as much as the florist who grows and admires his most perfect flowers.

Pure-bred stock pays best. Both eggs and fowls bring better prices than those from mongrel stock, and if careful to bring them up to a standard of perfection there is always a demand for both stock and eggs for breeding purposes.

FRIED CHICKEN FOR THE FARMER'S TABLE

I make more money on my pure-bred poultry than on anything else and as I love the work and find it a rest from my housework, as it brings me out into the free, open air, which I enjoy after being in the house a great share of the time cooking, baking, churning, etc.

I wrote down every sale that I made last year and at the close of the year found that I had had $52.06 in cash, besides having about 100 nice pullets which laid all winter.

I sold seventy-one culls at an average of 49 cents apiece, or $34.06. Had eighteen nice, handsome cockerels left, which I received $1 a piece for as breeders, or $18, making a total of $52.06.

The feed they gathered mostly on the farm, as they were on free range and the number of fries we used were worth far more than the entire flock had consumed in feed, as we had fried chicken from the Fourth of July until after Christmas, which cut down the table expenses to a very great extent, and besides it's a pleasure to dress a nice, fat, juicy chicken that you know is healthy and that you can have one whenever you want it.—Mrs. H. R. Fallers, Iowa.

Helpful Hints for Homefolks

When Peggy Goes to Market

When Peggy takes her basket up,
And off to market goes,
I'm stupefied with wonder at
How very much she knows.
She makes her way between the stalls
And, with judicial air,
Decides that this is "so and so"
And that is "pretty fair."

She knows if fish is fresh or not,
And, wise as any owl,
She differentiates between
A chicken and a fowl.
She thumbs the breastbone of the one
And pulls the other's legs;
She squints her pretty little eyes
To test the new-laid eggs.

The vegetables must be just right,
For, with a critic's eye
She scans them, not inclined to pass
Their imperfections by.
She calls the market folks by name;
Ah! What a lot she knows,
When Peggy takes her basket up
And off to market goes.

When Peggy does the marketing
My heart with pride she fills;
I go along, a useless thing,
Except to pay the bills.
—Johnstone Murray.

FIRESIDE SOCIAL CHATS

By Aunt Sophia

WE ARE NEARING THE TIME when all Christian people will try to repay in a measure the greatest gift the Creator gave humanity. Christmas and giving are inseparable. Without giving there can be no Christmas spirit, for the Christmas spirit is giving. But there can be giving without the Christmas spirit. It seems to me that to get the blessing which comes from giving we must not depart from the purpose which actuated our Heavenly Father to give Christ to humanity. That purpose was to give humanity for its needs. So should we, in making gifts in remembrance of the Great Giver of all gifts, remember humanity in its needs. And at our house we divide our circle of gift-giving and gift-receiving folks into two general classes, those whose needs are for gifts and those whose need is for giving. There are those who need for things to eat or to wear, or to enjoy, and pleasure is as much a necessity to right living as good food and warm clothes and comfortable homes. So in arranging our Christmas gifts we try to make them fill these needs. Then there are those who need to give, for their own good. A little self-sacrifice is good for all of us, and especially those who do not need to be given material things, having in plenty. Such need to GIVE, and find pleasure in giving. It brings them nearer to the hearts of people, and that means nearer to the feet of God.

* * *

We have a new furnace in our home. Those who have never known the comforts of a good furnace have no idea how one adds to the comfort of home in the winter. When your Aunt Sophia was a girl the old-fashioned fireplace was the only source of heat. It had its pleasant features and its drawbacks. The heating stove that replaced it was an improvement in a way, especially in warming-up qualities. But this new furnace is so far superior to stoves I must tell of it and urge all our folks to arrange to have one. We purchased a hot air equipment of a size larger than was recommended for the number of rooms we have to heat, and installed it in the cellar just before the weather became cold. Our wood shed adjoins the kitchen, and we opened a cellarway from the wood shed so as to save steps in carrying fuel to the fire. We have found it no more trouble to fire the furnace than to take care of one stove, and our whole house is kept in comfort day and night. Those who have not had this convenience can have no idea how much it adds to farm life. We must have more conveniences in farm homes. All the improvements in farming should not go in barns, fences, live stock and machinery. Fix up the farm home.

* * *

I have been disappointed because more readers of this department have not joined in these social chats. Why not write of some of your experiences in making home better? I want to hear from every one of you who has an idea or an experience that has been helpful to you. They will be helpful to others. This is the way to give that is worth while. We may not be able to measure the good it may do, but if it helps just one who needs help, by encouragement or inspiration, it will be worth doing. Let us hear from new members of our social circle. The invitation is always standing.

AUNT SOPHIA.

MRS. BUSYHAND'S DIARY

(Continued)

THURSDAY

On Thursday morning the little girls picked a big basketful of butter beans. The boys had picked us two bushels of green tomatoes—so, early in the morning, I washed and sliced them into a clean, big tub. After the morning work was done Mary went downtown with a girl friend after the mail. (How well I remember of going off with girls and leaving mother to do the work when I was a girl at home. Mother would never seem to care, and I did not think, then, of mother needing me to help her. How heedless young folks are at such times! It all comes home to me now, although I'm sure my girls are more thoughtful and diligent than I used to be. "Confession is good for the soul.") Soon after Mary was gone she called up and said that Aunt Nina wanted her to stay for dinner at her house, as it was uncle's birthday and they were going to have chicken, etc. So, of course, I told her to stay. That meant that I was elected to work with the pickles alone all day. I rolled up my sleeves and pitched into the work. Husband was working about a mile away on one of the farms and had taken his lunch. I only had to get dinner for George in high school, who comes home for his dinner. Here is what we put in our pickles which we also call "the last of the garden": Sliced green tomatoes, sliced cabbage, onions, little cucumbers, celery, cauliflower, butter beans, corn, a few peppers, spices, sugar, a little salt, and cover with vinegar and cook. It is very appetizing. I made eight gallons that day. Besides, I had two callers, answered phone a dozen times, more or less, and got supper. For supper we made vegetable soup, which the children especially enjoy. When they came home from school they said with sniffs, "Oh, I smell something good!" Into the meat broth I sliced potatoes, some cabbage, onions and two or three tomatoes—and we ate a big kettle full, or empty, rather.

(To Be Continued)

MONEY WELL INVESTED

A boy near here eight years ago bought a little female pig for $1. At the age of one year she raised nine little pigs. He sold these when three months old and got $3 each for them. He took this money and bought a little colt from his father. He kept the sow and she raised pigs each year, bringing him at least $20 a year.

When his colt was four years old she raised a colt and she raised two after that. The first is worth $175 now, the second $125 and the third $75. His mare is worth $225, and he made $150 and expenses from his pigs, making $750 in all in eight years all from $1.

If all boys were given the same chance to make money there wouldn't be so many leaving the farm.—Miss Erma Gildner, Michigan.

CANNING PUMPKINS FOR PROFIT

Raising pumpkins for canning for pies is an enterprise suited to farm women. Plant the pumpkins in the corn field just after the corn is cultivated the first time. Plant every fourth hill in every third row. Gather before frost and store in a cool, dry place.

Get the ordinary tin cans, such as are used for canning tomatoes. Cook the pumpkin thoroughly, sweeten and flavor as for pies and can while hot.

If you live near a town or city you can readily get 15 cents per can for all you can handle. As an ordinary sized pumpkin will can from six to eight quarts, you can readily see what a profit they make.—Mrs. E. Buck, West Virginia.

A SHUT-IN AT WORK

Dear Aunt Sophia—Those who are able to get about can grow vegetables, raise poultry and do many other things, but the poor cripple and shut-in must find something than can be done indoors. Hundreds of these unfortunates are constantly on the lookout for something that is both congenial and profitable. I have learned of one shut-in who conceived the idea of making a memory patch quilt, and now she finds these quilts are most profitable.

Her plan is a wheel design on a square of white muslin, thirteen by thirteen inches. On this square she draws a circle as large as can be drawn to look well, which, by the way, is a matter of taste. This circle she works in red silk twist, also a birds-eye or hub, as it were, in the center, from which point she works the spokes of her wheel outward to the large circle or tire. On each of these lines or spokes, of which there are sixteen, she wrote the name of some member of the family or near friend, working them in with silk.

About the time she had finished her first square in this manner her birthday was due and she was tendered a party and a shower of dimes. The invitation was general among friends and neighbors, and as her guests numbered almost sixty she netted a little over $5 in dimes. In addition to this, on the suggestion of a friend that whoever got their name on the memory quilt was to pay her a dime for working it on, another $5 was realized. It was a great day for the little shut-in, but the end was not yet, for friend after friend, hearing of the quilt, sent in their names and their dimes until she had her quilt all made up and paid for at the rate of $1.60 for each wheel or patch. As her quilt was six patches one way and seven the other, making a total of forty-two patches, she realized in all $67.20 for her quilt.

The names she works on the spokes of the wheels in green silk twist, and the red, white and green is really very pretty. If this plan is new or unique or some shut-in can do likewise, then I am pleased.—Mrs. J. L., Ohio.

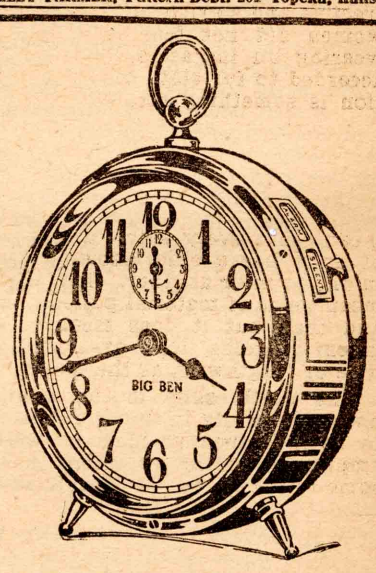
House Dress Pattern GIVEN

This pretty, new, one-piece house dress is the most practical and attractive house dress that can be worn this season. The blouse closes at left side and has new Mandarin arm hole, with sleeves inset. Round neck, trimmed with handsome collar; removable chemisette. A four gore skirt is attached to the blouse. Closes at side of front and has reversed box plait in back. Empire or regulation waist line can be used. Very easily made—use cheviot, wool eponge, crepe, charmeuse or any suitable material. Pattern No. 5944 is cut in sizes 32 to 40 inches bust measure. Requires about 4 yards of 50-inch material and 2 yards insertion. To quickly introduce our big home and farm magazine we make this liberal offer good only 20 days: Send 10 cts. for trial 3-months' subscription and enclose names of 5 housekeepers and we will send you this popular dress pattern free. Be sure to give size, also say you want dress pattern No. 5944.
VALLEY FARMER, Pattern Dept. 202 Topeka, Kansas



BIG BEN
Built of good implement steel

You can't wear him out. Give him a drop of oil a year and he's good for a lifetime of handy service.

He rings TWO WAYS—either way you wish—with one long five-minute ring, or ten short rings at one-half minute intervals, until you're wide awake.

More than 3,000,000 families have found him a reliable time-keeper. 20,000 jewelers have so many calls for him that they have to keep him within easy reach in their stores. You'll see him on almost every jeweler's shelves, and in his windows.

Think what it means for people to pay more than $8,000,000 to get this one clock in their homes. He only costs you $2.50.

He stands 7 inches tall, is triple-nickel plated, has big bold numerals and hands, and large keys that anyone can wind without frowning.

There never was another clock that fitted in so well with farm work—getting the hands up on time, and acting as a good house-clock all day.

A community of clockmakers stands back of him. Their imprint, *"Made in La Salle, Illinois, by Westclox,"* is the best alarm-clock insurance anyone can carry.

WHAT TO WEAR

There is almost no change in many of the garments for winter wear. Still popular for general wear is the one-piece dress cut on slender lines and made of serviceable materials. We note in many of these frocks the waistline is again normal, and we think this will soon become the rule.

The three-piece suit for the winter is not warm enough without the addition of furs, and the cheapest of these are very costly. In these dresses the coat and skirt are of one material and the waist of net or chiffon in matching color.

The very smart little short coats that have recently arrived may be described as something extremely new, and also very attractive. Many of these, ending just below the waist in little slashed basque pieces, recall the days of our grandmothers. The front and the back usually have a few gathers where the waistline ought to be, or a little above it, and the rest of the coat is quite baggy, with loose puff sleeves gathered with a frill at the wrist. These short coats will undoubtedly be very much worn in the spring when the weather becomes milder. They are smart even now, but they are chilly, and the woman who is wise turns to the long, loose wraps that are so warm and so loose and cozy.

Most of the long coats are now made three-quarter length and we see an increasing number in lighter weight materials, which can be worn far into the spring and used for emergencies even during the summer.

The nigger head cloth, the caracul cloth and the other woolen weaves imitating fur have been so very attractive and so rich in themselves that women did not feel that they were wearing an imitation, and the favor accorded to fur cloth of every description is something astounding.

A question addressed to a leading modiste the other day regarding the coming skirt was answered thus: "First, draped skirts, then draped skirts and then draped skirts." It means that every skirt of every kind of dress has a skirt showing drapery in one form or another. This does not mean yards of material pulled this way and that, but it does mean in some ingenious folds, long or short, crosswise or lengthwise, as the case may be.

The bustle skirt is the most pronounced novelty in this line. It seems to be a forerunner of the bustle, examples of which are already seen in some of the shops. The material used is slightly stiff in texture and is gathered into a sort of puff at the center of the back. This skirt is most trying, for few women are constructed to carry a hump with grace, but if it must come we will have to be reconciled.

The trousers skirt is not, as its name would imply, at all ugly. It is so cut that the material clings to the feet and to the hips, bulging a very little in the middle and producing an effect very distantly suggestive of Turkish trousers.

And Then—

Subbubs had taken Chumpleigh home to dine. Everything went well until they were seated at the dinner table, when Willie Subbubs remarked:

"Why, pa, this is roast beef."

"Well," said his father, "what of it?"

"Why, I heard you tell ma at breakfast that you were going to bring a muttonhead home for dinner this evening."

It Is Possible

"Do you think a person can be too healthy?"

"Yes, if you are to get his fortune after—after—well, afterwards."

A Little of Your Spare Time

Spent In Soliciting

new and renewal subscriptions for UP-TO-DATE FARMING would undoubtedly prove remunerative for you, as it has for hundreds of others. Better get our proposition anyway, because it will be more liberal than you now suppose. Write us.

What is Now the Fashion

6373. LADIES' DRESS.—Serge, cheviot or messaline can be used to make this dress, with the collar and cuffs of contrasting material. The dress closes at the front and is made with a four-gored skirt. The long or short sleeves can be used. No. 6373 is cut in sizes 34 to 42 inches bust measure. Medium size requires 3¼ yards of 54-inch material, five-eighths yard of 18-inch goods for a vest and 1¾ yards of 24-inch contrasting material.

6451. BOYS' RUSSIAN SUIT.—Serge or linen can be used to make this suit. The suit has a separate collar and bloomer trousers. The long sleeves can be finished with either plaits or with a cuff. No. 6451 is cut in sizes 2, 4 and 6 years. Age 4 years requires 1¾ yards of 54-inch material.

5904. LADIES' SKIRT.—This skirt can be used to complete a coat suit or it can be worn with separate shirtwaists. The skirt is cut in seven gores and can be made with either the high or regulation waistline. No. 5904 is cut in sizes 22 to 30 inches waist measure. Mediu msize requires 4⅝ yards of 36-inch material.

5991. GIRLS' DRESS. Any of the woolen materials can be used to make this dress. The dress closes at the right side of the front and is made with a removable shield. The skirt is cut in three pieces. No. 5991 is cut in sizes, 6, 8, 10 and 12 years. Size 8 years requires 2½ yards of 44-inch material.

6339. GIRLS' DRESS.—This pretty dress is made with the long-waisted effect. The skirt is cut in two pieces. The closing is made at the front. Serge, cheviot or linen can be used to make this dres. No. 6339 is cut in sizes 4, 6, 8, 10 and 12 years. Size 8 years requires 2½ yards of 36-inch material and 1⅝ yards of ribbon for a belt.

5938. LADIES' COAT.—Every woman needs a long coat and here is an excellent pattern for making such a garment. This coat can be made in either the 44 or 56½-inch length. The revers and cuffs are made of contrasting material. No. 5938 is cut in sizes 32 to 42 inches bust measure. Size 36 requires for the short coat 4 yards of 44-inch material and 1⅛ yards of 27-inch contrasting goods. The long coat requires 5¼ yards of 44-inch material.

5939. CHILDREN'S DRESS.—Any of the woolen materials can be used to make this dress with the revers, cuffs and belt of contrasting material. This dress closes at the back and can be made with either the long or short sleeves. No. 5939 is cut in sizes 3, 5 and 7 years. Size 5 years requires 2 yards of 44-inch material and one-fourth yard of 27-inch contrasting material.

6466. LADIES' NIGHTGOWN.—Muslin, longcloth or flannel can be used to make this nightgown. The garment is made with two tucks at each shoulder, which give the necessary fullness to the nightgown. No. 6466 is cut in sizes 34 to 42 inches bust measure. Medium size requires 5⅛ yards of 36-inch material.

He Got Stuck

"I decided to stop keeping chickens and keep geeses instead," said a new American. "So I go by the market and I think I get me three geeses—two shes and one man. But the feller stuck me. He sold me one she and two hims."

Price of Patterns, 10 Cents Each

These patterns are guaranteed; there are none better at any price. Full directions accompany each. Give number and size. Write your name and address plainly.

FASHION DEPARTMENT

Close Connection

Brown—There seems to be a strange affinity between a darky and a chicken.

Jones—Naturally enough. One is descended from Ham and the other from eggs.

Ever-Sharp Shears GIVEN

Dear to the heart of every woman—a pair of fine shears that are always sharp.

The Patent Tension Spring keeps them always sharp and enables the user to cut anything from wet tissue paper to the heaviest cloth. The tension on the rivet can be set so that any kind of material intended to be cut with shears can be cut with perfect ease, without tiring the hand.

The illustration is 4 inches long, but the shears we offer are 8 inches in length. They are made from the best carbon steel which insures strength, and a keen cutting edge. The manufacturers guarantee quality of the material and workmanship in every pair.

GUARANTEED FOR YEARS

Our Offer One pair of these Shears will be sent free for your renew or a newsubscription, one year at 50 cents

Up-to-Date Farming, Indianapolis, Indiana

Cadets of Equity

The Department Dedicated to Our Boys and Girls

This Department is for the special instruction and amusement of our UP-TO-DATE Young People, and to give them a chance to express themselves in print, and to exchange thoughts with one another. Everyone that writes a letter that is acceptable becomes a CADET OF EQUITY, and everyone that sends a NEW subscriber for one year—50cents—will be a PIONEER OF EQUITY and sent a collection of twenty beautiful colored and embossed post cards. Address CADETS OF EQUITY, UP-TO-DATE FARMING, Indianapolis, Ind.

A CADET is a young learner or student, and a Cadet of Equity is a friend and student of that great principle which demands equity or equality of rights and privileges for all. And what an army these young folks now constitute! If called together they would come from every state in the Union and from Canada and Mexico, and some would have to cross the seas. And UP-TO-DATE FARMING is read wherever there is a Cadet of Equity. Can any other paper equal it? We are proud of our young people, and we see in them better times, a more general practice of equity in all the countries of the world. As a means of accomplishing this, let us get more and more people to read the letters and the truths we publish. We earnestly trust the Cadets will help us.

DEAR CADETS—I wish to thank UP-TO-DATE for its farm advice as well as for its miscellaneous matter and the Cadet letters. I am a merchant's boy and live a quarter of a mile from Absher, where my father has a store. I go to school seven months of the year and clerk in the store the other five months. I would like to exchange photos, letters or cards with the Cadets or other students, and I would advise every one to take UP-TO-DATE, whether a farmer or not.—Norvel Shrive, Absher, Ill.

DEAR CADETS—I come from sunny Idaho and my father is an up-to-date farmer. He belongs to the Farmers' Society of Equity and thinks it is the very thing for the farmer. We have an 80-acre farm and raise hay, grain and hops. I am 20 years old and keep house for my father. I would like to hear from the Cadet boys and girls—will answer all letters and cards.—Lula Russell, Nampa, Idaho.

DEAR CADETS—I am a happy-go-lucky girl, whose home is in Banner County, Nebraska, just a mile from the Wyoming line. Our nearest town is Pine Bluffs, Wyoming, just twenty miles away. My father is quite an extensive farmer. We threshed 9,000 bushels of small grain. We also have quite a number of hogs and cattle. I have one brother and four sisters. One sister is married, another is a postmistress and another is teaching our home school and boards at home. My brother works on the farm. I go to Sunday school every Sunday, for we live just a mile from church. I think the Cadet letters are first rate, and I would like very much to hear from the Cadets.—Anna Palm, Gary, Neb.

The following letter from Connecticut is a newsy one and shows the educational resourcefulness of the east:

DEAR CADETS—I am a country girl, 15 years old, and have four sisters and a brother. We live with our father and mother on a large farm owned by my grandmother. One of my sisters and I walk two miles to school every day. Our school has double sessions, and we attend from 1 to 5 o'clock. It is always dark before we get home. We used to have morning and afternoon sessions for the same pupils, but we had two schools in the district then. One of these houses, the largest wooden structure in town, and that was occupied by 1,100 children, was burned about three weeks ago. The public library, two stores, a hose house, a boarding house and two or three dwellings were also burned. The school was emptied in fifty-eight seconds and every one got out safe by means of the fire drill the school had practiced. The scholars that attended that school were divided among the other schools in town, and we have to have double sessions to accommodate ours. Three of my sisters attend school and the other one works in the mill. My brother is a cute little 2-year-old and is just learning to talk. I think UP-TO-DATE is a very interesting paper and I would like to correspond with the Cadets.—Evangeline Loomis, 149 Keeney street, South Manchester, Conn. (J. Myrtle Loomis, 17 years old, the sister who works in the mill, also writes and would like to exchange letters or postals with the Cadets.)

The homesteaders out west like UP-TO-DATE:

DEAR CADETS—May a girl from the Flathead Indian reservation become a Cadet? I am not an Indian, but a homesteader's daughter, and I like homesteading fine. We have been taking UP-TO-DATE almost two years and I must say we like the paper fine. I will be 18 years old next January 7 and I would enjoy hearing from all the Cadets.—Cecilia M. Nunnally, Big Arm, Mont.

And so do the city folks:

DEAR CADETS—I am a city girl, 18 years of age, and visit the country occasionally, to my sister's farm. She takes UP-TO-DATE and I certainly appreciate reading it when I go to the country, especially the Cadet page. I don't know much about country life, as I have nearly always lived in the city, but I like to go to the country to get a breath of the country air. I would be pleased to have all the boys and girls of my age and older to correspond with me, as I have nothing to do but write and read.—Flora Peterson, Wilmington, Cal.

DEAR CADETS—I am a boy from North Carolina and I want to join you. We subscribe for UP-TO-DATE and think it the best farm paper there is. I live on a farm of 35 acres. My father died when I was 7 years old. I have two brothers, but they do not stay at home, so I have to farm for mother, which I enjoy doing on the UP-TO-DATE system. Our principal crops are corn, cotton, potatoes and peanuts. I will be 17 February 28 and would like to have a shower of post cards and letters all the time. Will answer all I get.—Robert R. Gibson, Maysville, N. C.

Here is a southern girl who would really like to see it snow:

DEAR CADETS—Most of the Cadets write of farm life, and I think it is the freest and pleasantest life any one can live. In this part of Mississippi cotton is the chief crop, but most all of the farmers raise hay, corn and potatoes. I shall teach school this winter, and I certainly enjoy reading the teachers' letters. Also that of John F. Miller. I am sure he enjoyed the snow he wrote about. We had no snow here last winter, but I hope we shall have one snow at least this winter. I would like to exchange cards and letters with all the Cadet girls and boys, for I do like to hear from other states.—Mary Lizzie Gammel, Rienzi, Miss.

This next girl, though not much of a northern girl, is already having more snow than she wants:

DEAR CADETS—I am a farmer's daughter, 18 years old, and live on a farm of 360 acres. We have 12 horses, 36 cattle, 35 sheep, 35 hogs, 54 turkeys, 25 geese, 12 ducks, 100 chickens, one dog and five cats. I live a mile from school and have gone every day of this term. My teacher is Laura Murray and I like her very much. We live four miles from church. We are having some very cold weather here now (November 16) and the snow is so deep the teacher could not go to school. I would be glad to exchange cards and letters with all the Cadets.—Mae Scott, Plato, Mo.

I am glad to introduce this philosophic young gentleman from Oregon:

DEAR CADETS—I am 21 years of age, have lived on a farm practically all my life and am very anxious to join your pleasant company. But I am now staying in town trying to gain a little knowledge of Latin, mathematics, etc., that I neglected several years ago. Oregon is a great state. We can raise almost everything except tropical fruits, but corn doesn't do very well on account of the nights being too cool. So far this fall (November 11) we have not had any killing frosts, and sometimes no snow at all falls during the winter. Cadets, isn't it difficult to choose one's life work in this age when there are so many attractive positions? It is said if one does not know what he is best fitted for by the time he is 18 he will never amount to anything. But I don't believe that, do you? I think one's life work should not be chosen until he knows what is best suited to him, for many a young man or woman has had his or her dreams blasted by attempting something they were neither adapted to nor fitted for. I shall be pleased to discuss various subjects with the Cadets, or to correspond for pleasure. Will send my photo to the first who writes.—Harry G. Boge, Cornelius, Ore.

How poetic some of the writers are!

DEAR CADETS—
Here comes a girl of just eighteen,
The nicest girl you've ever seen (?).
My hair is light, my eyes are blue,
I weigh a hundred twenty-two,
And live in the good old Buckeye state
Where farmers all read UP-TO-DATE,
The finest paper in the land.
On this, Cadets, I give my hand
In friendship true
To each and every one of you.
—Mary Anderson, Somerville, O.

Even the professional people like UP-TO-DATE:

DEAR CADETS—I am a lawyer's daughter and am nearly 16. My father has been a lawyer for quite awhile, but we live on a farm of between 275 and 300 acres. I am not very pretty, but I live to the motto, "Pretty is as pretty does." I enjoy myself

Secret Locket set with stone and 16-inch neck chain **Given** for the names of two ladies and 25c, stamps or coin, to pay part of advertising expense. All handsome gold finish. Every girl and young lady should have one. Prepaid by parcel post. S. E. FERRY, Irvington, Ind.

What 15c Will Do
The little matter of 15c in stamps will bring you the Pathfinder for 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the nation; now in its 21st year of increasing in success. The paper fills the bill without emptying the purse; it costs but $1 year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the PATHFINDER is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. Or send $1 for full year; money back any time if not satisfied. Address Pathfinder, Box 7, Washington, D. C.

A Cart Load of Fun This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in "A Cart Load of Fun" are the following: "A Man With a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded Not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jones' Baby," "Breaking up a Cat Concert," and 148 others. "A Cart Load of Fun" is a book of sixty-four large double column pages, neatly bound in attractive colored paper covers. Price 10 cents each, 3 for 25c; postpaid.
COONER & FORTUNE, Indianapolis, Ind. **For 10 Cts**

I am going to give this Dandy Pony with a Brand New Buggy and Harness absolutely Free to the Boy or Girl who does the biggest favor for me. Any boy or girl can do what I want them to and win this free pony. I am a friend of the children, and I want just as many of them as possible to own a Shetland pony. I give one away every three months.
YOU CAN OWN THIS PONY
Besides the Pony I am going to give thousands of valuable prizes away to my boy and girl friends. Now I want you to be my friend and send me your name and address today, so I can write and tell you how to get this Pony and Outfit, and many other valuable prizes, free. Don't send any money; it won't cost you a penny.
So Send Your Name Today to
UNCLE BOB, "The Children's Friend"
600 Second Ave. So., Minneapolis, Minn.

and try to make all those around me happy. I have a pet name that I am proud of. It is Blue Bell. My father and brother take UP-TO-DATE and we are very proud of it. I have six brothers and one sister. Three of my brothers are married and three stay at home and do the farming, as father is always busy. I would be delighted to hear from all the boys and girls and it will be a pleasure to receive and answer your letters. Will send photos to those who send me theirs, and will answer all who write.—Nannie M. White, Cynthiana, O.

DEAR CADETS—My mother takes UP-TO-DATE FARMING and I have been reading it for over a year. It is very interesting. I live on a farm of 212 acres in the eastern part of Virginia. I am 19 years of age and would be glad to hear from any of the Cadet boys and girls.—Olive Hildebrand, Staunton, Va.

Yes, they produce rhymes in California as well as the most delicious fruits:

DEAR CADETS—
Here comes a California girl
The Cadet banner to unfurl;
And twice a month I think it's great
To get the mail with UP-TO-DATE.
It's a good paper for the farm
And helps its readers like a charm.
I'm sure 'twill help the young folks, too,
To read the Cadet letters through.
From all young folks I'd like to hear
And greet them with a hearty cheer.
—Nannie Norman, Visalia, Cal. Age 15 years.

DEAR CADETS—Here is a northwestern girl of 15 summers, the oldest of a family of six. I have been taking UP-TO-DATE for a year and like it very much. I have a little broncho pony of my own. Its name is Twinkling Dan. He is a very good runner; in fact, the best around here. Come, girls and boys, let's have a race. I like very much to go out riding. I would like to exchange cards and letters with all the Cadet boys and girls; will answer all I receive.—Cecilia Janson, Tolly, N. D.

DEAR CADETS—I am a country girl and have never been to any large town. My father has been dead five years and I live on a little farm with my mother and three brothers. I know how to sympathize with those that have lost a father. I am 19 years old and would enjoy meeting all the Cadets. Would be pleased to get letters and cards from those who have my birthday, September 22.—Lillie Bell Daniel, Lamar, Ala.

DEAR CADETS—I am a Lawrence County (Ohio) girl and I wish to become a Cadet of Equity. I live on a farm with my parents and twenty-five dressed turkeys is our contribution to the Thanksgiving supply. We are having a snowstorm today (November 9). I think the Cadet page is just grand, and I would like to get acquainted with the Cadet boys and girls near my age, which is 19 March 25. I would appreciate a card shower. So please don't forget the 25th. I promise to answer every card and letter I receive.—Ethyl M. Riggs, Chesapeake, O.

DEAR CADETS—I am a boy 18 years old and live in the eastern hills of West Virginia on a farm of 222 acres and enjoy farm work fine. We raise corn, wheat, rye and potatoes and all kinds of fruits. I would like to correspond with the Cadet girls and boys and will answer all I receive, cards or letters.—Ebin Feaster, Maysville, W. Va.

DEAR CADETS—I have been reading UP-TO-DATE for some time and like it very much. I love farming and raising flowers. I am 16 years of age and enjoy life and school very much. I live in a valley through which the Genesee river flows, and I like boating, fishing, skating and outdoor life in general. I am a Camp Fire Girl of the Tuscarora branch. I would like to correspond with all the Cadet boys and girls. Will answer all letters and postals I receive.—Florence Reed, Belfast, N. Y.

DEAR CADETS—Will you let a Tennessee girl slip in and speak a word to you? I live on a farm of 600 acres and enjoy farm life fine. I am 19 years old and have a common school education, but I shall go to school this winter. I enjoy reading your interesting letters and think there is no paper like UP-TO-DATE. All letters and cards will be appreciated and answered promptly.—Boonil Gardner, Hornbeak, Tenn.

DEAR CADETS—I am nearly 16 and live in Pennsylvania. Father has taken UP-TO-DATE for three years and I can hardly wait to read the Cadet page. I hope to hear from all the Cadets and will answer all I receive.—John Koch, McKeansburg, Pa.

Hunting and Trapping

For Pleasure and Profit

NOTICE TO SPORTSMEN

This department is open to contributions from readers. Accounts of actual experience, and practical methods of hunting and trapping, either as a pastime or as a business, are solicited. Photographs, if good and clear, are especially desirable, and will be paid for at regular rates. Prizes are awarded to all whose letters are published, and at the end of the season a grand prize of considerable value will be awarded to the best contribution received during the entire season. Write one side of paper only and address all communications to TIM, THE TRAPPER, Sporting Editor, UP-TO-DATE FARMING, Indianapolis, Ind.

POWDER AND BALL

Fine copper wire is best for making rabbit snares.

Northern West Virginia gives us the best quality of opossum skins.

Raw furs found lower market values upon the opening of the season.

The most valuable fox furs come from the coldest corners of Canada.

Dear hunting was as successful as usual this season in killing off some of the hunters and guides.

The shop windows of fashionable stores in our cities are showing unusually fine fur garments at unusually high prices.

HOW I TAKE THE WHITE WEASEL

Dear Tim—The weasel lives among the rocks, such as rock walls and cliffs, also in hollow logs, brush piles, etc. The way to trap him is to set the trap near his den, along the cliffs or bluffs. Bait with a small bird torn in pieces, scattered over the trap; also put piece under pan of trap. They can also be caught by building a rock pen or enclosure, leaving a small entrance. Set trap just inside, putting bait in back of pen. A piece of rabbit—the bloodier the better, as he likes the blood—is excellent bait. They can be trapped by just setting trap inside of hollow trees, covering with feathers or rabbit fur. This is a good set after the snow falls, as it will be protected from snow and cold weather in winter. Use No. 1 traps, either Victor, Newhouse or Stop Thief traps.—Elbert Stoecker, Oakesdale, Wash.

ENJOYS THE TRAPPING LETTERS

Dear Tim—I am a reader of UP-TO-DATE FARMING. I enjoy reading the hunting and trapping page very much. I have followed trapping quite awhile and enjoy it. It is a great sport, as well as being easy money. I trap the skunk mostly out here. There are a number of good ways to trap them. I generally set my traps in holes about one foot from the entrance. A skunk will go down almost every hole it comes to. I dig a hole deep enough to let the trap down level with the bottom of the entrance, then cover the trap with fine grass, not too much of it, or it will prevent the trap from working right. I always stake the trap down with an iron peg about eighteen inches long to prevent them from gnawing loose.

Badgers are quite hard to catch. They are almost as cunning as a coyote. To trap badgers I set my traps about the same as for skunks, only I burn the grass or other trash I can get handy over the traps and I always wear cloth gloves scented with pine tar. This method seldom fails. It is best to set the traps in fresh holes for badgers, as they seldom go in old holes. Always cover chain.

Well, we had a big coyote hunt the day before Thanksgiving. I will write later and tell you all about it.—Ralph Mills, Garfield, Kas.

HOLLOW LOG METHOD OF TRAPPING ALL ANIMALS

Dear Tim—Will you admit a hunter, trader and trapper to your hunting and trapping department? I am a subscriber and have been for quite awhile. I will try and give the readers a few ideas on trapping and hunting.

In trapping I use the same method for all animals—the hollow log method. For mink, cut a hollow log about ten or fifteen feet long and roll down to the edge of the water, where there are plenty of tracks. Use some trail scent about 200 yards in both directions from the log. Set your traps in the hollow log, about a foot or two from each end, with some bait in the center—any good bait will do—and 99 times out of 100 you will get the mink, and sometimes two. And the same method is a sure catch for coon, opossum, rat, skunk or wildcat. I have used the trail scent for half a mile both ways with good results. Try it and see the difference.

I shipped the furs I caught and bought to United States dealers until I found out I could buy or get others to club in and ship to London and Leipzig and get twice as much. Last year I went to buying and shipping in large quantities across the waters with good results. Eight dollars for mink, $5 for coon, $2.25 for opossum, $4 for skunk, 50 cents for muskrat, $25 for otter, and prices in proportion for other furs—$10 for ginseng, $6 for golden seal. This is the way I am doing this year. I always preferred club shipments before this year. I guess I have said enough. I will ring off for this time.—C. H. Whittington, Myrtle, Miss.

TENNESSEE COMES INTO CAMP

Dear Tim—I thought I would write before the trapping season closes. I have no particular trapping or hunting expedition to talk about, but I will give you my method of trapping. (I do but very little trapping now.) The opossum, skunk, civet cat, mink and 'coon are easy to trap. A No. 2 jump trap is large enough to hold any of the animals named. A No. 1½ would do very well. The opossum, for its size, is very easy to hold, but the mink is not, owing to its smallness of feet and tapering of legs.

Opossum—Find where Mr. 'Possum frequents, take your trap, dig (if you are trapping on a runway) a shallow hole in the ground (this need not be done) to get trap level with pathway. Cover trap with some material near at hand (cover trap lightly only and be sure it don't clog when it springs). Next get a switch about twenty-five inches long and put a small bird on one end of switch and put other end in the ground, staking bait about fourteen inches above trap, and you are pretty sure of getting any opossum, mink or coon that may come that way.

'Coon (if you trap for 'coon at the river, creek, lake or pond)—Water set No. 1: Take your trap, get a live crayfish, tie crayfish to pan of trap, set trap any way from six to fifteen inches from bank, put trap under water, leaving crayfish on the surface of the water. If any 'coon comes that way and sees that crayfish you "got him." Set No. 2: Hunt some shallow and narrow place in stream, say from two to eight inches deep. Get two pieces of log, place across stream, leaving a space about thirty inches wide between the ends of logs. Next place your trap midway between the two logs, trap under water, put a small stick on each side of trap about six inches apart at surface of water. When Mr. Raccoon comes to cross on the logs he walks out to the end of log, steps off——. Next he steps between the two small sticks and into your trap and then you "got him" just like in set No. 1. Some one asks how to keep traps from rusting. I, for one, would not think very favorably of setting bright traps. Put them out a few days and nights to get rusty.—John W. Hafer, Westfield, Tenn.

WHEN WRITING TO ADVERTISERS PLEASE MENTION UP-TO-DATE FARMING

1914 MODEL 22 Cal. HUNTING RIFLE GIVEN

A REAL GUN. Take-Down pattern, with latest improvements, walnut stock and grip. Shoots accurately 22 long or short cartridges. Handsome, durable. SEND NO MONEY only your name and address for my easy plan of securing this fine rifle Absolutely Free express prepaid. Write today. D. W. BEACH, Box 56, Spencer, Ind.

For Your Hide's Sake

Have it tanned with the hair on for a coat, robe or rug. Moth proof, no smell. Freight paid on 3 hides. You furnish hide, we do all the rest and make coat for $10 up. Robes $5.50 up. Write for price list. Agents wanted.
THE WORTHING & ALGER CO., Hillsdale, Mich.

Now is the Time

to get your name on our regular mailing list. Write today for prices—a postal will do. Remember that we guarante satisfaction or return furs and pay all express both ways. Yours for an honest assertment and a square deal.
JONAS D. EMERY, Concordia, Kans.

Skunk--Opposum

We want 100,000 skunk and opossum and other furs. We quote one price for each grade and pay just what we quote. We hold all shipments separate five days and return them if you are not satisfied. We buy beef hides, horse hides, sheep skins, beeswax, ginseng and golden seal. Write for our price list today; it is free. Shall be pleased to hear from you.

A Personal Message

To All Who Desire a Better Method of Price-Making and Marketing

By the President of the F. S. E.

We have said it many times—that this paper is different from all others.

—o—

Wherein, then, is it different? The reader can have the answer to this question by reading any number. For instance, turn to the editorial pages and read "Still Talking Rural Credits" or any other editorial, or almost any other department of the paper.

—o—

UP-TO-DATE FARMING is preaching the gospel of profitable farming as it is not preached by any other paper. It is accomplishing a mission that no other paper ever set out to accomplish—the one of making farmers industrially free and independent. Its purposes as regards the conservation of soil energy and crop production are as broad as any paper's, but it goes farther than any other in teaching that it can only be through wise and profitable selling of the products of the soil that the spent soil fertility may be afforded to be returned. And unless the crops are profitably sold, and part of the money invested in fertilizer to return to the soil, the crops can not be increased.

—o—

But UP-TO-DATE FARMING is different from other papers in the fact that it never follows a popular idea or a fad simply because the thing is popular. We would rather be right than popular now, because we believe to be right on any important proposition now will make us popular in the future. For instance, the proposition to establish a new, distinct set of rural banks so farmers may give acceptable security to money lenders, is a popular idea. Farm papers all over the country endorse the idea in some form. But UP-TO-DATE FARMING does not.

—o—

First, we are opposed to everything that will stimulate borrowing amongst the agricultural class as long as they are not in a position to sell at prices of their own deciding. Second, we are opposed to a new line of banks because, with our national, state and postal banks and trust companies, there are already far too many banking institutions for the public to support. Third, we are opposed to creating a new line of banks when some simple legislation can qualify, or compel, present national, state or postal banks to take care of farmers' needs for money just as well as the proposed new banks can. And last, when crops are sold right will be the time to provide for credit facilities if, indeed, farmers will need to borrow much then.

—o—

And so it is on nearly all of the important farm problems. We speak our mind without fear or favor, and we speak the truth. Subscriber A. H. Green of Illinois wrote: "I am never afraid to follow UP-TO-DATE FARMING'S lead, because it is always right on every proposition." Bryant R. Stein, also of Illinois, wrote: "I am in harmonious agreement with your ideas on nearly every subject you have touched upon. In politics, as well as in political economy, you waive aside all political and social flimflam and proceed straight to the hard facts. This is what we farmers like." S. L. Reid of North Carolina wrote: "The thing that will help farmers most at this time is improvement in our marketing system, and that is what UP-TO-DATE FARMING is bringing about." William Klepfer of South Dakota: "I agree with all the teachings of UP-TO-DATE FARMING." Isaac Stump, Illinois: "There is more sound doctrine and good money-making sense for farmers in a page of UP-TO-DATE FARMING than in all other papers put together." L. Slayton, New York: "There are so many false doctrines presented to us these days that it takes the advice of a paper like UP-TO-DATE FARMING to show farmers the truth and protect us." K. A. Asplund, Nebraska: "It is gratifying to see how UP-TO-DATE FARMING stands for the rights of us farmers all the time." A. A. D., North Dakota: "UP-TO-DATE FARMING is a paper that surprises its readers by the greatness of its ideas, the simplicity of its truths and the importance of results sought. It is the only paper that is true to the farmers." E. E. Bell, Alabama: "I must certainly say that UP-TO-DATE FARMING is the greatest paper I ever saw." This was written at the beginning of his subscription. N. H. Sliter, Wisconsin: "The crisp and striking editorials, the neat but bold and fearless thrusts at the unrighteous manipulations of a nation's wealth by unscrupuous representatives, defended by a subsidized class of writers, are the astonishing and convincing proofs that UP-TO-DATE FARMING stands at the head of all papers for farmers. And when we consider its mission, to establish a new system of marketing crops, it is without a peer. The breath of inspiration to better things exhales from every line and page of its editorials." And this:

Any person who reads any number of UP-TO-DATE FARMING carefully and ponders on its teachings and then realizes that there are twenty-four such numbers in a year will admit that he is getting much more value than his subscription price. In short, the real value of this paper can not be measured or stated in monetary terms. If there is another journal published in the United States as valuable to farmers I have never seen it.

The reason the subscription list of UP-TO-DATE FARMING has grown so rapidly is that it teaches farmers just, moral, honorable and legitimate means to improve their condition, and in doing so it also promotes the general welfare of all classes and of our great nation. With this paper bringing "farmers to the front" it will soon be seen on the tables of a majority of farmers in the country.—C. W. L., Indiana.

—o—

In view of such letters, the like of which were probably never written about any other paper, has not UP-TO-DATE FARMING earned its right to be called different from any other paper? Such letters from its subscribers clearly put it in a class by itself. In all the years we have been associated with this paper we have tried to make each number highly educational as well as a distinct help at the time, along lines not touched by any other paper. We have always tried to have each number original in thought, teaching and practice. Its mission is not done yet, but its work is not finished. In the fullness of time we have every confidence that the perfect results will be realized. We do know that agriculture is now a better business because of our work and that every farmer has made many extra dollars, even those who have not been subscribers, because of the writing and work we have done.

—o—

We want every reader to take these questions home to himself: Have you not a clearer understand of many of the present-day problems because you read this paper? Have not many of your vexing questions been answered through these columns? Are we not farther along the way to establish a sound and enduring organization of farmers than ever before, because of the teachings of UP-TO-DATE FARMING?

—o—

If these were all the benefits each farmer has reaped, don't you think you owe much to this, YOUR paper? And, may we ask, how will the debt be paid? Shall it be as the old proverb says: "Whose bread I eat, his song I sing." Or this one: "I taught you to swim, but now you'd see me drown." Or "The hog never looks up to him who threshes down the acorns."

—o—

One of our purposes in saying these things is to emphasize the importance of a prompt renewal of subscriptions by a great many thousand subscribers whose time will be out with the end of 1913. And another reason is to tell new subscribers, of which many thousands are being added to our list, what kind of a paper UP-TO-DATE FARMING is.

—o—

We want to again impress on all of these that we have a great mutual interest in a large circulation for UP-TO-DATE FARMING—in fact, should not the circulation of such a paper, properly occupying, alone, the most important field of agriculture, the field of marketing endeavor, be limited only to the number of farms in the country?

—o—

There are other valuable papers, and we would not have you withhold a subscription from one of them, BUT UP-TO-DATE FARMING IS DIFFERENT. You get through it what you can not get any other place. Therefore, regardless of whether you can take one farm paper or several, we leave it to you IF YOU CAN AFFORD to do without UP-TO-DATE FARMING?

—o—

Perhaps YOU are one who received a letter from us. If you did, and if you have not written us, let this be a reminder to be sure to write before Christmas day. One hundred forty thousand such letters went out and we don't know any reason why we should not hear from every one of them.

—o—

Remember, you get from Up-to-Date Farming what you can not get elsewhere, and it is different.

* * *

On a card sent out by the National Soil Fertility League this question is asked: "What will we eat in fifty years, when the population is 200,000,000?" The following statistics are given on the same card:

We now consume 91 per cent of our wheat and 98 per cent of our corn.

In 1906 we exported 525,000 head of cattle; in 1912, 105,000 head. Decline, 75 per cent in six years.

In 1906 we imported 16,000 head of cattle, while in 1912 we imported 318,000 head, an increase of 2,000 per cent in six years.

In 1907 the number of beef cattle in the country was 51,566,000; in 1913, only 36,030,000. Decline, 30 per cent in six years.

—o—

Our answer to this question is: If farmers permit other people to set the price on their products during the next fifty years we will eat about the same food as now, but it will largely be brought from foreign countries.

Stag handle, strong, durable. We will send one of these 75c knives at special price 49c, postpaid, 5 for $2.10.
S.E. Ferry, Irvington, Ind.

Nothing can be surer, as the enormously decreasing exports of our agricultural products and increase of imports of foreign agricultural products plainly show. Denying the farmer sufficient profit to replace the plant food in the soil is bound to aggravate a bad condition. Also, the removal of protection from American farm products will hasten the time when this country will not be able to feed itself.

—o—

On the other hand, give the farmer steady, profitable prices and he can increase his yields to keep up with any possible increase in population for all time, and have billions of bushels to spare for foreign countries.

—o—

Profits never fail to be sufficient incentive for increased production. But increased production that does not result in increased profits always reacts against production. There is no surer road to agricultural stagnation, and famine if we must depend on home production, than to follow the advice of the exclusive greater crop teachers, without regard to the prices realized.

* * *

Anent the attentions everybody is showing the farmers the Saturday Evening Post says:

Innumerable accusative fingers point to the facts that in a decade population has increased over 20 per cent and grain production less than 2 per cent. And for several years nearly everybody has been lecturing the retailer for his improvident methods and the multiplication of shops, which make goods dear and at the same time keep the retailers' profits low. Now these two trades are the grand strongholds of competitive individualism. In both fields are found a host of completely independent proprietors, each striving for himself, with very little organization, very little co-operation. In both fields we ought to be reaping the theoretical fruits of competition in the shape of high efficiency and low costs. In both we have exactly the reverse. What's the answer to this paradox?

—o—

The answer is so obvious that the Post did not assume to give it. Neither will we. We print the article merely to emphasize what we have so often pointed out in these columns about the folly of much of the advice given to farmers and of the farmers' helplessness without a sound organization.

* * *

Here are some of the observations made by Secretary of Agriculture Houston in his address, recently, before the National Grange:

Less than 40 per cent of the cultivated land in the United States can be called even reasonably well cultivated.

Less than 12 per cent is yielding returns approaching the maximum economic output.

I do not entertain the thought for a second that we have begun to approximate the limit of our output from the soil.

We have not even reached the end of the pioneer stage in agriculture.

We would better face the fact frankly that in agriculture, compared with other countries, we are relatively inefficient.

Let us then take stock of our shortcomings and seek the remedy.

We have ceased to be an exporting nation of food products and are becoming dependent on foreign nations for the necessaries of life. The fact is a sad commentary on our use of the opportunities bestowed upon us.

—o—

And the only remedy the secretary has recommended so far is increased and improved production. Without at this time criticising the secretary's remedy, we will ask him how increased production can be brought about without more money from the crops? Science, applied under the direction of college professors and modern agricultural machinery, has succeeded in coaxing more from the soil in many cases, but the fertility so extracted is too often sold at prices that do not permit of its return in another form. So the farms are getting poorer and the yields smaller, while population iucreases, our exports diminish and imports grow.

—o—

We have approximated the limit of our output from the soil under the system of marketing now in vogue. Yes, we reached the limit some time ago and the average yields will decrease and decrease in the future, and our imports of agricultural products will increase until our government protects the farmers and their business, as European governments do, and until crops are sold high enough so more plant food is returned to the soil than the crops are taking therefrom.

—o—

The exclusive greater crop preachers can not change this fatal trend. It remains for those papers and those institutions and those individuals who teach a balanced education.

Question Box

This column is for members and subscribers. Use it to ask questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered dependable. If a direct reply is wanted, enclose two stamps.

QUESTION: *Please let us have advice about the proposition to establish the Alabama Canning and Packing Company, with a million dollars capital, as advertised in the issues of "The Onlooker" of November 26 and December 3 for the purpose, as the advertisements state, to furnish a home market for the coarse vegetables, such as sweet potatoes, yams, Irish potatoes, rutabagas, squashes, etc.*

ANSWER: The above question was asked by several members of the F. S. E. in Baldwin County, Alabama. We obtained copies of "The Onlooker," published at Foley, Ala., and found that M. F. Kenney of 1403 Harris Trust Building, Chicago, claims to be the chairman of a convention committee of arrangements. We learned further that the call has been made for a convention of Baldwin County producers to be held in the Auditorium Hotel, Chicago, on December 15.

A representative of this paper called at 1403 Harris Trust Building and met Mr. Kenney and others. From them we learned more than was stated in the advertisements. For instance, we learned that the farmers are expected to supply the million dollars at $100 per share of the capital stock; that the company proposes to erect a central cannery and branch canneries in Baldwin County; that the company proposes to buy the farmers' coarse vegetables and can, evaporate or convert them into vegetable meals. We learned other things about the proposition and the people who are promoting it. But suffice it to say, now, that the attitude of UP-TO-DATE FARMING toward such schemes is well known. For instance, we have repeatedly warned farmers against taking stock in foreign corporations, particularly new ones; and, second, since the farmers already own the crops, it is unnecessary for them to put their own money in somebody else's hands to buy their own crops.

Baldwin County is already well organized in the F. S. E. It has had signal success in marketing its crops, not the coarse ones only, by the Equity plan. One of the activities that members of the society are expected to engage in is the providing of canneries, factories, etc., to take care of surplus crops when the usual markets will not take them at profitable prices. We have often said that farmers should attend to their own business. We believe they have the ability in their own ranks. However, if it is advisable to hire an expert from the outside, it can be done and he work for the organized farmers, instead of for a foreign corporation.

The point of all this is: If the time has arrived when the growers of Baldwin County are in danger of having surpluses of crops, then let them establish canneries, evaporators and factories in their society and own and control them themselves. If they must put up the money, why should the head of the company be in Chicago? Or what is the need of going to Chicago to hold a convention of Baldwin County producers? If $10,000 or $25,000 will establish canneries, etc., in Baldwin County, what necessity is there for a million-dollar corporation? Remember all the time that the Farmers' Society of Equity principles are full mutuality in marketing, and not for one set of peeople to enrich themselves off of others through dividends. The producers furnish the crops to the factories, and they get the full returns from the sale of the manufactured goods, less operating expenses. If they can not wait for money until the sale is made, such manufactured goods can be warehoused in Baldwin County or elsewhere and money advances gotten from banks. Baldwin County has already been so much cursed by million-dollar corporations that we can not think the farmers will take up with this new scheme. But we do hope they will build up and strengthen the marketing machine they already have. If it is not as good as they would like to have it, it will be wise for them to give their attention to improving it and equipping it with more utilities to make it more effective.

Beware of the people who want to help you when you are required to furnish the money and the crops, too, and beware of the dividend-paying corporations, especially if the dividend is not evidenced by more than a promise.

Rural Uplift in Kentucky

Great interest in improved country life and work has been awakened in Madison County, Kentucky. Better crops, better live stock, better roads and better living is in the mind of nearly every farmer. There has been a great increase the past year in planting leguminous crops for soil improvement, and winter cover crops for grazing and to prevent soil leaching. Demonstration work has been carried on in all parts of the county. One boy grew an acre of corn on land that had never produced more than twenty-five bushels to the acre. In spite of a severe drought the lad harvested forty-seven bushels. His father, following old-time methods, got twelve and one-half bushels from an acre adjoining, the same kind of land. Another boy made twenty bushels of potatoes on one-eighth of an acre, and the average potato yield in that vicinity was less than twenty-five bushels to the acre. A girl raised seventy-one bushels of tomatoes from her tenth-acre plot, sold $21.96 worth at the rate of 60 cents a bushel, and the rest were canned for home consumption. To wind up the year's work, a corn show was held and was attended by over 2,000 farmers. Now, when this county takes up better methods of marketing for better prices, they will be on the road to real progress.

Business Farmers of Jasper

Farmers in Jasper County, Illinois, are organizing for the purpose of helping each other to learn better methods of farming, marketing and buying supplies. Meeting once in each two weeks, they come together to discuss the business of farming in all its aspects. Potatoes were a failure in Jasper this year, so the club members sent a man into potato-growing sections and bought 1,500 bushels at a cost of less than 80 cents per bushel, when the retail price at the stores was $1.15. They market all their poultry through their club, dealing direct with commission men in the big markets, and obtain from 2 to 4 cents per pound above local markets. Not much wheat is grown in Jasper County, and these farmers buy their flour in a body. Cutting costs 50 per cent. This is making a real business of the business end of farming.

Rapid Descent

They had been making hay while the sun shone, and when they had finished a high haystack the boy shouted from the top: "Say, mister, how am I goin' to get down?"

The farmer considered the problem and finally solved it:

"Oh, jest shet yer eyes an' walk 'round a bit!"

Bracelet 25c It's all the rage. Girls, wear it to school and all the others will envy you. Handsome gold finish, heart shape design, set with stone. Adjustable to any wrist. Not more than two to one person at the introductory price of 25c.
S. E. FERRY, Irvington, Ind.

XMAS Present Problem Solved
Give the Boy or Man a Wonder Telescope

5 to 10 Mile Sight Range

If you will accept this powerful telescope and show it to your friends; if you want to examine fences, count stock, see houses, friends and objects miles away just like they were close—write today. Enjoy it day and night. Needed on every farm. Telescopes this size have sold for $5 to $8. It is brass bound; protected with brass caps on ends; 5 sections; opens out over 3½ feet long; closed, 12 inches long. Entertain your friends day and night with the "Wonder." We have thousands of testimonials.

Our Offer To advertise the "Wonder" telescope we will send one for only $1, provided you send 3 names of friends you think will be interested in it. Send 10c extra for ordinary postage, or 20c for insured delivery, and we guarantee safe arrival. If not a bargain and you are not well pleased, money will be refunded. Full instructions free with each telescope.
PEOPLE'S WHOLESALE STORE, Indianapolis, Ind.

It is far beyond expectations. If I couldn't get another I wouldn't take $5 for it.—O. F. Folk, Elk Lick, Pa.

Worth $10 to me. I can see cattle at 15 miles and a nickel at 60 yards.—Tervis S. Sepeda, Morgan Hill, Cal.

It's a dandy; all you claim and then some. I trained it on the Buttes, 28 miles away. They looked like 2 or 3 miles instead. I can count stock in farmer's yard 4 miles away.—Chas. A. Story, Ft. Robinson, Neb.

Every boy and man on farm needs one.—Chester Housen, Minden, Ga.

Our farm is on a hill and we can see 10 miles away. Count windows in houses which cannot be seen with the eye.—Henry Conner, Manor, Tex.

Can see children playing at school 6 miles away.—P. H. Herrington, McDade, Tex.

Can tell time on clock 2 miles away.—J. Beers, Columbus, Ind.

1913 Annual Convention of the Farmers' Society of Equity

Indianapolis, December 16, 1913

The 1913 Annual Convention of the Farmers' Society of Equity will be held at headquarters, Indianapolis, Ind., beginning Tuesday, December 16, 1913.

At the convention officers of the National Union will be elected and every other thing for the good of the organization and agriculture that comes before the convention will be considered and acted upon. Several matters of extraordinary importance, as affecting the society and the future of agriculture in America, will come before the convention. This fact makes it important that there should be a complete representation of subordinate Union by-laws as follows:

For the guidance of members and unions we quote from the National unions.

ARTICLE VIII

Officers

Sec. 3. The officers of the National Union shall be a President, a Vice-President, a Secretary, a Treasrer, a National Organizer and seven directors.

Election—Representation—Term

Sec. 4. The officers and directors of the National Union, with the exception of the Secretary, shall be elected by a popular vote of the members on blanks furnished by the National Union, or printed in the official paper and forwarded to the National Secretary by mail, or brought by delegate representing such Union or Unions, to be voted in the National Annual Meeting of the Society.

Sec. 5. The Annual Meeting of the Farmers' Society of Equity is to be composed of representatives of subordinate Unions as follows: Each Local Union is entitled to one representative. If it is impossible for a Local Union to send a delegate, it may join with another Local Union, or more than one, to send a delegate. In this event that delegate will be allowed as many votes in the convention as he carries credentials from organized Local Unions. Each County Union shall have one representative. Each State Union shall have one representative-at-large and one for each two thousand members in the state or major fraction thereof.

Board of Directors

Sec. 7. The Board of Directors shall consist of the President and Vice-President (ex-officio) and seven elected Directors.

The following nominations have been made and they are now submitted to the membership:

For President

J. A. EVERITT, Indianapolis, Ind.—Mr. Everitt is the present president.

For Vice-President

W. H. MITCHELL, Hutchinson, Kas.—Mr. Mitchell is the present vice-president. He was one of the incorporators of the society in 1908. He is one of central Kansas's progressive farmers, but has retired from active work on the farm and lives in the city of Hutchinson.

HARVEY JORDAN, Atlanta, Ga.—Was one of the founders of the Southern Cotton Association and its president from 1905 to 1911. He was a member of the committee to study agricultural conditions and co-operation in Europe this year. Mr. Jordan, in a letter to the F. S. E., said: "Your society is thoroughly correct in its conclutions that the needs of the hour for farmers is to organize them on a sound business basis for better marketing. This has been my contention, and toward which my efforts for years have been directed. We need some specific, clear-cut method to pursue.

For Treasurer

C. HAYES TAYLOR, Indanapolis, Ind.—Mr. Taylor is a director of the society at present and actively at work at national headquarters and is associate editor of the official paper. His work during the past year has brought him more or less in touch with all members, therefore a more extended introduction is probably unnecessary.

For National Organizer

H. F. CUTTING, Portland, Ore.—Mr. Cutting is present national organizer. He has to his credit, largely, organizing the state of Oregon in 1913. At present he is organizing in Washington.

A. Y. SATTERFIELD, Sterling, Idaho.—Mr. Saterfield was one of the leaders in organizing Idaho in 1913, also the northern part of Utah, which is working with Idaho as a unit. He is president of the Idaho State Union, F. S. E.

For Directors

W. GREISENTHWAIT, Oregon City, Ore.—Mr. Greisenthwait is president of the Oregon State Union, F. S. E., and vice-president and a director of the Equity Warehouse Company of Portland, Ore.

ROBERT STEVENSON, Lebanon, Ind.—Mr. Stevenson is a director now.

JACOB BRETZ, Bretzville, Ind.—Mr. Bretz is a present director.

S. W. MORRIS, Rochester, Minn.—Mr. Morris has been a director from the time of the incorporation of the society. He has always been prompt in attending the meetings of the directors and the conventions of the Society.

FRED N. PARKINSON, Idaho.—Mr. Parkinson is a director at present and as active organizer in the field.

T. C. WILSON, Columbia, Mo.—Mr. Wilson is secretary of the State Board of Agriculture of Missouri and secretary of the American Apple Growers' Association.

ALBERT E. JACK, Chicago, Ill.—Mr. Jack is secretary of the Milk Producers' Association of the Chicago district.

J. A. HARMON, Shawnee, Okla.—A director at the present time.

C. B. LOZIER, Robertsdale, Ala.—Mr. Lozier is secretary of the Baldwin County Union, F. S. E., and business manager of the Gulf Coast district in marketing.

A. E. WEBER, Geneva, Neb.—Mr. Weber is a member of Geneva Local Union, F. S. E. In putting him in nomination the local said it would like to have Nebraska represented on the board of directors.

T. A. HARPER, Dundee, Ore.—Is a member of Oregon City Local Union, F. S. E.

W. S. SHURE, Summerdale, Ala.—Mr. Shure is a director at present.

J. H. ADAMS, Minneapolis, Minn.—Mr. Adams is editor of "Co-operator and Farmer," which is a magazine devoted to farmers' elevators and the grain growers particularly and "the interests of managers of farmers' co-operative companies" in general.

Vote for one candidate for each office of President, Vice-President, Treasurer and National Organizer. Vote for seven directors.

Each member is entitled to vote. Members-at-large will send their votes direct to headquarters, Farmers' Society of Equity, Indianapolis. The votes of the local unions may be sent by the delegate to the convention, but if no delegate, then by mail. The ballots will be counted when the national convention meets, December 16th, and the candidates having the greatest number of votes will be declared elected.

It is important that every member should vote for National Officers and Directors, and that every local, county and state union should be represented by delegate in the convention.

Report to headquarters as fast as delegates are selected, giving names and addresses.

"Delegates' Credentials" blanks are in the book of blanks sent to every local union. Let the delegates bring their credentials to the convention, but notify headquarters by letter.

BALLOT

This ballot is cast by (name of member or name of Local Union).....

Read wheat prices at right of chart, Corn and Oats at left. This chart shows the highest monthly cash prices for the three varieties of grain at Chicago, for the period, 1909 to September, 1913, inclusive. The lowest figures in November 1913, were: Wheat, 94½c, on November 7; Corn, 71½c on November 12, and Oats, 40½c on November 13.

(Concluded From Page 6)

eggs, April Firsts, 25c to 25½c; extras, 26c. Prices a shade lower.

Fruit

An easy feeling prevails, especially for apples out of cold storage. The mild weather is an unfavorable element. It causes the demand to be very tame. Some quotations are:

No. 1 Jonathan, $4.50@5.50; Northern Spys, $3.75@4.25; Ben Davis, $3@3.50; Grimes Golden, $3.50@4.50; Greenings, $3.50@4.25. Common storage apples of different kinds, depending on condition, $2@3.50. All these per barrel.

Some prices on box apples from the west follow: Arkansas Black, $2.25@2.75; Rome Beauty, $2@2.50; Jonathan, $2@2.25; Grimes Golden, $2@2.50; Delicious, $2.75@3; Spitzenburg, $2.25@2.50; Winesap, $2@2.25.

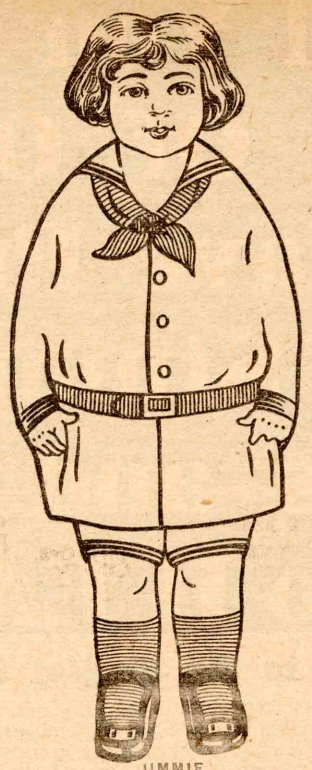
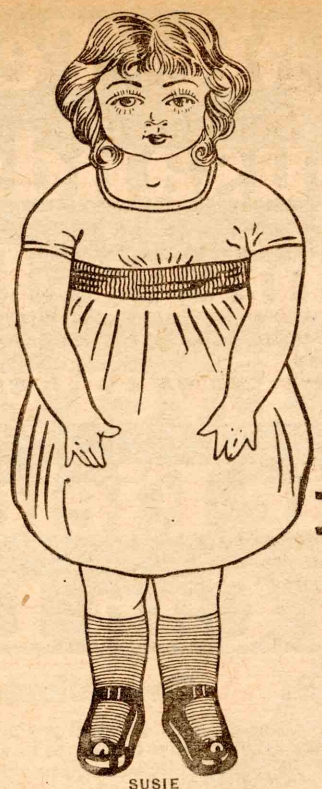
LOUISE
(OVER 2 FEET TALL)
Louise is a grand big baby, over two feet tall. You can dress her in a baby's clothes. She will sit or stand. She can't break. She is a beauty.



JIMMIE
He is fully dressed and measures 9 inches high. He comes to you with a pretty blue suit, red tie and brown shoes.



SUSIE
She wears a white dress, red sash, blue stockings and brown shoes. She is 9 inches tall. All the girls love her.

Will You Accept These *Three* Big Dolls?

This family consists of Louise, over two feet tall; her brother Jimmie, a husky fellow, and sister Susie, each nine inches tall. If you get them you can name them to please yourself.

Louise is a big, plump baby, very like a real live youngster, and can wear baby's clothes. Her hair is brown. She has bright eyes and rosy lips. Her legs and arms bend and she will sit or stand, as you want her to. Every little girl will love to have a dolly like this to dress and undress, and play with. Brother and sister dolls are just too cute for anything.

Our Offer We will send this whole doll family—Louise, over two feet tall, and the two other dolls, nine inches each in height. All you need to do is to send us one six-months subscription to Up-to-Date Farming (new or renewal) for 25 cents, or let us extend your present subscription six months. Address

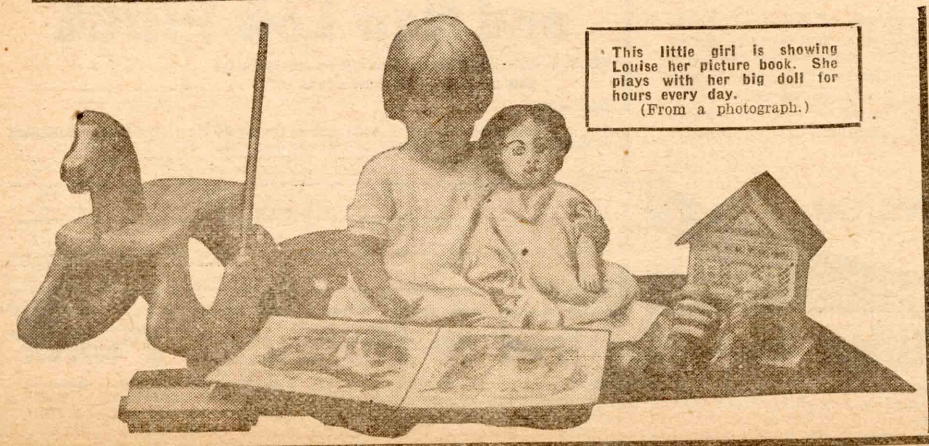
Doll Dept. 98A, Up-to-Date Farming, Indianapolis

Louise is as big as a real baby and nearly as large as the little girl.
(From a photograph.)

No Christmas Present for a Little Girl Could be Better

This big doll is delighting thousands of girls in all parts of the country. There was never a finer plaything for the little folks. No matter how many dolls the girls have, they always want another. Louise and her brother and sister will be given away to little girls or any one who sends a subscriber.

If you want more than one doll family for Christmas gifts send more subscribers. We will give a doll family with each six-months subscription at 25 cents. Clip the coupon and add more paper for list.



This little girl is showing Louise her picture book. She plays with her big doll for hours every day.
(From a photograph.)

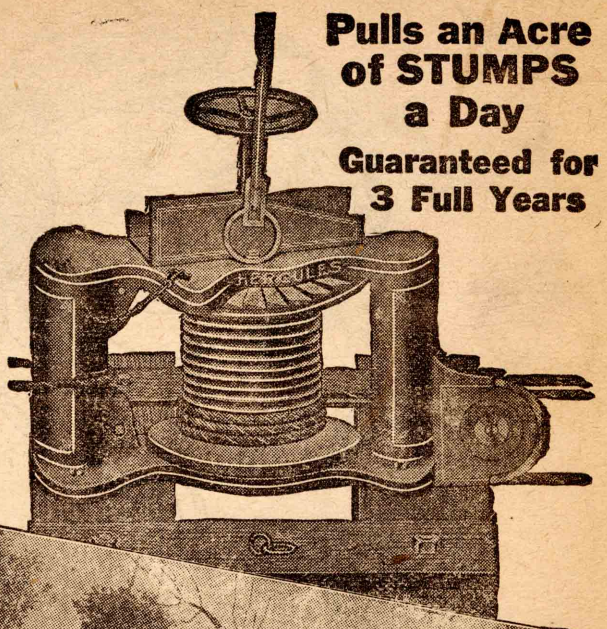
Let Me Tell You How Thousands Of Other Farmers Have Pulled Up Every Stump In Their Fields—and How You Can Do It EASY!



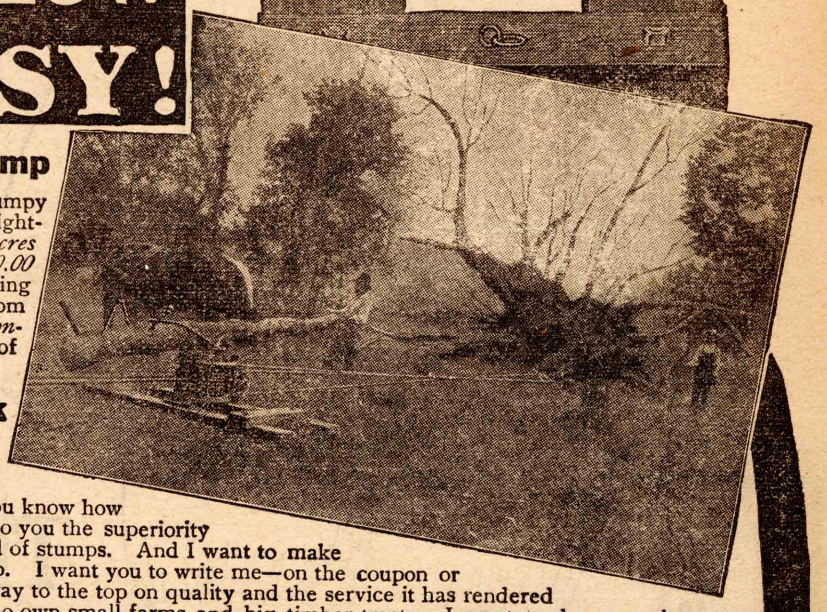
Pulls an Acre of STUMPS a Day

Guaranteed for 3 Full Years

B. A. FULLER

Five Minutes to the Biggest Stump

Let me send *you* my book to prove it to *you*. If you have stumpy land or stumps in your fields you're *losing big money* that rightfully belongs to you. I'll *show* you how you can turn *40 acres of stump land* into *$1281.00 profit* the very *first* year and *$750.00* every year after—by *doubling* the land value and by raising *money*-crops! The actual *photographs* and actual *letters* from hundreds of Hercules owners, as shown in my book, will *convince* you of the *necessity* of pulling out the stumps and of the *ease* with which it is *done* with the Hercules.



Send in Your Name for My Book and Special Price Proposition

You know how big a nuisance stumps are. You realize how much profit they prevent you from making every year. You know how hard it is to blast them out or grub them. I want to prove to you the superiority of the Hercules over any other known method of getting rid of stumps. And I want to make you a proposition that will be worth while for you to take up. I want you to write me—on the coupon or on a postal. I will tell you how the Hercules has won its way to the top on quality and the service it has rendered I want to show you letters from far and near—from men who own small farms and big timber-tracts. I want to show you in dollars and cents how much a Hercules means to you and I want to quote you my special price—a price I can only make to the first one or two buyers in each locality.

HERCULES All-Steel Triple Power Stump Puller

Let me tell you a few facts here, about the construction of the Hercules

All-Steel Triple Power

The Hercules is the only all-steel Stump Puller made. It is the only puller that has the single, double and triple power features, giving you three machines in one. There isn't a stump, green tree or hedge grown that the Hercules won't pull out without straining or breaking any castings. It's the only low-down constructed puller that has self-anchoring and stump-anchoring features—the only one with double safety ratchets, that insure the absolute safety of men and team. Let me send you a Hercules on

30 Days' Free Trial

If, at the end of that time, the Hercules isn't everything I have said it is, I want you to send it right back to me, and I'll see that you get every cent of your money back promptly. Thousands and thousands of farmers have ordered on this plan, and so far less than one out of a thousand have been returned. Besides my thirty-day free trial offer, I absolutely give you the following

3-Year Guarantee

If any casting of your Hercules All-Steel Triple Power Stump Puller breaks, any time within three years, whether the fault is yours or the machine's, I will absolutely replace any such part free of cost to you. There are no conditions to this guarantee whatever. Any casting will be replaced promptly, whether the machine breaks by accident or through any flaw in workmanship or material. Let me say right here, however, every Hercules is tested to terrific strain before it even leaves the factory, so as to guard against any machines being returned, or any parts being returned due to breakage.

The strongest guarantee ever placed on any article for farm use. Made possible only because of the High Quality of Hercules.

Mail Me the Coupon or a Postal

If you write me at once on the coupon below or on a postal, I will reserve one of these machines for you at the special price I am now making, until I hear from you whether or not you are going to buy. Understand, your request for my book is not an order. I simply want to get the book to you at once, so that you can read the remarkable facts about the Hercules All-Steel Triple Power Stump Puller and how it does such splendid work making big profits for owners everywhere. Mail me the coupon or the postal right now before you forget, or take down the name and address and write it as soon as you get a postal card. Address me personally.

NOTICE!

Grand Prize Yellow Strand Wire Rope Used on Hercules Pullers

It is this *Yellow* strand wire rope that won *first prize* at St. Louis Exposition | *proving twice as good as next best cable*. It is this *Yellow* strand wire rope that is being used by the *U. S. Government at Panama on the real important work* of building the canal. And experts say this *Yellow* strand rope is one of the big helps that will enable Uncle Sam to complete the canal a whole year before expected.

Don't forget—it's the *Yellow* strand cable that is showing such wonderful strength—the *Yellow* strand rope that is beating *all others* on every test put to it, under *all* conditions all over the world. *And it is the Yellow* strand wire rope that is used exclusively on the Hercules Stump Puller —*not a green strand, blue strand, white strand or red strand*—but a YELLOW strand—don't forget that—and don't let any unscrupulous person or company confuse you.
